It may be of interest to the public to know that our Magistrate, Mr. Mun Bong, has been nicknamed by the people of the district "Hulchi Pakjung" (which signifies "squeezing butcher") and we believe that he deserves the title. One of his pet schemes is to send out constables to the village with the pretence of investigating the condition of the people, and whenever he hears of any farmer who has some outlay of money or gain he is charged with undutifulness or immorality and given thirty blows a day until the farmer's surplus money or grain is emptied into the pocket of the Magistrate. After paying for the crime (?) of being a thrifty farmer he comes home with broken limbs, broken heart, and broken pocket-book. The Magistrate has invented a new method of torture which has a telling effect on every victim who happens to fall into his hellish hands. First he beats a man with whips until the legs become raw, then he takes a stout rough stick and rubs the raw skin vigorously with it until flesh is torn off. He repeats the process every two or three days in order to keep the part from healing. No one can stand this torture more than twice and is then willing to pay everything he possesses to get out and be released from the infernal punishment. The nickname is so appropriate that we wish it to be known to the public.

Yours truly,

KIM MENGSIK,
YE KEUNGUNG.

The number of Korean students now studying in Japan, writes our Söul contemporary, "is seventy-seven. They have graduated from the Fukuzawa School and are now pursuing special branches at various institutions. Industrial School at Asakusa, nine, including one female student; Agricultural School at Nihara, five; School for construction of ships, five; Commercial School at Kanda, two; Engineering School at Kanda, four; School for Political Economy at Ushigomé, three; Fukuzawa College, one; Law School at Kanda, eight; School for Police Service, two. The following are studying the workings of the various Government institutions:—Telegraph Office, three; Railroad Office, three; Home Department, two; Finance Department, two; Prefectural Office at Shizuoka, two; Educational Department, one; Law Department, two; The Office of the General Staff of Army, one; Military School, eighteen; Tokyo Charity Hospital, one; Government Industrial School at Tsukiji, two. Beside these there are sixteen private students who do not receive any allowance from the Korean Government. The amount the Government allows for these students is about \$13,860 per annum or on the average \$5 monthly for each person."

The new Prime Minister of Korea, Sin Sun-tak, is said to be a statesman of the old school. He was Premier before the war with Japan. The King, in summoning him to resume the post, wrote:—

You have been resting in the country for many years. That makes us crave to see you all the more. We have no other thought but of you and you alone. We now appoint you to the position, though we appreciate the trouble you will have to undergo travelling the long distance, but we need your services at the royal funeral and other sacrificial ceremonies. You must not decline our invitation. We have prepared a seat for you in Our household and you must come up with the Royal Prince Secretary who takes this message to you.

GERMAN NOTES.

A military correspondent writes to a London paper:—Peace manœuvres had their origin in Germany, or, more correctly speaking, Prussia. The zenith of the military successes of Prussia, both in the present and in the past centuries, may be significantly referred to as immediately following a time when peace manœuvres were considered of the highest importance; and we should not lose sight of this fact in England. On the other hand, the decline of peace manœuvres, and the fact that military training became more and more confined to the unproductive niceties of parade drill in the beginning of the present century, paved the way for Prussia's disasters. Frederick II. developed on the manœuvre fields of Potsdam, Spandau, and Berlin the Prussian tactics of Frederick William I., who founded the military strength of Prussia. Representatives from every Army in Europe were to be seen at Prussian manœuvres after the seven years' war.

The much talked of drama by Kaiser Wilhelm will see the light shortly. "S. Michael Germanize" is a piece in three acts. The Kaiser conceived it, thought out the scenes, and wrote the principal passages himself. The text has, however, been overhauled by the German dramatist, Herr Buttner-Pfæner. It is a long epic poem rather than a drama of action, and its theme is the glorification of Germany.

It is generally supposed, and not without good reason, that the red spectre of Socialism is just now an object of terror to the German Government and people. The *Berlin Post*, however, cannot see the alarming phantom. On the contrary, it takes occasion from the reports which have reached it of the feeding of poor persons in England at the cost of the Princess of Wales's fund to draw a flattering contrast between Germany and England. "Such endless misery," it says, "as that to which the dinner to the poor in Jubilee week testified is unknown to us. In no country in the world has so much been done for the elevation of the lower classes, and nowhere has the employer so patiently accepted the burdens of social legislation as here."

The situation in Austria, says an exchange, by no means improves, and there now seems no possibility of putting an end to the feud between the two races, the Germans and Czechs, as their political passions are fully roused. Count Badeni has proved himself incapable during the crisis, and has deeply offended the Germans by his dictatorial acts, while he has not altogether succeeded in winning the confidence of the Czechs. The latter race is now very confident, and its journals talk of a *coup d'état* which will give them the upper hand and enable them to dictate terms to the Germans. But it is absurd to think that a great race which has done so much for the Austro-Hungarian monarchy can be politically crushed by an order of the Minister. The result of any such high-handed measures would inevitably be to make the situation ten times worse, and would bring about a position which would be of the greatest danger to the Empire. Count Badeni is too much of a bureaucrat, and too little of a statesman. He has no adaptability, and looks at things from too narrow a point of view. The situation has puzzled some of the most skilful statesmen in Austria, but Count Badeni's course of action would seem to have brought about a most serious tension between the Germans and the Czechs, and a bitterness of feeling which causes the gravest apprehension among those best qualified to form an opinion. Probably the Emperor will take matters into his own hands and dismiss Count Badeni from office with the intention of putting the conduct of affairs into the hands of someone more diplomatic and tactful in his manner of acting. After all, the Emperor is the wisest and most experienced statesman in Austria, but unless he acts quickly the result may be serious for his composite Empire.

THE TARIFF.

THE question of the Tariff remains still obscure, though why there should be any perplexity we fail to perceive. These are the facts:—When the Anglo-Japanese Treaty was revised, the High Contracting Parties negotiated a new Tariff which was to become enforceable one month after the date of the exchange of ratifications. The latter event took place on August 25th, 1894, and the Tariff consequently became operative from September 25th of that year. But there was a condition attached; namely, that British subjects should enjoy most-favoured-nation treatment in this matter. In other words, British subjects could not be required to pay the rates fixed by the new Tariff so long as the subjects or citizens of any other nationality paid lower rates. It therefore followed that until all the old treaties were revised and until all the Occidental parties to them had agreed to the New Tariff, its provisions could not be enforced against British subjects. It further followed that if other Powers, in the course of their negotiations, obtained tariff concessions more favourable than those secured by the British Treaty, British subjects would become entitled to the same concessions. There was another condition, also. The Tariff appended to the British Treaty comprised 39 staples of import: it covered only a portion of the import trade. With respect to the remaining portion, namely, all the articles not enumerated in the Conventional Tariff, it was agreed that the rates leviable upon them should be fixed by a General Statutory Tariff, which the Japanese Government would have a free hand to enact. This Statutory Tariff and the Conventional Tariff were to become operative simultaneously. Evidently neither could take effect without the other. The General Statutory Tariff was submitted to the Diet last session, approved, passed and duly enacted. But it did not, of course, go into operation. It had to wait until the revision of all the Treaties had been effected. Consequently, its last article provided that notice should be given of the date of its operation. Now, if all the Powers had revised their treaties on exactly the same lines as Great Britain did, it is evident that the new Tariff could have gone into force one month after the exchange of ratifications of the last of the revised treaties. But Germany departed from those lines. She stipulated for an interval of six months between the operation of the Tariff and the exchange of ratifications, and she further stipulated that six months must separate the promulgation from the operation of the General Statutory Tariff. In Germany's case the six months have already expired. But France has naturally made a similar stipulation, and since the Revised French Treaty

has not yet been ratified, an interval of at least six months must elapse before the new Tariff can be enforced. The Austro-Hungarian Treaty, which is understood to contain the same stipulation, has not even been concluded, and from that point of view a source of additional delay is apparent. So soon as the ratifications of the last of the Revised Treaties have been exchanged, the Japanese Government may be expected to issue an Imperial Ordinance providing that the General Statutory Tariff shall go into operation six months after that date. But no such Ordinance can be issued until the exchange of ratifications is an accomplished fact. It is, therefore, abundantly clear that the promulgation of the General Statutory Tariff on the 26th of last March did not amount to a notice for the purposes of the Conventional Tariffs. It was merely a necessary preliminary. The notice will take two forms; it will be furnished, first, by the exchange of ratifications of the last Revised Treaty, and secondly, by the issue of an Ordinance fixing the date of operation of the General Statutory Tariff.

Having given the above explanation, we now reproduce, from the columns of the *Japan Gazette*, a letter addressed by the British Consul to a Yokohama firm:—

"I beg to inform you that I communicated with Her Majesty's *Chargé d'Affaires* on the subject of the date of putting in force of the New Customs Tariff. I have now received a reply from Mr. Lowther, giving me the following information:—

The Treaty between France and Japan contains a stipulation that six months must elapse between its ratification and the operation of the Conventional Tariff attached to it. This Treaty not having yet been ratified, the date of the operation of the New Conventional Tariff will depend on the date of ratification. With regard to the General Tariff, the protocol attached to the German Treaty prescribes an interval of six months between the publication and operation of the General Tariff and any subsequent changes which may be made in it. This Tariff was published by an Imperial Decree, dated March 26th, and the six months interval will therefore terminate on the 26th September next. After this date the Tariff can come into operation, at any time, provided however, the exchange of the ratification of the French, and possibly also of the Austro-Hungarian Treaty, has taken place.

According to the last article of the New Tariff Law, the Japanese Government undertakes to give notice in advance of the date of its operation. I am, Gentleman, your obedient servant,

(Signed) JAMES TROUP,
H.M. Consul.

It will be seen that the above letter exactly bears out what we have written, except in one place where the wording is elliptical. Mr. TROUP, speaking of the General Statutory Tariff, says:—"After the 26th of September, the Tariff can come into operation at any time, provided, however, the exchange of the ratifications of the French, and possibly, also, of the Austro-Hungarian Treaty has taken place." This sentence seems to have misled the *Japan Gazette*, though the ellipsis is quite plain from the context. Mr. TROUP intended to write:—"The Tariff can come into operation at any time, provided, however, that an interval of six months has elapsed after the exchange of the

ratifications of the French, and possibly, also, of the Austro-Hungarian, Tariff."

Perhaps it may be well to add one word. We have spoken of the General Statutory Tariff as comprising the staples not enumerated in the Conventional Tariff. That limitation was employed for the immediate purposes of explanation. In point of fact, the General Statutory Tariff, as its name implies, covers all the staples of import. But a certain number of them are specially dealt with in the Conventional Tariff, and thus importers enjoying the rates fixed by the Conventional Tariff, have to consider the Statutory Tariff in so far only as non-Conventional articles are concerned. Of course, subjects or citizens of States not having Conventions with Japan, or not entitled to most-favoured-nation treatment, will have to work entirely under the Statutory Tariff.

THE SARATOGA SPIT AFFAIR.

A CORRESPONDENT suggests that some prejudice may be created by our remarks about the British Consul's connexion with the irregular action of the Danish Consul in arresting one of his nationals on board an English steamer in Japanese territorial waters but not within the limits of a treaty port. Such endorsements are, of course, acts of mere comity under ordinary circumstances; but in this case the circumstances were not ordinary, for the only authority by which the arrest could be properly effected while the *Columbia* lay on the Saratoga Spit, was the Japanese authority. It appears, however, that when the endorsement was given, no reason existed for suspecting that the warrant would be put to an illegal use. Had there been no disturbance of the normal course of events, the arrest would have been effected after the steamer's arrival at Yokohama. No questions would then have arisen, and the endorsement would not have attracted any attention. On that hypothesis the British Consul doubtless proceeded, and he can not be held accountable if a step properly taken and to all appearances quite regular, so far as his functions were concerned, subsequently placed him in a false position owing to the injudicious zeal of his Danish colleague. The Consular Constable's procedure, however, admits of no such explanation. That his services should have been employed to prevent any resistance to the execution of the warrant on the part of the master or officers of the *Columbia*, would have been natural and proper, supposing the ship to be within the limits of a treaty port. But he had no business whatever to render any such assistance at Saratoga Spit, and the question is, by whose orders did he go there. A Consular Constable can scarcely be expected to understand nice problems of international law, nor should any such task be imposed on him. On the other hand, he should neither take direc-

tion from a foreign Consul nor be guided by his own lights. Who was responsible for his journey to Saratoga Spit, and his assistance at the execution of a warrant under illegal circumstances? We are not impressed with any sense of the gravity of this affair; still less do we seek to impress our readers. The principles concerned are now so clearly established that to contend for their recognition is quite unnecessary, and an error in practice is a comparatively trivial matter. But considering the strictly correct course pursued some years ago by the British Legation and the British Government with regard to this very problem, and considering also the exceptionally conscientious and thorough manner in which the obligations of England's treaty jurisdiction are discharged in the East, we can not but regret that the record should be marred by incidents like that under consideration. The Consular Constable ought not to have assisted at the Saratoga Spit arrest. There can be no second opinion about that, we think.

With regard to the action of the Kanagawa Prefectural authorities in refusing to undertake the arrest originally, it will appear to most persons that all technical obstacles to the execution of justice are to be deprecated, and that it should be the object of every Government to remove, rather than to recognise, them. That is certainly our own opinion. It seems to us that where the punishment and repression of crime are concerned, nations, the world over, should co-operate unreservedly, and that when the representatives of one Power approach those of another with a request for assistance in the apprehension of criminal fugitives within the latter's territory, there ought not to be any hesitation about complying. That is the case in the abstract. But, of course, other considerations also are involved. Every civilized nation is concerned in asserting its right of asylum, and international jurists have prescribed certain forms of procedure which serve the double end of safeguarding that right and preventing its perversion into a means of evading the ends of justice. Foreign States enjoying the privilege of extraterritorial jurisdiction possess a limited competence in the matter of apprehending such of their own nationals as may have fled to Japan to escape the consequences of crimes committed elsewhere. But it is only a limited competence: it can not be exercised outside the Settlements. Thus, in the interests of justice, there devolves upon those States the plain duty of concluding extradition treaties which shall provide against the contingency of fugitives from justice escaping beyond the bounds of the Settlements into the interior of Japan, where their arrest can not be effected without the coöperation of the Japanese Government. Thirty-five years should have sufficed for the conclusion of such

treaties, and Powers that have suffered matters to drift during that long interval, trusting that happily no occasions calling for the exercise of extraditional functions would arise, can not complain if their own perfunctoriness suddenly places them in an embarrassing situation.

THE JAPANESE CODE OF CRIMINAL PROCEDURE.

MR. MIYOSHI TAIZO, late President of the Court of Cassation, has published some criticisms of the Japanese Code of Criminal Procedure. Speaking broadly, Mr. MIYOSHI'S condemnation of the Code depends on the fact that it follows French precedents. In France, preliminary examinations are held with closed doors; so they are in Japan. In France, the services of a barrister are not allowed to an accused person until after he has been committed for public trial; in other words, until after his preliminary examination is over; the same restriction is imposed in Japan. Mr. MIYOSHI prefers the English system. He thinks that the governing principle of criminal procedure should be to give the accused an opportunity of clearing himself, whereas the Japanese system, following the French, is to create opportunities for him to incriminate himself. That is a very large question. The French system is certainly repugnant to our English ideas. In England, a policeman's evidence as to statements made by a prisoner is not accepted unless he can swear that he previously warned the prisoner against saying anything to his own prejudice. The rule is so carefully observed that not only does a constable refrain from questioning a prisoner, but if the latter volunteers a statement, the constable recommends him to keep silence. In France, on the contrary, guilt is assumed, and every effort is made to entangle the prisoner in damaging admissions. Under which system the ends of justice are better served, the greatest jurisconsults have disagreed, but there is a strong prejudice among Englishmen against the French system, and we count it a wholesome prejudice. In our opinion Japan would make a progressive step did she revise her Code of Criminal Procedure on English lines. But there is a reservation. If the French method seems harsh in one respect, it is distinctly considerate in another. For it screens a suspected offence from public gaze until testimony sufficient to establish almost a certainty of guilt has been collected. How often does it happen in England that owing to the publicity of preliminary examinations, an innocent person is put to great shame, and, though released, finds a stigma attached to his name ever afterwards? That, at any rate, can never happen in France. Mr. MIYOSHI advances another objection; namely, that barristers are not allow-

ed to confer with their clients unless some prison official is present. That is probably no hardship in practice. It means, we presume, nothing more than that the prisoner is under surveillance when engaged in consultation with his legal adviser. Surveillance need not prevent privacy.

One interesting feature of this question, as we think, is that the preliminary examination of a foreigner by means of an interpreter is likely to be attended by difficulties not experienced in the case of a Japanese, and may possibly lead to unfortunate misunderstandings. It seems probable that justice would be more certainly secured were legal assistance allowed from the outset. We can not expect, of course, that one kind of procedure will be adopted with the foreigner and another with the Japanese; but if there is any disposition to revise the system in the above sense, the point here advanced may help to turn the scale. We understand, indeed, that all the criticisms made by Mr. MIYOSHI had previously been under consideration by the Committee appointed to prepare for the operation of the Revised Treaties. The Committee's *raison d'être* is to remove, as far as possible, every obstacle to the smooth working of the new order of things, and though the fact that French procedure is followed in Japan does not, in itself, constitute a legitimate obstacle, it has to be remembered that the conditions in Japan are different from the conditions in France.

"CONQUERED OR CEDED."

THE LORD CHANCELLOR of England, when hearing the *Carew Appeal* case, used exceptionally plain language with reference to the celebrated Order in Council of 1865. The Order claims for the QUEEN jurisdiction in Japan similar to that enjoyed in "ceded or conquered" territory, and that formula has been from the first a sore blow to Japanese patriotism. The truth of the matter is that the law under which HER MAJESTY exercises the jurisdiction delegated to her by the Emperor of JAPAN, was originally framed without any reference whatever to Japan, but being the only existing law applicable to the circumstances created here by Treaty, its enabling provisions were invoked to meet the new situation. If its applicability to Japan were explicitly limited to the terms "ceded," and if for "territory" the words "extraterritorial jurisdiction" were substituted, there would be nothing to complain of, for undoubtedly the Emperor of JAPAN did "cede" a portion of his jurisdiction to Great Britain by the ELGIN Treaty. There can be no question that, as a point of international courtesy no less than of strict accuracy, the British Parliament should have been invited to pass a statute which would have saved Japan from the indignity of

being technically referred to as "ceded or conquered territory," and the QUEEN from being obliged to exercise her powers under the authority of a fiction. However, no such law was passed. The principle of "ceded or conquered territory" seemed to serve the purpose well enough in a rough and ready kind of way, and many ingenious folks have found occupation, since 1865, in trying to prove that the Order in Council was quite properly worded, and that really Japan had no cause of complaint. We should be sorry to think that Englishmen would find no cause of complaint under similar circumstances. Lord HOBHOUSE brushed away all the silken cobwebs of the apologists. "HER MAJESTY'S powers," he said, referring to British Jurisdiction in Japan, "are as a conqueror, not as a constitutional sovereign. A conqueror can impose such laws as he pleases." A strange saying, surely! A conqueror certainly has the right to impose laws on the conquered, but who are the conquered? The question before the Privy Council was whether the QUEEN is entitled to exercise jurisdiction over her subjects in Japan by means of laws which are of her own making, and are not British laws at all. By treaty she undertook to exercise jurisdiction "according to the laws of Great Britain." The LORD CHANCELLOR avers that, as a conqueror, she can impose such laws as she pleases. Has HER MAJESTY, then, conquered her own subjects in Japan, so as to be entitled to impose on them such laws as she pleases; so as to be entitled, for example, to place them on trial for their lives before a jury of five, instead of twelve, persons? The right that conquest creates to impose laws is exercisable against the conquered people only. That certainly is not to be denied. Where, then, does the right exist in this case? We are not aware that any such right is claimed or exercised by the QUEEN in respect of British subjects in India, which is a conquered country. The LORD CHANCELLOR is a great legal luminary. It seems sacrilegious to suggest that any confusion should exist in the mind of such a jurisconsult. Yet we do venture to think that his Lordship confounded the exercise of jurisdiction with the enacting of laws, two radically different things. There has always been a strong objection on the part of Englishmen, private persons as well as officials, to admit that the jurisdiction enjoyed by HER MAJESTY in Japan has been delegated to her by the Sovereign of this country. They prefer to think that it was obtained by some occult exercise of *force majeure*, a contention involving the hypothesis that the treaty conceding the jurisdiction was wrested from Japan *vi et armis*. Chief Justice HANNEN declined altogether to admit the "delegated" theory in the *Chishima-Ravenna* case, and the LORD CHANCELLOR seems to labour under the same reluctance, though both

these learned Judges would assuredly concur in denying that the treaty was obtained at the point of the sword. At all events, the treaty relates to jurisdiction only, not to law-making. In order to extend it to legislative competence, the fiction of conquered or ceded territory had to be set up, and even then a wholly illogical position was created, for if legislative power be possessed by the QUEEN as a conqueror in Japan, it must be power in respect of the conquered, namely, the Japanese. "It is 30 years too late to argue that now," said the practical LORD HOBHOUSE. Yes, but it is never too late to assert the truth, and for our own part we recall with satisfaction that it is sixteen years since the point was first discussed in these columns, Sir FRANK LOCKWOOD'S statement of the case seems quite incontrovertible. Indeed, no attempt was made to controvert it in the Privy Council. The LORD CHANCELLOR recoiled from the stupendous prospect of a theory involving the notion that "all the courts in Turkey and elsewhere had been for years exercising a jurisdiction they had no power to exercise." To the very last his Lordship could not, or would not, bring himself to distinguish between juridical competence and legislative competence. Thus one other, probably the last, opportunity has been lost to get this much discussed question judged on its merits by the highest tribunal in Great Britain. Happily it has nearly ceased to have any interest except an academical, though who can tell at what moment a British subject may not again be put on trial for his life under a form of procedure contrary to the laws of his country?

MONTHLY SUMMARY OF CURRENT JAPANESE LITERATURE.

Mr. Disraeli, in his "Lothair," says that "Critics are writers who have failed." Mr. Takayama Rinjiro expresses the same conviction in an article on the duties of critics published in the *Taiyo*. He accuses this class of scribblers in Japan of great levity and lack of discernment and of confining their attention to novels and new-style verses. In order to do good work as a critic, says Mr. Takayama, a writer must be well versed in existing literature, must have an ideal of his own, must be able to analyse, generalise and explain. His methods of dealing with authors must be scientific and thorough. Most of the criticism of the day fails to fulfil these conditions and consists of violent abuse or indiscriminate praise of the books reviewed; and there are not wanting instances of men whose reviews are published in various organs, disguised so as to appear as though they were penned by different writers.*

The same copy of the *Taiyo* from which the above is taken contains the report of a lecture on Education delivered to the Nihon-Kōdōkai (弘道會), by Mr. Nishimura Shigeki, of which we furnish the following epitome:—

(1) It has been decided by the Education Department that boys shall not begin athletic exercises and fencing till they are over 15 years of age. This is too late. They should commence when they are 10. Instruction in fencing is not what it ought to be. Instead of making the lads fence with each other and waste their

breath in shouting it would be better for each lad to begin by fencing with the teacher and to be told how to hold his sword, pose, advance and retreat, &c., from the very first. Defeat or victory is a matter of no moment compared with the acquirement of a good style.

(2) The age at which children are obliged to attend school has been fixed at 6 years, but should be changed to 7, on account of the smallness of Japanese children compared to Europeans.

(3) The course of Ordinary Elementary Schools is fixed to extend over 4 years. In Europe, Spain is the only country which sanctions such a short course. In other countries 6 is the average, but since in Japan there is the difficulty of acquiring the ideographs, and since statistics show that 96 per cent. of the pupils attending school finish their education in the Elementary School, it is advisable that the Elementary course be extended to 8 years.

(4) In perusing Educational Magazines I have observed that of late there are frequent discussions on the educational principles to be adopted. Many writers do not seem to know what they are talking about when on this subject. They speak of one system of education being old and another new, and argue as though in education, as in science, discoveries were being made that rendered old theories untenable. The Mombushō has from time to time professed to adopt new theories. In 1875, when Dr. David Murray was in the employ of the Department, he recommended an American work by Bailey, which was translated and referred to as a guide in educational matters. Subsequently Herbert Spencer's work on Education attracted considerable attention, but the principles advocated in it were deemed too radical for adoption by the Department. Bain's "Education as a Science" was for a while all the rage, followed by Johnot, who gave place to Herbert, who again has been succeeded by Rosenkranz. This adoption of one writer's opinions to the exclusion of those of others only tends to show how shallow are the thoughts that pervade the minds of many Japanese educators. To talk about Spencer and Bain being old and more recent writers new, shows great ignorance. The men who use these expressions have no notion of the meaning of the terms new and old. If asked in what respects the principles advocated by the former writers are old, they could not answer. Then there are controversialists who fight over the fundamental meaning to be attached to the term education. Does it consist of a drawing out or developing of the mental faculties, or does it consist of a pouring into the mind stores of knowledge? Such persons seem to think that the two functions of education referred to are incompatible with each other, thereby showing their ignorance.

(5) Recently it has become the fashion to apply the terms 正 *sei* and 准 *jun* to school teachers, the former being applied to those who have passed an examination and received diplomas as teachers, and the latter to those who have adopted the profession without undergoing anything but a general training. I do not understand the use of the above terms. There is no reason why a teacher who has passed through a normal school should be called a correct or proper teacher, nor why the man who has not followed this course should be described as resembling a proper teacher. There is no sense in the use of such terms.

The first of a series of works on Chinese literature has been published. Its title is 先秦文學 *Senshin-bungaku*. The author is Mr. Fujita Toyohachi. The volume covers 231 pages and is issued by the Tōkadō, Ushigome, Tōkyō. The book treats of the literature of the time prior to the reign of the Emperor Tsin (秦). The distinction between the literature of the northern part of China and the Southern is very clearly drawn, says the *Shigaku Zasshi*, from which we are quoting. According to the *Taiyo*, Mr. Fujita's work is written after the style of Buckle, not aiming at the mere reproduction of dry records, but at tracing the gradual evolution of thought in China. Mr. Fujita, says the

* Such writers are called 掛持記者 *Kakemochi-Kisha*

Waseda Bungaku, is well qualified for the work he has undertaken, having resided in China and published books there on "Agriculture," "Official Business," and other subjects.

The Tōkadō has also issued a work entitled *Shina Shōsetsu-gikyoku-shōshi*, "A Short History of Chinese Fiction and Drama," which is favourably noticed by several of the magazines.

On July 10th appeared the first number of a magazine to be issued fortnightly called *支那神史評釋 Shina-hishi-hyōshaku*, which, as the title implies, purposes to deal with Chinese fiction. One of the chief objects of the new organ is said to be the cultivation of poetical ideas in the minds of readers.

The *Teikoku Bungaku* speaks highly of the first volume of a series of English Readers compiled by Mr. Matsushima Gō and published by the Shunyōdō. It consists of extracts from English and American Authors and English translations of foreign books. The get-up and illustrations are said to be excellent and it is predicted that there will be a great demand for the work as a school-text book.

The first number of a magazine called the *千代田 Chiyoda* has appeared. The name was formerly used of Edo Castle, which was called Chiyoda-no-Shiro. The Chiyoda Kai, of which the magazine is an organ, is a body whose object it is to facilitate the abolition of class distinctions by bringing people of all classes into close contact with each other. The doctrine preached by the members is social equality.

Another Women's magazine has been launched, bearing the title of *Foshi-no tomo*, the "Women's Friend." It is published by the Tōkyō Tōyōsha. It resembles the *Yokan*, *Jogaku-Zasshi* and other organs designed for female readers.

Mr. Murakami Naojiō, whose visit to Formosa for the purpose of investigation we noticed some months ago, has returned to Tōkyō and is publishing the information he collected. One of the most beneficial results of the Dutch occupation of Formosa in the seventeenth century, says Mr. Murakami, was the knowledge of the Roman letters imparted to the uncivilized natives. There were more than 600 of these in 1643 who were able to write and read their own language by this means. From the English Missionaries labouring in Formosa Mr. Murakami obtained some very valuable and curious manuscripts, dating from A. D. 1723—1820. Some of these manuscripts have a Chinese interpretation of the Roman letter text. The Formosan natives used arithmetical signs in a different way to the rest of the world; thirty-eight was written 308 and twelve 102. The manuscripts are all to be published and will furnish valuable material to those engaged in the study of the language of Formosan aborigines. No. 7, Vol. VIII. of the *Shigaku Zasshi*, from which we have extracted the above details gives a list of the German, French, English and Dutch works on the study of Formosan, to which we refer readers interested in this subject.

We read in the *Shigaku Zasshi* that a staff of compilers, with Dr. Suyematsu at their head, are engaged in writing the history of Prince Mōri, which is designed to show the part played by the Chōshū men at the time of the Revolution. It is stated that the work is likely to occupy two years in completion.

A Chinese work of great interest and value, well known to Buddhists in Japan, called *南海寄歸傳*, has been translated into English by Dr. Takakusu Junjiō under the title of "A Record of the Buddhist Religion as practised in India and the Malay Archipelago [A.D. 671-695] by I-tsing," and issued by the Oxford Clarendon Press. I-tsing (義淨) left China at the age of 37 and spent 30 years in travelling through India, when he studied Sanscrit and made a huge collection of learned works on Buddhism, and the Malay Archipelago. The

above work was written in Sumatra [690-692]. An English translation of this work had long been desired by students of Buddhism and Dr. Takakusu's accomplishment of the task, after its relinquishment, owing to sickness, by Mr. Kasabara Kenju, has elicited the admiration of Professor Max Müller and other Orientalists. Dr. Takakusu has prefaced his work with a valuable introduction dealing with the life of I-tsing, with the School of Buddhists to which he belonged and contemporary schools. We are indebted to the *Shigaku-zasshi* for the above particulars.

The *Kokumin-no-tomo*, ever an earnest advocate of reform, has taken up the subject of the awkwardness and defectiveness of the ideographs and the *Kana* now in use. The writer, Mr. Oshima Seiken, thinks that it would not be difficult to invent an entirely new system of signs, but if this is objected to, then he is in favour of resorting to the *Romaji*. The failure of the *Romaji Kai* some years ago Mr. Oshima attributes to the prematureness of the movement. The country did not feel the need of a change then as it feels it now. There are many sounds in foreign languages which cannot be rendered into Japanese *Kana*. Mr. Oshima thinks that the reform must begin with a discontinuance of the practice of using Chinese characters for merely ornamental purposes and of making the spoken and written languages alike. Wherever possible *Yamato Kotoba* should be used, and the habit of writing and saying *認識 Ninshiki suru*, instead of *認認 Mitomuru*, *通曉 Tsūgyō suru* instead of *曉 Satoru* and the like, and the pedantry in employing difficult ideographs where easy ones would equally well express the meaning, such as writing *覆載 fukusai*, instead of *天地 tenchi*, should be given up. Full liberty should be allowed in the use of *kana* where Chinese characters are not necessary to the meaning. In this respect the books written in the Heian and Kamakura eras were much more easily understood by ordinary readers than those produced in the Tokugawa era. The principle that should be observed in this matter is never to employ a Chinese character where the word written in *kana* would be perfectly intelligible by the context. There is no sense in inserting *義* when *fukuro* in *kana* would serve the writer's purpose. The first step in the desired direction must be the tabooing of pedantry. Numerous are the writers who have yet to learn that the highest art is required to express deep thoughts in transparent language; that compared to this the selection and grouping of high sounding ideographs is mere child's play.

The greatest dissatisfaction with the ethical text-books in use throughout the country is felt everywhere, says the *Kokumin-no-tomo*. That the only moral teaching received at school by no less than 3,600,000 pupils should be based on such books is a disgrace to the country. The charges brought by the *Kokumin* against these works are summed up under the following four heads. (1) The authors are for the most part under-officials of the Education Department, who undertook the work of compilation in response to the suggestions of avaricious book-sellers, and who were in no way qualified for such important work. (2) These text-books have undergone constant revision and alteration, but the basis of morals never changes. Ethical principles embodied in a text-book ought never to require modification of any kind. The fact of their requiring alteration from time to time shows these works to be utterly unworthy of the position they occupy. (3) There is none of the sacredness that should attach itself to books of this kind characterising our moral text-books. They do little but raise doubts in the minds of pupils: many of the assertions made in them only suggest the question "why?" Books of this kind should be all-convincing. The basis of morality should be such that doubt is impossible. (4) The language used in these books is altogether lacking in force and polish. The inequality between the sayings quoted from

ancient sages and the language of the compilers is most glaring. The *Kokumin-no-tomo* recommends that the attention of the Emperor be drawn to the subject and that His Majesty be asked to create a special bureau, to which the compilation of these text-books should be entrusted. The compilers should consist of the very best men to be found in the country and when finished the books should remain to all time Japan's Bible on morality.

Prior to his departure for Europe to attend, as Japan's representative, the Paris Oriental Congress to be held next month, Dr. Inouye Tetsujiō was entertained by a number of his friends, the chief of whom was Dr. Kaiō Hiro-yuki. The speech made by Dr. Inouye on that occasion is reported in the *Tetsugaku Zasshi*, from which the following is culled, "Of late years Oriental studies have become all the fashion in the West and there is a danger of Japanese being behind the times in their knowledge of Eastern subjects. At the suggestion of Dr. Kaiō several years ago, I commenced the study of Oriental Philosophy, and when first appointed Delegate to the Oriental Congress, I intended to use the opportunity for stating some of the results of my inquiry. But on second thoughts it seemed to me that, as I was going as Japan's representative, I should leave China out of consideration and confine myself to giving a history of Japanese philosophy. For Japan has been by no means without her philosophers. Kūkai (Kōbō-daishi) was undoubtedly a great philosopher. Ekiken, Jinsai and Sorai and others in introducing Confucianism by no means slavishly adopted the theories and teaching of Chinese writers, but imparted to the system, colour and character derived from their own minds. There is about their teaching that objectiveness (客觀的) and that tendency to rely on experience which characterise the philosophy of islanders like the Greeks and the English as distinguished from the philosophy of continental natives like the Hindoos and the Germans. Should time allow, I purpose showing that Japan has an art of her own as well as a philosophy. Another subject on which I have to speak is the desirability of holding an Oriental Congress meeting in Japan. The Japanese Government highly approves of this proposal and have promised if necessary to convey members of the Congress to this country, in a man-of-war.

According to the *Tetsugaku Zasshi* Mr. Tanimoto Tomi, of the Tōkyō High Class Normal School, the author of a new book on Ethics, noticed by us a few months ago, has in contemplation quite a Spencerian programme. He purposes to furnish educationalists with a small library of useful works on pedagogy, general education, management of schools, &c.

The *Meiji Hyōron* has an article on Mr. Nakamura Kametarō's attempt to revive interest in ancient ceremonies and customs. Mr. Nakamura is one of the greatest living authorities on the ceremonies and forms of polite society in bygone days. He has been lecturing on the subject throughout the country and has been consulted by some of the leading noblemen of the capital, many of whom feel that some effort in the direction of restoring the forms and usages of the pre-Meiji era is needed in this degenerate age, when society is drifting into a most undesirable state of Bohemianism in manners. Mr. Nakamura says that under the Tokugawa Shōguns the various *daimyō*, though differing in minor details, followed in the main what is known as the Ogasawara style, that is the men adopted this style, the women following the Shijō style. As regards other members of the society of those days, while *samurai* conformed to Ogasawara usages, the *kuge* (court nobles) observed the Shijō forms. The expression *niryū roppa*, "Two (main) styles and six branches," applied to Japanese ceremony is then explained by Mr. Nakamura: The two main styles are those of Ogasawara and Shijō. The 6 branches consist of

4 Ogasawara branches, namely, Imagawa, Oda, Matsunaka, and Mito, and 2 Shijō, namely, Ise and Kira. The *Meiji-hyōron* is of opinion that the attempt to revive old ceremonies will prove futile, but admits that there is room for improvement in modern manners and customs.

There is a pretty wide movement on foot in favour of creating Associations of Journalists and Authors, with the object of raising the general tone of literature. The *Meiji-hyōron* gives the views of Prince Konoye on this subject. His Highness condemns in strong terms the scandal-loving spirit of the age, for which some of the smaller papers are largely responsible. The term applied to these papers, *Akutoku Shimbun*, Papers which use Vice as a means of Gain, correctly describes them. They trade in every kind of vice and are literary scavengers who collect all the offensive matter to be found in hidden places. Journalists, the Prince contends, might, by forming an Association, ostracise the rag-tag and bobtail among newspaper scribblers. The *Kokumin-no tomo* and other organs approve of the project and in the *Shin-shōsetsu* Rohan advocates a similar scheme for authors, giving instances of the benefits accruing from such combinations in England, France and America. The *Hansei Zasshi* discusses the same subject in an earnest manner, contending that such an organisation would, if properly managed, make authors more independent of booksellers than they now are. The *Hansei* is of opinion that a fund might be raised to help needy authors to publish works of value. The standard of authorship would be raised by the existence of an Author's Association, says the *Hansei*.

* * *
The issue of what are called Summer Supplements (*Natsu-furoku*) is becoming quite a feature with the chief magazines. Many of these will not appear till the end of this month. We are indebted to the *Waseda Bungaku* for the following information on this topic. The supplement of No. 17 of the *Sekai-no Nihon* contains the following: Mrs. Shikin's *Tarega Isumi*; the *Tenraima* (天來魔), anonymous; and Rohan's *Shin-Ikutagawa*. The *Kokumin-no tomo* announces that it will publish novelettes by Takenoya, Bizan and other writers and Mr. Onishi Shuku's 天才論, *Tensai-ron*. To the pages of the *Shin-shōsetsu* (New Fiction) pretty well all the leading novelists have promised to contribute. The list given includes Kōson (Aeba), Ochi (Fukuchi), Shiken (Morita), Ogai (Mori), Setsurei (Miyake), Shizau (Kawasaki), Seihei (Suematsu), Gensai (Murai), Kōyō (Ozaki), Rohan (Kōda) and Shōyō (Taubouchi). The *Hansei Zasshi* has also enlisted the services of several of the above novelists. The *Shincho Gekkan* will publish Ryūō's 戀の戀 *Koi no Koi*, and a long new-style poem called *Yotsu no Sode*.

The subjoined items of literary news are from the *Waseda Bungaku*. Dr. Shigeno's long looked for History is finished and will be published before many months are past. Mr. Owada Kenju is busy writing a history of Operatic Songs. The head of the Hakubunkan, Mr. Ohashi Shintarō, and various literary men are engaged in forming a Literary Society, to consist of well-known authors. Mr. Shimamura Hōgetsu's work on Rhetoric is now in the press and will be shortly issued by the Semmon-Gakko. The Shun'yōdō is preparing a Glossary which will give the meaning and the origin, &c., of the *noms de plume* of the principal writers of the Meiji era, together with biographical notices, to be published in the *Shinshōsetsu*.

* * *
The *Forodsu Chōhō* quotes some observations made at a recent meeting of the Paris Ethnological Society on the changes that are wrought in colour and even features by the adoption of a new mode of life. It was stated that the Japanese had changed in appearance very much since the introduction of Western Civilisation and that Occidentals who had lived in this country a long time had grown to resemble the people among whom they reside. *Apropos* of

this, the *Taiyō* says that a Japanese girl of good family who was sent to England at the age of 5, was educated there and married an Englishman, no longer bears any marks of her ancestry. She might be mistaken for a Greek, but would not be thought a Japanese.

The *Kyōiku-jiron* earnestly advocates the creation of a University entirely independent of state control, drawing a contrast between the influence of German and Japanese Universities. In the former not even a Bismarck is sufficiently powerfully to alter the trend of opinion. The Japanese Imperial University is an office-loving and state worshipping institution, and hence is not regarded by the nation with the veneration which is felt for great seats of learning in the West. That some years ago some of its professors should appear at a Fancy Dress Ball in the guise of certain of the *Shichifuku jin* (七福神) accords well with the low aspirations of the members of the teaching faculty generally and with their readiness to pander to vulgar tastes.

The *Shinri*, referring to the Magazines devoted to the study of German, says that they are all more or less defective and some of them absolutely useless. Two of these consist of literal translations in *kata-kana* of elementary German grammars, a fruitless undertaking, as any one with a very slight acquaintance with German could understand the original. A more pretentious affair is a Magazine called *Doitsugo-kenkyūroku* (The Study of German), which is so full of mistakes that it would be better called "The Study of Incorrect German." The German part of the *Gwaikoku-gogaku Zasshi* is the best thing of the kind that has appeared but it also has many serious defects. The design evidently is to enable a Japanese to learn German without a teacher, but with this in view it is surprising that so little attention is given to the difficulties of pronunciation. The whole subject of fixing the *kana* to correspond with German sounds needs discussing. Ignoring this, the writer of the *Gogaku Zasshi* German course chooses *kana* in a slipshod manner. The grammatical explanations sound very much like translations from German grammars. This is by no means a suitable or expeditious method of teaching German to Japanese. Mr. Taniguchi says in the first number of the Magazine that German grammar is much more difficult than French and English, but the truth is that Mr. Taniguchi's method of explanation increases the original difficulties of the language enormously. In the conversation, letters, and other material given there are a great many mistakes, many of which sound very funny to German ears.

Some examples are given in the *Shinri*, for which we have no space here.

* * *
Mr. Ono, whose *nom de plume* is Shachiku, has commenced the translation of "Faust," but both the *Kokumin-no tomo* and the *Waseda Bungaku* assert that the work is badly done, full of inaccuracies and plainly revealing that the translator has not understood the original.

* * *
According to information published in the *Taiyō*, supplied by Dr. Tsuboi, the University Bureau engaged in collecting, criticising and arranging historical material, is encountering considerable difficulty in obtaining access to historical documents in the possession of private persons residing in the provinces. In some instances the facts recorded in these documents are derogatory to the families of living persons and hence objection is taken to their publication, and in other instances the owners of documents do not care to be put to the trouble of showing them. So that, though armed with Government authority, in some districts investigators make little progress in their work. The periods best supplied with materials are the Ashikaga, Kamakura, and Tokugawa.

* * *
The well-known novelist Rohan contributes to the *Taiyō* an interesting article on literary

composition and its difficulties, of which the following is the gist. Among the living novelists the writer that pays the most attention to style is Kōyō (Ozaki), whose productions bear the marks of laborious elaboration. The practice of committing to writing an idea that passes through the mind in the form in which it first strikes one and publishing it to the world in that form, so common among writers, is not to be commended. Ideas frequently need very severe handling before they assume a form that satisfies an author with a high ideal. It is after they have been repeatedly subjected to fire and water successively, like the iron in a blacksmith's shop, and received the blows of the literary hammer, that they take their permanent shape. To take an example. Suppose I want to represent the moon, I can do so in a variety of ways. I can sketch her as she appears through the clouds, I can represent her as reflected in water, or I can omit both the moon and the clouds and place on the stage a man shivering with the cold felt on a wintry moonlight night. The difficulty of portraying the feelings produced by certain objects so clearly that at once the objects referred to shall be understood, is very great. It is in this that the subtlety of the author's mind is revealed. The only drawback connected with this kind of writing is the frequent failure of readers to discern the nicety of thought which has cost the author so much labour. It very frequently happens that the parts of a book most praised by the *oi polloi* are not those on which the author has spent the most labour.

* * *
Mr. Fenollosa is reported by the *Nihon-bijutsu-Kyōkai* to have expressed the following opinion on the subject of applied art in Japan. It is an entire mistake to suppose that art flourishes best when it is studied and practised apart from the uses to which it is to be put and the exigencies which it has to meet. It is true to say that to the peculiar needs which characterised the ages in which they lived is to be attributed the skill shown by men like Michael Angelo and Kanaoka and by schools like the Tosa and the Kano. The idea, so largely entertained by the managers of schools of art in Japan, that art is debased by being suited to the special wants of the age, by serving as the hand-maiden of science and material development of every kind, cannot be too strongly condemned. To the prevalence of this notion is to be attributed much of the stagnancy that characterises Japanese art at the present time. Art succeeds best when not left free to develop as she will. Her most brilliant achievements have had for their essential condition a circumscribed area in which to exercise creative genius.

CHINESE TOPICS.

Folks in Tientsin believe that Shēng Taotai has concluded his loan from Belgium. The latter country put up 4½ millions sterling, at 4 per cent., for the purpose of constructing a line from Hankow to Peking, the road to be surveyed and constructed by Belgian experts. But there is no apparent security. The Chinese Government is not concerned. On the contrary, for the purposes of the loan, Shēng ceases to be official controller-in-chief of railways, and retains the control of one road only in the capacity of a private speculator. Thus Belgium has no responsible *vis-à-vis*. It is hinted that she is guaranteed by Russia or France. But who guarantees Russia or France? There can't be rocks all the way down.

* * *
Mr. John Goodnow of Minnesota has been appointed Consul-General in Shanghai. Many regrets are expressed about Mr. Jernigan's supersession. There will be similar regrets when Mr. Goodnow's time comes. The fact is that if the wishes of the various communities in the East were consulted, no such thing as a change of American Consul would ever take place.

* * *
A very sad incident has occurred at Shanghai. Wilfrid Arthur, a child of Mr. John Chambers, aged 3 years and 10 months, was ordered by

Mr. Zedelius to take a santonine powder. The prescription was sent to Messrs. Vockel and Schroeder's to be compounded, and within half an hour from the time of taking the powder, the child died in convulsions that presented all the appearance of strychnine poisoning. There were two powders, and chemical analysis showed that the second consisted of nitrate of strychnine and sugar. The stomach and other organs were too much decomposed for trustworthy analysis. Mr. Chambers' friends in Japan will sympathise keenly with his sorrow.

The methods adopted by the Chinese in building the railway from Shanghai to Woosung are severely criticised. Instead of utilizing the road on which the old line ran, they have laid out a new circuitous route cutting the old route at several points, and involving large superfluous expenditure.

A terrible explosion occurred in the camp to the east of the Kiangnan Arsenal at 1 p.m. on the 9th instant. We take the following description from the *N.-C. Daily News* :—

The place where the explosion occurred is a small camp, about 250 feet square, situated about a quarter of a mile in a direct line to the east of the arsenal and garrisoned by 320 braves, under the command of a major. The magazine which blew up was almost in the centre of the camp. In the magazine, which was only a temporary structure, were stored about 16,000 rifle cartridges, eighty pounds of prism powder made up in flannel cartridges, a quantity of gun cotton, and a number of packages of percussion caps. Close to the magazine was a watch tower, of the ordinary type in use in such camps, the wooden supports of which were quite rotten. The theory is that this tower was not strong enough to withstand the high wind blowing at the time, and fell across the roof of the magazine, crushing it in, and some of the debris striking the percussion caps, caused the explosion. Whatever the cause, the effect was appalling. The buildings appeared as if they had been subjected to a severe bombardment, and the illusion was heightened by the numbers of shot and shell lying scattered about all over the place. There had been a large number of five inch solid shot stacked close to the magazine, and these had been distributed all over the camp, many of them crashing through the roofs and walls of the buildings. One death at least was caused by them. A poor fellow, a brother of one of the officers, who was in the camp on a visit, had been struck full in the chest by one of these projectiles and crushed in a fearful manner. Twelve bodies were laid out in one of the least damaged buildings, to wait until coffins could be prepared for them. They presented a ghastly sight; some with limbs missing, others so badly charred as to be unrecognisable, and some crushed almost out of all human semblance by the falling buildings. It was a sight that one does not care to dwell upon.

More than one narrow escape is reported. One of the officers, fortunately for himself, for some reason or other did not sleep in his own quarters that night. No less than three five-inch shot came through the roof and penetrated the floor, one of them striking the middle of his sleeping place. Had he not shifted his quarters for the night he must inevitably have been killed.

With reference to the attempt made by the Bank of China and Japan, Ltd., to compel its Chinese shareholders to pay the calls due on their shares, the Taotai of Shanghai has expressed his inability to enforce written contracts entered into by his nationals with foreigners. The Chamber of Commerce has protested against such an extraordinary attitude on the part of the Taotai.

The Chinese correspondent of the *N.-C. Daily News* writes as follows from Canton :—

A party of government experts have been prospecting in Kuangtung province for mineral deposits and have come across an alleged rich deposit of auriferous quartz among the Yunglin hills in the district of K'aichien, sub-prefecture of Tch'ing. The best specimen of quartz when crushed is said to have yielded pure gold at the rate of 16 oz. per ton, while the quartz found in another portion of the same hill produced, when crushed, over 3 oz. per ton. The provincial authorities of Kuangtung appear to have been quite excited over the discovery of gold in the province and have authorised the formation of a syndicate to develop the mines with a capital of \$500,000—one-

half to be lent by the provincial government. The Yunglin hills stretch into the Kuangsi border district of Ch'angwhsien and it is reported that at this last-named place gold has also been discovered. Already plans and estimates have been presented to the Viceroy and the Governor of Kuangtung, and orders will soon be sent to San Francisco for sixty crushing mills, pumps, etc., were also a number of experienced Chinese miners, now unemployed, will be engaged to return to China and work at the new mines. In the newly-formed mining syndicate are several influential returned emigrants from California, hence the idea of sending to San Francisco for the mining machinery.

The Kwangsi insurrection has thus far been entirely in favour of the insurgents. Some of their number having been arrested and imprisoned in Kuangyang, they stormed the city, broke open the prison, murdered the Magistrate and everybody in his *yamen*, to the number of 30, looted the place, and retired to their hill fortresses with the plunder. They are said to aggregate 15,000, but to be badly armed. There are fears, however, that the Kolao Hui in Hunan and Kiangsi and the Triad Society in Kuangtung may join them.

FINANCIAL NOTES.

According to investigations made at the Kanagawa Prefectural Office, the number of companies in Kanagawa Prefecture at the end of December last year was :—Joint stock companies, 54; joint partnership, 15; joint capital corporations, 25; factories, 147. Of the number of factories mentioned, 47 manufacture silk, and 41 tobacco. Commercial companies and banks in Yokohama total 51, with a capital of 16,827,100 yen; while the rural districts have 44 institutions with an aggregate capital of 1,951,750 yen.

When the authorities raised the *saké* tax to seven yen per *koku*, they estimated the amount of liquor brewed, the *Tokyo Shimbun* says, at about 3,900,000 *koku*. But as a matter of fact, the total quantity was found to exceed 4,660,000 *koku*, an increase of nearly 700,000 *koku*, compared with the original estimate. An excess of 4,900,000 yen in the tax collected was consequently obtained. In regard to the Registration tax, too, it is said that in spite of the complaints and attacks made upon it, the Government has realized 1,500,000 yen more than the original estimate.

The Chinese merchants in Kobe and Yokohama who have been amassing Mexican dollars, intend, the *Sekai-no-Nippon* says, to exchange the same for Japanese silver at the Hongkong and Shanghai Bank, so that they may be exchanged for gold hereafter. The value of Mexican dollars in Hongkong is reported to have considerably fallen and the banks in Kobe have suspended ordinary exchange, fixing the premium on Japanese silver and discount on Mexican dollars according to weight. In Yokohama the exchange of Mexican dollars has been suspended by all Japanese banks. We (*Japan Mail*) should like to know why the Hongkong and Shanghai Bank should give yen for Mexican, and where, if it desired to be so silly, it could procure yen for the purpose.

According to the *Nichi Nichi*, the arrivals of tea in Yokohama, Kobe, and Nagasaki during the 29th year of Meiji (1896), as compared with the figures for the previous year, were as follows :—

1896.	Catties.	Chests.
Yokohama	21,836,320	240,972
Kobe	11,284,524	144,711
Nagasaki	973,958	8,822
Total	34,093,793	394,575
1895.	Catties.	Chests.
Yokohama	24,242,032	266,484
Kobe	15,261,319	205,524
Nagasaki	711,318	8,322
Total	40,214,669	480,400

Two years have elapsed since the inauguration of the system of convertible notes. On more than one occasion during that interval the legal limit of issue has been exceeded, and a tax has

been imposed on the excess by the Government. The law does not definitely fix the amount of such tax. It merely enacts that the minimum rate shall be five per cent. Nevertheless, since five per cent. was always the impost levied by the Government, the public came to regard it as an invariable rate. But the volume of the over-issue recently swelled to twelve million yen, and the Bank deemed it expedient to check the demand for accommodation by raising its terms, whereupon the Government also decided to increase the tax on over-issue to 6 per cent. Thus for the first time a higher tax than 5 per cent. has been imposed. On the 10th instant, the over-issue did not fall short of twelve million yen, but two millions have since then been withdrawn.

Now that the period for the enforcement of gold monometallism draws near, prices of commodities have naturally shown a downward tendency. Amongst others, cotton yarns are steadily falling. Rice, which is usually regarded as the standard of the country, has also fallen, in consequence of gold's appreciation and silver's depreciation. Some people are inclined to think that so long as inequality exists between demand and supply, and so long as the Government continues to extend its financial organization, there will still remain an extraordinary demand for labour, while the purchasing power of the middle classes will remain unimpaired. The fall in prices must therefore be slow and gradual. Moreover, the recent enhancement of prices deprived manufacturers of profits, and purchases of materials even for productive enterprises have been considerably diminished. It may therefore be confidently asserted that a fall in prices will be the inevitable result of the gold standard's adoption in October next. So remarks the *Nichi Nichi*, but its estimate of the rapid sensibility of prices to exchange fluctuations, represents a theory that no Western economist will be willing to endorse.

Statistics published in the *Nippon* show that the various sorts of sugar imported into Tokyo during the latter half of 1896 and the first half of this year were as follows :—

Classification.	1st half, 1896. Barrels.	2nd half, 1896. Barrels.	1st half, 1897. Barrels.
White sugar (home made)	58,674...	38,853...	46,291
Molasses (white)	7,716...	1,999...	7,354
Molasses (black)	1,825...	1,958...	957
Brown sugar (Oshima)	899...	150...	245
Sugar candy	2,735...	4,364...	3,102
White sugar (foreign)	172,327...	238,442...	231,267
Brown sugar	19,438...	33,533...	39,382
Black sugar (<i>tamaita</i>)	314,197...	417,051...	472,038
Molasses (foreign)	3,298...	4,638...	3,543
Total	581,109...	740,988...	802,178

The price of sugar in 1896 ranged as follows :—

	Maximum. Yen.	Minimum. Yen.	Average. Yen.
White sugar (home made)	9.20...	7.07...	8.00
White sugar (foreign)	9.44...	8.92...	9.16
Brown sugar	4.92...	4.06...	4.52

Quotations for the first half of this year were :—

White sugar	8.88...	8.57...	8.73
White sugar (foreign)	8.96...	8.91...	8.93
Brown sugar	4.19...	4.00...	4.06

In a recent interview with a certain guest, Count Okuma is said by the *Nichi Nichi* to have spoken as follows :—"There are loud complaints among the public about the excess of imports, but it must be remembered that in a poor country only can be found an excess of exports. If the money known as the indemnity were spent to its last cent in the purchase of good things, trade would return to its former condition. There is nothing to cause anxiety in this matter." Turning to the subject of foreign loans the Count said :—"Five per cent. may be a fair rate and quite sufficient for the purpose. To send a few judicious officials to London or Paris and have enormous loans raised there might be an agreeable enterprise. How pleasant it would be to appropriate the loans so raised for the redemption of public bonds bearing five per cent interest. But loan bonds are now regarded as an essential element

of the economic world, however low their interest may be. Those whose bonds are redeemed might be perplexed about investing their money, and would soon endeavour to buy other bonds in spite of the interest on the same being extremely low." The guest is said to have been astonished at the Count's remarks, but why he was astonished we are not told.

Here is another striking financial utterance by the *Shogyo Shimpō*:—Since the suspension of the free coinage of silver, the value of the white metal has steadily fallen, and it may legitimately be expected that the losses by the Government on the enforcement of gold monometallism in October next will be immense. Many of the proprietors of silver mines in the Empire having become unable to carry on their enterprise at a profit, on account of the depreciation of the metal, have suspended operations. The annual production of silver in Japan, however, did not exceed 20,000 *kwamme*, so that the suspension of work at these mines is a matter of no great import so far as the country's mining industry is concerned. Is not that remarkable? Japan's action is charged, first, with giving silver a fictitious value so high as to threaten the Treasury with a deluge of silver *yen* for exchange; and, secondly, with causing such a depreciation of silver that mining for the white metal has ceased to be profitable!

The *Nichi Nichi* says that while Consolidated Bonds are quoted in Japan at present at 97.20 *yen*, the price has fallen in London to £96½ per thousand *yen* face value. The depreciation is ascribed partly to pressure in London, and partly to anxiety about the increasing diplomatic complications between Japan and other Powers. The cause is not exactly known, but shrewd merchants, taking advantage of the depreciation of the Bonds, are contemplating a scheme to bring back the same to Japan from abroad. An attempt has been made by the public, on the one hand, to introduce foreign capital by the sale of public securities, but now, on the other hand, a plan is under contemplation to buy back the Bonds with Japanese capital. Such a change in the spirit of the scheme is surprising; but is none the less admirable in showing that the merchants are so keen and shrewd in making a profit. Does our contemporary see a profit? We do not. The Japanese market is so small that if anyone attempted to unload a million *yen* worth of Bonds, there would be something like a *débacle*.

According to the *Shogyo Shimpō*, up to the 16th inst., the amount of Japanese silver brought to Yokohama from abroad in view of the gold system being enforced in October, was as follows:—From Singapore, 100,000 *yen*; from Bombay, 10,941 *yen*; from Shanghai, 650 *yen*; from New York, 47 *yen*, making a total of 111,638 *yen*. The influx of silver will increase day by day. In the Straits Settlements and other places the Japanese *yen* is exchanged for the Mexican at a premium of five *sen*. There is every reason to believe that the premium in question will slowly but steadily increase.

That is the kind of writing to be found in the majority of Japanese journals with reference to the silver question. We have always been firm believers in bimetalism, and when condemning the adoption of gold monometallism by Japan, we pointed out very clearly the embarrassment and loss that might be caused if gold appreciated to such an extent as to make the collecting and changing of silver *yen* a profitable speculation. But we never thought of suggesting that a difference of less than 2½ per cent. between the market price of the silver *yen* and its price so fixed by the new Japanese system, could possibly constitute a margin sufficient for such operations. The *Shogyo*, it will be observed, predicts, with the utmost assurance, that the influx of silver into Japan will increase day by day. So it may, indeed, if the appreciation of gold becomes very sharp; but there is nothing in the present ratio to warrant any such transaction. If a bank in the East came into possession of a number of *yen* pieces, and at

the same time, had occasion to transmit bullion to Europe, there would be an advantage in sending the *yen* via Japan for exchange against gold at the Treasury in Tokyo. Hence, so long as the market price of silver remains lower than the currency price in Japan, merchants or bankers will find the *yen* a good medium for transmitting gold to Europe or America, and for that reason we shall doubtless see a steady inflow of the coins, unless the ratio between the precious metals changes in favour of silver. But for speculative transactions of exchange, there is no room at present. We do not say that there may not be room, one of these days, but as yet there is not. Concerning the statement that the *yen* is at a premium of 5 cents over the Mexican in the Straits Settlements, if we are to understand that the premium is a consequence of this question of Japanese monometallism, the story is obviously absurd. With the dollar at 1/11½—supposing it were down to that—5 cents is the equivalent of 1.17d., whereas the difference between 1/11½ and 2/3 is only 1d. Yet the *Shogyo* says, "there is every reason to believe that the premium will slowly but steadily increase." Truly in matters of finance some of our Tokyo contemporaries are "away up."

NEWS OF THE WEEK.

The Japanese battleship *Fashima* was undocked at Chatham on 3rd July, and left in the afternoon for Newcastle-on-Tyne.

The trial of James Fergusson Morrison in H.B.M. Court for Japan, on a charge of larceny, is fixed for 10 o'clock on August 26th.

The Straits Legislative Council has passed a resolution voting a sum not exceeding \$100,000 for the Permanent Jubilee Memorial Fund.

The *Kamakura Maru*, the new N.Y.K. steamer, lost her fore-topmast during a storm in the Indian Ocean on her way out to Japan.

From the home papers we learn that the Judicial Committee of the Privy Council has upheld Sir Nicholas Hannen's judgment in the case of the *Normandie-Pekin* collision at Shanghai, holding the former vessel alone to blame for the accident.

Admiral of the Fleet Lord John Hay will be retired this month on reaching the age of 70. It is said that Admiral Sir Algernon Lyons, the Queen's principal naval *aide-de-camp*, will be promoted to the vacancy. The stipend of an Admiral of the Fleet is £6 and of an Admiral £5 daily.

In the Clyde Corinthian Yacht Club's race on 5th July, Capt. A. R. Brown's new schooner *Geisha* came in for rather rough handling, as she carried away both masts, in gybing at the Killeregan mark. Her mainsail sheet parted, her boom sweeping everything before it and snapping the masts a few feet from the deck.

The Kawasaki Electric Railway, projected by Messrs Morioka, Asada, Okada, and others, with a capital of *yen* 550,000, received a charter from the Authorities on the 16th inst. According to the scheme, the line is to run from Shinanomachi, Yotsuya to Kawasaki and Omori via Aoyama, Meguro and Ikegami, a distance of 13 miles and 46 chains.

Thus the domestic bard of Kobe's *Kata-phracted Kidneybean* on the coolie question:—

A coolie who worked on a ship,
Said these quiet times give me the pip,
So he knocked down a sailor,
The cook and a tailor,
And gave the policeman the slip.

The *Aden* survivors reached Plymouth on July 14th. All declined to say anything about the wreck, as they had come to an agreement not to be interviewed, since it might interfere with whatever claims they might have against the company. Mr. Gillett, who was still lame from a

wound in the foot, and Mr. Valpy proceeded in the ship to London. Mr. Valpy admitted having sent the telegram from Aden of the wreck to a London newspaper. All are doing well. A correspondent who saw Mrs. Gillett says that she was looking very thin and white, but otherwise was as cheery as ever.

The tea trade abroad seems to be extremely dull, remarks the *Nichi Nichi*. The market is now glutted with tea, and foreign firms in Yokohama are decreasing their purchases. Sales effected on the 16th instant amounted to 15,600 catties. Orders for goods below \$20 per picul appear to have been received from time to time, but the teas now in stock vary in price from \$28 to \$40. Foreign dealers are waiting a fall in prices.

If a London telegram that appears in Canadian papers can be credited, Mr. Chamberlain, Colonial Secretary, has written a letter to the colonial premiers suggesting an interchange of forces in the empire. According to his plan, the colonial regiments would come to England, British troops replacing them in the colonies. The troops are to be similarly armed and learn to act together. The War Office has closely examined the scheme, and it is believed everybody approves it.

The return of the Emperor and Empress to Tokyo is again postponed. The Majesties were to have set out on the 19th to reach the capital on the 20th, but the *Official Gazette* announces that the latest programme is as follows:—

Departure from the Palace in Kyoto, 8.50 a.m., 22nd.
Departure from the Shichijo Station, 9.20 a.m., 22nd.
Arrival at Shizuoka, 6.20 p.m., 22nd.
Departure from Shizuoka, 9.40 a.m., 23rd.
Arrival in Tokyo, 4.00 p.m., 23rd.

The Mosquito Yacht Club carried out its Saturday-Sunday cruise as originally arranged, nearly the whole fleet accompanying the Commodore, Mr. W. W. Campbell, to Uruga. Notwithstanding the dirty weather on Saturday night every one enjoyed himself and turned up in Tomioka Bay for tiffin on Sunday as merry as sand-pipers. The 17-raters of the Y. C. C. cruised to Tomioka on Sunday, as well as several other yachts, the combined fleets presenting a pretty sight when all were at anchor. Coming home the wind increased to a gale and every man Jack aboard the various craft got soaked to the skin. Still it was a very glorious holiday.

The Imperial Iron Foundry now in course of construction in Ouga-gun, Chikuzen, was established on the advice of Mr. Yamanouchi. Mr. Hotta, Chief Engineer, holds entirely different views to Mr. Yamanouchi, and by his advice it has been decided that the iron ore used in the Foundry shall be procured from mines in the interior. It is hardly necessary to say that Iwatano in Ou takes foremost rank in the production of iron, other districts yielding a comparatively insignificant amount. A pig iron foundry is to be established in the vicinity of Niigata, whence the materials obtained will, it is alleged, be transported by steamer to Wakamatsu in Chikuzen.

Here is a paragraph with a good wholesome *timbre*; we translate it from the *Mainichi Shimbun*:—"It is very true that, since the war with China, military experts have been visiting Japan in constantly increasing numbers to examine her fortifications and investigate her military strength. But the officials of our country also fix keen eyes on the military affairs of other States and take steps to have them observed. Those States, however, are so large-minded that they treat our investigators with civility and raise no objections to their comings and goings. It strongly behoves our people to follow the example of foreigners in this matter, and so long as no practical obstacle stands in the way, to treat the affair pleasantly and quietly; to shut our eyes, in short, and make no fuss. Unfortunately, the newspapers do not adopt that view.

They talk excitedly of such and such a foreigner having come here, and such and such another having taken drawings of a fort there, the general result being to impair the smooth progress of our foreign intercourse, and create unpleasantness. It were well if editors remembered their national obligations and behaved with more circumspection."

The Nagasaki journal has been reading the Captain of H.M.S. *Humber* a good lecture on the unnecessary amount of syren-blowing that takes place on his vessel. As our contemporary points out, a syren is never needed except in a fog: a steam-whistle is always sufficient. Yet for nearly an hour before the storeship weighed anchor at Nagasaki she gave prolonged howls on her syren at intervals of a few minutes, and then for nearly half an hour pursued her screaming way down the bay. Calculating the amount of fine that a similar performance would have cost the Captain in Hongkong, the *N. S. L.* works it out to the nice little sum of \$300. Syren playing in the Colony under those circumstances is a more expensive amusement than in Japan. Worse luck.

Messrs. Bandinel & Co., writing from Newchwang on 30th July, say:—A good deal of rain has fallen lately, and the prices of cakes are slightly lower; we quote:—

Bean oilper piculTls. 6.40
Bean cakes..... " 10 piculs...Tls. 6.20
Beans..... " 3 piculs...Tls. 5.00

The growing crops are thus far said to promise well in almost every district.

Freights are dull. The *Higo Maru* is loading at 15 cts. to Nagasaki.

Arrivals to date are 2 sailers and 209 steamers against 2 sailers and 210 steamers last year.

Vessels in port:—*Feiching, Higo Maru, Tamsui, Oslo, Sullberg, Pakhoi, Tientsin.*

According to the *Chuo Shimbun* Mr. Yamada, Superintendent-General of the Police Board, summoned on the 12th instant, by telegram, all the Directors of Police Stations in the capital to his Bureau, when Mr. Nagatani, Head of the First Section, on behalf of the Superintendent, instructed them that, as various anti-government movements are now carried on, such as exhorting the Premier and other Ministers of State to resign, and political lectures, are being held in various places, denouncing the policy of the Cabinet, drastic steps should be taken to suspend or disperse public meetings, should the proceedings assume a disorderly character. At a lecture meeting held in Aoyama the same night eight speakers out of ten were suspended in the course of their lectures. The country is fast returning to the conditions, the *Chuo* laments, which prevailed fifteen or sixteen years ago.

A considerable quantity of goods from the silkworm producing districts are being taken to railway depôts, and customers are waiting to receive them at their destination as quickly as possible. The railway station at Matsumoto in Shinshiu had to deal with about three hundred thousand cards of eggs during ten days. Yet serious inconvenience or rather bungling has arisen, says the *Nichi Nichi*, from no extra goods' vans being put on to meet the contingency. Disorder and confusion characterized these stations and silk-worm eggs, were piled up and exposed to the heat of the sun. Under the circumstances, not only was irreparable damage done, but it is feared that the most suitable period for rearing the worms has been lost. So not a little anxiety is felt by sericulturists at present. It is absolutely necessary that railway officials should endeavour to afford every facility to silkworm producers during this particular season of the year. Yet they fail to rise to the occasion.

Since the Tariff Bill was passed in America the trade in *habutae* has naturally fallen off considerably, orders having been received only on a small scale from Europe, India, and China. Many of the American merchants in Japan, in apprehension of the tariff then under discussion, exported large quantities of *habutae* in March

and April this year. The native dealers too grew extremely solicitous about the future of this trade, and a few of them proposed the advisability of organizing a company in America with a joint capital, in order that weavers might be sent there for the manufacture of the goods, and the duty be avoided thereby. Unexpectedly, however, considerable orders have of late been received from the West by many of the foreign firms in Yokohama, and sales have been effected at a price thirty or forty *sen* per 100 *momme* higher than before. Figured *habutae* for India, in particular, has risen to \$7.80.

According to the *Mainichi Shimbun*, the demand for American timber for the construction of bridges, cars, houses, and vessels has considerably increased of late. During the past few years, pine was chiefly imported from Oregon, but fir is now brought over to a greater extent. The latter is considered about ten per cent. heavier and much stronger than the former, while it is abundantly produced in Oregon. The freight for timber, however, is eight dollars gold per thousand feet, being one fifth of forty *sen*, the value realizable in Yokohama. The increase of import may be seen from the following figures:—

Year.	Value. Yen.
1894.....	30,913
1895.....	14,918
1896.....	148,555

It is said that Messrs. Okura & Co. have realized enormous profits by the import of timber from America.

The *Chuo Shimbun* reports that Mr. Matsumoto, Superintendent of the Railway Bureau, has made the following remarks on the railway scheme in Formosa:—No prospect of success lies before the Formosan railway. Even the lines laid in the most important parts of the island under the supervision of eminent engineers can hardly be expected to earn, after eight years, a dividend of four per cent. That is the most favourable computation. There is no reason to believe that success can ever be attained there by private enterprise. Nevertheless, the Government having arranged to pay interest on the capital during the period that the work is going on, it may be profitable to hold the shares during such a period, but this can only be done by persons who are not in need of money. The above statement seems to have had the effect of changing the intention of many who had formerly desired to invest money in the Formosan railway enterprise. Engineer Haraguchi is also reported to have resigned his position in the Company.

The results of the extensive journeys in Central Asia made during the last four years by Dr. Sven Hedin, who has only recently returned to Sweden, are even more remarkable than was at first supposed. Not the least interesting of Dr. Sven Hedin's discoveries were the ruins of two ancient cities now covered with the shifting sands of the desert of Gobi. Paintings and sculptures testified to an advanced stage of civilisation. Dr. Hedin is a trained observer, and he has taken home with him from his numerous journeys vast masses of material as to the geography and geology of regions either wholly or almost wholly unknown. He has been able to settle a very long standing controversy as to the situation of Lob Nor, and to place on the maps many important lakes in the northern plateau of Tibet, a region so inhospitable that it does not support over a great area a single human being. Wild horses and yaks roamed these deserted highlands in immense herds, but for two months not a human being was seen.

The longest period during which any man-of-war has been retained in the British service was that of the *Royal William*, built at Chatham in 1670, and not broken up until 1830. She was originally a 100 gun ship, but was cut down to eighty-four, guns. During her 130 years' existence she was repaired innumerable times, and little, if any, of the original material was in her when finally broken up. During the time of wooden vessels, the life of a ship-of-war was

counted as thirty years, while now, with apparently indestructible material, the life of usefulness seems to have been reduced to about fifteen years. As a matter of fact, so rapid have been the improvements in ships-of-war since 1880 that vessels launched five years ago are now so nearly obsolete as no longer to figure as first-class in the essentials. The introduction of water-tube boilers, electricity, and the chances of successfully applying the turbine motive-power to warships, promise, together with nickel-steel and aluminium, to effect still greater changes in navies and make the ships of to-day obsolete in probably less than half a dozen years.

Cricket for the nonce is "off" both in Yokohama and Kobe, but the Fleet will be down soon and then the game will revive amongst us. And how pleasant these Naval matches always are! As Mr. C. B. Fry, the famous cricketer, writes in the July number of the *Windsor Magazine*: "Half the charm of playing cricket is that you knock up against men as they really are. "There is something in the game that smoothes pretence and affectation, and gives air to character. You cannot be a cricketer and stay in your shell; your inwardness must come out in your play. Most people devoted to the game have quite forgotten the use of their shells, if they ever had them. Cricket finds the truth even more surely than wine does; so it speaks well for human kind that no pleasanter fellow is to be met than the typical cricketer." This is always the predominating note in naval matches here.

Further particulars received concerning the death of Mr. J. Austin Thomson, which took place at Kobe on 10th of August, show that he left home suffering from an attack of malarial fever, but he was then hoping that the sea voyage would speedily benefit him. It is gathered from his letters that he improved until after leaving Shanghai on his way to Hongkong. On leaving the latter place he grew very much worse and landed at Singapore in a state of very high fever and great prostration. After lying ill at an hotel in that town for a week, he gained sufficient strength to attempt the journey homeward. He cabled to his wife in Yokohama that he was leaving for home on account of illness; and later, on the 3rd, again cabled from Hongkong that he was a little better and would arrive by the French Mail on the 11th August. But the day before the steamer arrived at Kobe, he was pronounced by the ship's Doctor to be dying, and growing suddenly weaker, passed away the following morning, just fifty minutes before his brother came on board to meet him.

The trial of Inspector Job. Witchell, at Hongkong, on a charge of receiving bribes, closed in very dramatic fashion. The jury having found the defendant guilty, with a recommendation to mercy in consideration of his previous good conduct, Sir John Carrington, Chief Justice, said he would hear anything the defendant had to say in extenuation, and the following dialogue took place:—

Defendant.—As I have been found guilty of this abominable charge, I beg the mercy of the Court. I have a family and five children, and a European wife, my Lord, depending solely upon me. My whole estate in Hongkong at the present time, and when this charge was instigated against me, was \$1,198 for ten years, which my Lord, I shall give you my power of attorney to go to the Hongkong and Shanghai Bank or to any other place in this Colony to see my investments. That is my whole estate, excepting my household goods.

His Lordship.—I am very sorry indeed to see an intelligent and energetic officer like you fallen so low as this.

Defendant.—My Lord, I have not fallen.

His Lordship.—Stop, stop, now. I give full effect to the recommendation of the jury, and I direct that you be imprisoned for six months.

Defendant.—This is imposing infamy upon me; and on Mr. May's death-bed he shall reap the reward of that gross perjury, for upon my word of honour and upon my oath—

His Lordship interrupted and cautioned him if he did not behave he would have to increase the sentence.

Defendant then bowed to his Lordship, and left the dock.

CORRESPONDENCE.

LYING AND SLANDERING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I must ask you to be kind enough to give publicity through your columns to a denial of the damaging statements made by the *Nippon* a few weeks ago when commenting on the Sendai taxation affair. I received only to-day a copy of the *Kobe Chronicle* of the 26th ult., containing an article in which the *Nippon's* representations are quoted. This article I forward for insertion. In reply to it, I beg to say that the comments of the *Nippon* on the case are full of gross exaggerations and falsehoods. The correspondence which took place between myself and the British Minister, about which the *Nippon* professes to know so much, I am of course not at liberty to make public, the matter in dispute being still *sub judice*, but I take this occasion to say that the *Nippon's* account is a ridiculous parody of the whole affair.

The Emperor's picture episode quoted by the *Nippon*, as you will remember, concerns a former employé of the Sendai school, Mr. C. Carruthers. The "letter of apology to the city people who condemned his conduct" never existed outside the office of the *Nippon*. The excitement of the people of Sendai and the proposed meeting of denunciation are also fabrications. It is, I suppose, hardly to be expected that the silly youth, who, it is probable, supplied this information to the *Nippon*, should draw a distinction between one member and another of the hated race. He might have applied to any one of the 1,000 students to whom the facts of the picture incident were known. But any correction would have spoiled the paragraph—taken the supposed sting out of it. And this, sir, is the paper that is always boasting of its patriotism. Patriotism forsooth! There is no greater injury it can do to Japan than to stir up its fellow countrymen against foreigners by penning such lying paragraphs as the one I am now discussing. I shall of course insist on a retraction being published. But the rôle of stating and retracting is one that the *Nippon* is quite accustomed to play. I may add here that the tax question has been referred to head-quarters and that the school authorities are of opinion that the action of the local officials is irregular, and advise Dr. Seymour and myself to await instructions from Tokyo before taking further steps. The school officials are not satisfied with the explanation of the affair given by the tax collector. It is, sir, pertinent to ask why, if they are confident of the legality of their action, the municipal authorities took no steps to enforce payment in the case of Mr. Moor, who, nearly two years ago, was served with an assessment notice based on income. Mr. Moor did not pay and was allowed to move to Tokyo without being required to pay. I have ascertained that in Sendai in no case does the amount of the tax depend on the size of the house occupied. An old resident here assures me that for many years past income and not the size of the dwelling-house has been the basis of assessment. This information has been corroborated from various quarters.

Apologising for the length of this communication, I am yours, etc.,
WALTER DENING.
Sendai, August 11th, 1897.

[From the *Kobe Chronicle*.]

TAXING A FOREIGNER.

According to the *Nippon*, which is keen at ferreting out any trouble between foreigners and Japanese local authorities, a curious case has arisen at Sendai over an attempt to impose local taxes upon a foreigner. As the facts are related by a correspondent of the *Nippon*, it appears that Mr. Dening, at one time the editor of the *Fapan Gazette*, and now a teacher in the Second Higher School at Sendai, received an application recently for the payment of what appears to be local taxes to the amount of some ten yen. The tax in question is assessed upon the amount of income-tax, paid, and, as the Government has never attempted to impose this tax upon foreigners, payment of the local rate was naturally resisted. An official was then sent to press for payment, whereupon Mr. Dening communicated with his Minister in Tokyo, and, says the *Nippon*, received a reply stating that he was under no obligation to pay the tax levied by the prefectural assembly—firstly because no agreement had yet been made permitting the levy of such a tax, and secondly because no tax was levied upon salaries in his country. The correspondent is evidently incorrect in this part of his statement. Mr. Dening is, we believe, a British subject, and if his salary exceeded the limit under which exemption can be claimed, he would, if resident in England, have of course to pay income tax. But it is clear that no such reply

could have been returned by the British Minister, as the question whether income tax is payable in England or not has no bearing whatever on the point in dispute. However, Mr. Dening, relying doubtless upon advice from the Legation, declined to pay any such tax, and great indignation is said to have been aroused at Sendai in consequence. The officials informed Mr. Dening that the taxes were imposed in accordance with orders from the prefectural authorities, and suggested that he should pay the amount under protest. Mr. Dening, however, declined to do so, and there the dispute rests. We believe this question has never previously arisen in Japan in this form. Some years ago there was a controversy between the Japanese authorities and foreign landholders and leaseholders in Kobe with regard to the levying of local taxes on land and house property, and this dispute was, we believe, eventually decided in favour of the Japanese; at any rate, a building tax is paid by foreigners having property on the Hill, and to this there can be no reasonable objection. But, so far as we remember, no attempt has hitherto been made to levy other local rates, and it seems surprising that such action should be taken now, when within less than two years extra-territoriality will terminate and foreigners will be subject to the same imposts and taxation as Japanese. It is especially remarkable that such action should be taken at a place in the interior, where the success of the attempt at including the foreigner within the scope of local taxation can make but the most infinitesimal difference in the result of the levy. But, of course, the refusal of the foreigner to pay a tax which he believes cannot legally be imposed upon him has roused the local "patriot," and we learn that a meeting is to be held to consider the foreigner's "improper action." The correspondent of the *Nippon*, true to the traditions of the journal, attempts to inflame the dispute by stating that some time ago Mr. Dening acted disrespectfully towards the photograph of the Emperor, and afterwards wrote a letter of apology to the city people, who condemned his conduct. We know nothing as to this, but shall regard it as unworthy of credit until we have more than the authority of the *Nippon's* correspondent. But what a picture the writer incidentally draws of his fellow-countrymen. The people of Sendai are greatly excited, he says, over this action of the foreigner, and intend to hold a meeting of denunciation,—simply because the foreigner has refused on legal grounds to pay a local levy of ten yen!

MISSIONARIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I was interested in a conversation between a missionary and a Japanese, reported in the Correspondence column of your weekly issue for August 7th.

Although I have never been at Karuizawa, I am somewhat familiar with the camping ground from which I am writing, where every summer, for five or six weeks, a company of missionaries gathers to escape the heat of the cities, and to gain strength for the year's work.

I can hardly believe that the missionaries in Karuizawa devote themselves so entirely to play as their modest representative indicates.

Here, most of us give at least four or five hours a day to solid work, either on the Japanese language or in other preparation for the business of the year,—some of us counting these days, comparatively free from interruption, as our best time for study during the whole year.

Calls from those desiring to hear about Christianity are not infrequent, and the work for which we came to Japan is by no means forgotten. Last evening, as we watched a glorious sunset from the summit of beautiful Hieizan, I saw one of our number turn away from his friends and spend some time in speaking most earnestly of Christ to a group of *kago* carriers, who listened with evident interest.

Yours most respectfully,
Hieizan, August 11th, 1897. S. S.

HOW CAPT. STORNAWAY MADE A RAID ON ROBBER ISLAND.

(WRITTEN FOR THE "JAPAN MAIL.")

Captain Stornaway's career as a daring fur-seal hunter is too well known in this land of the Rising Sun to need any introduction from me as a preface to this story, but since he has not, for the last few years, been so prominently in the public eye as he was at the zenith of his power, I may as well say a few words in regard to him as a man and a story-teller. As we all know, Captain

Stornaway is not cast in the mould that heroes are supposed to be made in, but if he is small in body, in spirits he is the equal of John L. Sullivan. Many are the times,—he will tell you—when single-handed he laid out the whole boiling of a minnow deep-water crew. The little man is however, a great blusterer; but who has better right to be? Were they not also great blusterers, those roving Ishmaels of a hundred and fifty years ago, who scoured the seas in quest of prey, with every man's hand against them as theirs was against everybody's? The fur-seal hunters of ten or fifteen years ago were the latter-day Filibusters and Ocean Free-lances. Marauders they are generally designated,—and Captain Stornaway was the foremost of them all. It is several years since he told me this and other yarns, one of which I have already submitted to the public in the columns of the *Mail*. It was about the same time that he dined his marvellous stories into the ears of Rudyard Kipling, who seemed to have been fascinated by them, and proposed to have the great Wizard from the South Seas brought to Yokohama to transform Captain Stornaway's yarns into living pictures by his magic pen. Alas! the hand that wielded that pen is still. Of course it is impossible for me to relate the story in his own words, first because his language, although terse enough, is not exactly suited for publication *verbatim*, secondly because I could not possibly do justice to his style. So I will give it as a plain, unvarnished tale. But the reader must bear in mind that Capt. Stornaway is really telling the story; I have merely set the scene for him.

Robben Island is a small rocky islet off the east coast of the large island of Saghalien, and is fourteen miles distant from Cape Patience, between which promontory and the islet extends a low and dangerous reef. It is one of the principal fur-seal rookeries in the North Pacific, and was, at the time when this adventure took place, leased by the Alaska Fur-seal Company from the Russian Government. A vessel belonging to this Company was stationed off the island through the summer to prevent depredations being made by unscrupulous hunting schooners, who paid but slight regard to the laws of *meum* and *tuum*. Pelagic sealing had not yet been thought of, but a successful raid on one of the rookeries, even if it only consisted of a single night's drive, would amount to more in dollars than a whole summer spent chasing the seal herd in later days. Consequently, late in the season, just before the seals were quitting their quarters, several schooners were always hovering about the island waiting for a favourable opportunity to slip in and secure a few hundreds of skins, or perhaps more. Success meant a small fortune, while discovery only resulted in the seizure of the skins, and the vessel at the most. Now, however, detection means years of hard labour in Russian prisons or in the still more dreaded mines. The skins secured during these nocturnal and stealthy raids did not, of course, attain the same value as those carefully selected ones offered by the Fur Company, for gender or age made no difference: all encountered were indiscriminately slaughtered; haste was the watchword and quantity the principal object,—nevertheless, 25 dollars a piece, on an average, was the usual price obtained at that time.

Robben Island is separated from Saghalien by a dangerous reef, leaving only a narrow clear channel between it and the edge of the reef; through this channel the tides sweep with tremendous force. Cape Patience is a high promontory on Saghalien, overlooking the reef and the adjacent island, and back of it to the northeast is a small and snug anchorage, just big enough to hold a couple of small vessels at a time. It was there I found myself with my schooner, the *Fly-by-night*, one day in the beginning of October. I had already that year made two unsuccessful attempts to approach the island with the laudable intention of having a short but effective struggle with the seals. The previous year I had been here about the same time and had thought everything safe for making a run across when I suddenly perceived black smoke issuing from behind the island, indicating the presence of a steamer, or probably a Russian man-of-war,—enemies anyhow. I was not slow to increase my distance from such dangerous neighbours, and my intended raid that year came to naught. This year I had been there earlier in the summer, and found the schooner on watch, contrary to my expectations, with an auxiliary force on shore to reject any projected invasion.

The winter was apparently setting in early, as a light fall of snow greeted my arrival at the anchorage in the morning, and, when, an hour later, I ascended to the top of Cape Patience, it was a long and anxious look I cast at the island where it loomed up, dark and forbidding, in the now clear air. I drew a breath of relief when I

did not perceive the schooner at her anchorage, or any sign of the island being inhabited by its Russian defenders. My conclusion that the schooner had left for the year was confirmed by two Ainors who I encountered on my way back. They assured me that the schooner had left six days ago, but whether for San Francisco or Saghalien they did not know. I did not place much reliance on what they said, as I knew they would only say what they thought would please me, in the hope of getting a drink of gin, but in this they were disappointed, as I did not allow them to come on board the schooner. But what about the seals? Would the schooner leave before the seals had taken their departure? This question I asked myself as I scrambled down the precipitous side of the cape; I would find out before many hours.

The boys received me with loud acclamations when I got on board and told them my news; a couple of thousands of seals meant a couple of thousand dollars to each of them, and even my Japanese sailors, although on monthly pay, were apparently highly elated. We had the anchor up and the sails set before many minutes had passed, and went out from the little bay skimming before a fresh northerly breeze. I kept the schooner in for the channel, and as the tide was slack we made good progress, expecting to be off the rookery in another half hour. Just then, to my intense vexation, the wind died out light and shifted to the southwest, while a heavy fog bank descended on us from the low land round Patience Bay, and before we knew it, we were drifting out again to sea with the strong ebb-tide.

This was an unfortunate occurrence indeed; and it came so suddenly and unexpectedly that it fairly took my breath away; if we had not been in such an "Oh let us be joyful" state of mind, we should have seen the fog coming with the change of wind, and we should not have entered the channel, but kept off the southward around the island, and thereby perhaps escaped. Now there was no help but to trust in Providence and an early dispersal of the fog; but we looked at each other rather crestfallen, when we gathered in the cockpit and cursed in silence. A colony of sealions had a small rookery on a rock off the north point of the island, and we could hear their hoarse roarings for several hours, indicating that our drift was not so rapid after we had once got out of the channel. The wind was just strong enough to keep our sails full, and in this way the day and night, and the following day and night passed away without any sign of the fog breaking. How confoundingly aggravating it was to be drifting about like this, with the rookery so tantalizingly near, and clear weather perhaps half a mile from us! No wonder we cursed, both fore and aft.

On the morning of the third day, the wind freshened at daylight, and at 8 o'clock the fog began to thin, overhead at first and then to windward; breaking up in wisps that were quickly absorbed by a sickly looking sun that showed faintly above the sea. At 10 o'clock it was clear as a bell to north-west, and there, two points on the port bow, laid Robben Island, the blessed spot we were bound for, and only about six miles distant. Numerous seals were swimming in the water about the schooner, so we could see, to our satisfaction, that we were not too late after all, if nothing else occurred to prevent us from effecting a landing. All hands were intently gazing at the island we were nearing. The schooner was progressing at a fine rate, under the freshening northwest breeze. Now at last was the eventful moment approaching that we had been so fervently looking forward to. I had just laid my glasses down to light a pipe when a shout from one of the sailors, taken up over and over again by the rest, made me jump quickly to my feet, and a most perplexing sight met my eyes. As if by magic, two schooners appeared suddenly under a press of canvas coming round the south-west point and steering to the eastward away from the island; staysails and flying jibs were set as we looked at them, and with booms well out they fairly flew over the water. I could not make it out at first, and, going about with the schooner, I directed my gaze towards the island and beyond, expecting to see the watch schooner in pursuit. But nothing interrupted my view—nothing but the rocks, with a moving, struggling mass of seals occupying every available space. Since we had not come to solve riddles, as my head hunter sagely observed, we immediately set to work preparing for the great task before us, without, just then, giving another thought to the two schooners. Clubs and knives were put into the boats, and, after I had made one more tack to ascertain that nothing suspicious was in sight, we came to anchor within a couple of hundred yards of the

rookery. Boats were launched, and all hands started for the beach, leaving me and the cook on board the schooner. I had a crew of three hunters and a mate, Europeans, and ten sailors and a cook, Japanese; young, able men, all with some previous experience in clubbing seals, and eager for the fray. I stood watching for a moment when they landed, but had no time to observe their further movements, as I and the cook, who had no cooking to do that day, had to prepare for the reception of the skins and their salting in the hold. We had the hatches off, and were busy below when the sound of a boat coming alongside made me jump quickly on deck, anticipating that some unexpected reverse had been encountered on shore. But what was my astonishment when I looked over the side and saw a boat deeply laden with sealskins, and another just on the point of pushing off from the rocks. One of the hunters had sculled the first boat and stood at the stern evidently enjoying my amazement. Fifteen minutes had barely elapsed since they left the vessel, and here were two boats already loaded. When I perceived the man grinning in the boat I controlled my curiosity, and told him to pitch the skins on board, without making inquiry how they had been procured, which he obviously expected me to do. Contenting himself with volunteering the information that many hundred of skins were lying on the beach, he rapidly emptied the boat of its valuable contents. Three hundred and sixty-eight skins were brought off in this way, and these I covered with salt, layer on layer, as fast as the cook passed them down to me. I had in the meantime formed a theory as to how these skins were so providently left on the rocks at our disposal, and this theory I eventually found to be right.

Eight hundred clubbed seals were also lying on the beach beside the skinned ones, and all that day the work went on without intermission, skinning the seals and sending the skins on board for me to salt down. At 5 o'clock one hundred additional seals were slain and skinned, and I then sent word to the boys to come on board, to refresh the inner man, and have a needed rest ready for the following morning. One thousand and ten skins constituted the day's work. Next day I expected to get another thousand under hatches, as a long day was before us. It was 7 o'clock when the men came on board, and after a hearty meal every one turned into his berth, leaving one sailor to keep watch, which would be an hour a piece for each of the ten sailors. The fog set in again during the forenoon, and the wind was light from the north-west with a smooth sea. I could not sleep, so lighting my pipe I went on deck after having written up the log. The fog was still dense on the water, but above it was thinning fast; the wind was freshening. I watched this with some anxiety; an increasing wind would bring an increasing sea, and we were lying unpleasantly close to the rocks; still as yet there was no danger. At 10 o'clock I was thinking about going below when a dull sound, resembling a shot fired at some distance, attracted my attention; it was away off to the westward. The fog was now clearing away fast and I could see to some distance. All inclination for sleep had left me, and as it is the unexpected that generally happens, I stood with all my senses on the alert waiting for further developments. I had not long to wait; to the westward the fog had disappeared, and as the stars were coming out in all their brilliancy, their gleam disclosed the form of a large schooner, under mainsail, foresail, and staysail, standing in towards the island. One glance was enough; it was the *Leon*, the watch schooner; she was about a mile off; and that they had not yet seen us, lying as we were in the shadow of the rocks with no lights burning, I was certain. I gnashed my teeth with rage when I thought how much we lost by this unfortunate interruption, and when I called the boys up I am afraid my language was not of the choicest. Cautioning them not to make any noise we speedily slipped the chain, already prepared for this emergency, and hoisted the sails and were off before the Russians were aware of our proximity. I lost an anchor and fifteen fathoms of chain, but saved the 35,000 dollars worth of fur-seal and sea-otter skins I had on board.

Of course it was vexatious to have to take this forced departure, but still I was thankful for my lucky escape, and considering the little trouble I had had in procuring the skins, I had done tolerably well in my raid. With this consolation I kept on out of harin's way, and eight days later anchored in Yokohama harbour. Two of the hunters were grumbling at my hasty departure, but this did not trouble me in the least, as I was always accustomed to be master on my vessel, especially when the other two men sided with me.

At Yokohama I found the two schooners which had so prudently taken to flight when they saw us coming, leaving us the spoils. They had mistaken me for the *Leon*, but how they could do so, as the *Fly by Night* was rigged differently, neither I nor anybody else could understand. They were so flustered that they did not even wait to bring with them the skins lying on the beach, but left them for us, who were not in anyway loath to appropriate them. Still they had the impudence to ask me to divide with them, and when I laughed at them they brought a law suit against me. How that turned out everybody knows; for the rest of the year they remained a laughing-stock for the hunting fleet; and serve them right for their cowardice, say I.

By a San Francisco paper I saw that the *Leon* arrived there twenty days from the time I left Robben Island, so it could not have been that vessel which appeared that evening and scared me away from the rookery. This discovery I effectually kept to myself, and nobody else that I know of ever heard anything about it; if it had been generally known I should probably have had to experience many uncomfortable hours.

JOHN C. WERNER.

ARIMA CHRISTIAN CONFERENCE.

The number of visitors at Arima this year is much smaller than that of former years. However the Conference this year was, with the exception of numbers, in no respect inferior to those of the past. Never before were there more able papers, more interesting discussions, or more profitable services.

The Conference opened on Sunday morning, Aug. 1st, with a sermon by Rev. R. A. Thomson of Kobe. The evening sermon was by Rev. S. E. Hager of Tadotsu. These able sermons were listened to with interest by all who heard them.

At the organization of the Conference on Monday morning, Aug. 2nd, Rev. J. B. Hall, D.D. of Wakayama, was chosen President, and Rev. J. H. Scott, of Osaka, Secretary.

The paper of the day was then read by Rev. J. B. Hall, subject *The Hindrances to Christianity by other Religions in Japan*. The paper was an exceedingly helpful one. The writer showed great familiarity with the religions and philosophies of Japan, and pointed out how, by knowing the religious thought and life of the people, he had been able more efficiently to reach them with the Gospel. He classed these "Hindrances" as threefold: I. *Intellectual*, II. *Conventional*, III. *Emotional*.

The evening's devotional service was led by Rev. J. H. Scott, subject, *Mission work in Japan*. Interesting reports were given of the late Council of Missions at Karuizawa and also of the work of the different missions represented at the Conference.

The subject for Tuesday, August 3rd, both day and evening, was *The Jews in Prophecy and Providence*. The paper of the day was by Rev. R. H. Custerdine and the address of the evening by Mr. W. E. Towson. The chief thought of these two able discourses was that Christians had not given as yet proper attention to the evangelization of the Jews. "We apply all the blessings spoken to the Jews to ourselves spiritually, and all the curses we apply to the Jews literally." The Lord evidently has yet a great purpose to be accomplished by the Jews, and perhaps the return of the Jews of late in great numbers to Jerusalem indicates that the prophecies of God are now to be accomplished.

Both the morning and evening meetings of Wednesday were given to *Reports of Missionary Work in China*.

The remarks of Mr. J. B. Woods, M.D. on "Medical Work in China;" by Miss Shalders on "Women's Work in China;" and by Rev. J. A. Hearn on *Methods of Work, Hindrances and Results of Mission Work in China*, were all very interesting.

The subject of Thursday's paper, a very helpful one by Rev. C. A. Tague of Hiroshima, was *The Place of Prayer in the Missionary Life of Paul*. The evening's devotional service, with the same subject, was led by Rev. J. H. Hoden.

Friday, Women's day, was taken full advantage of by them, and proved to be one of special interest. The paper was by Mrs. R. A. Thomson of Kobe; subject, *The Place of Women in the Apostolic Church*. She held that although woman then did not hold positions of authority, she did hold position of importance and honour. The writer of the paper advocated a revival in the churches of to-day of the order of deaconesses. As interesting discussion was conducted by Mrs. Scott, Mrs. Warren, Mrs. Lambuth, and others.

Saturday's subject was *The Character of*

Christian Converts on the Mission Field. Although no paper or address had been assigned before, yet the "open discussion" of the day was especially interesting.

The closing sermon on Sunday morning, Aug. 8th, was by Rev. J. B. Brandrain of Kumamoto, and the evening's discourse by the President of the Conference. Both were especially helpful.

Thus closed the very interesting and profitable session of the Conference, characterized by deep interest, harmony, and presence of the spirit.

THE SECRETARY.

REPORT ON THE TRADE OF JAPAN FOR THE YEAR 1896.

Sir Ernest Satow, H.B.M.'s Minister to Japan, has forwarded to the Foreign Office a Report drawn up by Mr. Arthur Hyde Lay, Her Majesty's Acting Vice-Consul in Tokyo, on the Trade of Japan for the year 1896, which runs as follows:—

AGGREGATE TRADE.

The total foreign trade of Japan for the year 1896 amounted in sterling to the sum of 31,543,195*l.*, consisting of imports to the value of 18,776,896*l.*, and exports valued at 12,766,299*l.* The foreign produce re-exported from and the Japanese produce reimported into the country stood at 23,507*l.* and 137,277*l.* respectively. Deducting these figures from the total amount of trade, the following comparison between the past year and 1895 is arrived at:—

Year.	Imports.	Exports.
1896.....	£18,753,389	£12,629,022
1895.....	13,526,710	14,624,025
Increase or decrease ..	+£ 5,226,679	-£ 1,995,003

The whole foreign trade thus exhibits an increase of 3,231,677*l.* as compared with the preceding 12 months. The balance of trade was against Japan, imports exceeding exports by 6,124,367*l.*, an occurrence rare in the history of the nation's foreign commerce. This state of affairs arose principally from the increased demand for metals, textiles, raw materials, &c., consequent on the industrial activity which sprang up after the war, and from a considerable falling off in the quantities of silk and tea—Japan's two staple articles of export—sent abroad.

TRADE OF DIFFERENT PORTS.

The various ports of the Empire participated in the trade as follows:—

Port.	Value.	Total.
Yokohama	Imports...7,957,807 Exports...6,646,644	14,604,451
Hiogo and Osaka..	Imports...9,478,047 Exports...4,434,594	13,912,641
Nagasaki	Imports...1,092,475 Exports... 502,390	1,594,865
Hakodate.....	Imports... 36,130 Exports... 94,111	130,241
*Other Ports	Imports... 188,930 Exports... 951,283	1,140,213

Total trade 31,382,411
* Under the heading "other Ports," are included Niigata, Shimonoseki, Moji, Hakata, Karatsu, Kuchinotsu, Izuhara, Shishimi, Sasuma, Sakai, Fushiki, Muroran, and Otaru.

The import trade generally has increased by nearly one-third. In imports Yokohama marks an advance of about 30 per cent., Kobe and Osaka of 31 per cent., and Nagasaki of 50 per cent., while at Hakodate the imports have more than doubled the figures of the previous year. All the ports show an increase in exports, with the exception of Yokohama, which experienced a decline of no less than 2,565,293*l.*, or about 27 per cent.

DISTRIBUTION OF TRADE AMONG FOREIGN COUNTRIES.

The trade was distributed among the foreign countries chiefly interested in it in the following way:—

Country.	Imports.	Exports.	Total.
British Empire—			
Great Britain..	6,480,664	976,343	7,457,007
Hongkong ...	999,007	2,162,972	3,161,979
British India..	2,462,833	491,579	2,954,422
Australia	91,333	157,978	249,311
Canada.....	5,636	172,688	178,324
Total	10,039,483	3,961,560	14,001,034

United States ...	1,790,842	3,416,004	5,206,846
France	840,257	2,061,300	2,901,557
Germany	1,879,494	321,982	2,201,476
China	2,334,557	1,497,584	3,832,141

Comparing these figures with the corresponding ones for the previous year, the following increases or decreases in the trade of Japan with each country are shown:—

Country.	Imports.	Exports.	Total.
Great Britain	Imports.....Increase ...1,775,237 Exports..... do ... 122,332		Total increase...1,897,569
Hongkong	Imports.....Increase ... 123,870 Exports..... do ... 173,669		Total increase... 297,539
British India	Imports.....Increase ...1,212,955 Exports..... do ... 19,329		Total increase...1,231,984
Australia	Imports.....Decrease... 19,329 Exports.....Increase ... 19,193		Total decrease... 136
Canada.....	Imports.....Increase ... 4,208 Exports.....Decrease... 42,479		Total decrease... 38,271
United States	Imports.....Increase ... 824,555 Exports.....Decrease...2,437,131		Total decrease...1,612,576
France	Imports.....Increase ... 260,313 Exports.....Decrease... 577,208		Total decrease... 316,895
Germany	Imports.....Increase ... 605,207 Exports.....Decrease... 39,852		Total increase... 565,355
China	Imports.....Increase ... 39,852 Exports..... do ... 507,948		Total increase... 547,800

It is satisfactory to observe that British trade is more than holding its ground. Imports from Great Britain amounted in 1896 to 36 per cent. in the total, as compared with 34 per cent. in 1895. German trade did not increase to the same extent, amounting to 30 per cent. of the whole, as compared with 9 per cent. the previous year. Imports from the United States rose 84 per cent., but a decrease of over 40 per cent. took place in the exports to that country. The trade to China grew about 50 per cent.

IMPORTS.

The whole of the imports from foreign countries to Japan amounted, as above mentioned, and as shown in Table I. of this report, to 18,753,389*l.* in sterling and according to the annual trade returns published by the Japanese Government, to 171,459,555 dol. silver currency. As in previous years, these figures represented only the original cost of the goods imported at the place of production or shipment, and in order to estimate the amount actually paid by Japan for her purchases, an addition of 15 per cent. should be made to cover freight, insurance, and other charges. Adding this percentage to the sum given before, it will be found that in 1896 Japan's imports cost her 21,566,394*l.*, or 197,178,488 dol. (silver).

The principal articles which show an increase (see Table I.) are raw cotton and cotton manufactures (with the exception of drills, T-cloths, Turkey-reds and miscellaneous piece-goods). Wool has decreased slightly, but there has been a rise in the importation of woollen manufactures.

All metals, except tin, have been more largely imported than in 1895. A similar increase has taken place in the case of machinery and kerosene oil.

RAW COTTON.

A great impetus has been given to the import of this article by the abolition of the import duty from April 1; and with the continued prosperity of the cotton-spinning industry the import of raw cotton augments year by year, the quantity of raw cotton consumed by the 61 cotton-spinning companies belonging to the United Guild of Spinners was over 210,000,000 lbs., as against 184,201,357 lbs. in 1895. Of this amount 1,356,812 lbs. of Japanese cotton were used. The largest quantity

came from India, whence the importation of cotton into Japan is increasing largely, having more than doubled as compared with the previous year in amount about 130,000,000 lbs. China supplied over 60,000,000 lbs. and the United States of America 24,000,000 lbs. French India supplied about 3,000,000 lbs.

COTTON MANUFACTURES.

Grey shirtings amounted to 216,527 yards, as against 153,082 yards the preceding 12 months. The trade in g-lbs was bad: these goods are gradually being supplanted by 46 and 48-yard cloths. In fancy cottons the import was treble that of 1895. Business for the first six months was good, but during the latter half of the year clearances were so bad that a loss was shown on most contracts. Stocks have never before been so large. The same may be said of cotton, Italians, and velvets. Turkey-reds were unfavourably influenced by the native-dyed fabrics; although they show a decrease in quantity the stocks carried over were very heavy. Altogether the result of the year's trade in cotton manufactures was most unfortunate, owing to the commercial panic which prevailed during the latter six months.

COTTON YARN.

A substantial increase took place in the import of this article, the figures for the two years 1896-95 being 11,913 tons and 8,685 tons.

The chief expansion has been in gassed and fine plain yarns, the import of which has more than doubled. 2/42's and 2/32's have also increased. 38/42's alone have decreased. At the same time business proved unremunerative owing to the failure of the native dealers to observe their contracts and remove their purchases from importer's warehouses. Stocks at the end of the year were unprecedentedly heavy, in spite of the fact that most of the goods were sold "to arrive."

WOOLLEN MANUFACTURES.

The value of the woollen manufactures imported during 1896 amounted to 777,503*l.* more than in 1895. Blankets increased greatly, flannels and mousseline de laine almost doubled, while Italian cloth grew three-fold.

The stock of blankets carried forward was not excessive. The Japanese largely imported these goods direct for Government use. Wool has decreased slightly but it must be borne in mind that the quantity imported in 1895 was nearly double that in 1894. The market was, however, particularly unfavourable for woollens. Stocks have accumulated and have in many cases to be carried over till next season. The consequence is that very few fresh orders are going forward this year. The steady growth of the woollen industry in Japan will also lead to a diminution of exports from Europe. Serges and tweeds suitable for clothing purposes are made in Japan, and the coloured striped blankets, rugs, and shawls of native manufacture are gradually taking the place of the foreign article.

METALS AND MACHINERY.

With the exception of tin all metals show an increase over 1895, more particularly iron rails. Contract business was not without a small margin of profit, but all speculative ventures must have turned out badly. Prices have been steadily rising at producing centres, but excessive importation prevented any proportionate response in Japan. When the goods arrived to a bad market the Japanese dealer would not hold by his bargain, but left the importer with the goods on his hands for indefinite periods. Pig and bar iron amounted to 15 per cent., plate and sheet to 41 per cent. more than in 1895, while rails more than doubled.

AMERICAN COMPETITION.

Owing to the financial depression in America, that country has made its appearance as a serious competitor with Europe in the supply of machinery, rails, nails, and pig-iron. The dullness of trade at home caused manufacturers to seek an outlet for their goods abroad, and a bid has been made for the Japan market. It has been stated that American nails, sold largely in Japan, about the end of the year were quoted at 50 per cent. below prices current in the United States, and altogether defied the competition of the German makers who hitherto held the trade.

In the iron trade the principal feature was the competition of American rails, of which some 30,000 tons were sold at lower prices than British makers were willing to accept.

There appears to be a probability that American locomotive builders will secure a greater number of orders during the coming year. This is mainly due to the fact that British makers are not always able to supply Japan's requirements within the specified time. If British makers were able to supply them fast enough, it is practically certain that orders which have been given to America would have gone to Great Britain. Owing to the

exertion of representatives of British firms out here the list of approved British locomotive makers to the Government has been increased from 6 to 9, but even that does not appear to enable Great Britain to compete with the United States in time of delivery. If British makers are not really so full of work as is reported here and are in a position to effect quick deliveries, they should lose no time in publishing the fact, the great extension now being made on the Government lines together with the rapid formation of new private railway companies, will create a demand for a large number of locomotives within a comparatively short space of time.

To show how eager the American makers are to cultivate Japan it may be stated that one of the leading American locomotive builders, who has a representative here working solely in his interests, has recently sent out a mechanical engineer to render assistance in erecting the locomotives supplied.

A hint that might be useful to British manufacturers is that in sending catalogues out to this country, the approximate prices of goods should invariably be given. Without price, catalogues are so much waste paper. Government officials, in making up specifications, are bound to give some approximate prices in order to obtain a vote for the amount, and unless prices are specified time is lost in communicating home on the subject.

Doubts are expressed as to the permanence of American competition in machinery, rails, and pig-iron. It is certain that the prices realised have in many cases been under cost, but it must be remembered that the American manufacturers have had to contend against the strong prejudice which exists in favour of European and especially British goods. This they have endeavoured to break down by sheer force of cheapness, and some of their prices have been reduced far below what was necessary to effect the purpose.

Several points in the new competition are worthy of consideration. There is the remarkable co-operation of the railway and steamship companies which assists makers by liberal rebates, recouping themselves out of the high charges of the home market, and by facilities similar to those enjoyed by Germans, but which are not obtainable in England.

It is possible for an American manufacturer in almost any city in the United States to obtain a through rate of freight and bill of lading. In this way matters are much simplified, as there is only one ascertained charge to consider; whereas in purchasing goods in England, there are the items of railway carriage, dock dues, sundry charges, besides steamer freight. This is a valuable privilege, but in addition such low rates are quoted for large quantities that goods are actually conveyed two-thirds of the way across the Continent, and thence to Japan by steamer for less money than by the sea route from Liverpool or Glasgow.

American makers have also, as a rule, adopted the practice of quoting for their goods "packed f.o.b., New York," whereas the British prices are almost always subject to the addition of packing charges, which can rarely be estimated as closely as competition demands, and are consequently very unsatisfactory as far as the buyer is concerned.

SPINNING MACHINERY.

The importation of all kinds of machinery was greater than during the previous year, but the most noticeable increase took place in spinning machinery, to the extent of about 60 per cent. The figures are 207,395*l.*-327,289*l.*, and indicate the rapid development of the spinning industry.

SUGAR.

In the import of sugar an increase of about 6,400 tons is observable. One point worthy of mention is the increasing importation of beet sugar from Germany, a trade fostered by the bounties on export. Upwards of 6,000 tons passed through the Yokohama custom house alone. But this increase of beet sugar has had comparatively little effect on the other kinds of sugar imported, which denotes an increasing consumption in the country. Formosan sugar came in considerable quantities, and markets at first ruled higher than usual owing to the higher cost in Formosa, but with the accumulation of stocks and heavy arrivals of Manila sugar in October, prices for Takao sugar fell to under $\$4$, at which price the balance of stocks was cleared out late in the year. The whole of the sugar sent here from Formosa arrives during March-August, so that it is necessary to hold over a large proportion during the hot weather, when the loss in weight amounts to from $\frac{7}{8}$ to $1\frac{1}{2}$ per cent. During the past season a certain proportion of the Formosa crop came here under direct orders of Japanese from German and British firms in Formosa.

KEROSENE OIL.

The native production in the province of Echigo

shows an increase during the current year, although not so large as was at one time anticipated. Proper machinery for boring the wells has been imported from America, and the result is said to be very favourable, as in some instances the output has considerably increased. The consumption of oil in this country is, however, becoming greater year by year, and, although imports were larger than in 1895, sales were also greater, and the year closed with a comparatively small stock at the treaty ports. The demand for this article will be almost certain to increase with the growing spending power of the population. The average prices for the year under review were less than the preceding one, viz., about 25 *sen* per case, which was due to a fall in prices in America and Russia.

SHIPPING.

Several important shipping developments have taken place during the year. The Nippon Yusen Kaisha has opened lines to Europe, Australia, and the United States. The steamers formerly employed in the coasting traffic and in transport service, with several chartered boats, have been used for this service, but the company has ordered 12 new vessels of the most modern type, with large carrying capacity and steaming 17 knots. All these ships will be delivered during 1897. The opening of new lines, as well as the increased trade resulting from the addition of Formosa to the Empire, has absorbed most of the increment of tonnage recently acquired, and thereby prevented any serious cutting of freight, or interference with the local coasting trade of Japan.

The first sailing of the European line in March resulted in a reduction of freights to London from 35*s.* to 30*s.* 6*d.*, but eventually the Nippon Yusen Kaisha joined the London conference on condition that the privilege of quoting 5 per cent. lower was conceded. Since then freights have remained steady at 32*s.* for English lines and 30*s.* 6*d.* for the Japanese line.

The company has been so successful in obtaining cargoes that it is rumoured they have decided to make the service a fortnightly one. This appears unlikely, as it is calculated that the company incurs a loss of over 3,000,000 *dol.* (*yen*) per annum on account of the European and American services. Should they do so, with the high speed it is proposed to maintain, the advantage of 5 per cent. may divert a large amount of cargo from English lines. English trade may be benefited by such a reduction, as the freights to London during past seasons have been kept at a high level by the conference, which has given an advantage to German ports, to which rates were much lower.

The lines to Australia and the United States have only recently been established, and it is too early to give an opinion as their prospects, but the former will undoubtedly break the monopoly which has so long controlled rates to Australia.

The Nippon Yusen Kaisha had, at the end of September, 1896, 63 steamers, with an aggregate displacement of 136,579 tons, having within the last three years added 18 steamers, or 62,421 tons. The company, with the approval of the shareholders, increased its capital from 8,800,000 *yen* to 22,000,000 *yen* in June, 1896.

The Toyo Kisen Kaisha has been formed, with a capital of 7,500,000 *yen*, for the establishment of a line across the Pacific, and three vessels have been ordered for that route. This company has the intention of purchasing tank steamers for the kerosene oil trade between Batum and Japan.

Speaking generally the freights on outward cargo were maintained at a fairly equal level throughout the year, but for homeward business a considerable decline took place. Rates across the Pacific were low, which was principally due to the fact that the quantity of cargo going forward was less than the previous year. The continuous increase in the number of steamers trading with the Pacific coast is another cause for remark, but the most important feature of this trade is the large amount of cargo now brought to Japan by these vessels. There are several reasons for this. Both steamers and railroads are willing to accept very low freights; the diminution in the supply of timber within easy reach of the lines of communication and the generally enhanced cost of labour have so raised the prices of timber in Japan that it is possible to import with advantage from America for the supply of towns on the coast; and the American export trade has largely developed, as mentioned in another paragraph.

The P. and O. Co. have extended during the year their line of "Intermediate" steamships, which consists of a number of high class cargo boats with good accommodation for a limited number of passengers. As the ships go through to London without change and make fairly quick passages, they are well patronized.

The "Rickmers" line (German) has also been established to ply between English, German, and

Japanese ports, making a monthly trip. It may be noted that German lines have a good reputation for speed and regularity. It should also be mentioned that the rates of freight from Hamburg and Antwerp are always lower than from English ports.

The total tonnage of the Japanese Mercantile Marine at the end of the year was (approximately) 360,000 steam, 27,500 sail, consisting of—

LAW FOR THE ENCOURAGEMENT OF NAVIGATION.

So far, the law for the encouragement of navigation has been practically inoperative. Application was made on behalf of several vessels for subsidies under the terms of the law, but up till the end of the year no steamer was passed by the Government surveyors, who construed the text of the Statute with all possible strictness. At present (April, 1897) only one steamer, the *Kinshu Maru*, late *Kintuck*, has obtained a subsidy, but only after the expenditure of large sums by the owners in bringing her up to the required high standard. The *Kanagawa Maru*, a fine new vessel built in Glasgow, of which the plans had previously been submitted to the surveyors, failed to satisfy the tests applied.

EXPORTS.

A falling off in the export trade of about 15 per cent. was experienced. This was due to the smaller business done in the two staple articles of export silk, and tea, which together show a decrease of nearly 2,300,000*l.* Miscellaneous exports show an increase of over 500,000*l.* sterling.

RAW SILK.

This, the chief staple of export amounted to 5,225,325 lbs., valued at 3,123,316*l.*, as against 7,746,728 lbs., valued at 5,185,728*l.*, for the previous year—a difference of about 60 per cent. In order to account for this large deficit, it is necessary to remark that the silk trade of 1895 was exceptionally good in all consuming centres, and that the average price ruling in Japan throughout the year was 824 *dol.* (silver), whilst the average for the past year was only 748 *dol.* (silver) per picul (133½ lbs.). Both years started on an almost equal footing in regard to the stocks on hand, the slightest preponderance being with the year just ended. America, the chief consumer of Japan raw silk, had in 1895 taken the large quantity of 1,972 tons at the high prices before mentioned; and this appears to have been more than ample for requirements, seeing that during 1896 only 1,041 tons, or little more than half that quantity, went forward to New York. The agitation caused by the currency question in the United States, and the unsettled state of finances in that country, brought about an almost complete cessation of business in the staple under review during the first half of the year. The new season in Japan, which commences on July 1, opened under very unfavourable circumstances. Climatic influences were very much against the successful rearing of the silkworm, the months of May and June being unusually rainy. Some time before the crop was harvested it was evident to close observers that it would be very short of the previous year's yield; probably to the extent of 20 per cent.

Foreign experts were further made uneasy by the receipt of reports from many of the chief silk districts to the effect that the silkworms were dying off before completing the cocoon. The fear then arose that the dread disease of "pebrine," (which played such havoc with the silk of Italy some 40 years ago) had found its way into the country. It would indeed appear from expert enquiry recently instituted, that the Government officials were aware that this disease had actually, to a slight extent, existed in the country for some years past. But the developments of the past season have so alarmed the authorities that a bill has been passed by the Diet enforcing strict examination of all silkworm eggs, in order to ascertain whether or not they are free from disease. The coming season in June, 1897, will be watched with great interest by all

those engaged in the silk trade throughout the world. The poor crop of 1896 caused Japanese spinners and dealers to purchase recklessly cocoons at very high prices, regardless of the crops in Italy, France, and the Levant. The outcome has been that during the latter half of 1896 they have been unable to market their stocks, being undersold by the cheaper silks of Europe. The year closed most disastrously for all concerned in the trade. In the export to Europe the falling-off has not been so marked.

One of the chief causes of complaint regarding Japanese raw silk is in the colour. Silks from the province of Shinshu, which were formerly noted for their brilliant white colour, have greatly changed for the worse in this respect. Perhaps the reason may be found in the largely increased number of silk filatures established in the province, where the supply of cocoons is inadequate to meet the increased demand, the result being that purchases have to be made further afield in the districts where the quality of cocoon is inferior. It may, on the other hand, be perchance that the disease of the silkworm referred to causes a discolouration of the cocoon, with resulting inferior silk.

Fluctuations in prices were very trivial during the latter half of the year, the greatest depreciation being between January and May, when prices of silk suitable for the American market fell 175 dol. (silver) per 133½ lbs.

A Bill has passed the Diet (March, 1897) providing for the payment of a bounty to Japanese merchants on all raw silk exported direct, that is, without passing through the hands of the foreign merchants, to whose exertions the silk export trade owes its existence.

TEA.

The tea crop last year was a good one; much better than usual, especially as regards the make of the leaf. The average price has been about 15 per cent. less than in 1895. During the early months of the year trade in the home markets was very dull, but after the United States presidential election quite a "boom" ensued, and a large and profitable business was transacted.

Japanese merchants are beginning to be very anxious as to the consequences of the competition they are subjected to by Indian teas. Hitherto they have done little, if any, harm to Japan, either in the United States or Canada, although strong efforts have been made to introduce them, and large sums of money spent in advertising. Japan teas are popular in America, light drawing teas being in greatest request there. The export, which was much less than the previous year, amounted to 41,321,963 lbs., valued at 690,336. The falling-off is due to the same causes which affected the raw silk trade, in a slight degree to the competition of Indian teas above mentioned, and partly to carelessness of preparation and inferior quality in certain instances.

The Japanese Government are alive to the importance of preserving the tea market, and have recently had under consideration a suggestion that 70,000 dol. should be devoted to the encouragement of tea export. The Japanese are endeavouring to open up a market in Russia for their teas, but so far without marked success.

RICE.

The year 1896 was a bad one for exporters of rice. Prices were kept up by native demand springing from a shortage in the crop, which, as mentioned elsewhere, was 10 per cent. less than that of 1895. Judging from the fact of the increased earning power of the people generally, the chances are that the quantity of grain available for export is likely to be smaller each season. The Japanese naturally prefer their own cereal, and will consume no other as long as their resources suffice. Beyond dispute the consumption in the country has very greatly increased.

COAL.

The export of coal has expanded, showing an increase of over 300,000 tons, but values for this article also show considerable advance. This advance is due to increased native consumption for use in factories, on railways, &c. The demand for export has also grown considerably, and prices, in consequence of these two factors, have increased some 25 per cent.

STRAW BRAID.

Straw braid (or straw plaits) is one of the articles of export which has lately shown a sudden development. In 1892 the amount exported was valued at 16,810. (155,162 yen); in 1895 at 150,326. (1,387,643 yen); and in 1896 at 242,355. (2,234,353 yen). The braid is chiefly made at Kasaoka, Bitchu, Oita, and a few other places. Great efforts are being made on the part of manufacturers and makers to push the sale abroad.

MATTING.

The export of matting was checked owing to

shoddy manufacture, the result being a decrease in value of over 50,000. The inferior goods sent to foreign countries have to a great extent injured the reputation of Japanese matting.

MATCHES.

The quantity of matches exported is gradually increasing. They are, however, of very inferior quality, and cheapness is their sole recommendation.

FISH OIL.

The tidal wave in summer did tremendous damage to the production of fish oil, about 3,000 tons being destroyed by it. The amount exported was about half of the previous year's figures.

By the middle of December a very good winter's catch was reported.

COTTON YARN.

The export trade in cotton yarn, which only took its rise a few years ago, is advancing rapidly, assisted by the abolition of import duty on raw cotton. Last year, 7,723 tons, valued at 436,522., of export, compared with 2,103 tons, valued at 112,068., the preceding year. China takes the bulk of this yarn, and Japan is endeavouring to supplant Indian yarn in her markets.

COPPER.

Export business during the year was on the same level as regards quantity, but showed an advance in prices. The principal destination of the metal was England and the continent of Europe.

SILK HANDKERCHIEFS AND PIECE-GOODS.

Silk handkerchiefs and piece-goods fell off to the extent of over 300,000., owing to the same causes which so disastrously affected the raw silk export. The trade in fancy piece-goods, such as *kaiki* and brocades, has been ruined, apparently beyond remedy, by deliveries of inferior qualities in past seasons.

CLOCKS.

The export trade in clocks at one time promised substantial extension in the Chinese market, but several of the late shipments were returned owing to defects, which arose from the irregular work of the native-made machines. Japanese manufacturers are beginning to realise the utility of purchasing foreign-made machinery, instead of the imitations which have been so much patronised since the recent boom in industrial development.

INDUSTRIES, &c.

Great activity has been manifested in the field of industrial and commercial undertakings since the war. The following figures show the capital invested in new enterprises during the past two years:—

	1895. Dollars.	1896. Dollars.
Railways	229,780,290	553,230,000
Banks.....	39,220,000	122,405,000
Companies.....	70,840,000	264,014,500
Total	339,840,000	939,649,500

JOINT STOCK COMPANIES.

The number of joint-stock companies in existence at the end of December was 1,729, with capital to the amount of 260,916,797 yen. The month of greatest activity during 1896 was January; December being the most quiet. Many of the companies no doubt were started on a purely speculative basis, and numbers of them were abandoned before long. Among many one company mentioned in the Trade Report for the first six months of the past year, the "Conscription Insurance Joint Stock Company," whose object was to guarantee support to the families of insurers drawn for conscription, being unable to raise the proposed capital, first reduced the sum to be subscribed by half, and then, failing to secure popular favour, the project was abandoned.

OSAKA HARBOUR CONSTRUCTION.

A grant of 468,000 yen per annum for 10 years from 1901 (the total cost is estimated at 14,500,000 yen) for the construction of a harbour at Osaka was passed in the last session of the Diet.

The question of constructing a harbour at Tokyo is at present under consideration.

DOCKS.

At Yokohama ironworks four new docks are projected. Only two of the docks have as yet been commenced, and the dimensions of the other two are not yet fixed. One of the docks is expected to be completed and ready for the reception of ships shortly. The other will probably be finished in December, 1898. The Kawasaki Shipbuilding and Engineering Yard at Kobe has begun the construction of a new dock 440 feet long, 100 feet wide, and 37 feet deep. The work of increasing the customs accommodation at Kobe, which was of most urgent necessity in view of the expanding trade of the port, is now being undertaken.

COTTON SPINNING.

During 1896 the cotton spinning companies belonging to the United Guild of Spinners produced 165,866,084 lbs. of yarn, as compared with 150,000,000 lbs., the previous year's production. The number of spindles at the close of the year amounted to about 1,300,000. Raw cotton to the extent of 206,553,321 lbs., was consumed, and of that quantity 1,356,812 lbs. were Japanese. An increase took place in consumption of cotton of 22,351,964 lbs., compared with 1895.

The subjoined list shows the condition during the last six months of 1896 of 22 of the principal spinning companies:—

Factories.	No. of Spindles.	Number of Employees.		Daily Wages.			Profit per Spin- dle.
		Men.	Women.	Men.	Women.	Sen.	
Settsu	35,328	660	1,673	70 to 21	85 to 7	5.71	
Hirano	27,648	403	1,034	80	18	3.48	
Tokyo	26,052	368	1,800	200	10	4.53	
Sakai	16,128	286	750	55	5	2.48	
Miyu	5,678	985	3,401	60	9	8.34	
Shimotake	5,136	91	218	45	9	3.64	
Hakuyama	10,752	147	358	231	9	1.59	
Owari	30,344	373	1,336	40	6	2.17	
Kurume	20,112	287	560	101	141	2.88	
Koriyama	20,368	286	793	50	5	3.77	
Kanagawa	18,848	657	9,200	50	5	2.76	
Amagasaki	30,628	423	928	45	6	2.41	
Himeji	4,228	210	153	35	3	4.51	
Kuraahiki	15,108	295	1,455	61	5	2.22	
Osaka	56,374	940	2,648	61	5	3.03	
Senbu	19,872	269	750	40	15	3.10	
Naniwa	21,922	430	1,560	40	10	2.77	
Okayama	25,488	2,407	—	—	—	2.52	
Tanahashi	14,052	718	555	—	—	2.22	
Wakayama	17,020	200	610	29	24	2.27	
Uwajima	4,228	84	308	30	21	3.76	
Milke	19,835	307	1,090	30	4	3.66	

* Average.

† Men and Women.

* Average.

† Men and Women.

The average profit per spindle was about 3 dol., not much lower than that for the first six months, in spite of trade depression. Rates of wages are rising, and in some of the mills it is a matter of difficulty to obtain a sufficiency of labour. The price of coal also rose some 10 per cent., while yarn sold at 91 dol. 40 c. per bale, as compared with 93 dol. 20 c.

WEAVING INDUSTRY.

The weaving industry continues to show signs of expansion. The total number of weaving establishments in 1896 was 660,408, with looms to the number of 949,123, giving employment to 1,042,866 weavers, of whom 57,850 were male, and 985,061 female. The value of the products was:—

	Value. Yen.
Silk textiles	46,471,401
Silk and cotton mixtures	10,281,272
Cotton fabrics	37,083,757
Hemp manufactures	2,011,467
Other manufactures	339,338
Total	96,187,235
Equivalent in sterling... (about)	10,000,000.

RAILWAYS.

According to the latest published statistics 2,681 miles of private, and 792 miles of Government railway lines were laid down, of which 1,697 private, and 593 Government lines were open to traffic. In 1895, 1,538 miles of private, 581 miles of Government railways were open to traffic, so that we observe an increase of 171 miles in all.

GENERAL REMARKS.

During the first three or four months of the year the demand for commodities which sprung up after the war was sustained, and business was conducted in a satisfactory manner. The inevitable reaction, however, was accelerated by the results of the disastrous tidal wave and terrible floods which prevailed in the summer and autumn of the year. Heavy damage was inflicted in many cities and villages throughout the Empire. Widespread disorganization of traffic ensued, and the rice crop experienced serious diminution, being about 10 per cent. less than that of the previous year, and the worst since 1889. The native banks withdrew the financial facilities they had hitherto extended to Japanese customers, which resulted in several failures, and contracted business generally. The consequent tightness of the money market caused the abandonment of many joint stock companies and industrial enterprises. In some cases where machinery had been ordered from Europe the contractors are even now experiencing difficulty in obtaining final payment from the merchants who placed the order.

Owing to change of fashion in the United States and collapse of trade due to the political situation, raw silk experienced an unparalleled absence of demand in the last half of the year.

Towards the end of the year buying diminished. The revulsion is naturally not so perceptible at present as contracts are given out a long while ahead, but by the end of 1897 a very sensible diminution of general imports as distinguished

from Government requirements will, no doubt, be discerned.

The rise in the cost of labour has not yet had time to affect appreciably the volume of business done, but it is probably one of the contributory causes to the lull now being experienced.

CONTRACTS.

In the export trade the foreign buyer who desires to avoid difficulties must exercise unceasing vigilance on all points connected with his contract, and even then be prepared to allow a very liberal margin of concessions for contingencies as to the quality and delivery. During the past year Kobe trade in matings and strawbraids has been a fertile source of trouble in this respect.

The difficulty is one which every branch of trade suffers from in turn. As soon as any article shows signs of extensive demand from abroad, deliveries are delayed and quality deteriorates. If the foreign purchaser insists on compliance with the contract, the guild of dealers in the particular article may boycott him and obtain the assistance of other guilds to that end.

Under these circumstances each delivery against a contract becomes a subject for fresh bargaining, but where prices have risen to any extent it is almost impossible to obtain compensation for the differences without risking an entire cessation of business.

On the other hand, some of the State Departments go to the other extreme and impose the stipulations of contracts for Government purposes with a rigidity which has no other effect than to increase the risks and therefore the cost of the articles required. Of late years the regulations have been administered with increasing severity, and it would be to the interests of all concerned if some modification were introduced.

CREDIT.

The extension of credit in Japan has largely increased in the past ten years, but there are not wanting signs that the people do not yet appreciate its value. Dealers had been in the habit of receiving payment from their country customers by means of promissory notes at 90 days, which were discounted by the native banks. Early in October the wholesale cloth merchants of Tokyo, finding themselves in trouble on account of the rise in interest and the difficulty of renewing their notes, combined to appeal to their creditors for special consideration, in other words to dictate their own terms. The amount involved was something over \$2,000,000 and the merchants proposed that their notes should be extended for two years. Eventually a compromise was arranged, but the banks took alarm at the possibilities revealed by this incident. They realised that similar combinations might be formed to their detriment, and as a consequence have gradually reduced the extent of their accommodation in this respect. It is this curtailment of credit which has been largely responsible for the dull trade of the end of the year, the native dealers being by this means reduced to a smaller scale of transactions.

USEFULNESS OF FORWARDING CATALOGUES.

The uselessness of sending to Her Majesty's Vice-Consulate at Tokyo elaborate catalogues was dwelt upon by Mr. Longford in last year's trade report. Opportunities are open to manufacturers to bring their names before the Japanese by means of the following journals which are published in Japanese. The *Nichi Yei Futsu go Zasshi*, journal of Japanese and English industry, which has an English representative resident in Tokyo, and the *Eikoku Shogio Zasshi*, a reproduction of the "British Journal of Trade."

POPULATION.

The population of Japan, according to the last census, amounts to 45,279,628 souls, of whom 21,345,750 are males and 20,924,878 females.

REPORT ON THE RAILWAYS OF JAPAN.

Sir E. Satow, writing to the Marquis of Salisbury, transmits a Report drawn up by Mr. Lowther, intended to act as a supplement to the Report on Railways drawn up by him in 1895. The present Report shows the advance made in the railway system since the above date, and gives also information as to schemes which it is intended shall be carried out.

GOVERNMENT LINES.

No great advance has been made in construction of Government lines since the Report of 1895. The total length of Government lines in operation, as then given, was 580 miles 69 chains. In the last Government report, issued in 1896, the total length is given as 593 miles 2 chains showing an increase of lines opened to traffic of 12 miles 13 chains during the year, and during the same period 34 miles of railway were begun.

The Government lines now open are:—

	Distance.	
	Miles.	chains.
The Tokaido	440	30
Shinano and Echigo	117	3
Oshiu and Dewa	35	40
Total	593	2

PRIVATE LINES.

In 1895 there were 1,538 miles of private lines open to traffic. This has been increased by 150 miles to 1,697 miles, which gives the total amount actually in operation. Further lines of railway extending over 984 miles have been laid down, but are not yet opened, showing an increase of 470 miles over the previous year of lines laid down. Beyond this charters have been granted for lines to extend over 476 miles.

The most important Government line, which has been partly built, is that between Hachioji and Nagoya, passing by Shiojiri, and thence west by Tajiri to Nagoya. By a reference to the map it will be seen that this will be an alternative line to the present main line between Tokyo, Osaka, and Kyoto, the principal centres of Japan.

The other important line undertaken by the Government is that branching off at Fukushima from the Japan Railway Company's line, which runs north from Tokyo, and touching the west coast at Akita, which it may be important some day to be in touch with, and thence running north to Aomori, likewise the terminus of the Japan Railway Company's line. There is further an extension of the line on the west coast from Kanagasaki to Toyama, and another further south, running along the coast from Yonago to Tottori and then inland, joining the main line to Kobe at Himeji; also a small piece of line in Kishu running from Yatsushiro to Kagoshima. There is also a short line connecting the dockyard at Kure with the main line. The majority of these lines are only just begun, and will require some years to be completed, as will be seen by reference to the extract from the Budget of 1897-98 quoted below.

Besides this it has been quite lately decided, that a line should be undertaken running from Matsuyama northwards by Takayama to Toyama, crossing a pass in the Hida range which is over 6,000 feet high. This railway, if it is built, will be very costly, and it is difficult to see how it can be remunerative, while its strategic value would hardly appear sufficient to compensate for the large outlay. As a further part of this system, it has been proposed to connect Gifu with Tajiri on the line from Shiojiri to Nagoya.

In Shikoku it is also proposed to build a line from Tokushima to Yawatahama, via Kochi, and a branch to Susaki.

GOVERNMENT RAILWAY BUDGET.

The Government has introduced and passed its Railway Budget for 1897-98, which stands as follows:—

	Amount.	Total.
Estimated receipts—	£	
1. Traffic	1,150,963	
2. Miscellaneous	49,895	
		1,206,828
Estimated disbursements—		
1. Salaries and wages	39,829	
2. Provision for injuries, deaths, &c.	401	
3. Compensation and legal expenses	248	
4. Foreign employes	3,321	
5. Interest	99,062	
6. Working expenses	501,391	
Reserve		644,252
Of which is set aside for general reserve fund	10,000	
And reserve for incidental expenses	10,000	
Received for material sold	599,509	
Paid for material bought	599,509	
Thus showing a net profit of		542,576

LINKS OPENED SINCE 1895.

The following is a list of the private companies, and of the lines which have been opened since 1895:—

Line	Between.	Distance.

They do not call for any special observations, the lines being principally branch lines connecting the present systems, but there is a tendency to connect the west coast with the east, which up till recently has been absent owing to the difficulties of crossing the mountains, which form the backbone, as it were, of the country.

Since the date of the Government report, a small line has been opened from Mito to Ota, and part of the line from Mito to Iwanuma as far as Taira, and a short line from Utsunomiya (Tokio) to Tonobe.

The following companies have also received charters for lines:—

Name of Co.	Location of Line.
Sanuki	Marogame-Takamatsu.
Hoshu	Idamuri Vegetamuri.
Kioto	From Kyoto through Mikata to Maizuru, Maizuru to Miyazu, Maizuru to Kobe, Mikata to Wadayama.
Chinyetsu ..	Takaoka-Shiohata.
Narita	Sakura-Sawara.
Sobu	Sakura-Narita Choshi.
Hokuyetsu ..	From Naotsu through Niitsu to Shibata, Niitsu to Nuttari.
Kozuke	Takasaka-Shimonia.
Sangu	Uji Yamadacho Miyagawa.
Toyokawa ..	Shimochimachi-Shigarakimura.
Hokkaido ..	Wanishimura-Muroan Harbour.
Boso	Chiba Soga and Narito Jechimiyu.
Kayo	Kayo Kashiwabara Mikkaichimura.
Nishinari ..	Kawagatsuma Oaza Minami Kwan-sen-Umeda.
Karatsu ..	Karatsumachi Ushitsu.
Nankai	Minatocho Wakayama.
Kujima	Kurashiki-Mino.

And the following lines are likewise to be built:—

Toyama to Naotsu.
Shibata to Chuhonai.
Kurozawajiri to Yokoto.
Hiroshima to Hamada.
Ota to Miyazaki.
Kurume to Yamaga.

PROVISIONAL CHARTERS.

Provisional charters enabling companies to be formed and construct railways in the localities indicated have been granted to the following companies:—

Name of Company.	Location of Line.
Chukuh	Umi-Komada.
Kanto	Hakodate-Shimoyukawa.
Kibi	Ishi Mura-Asao Mura.
Yamagi	Yamaga-Yoroida.
Tsuga	Kawashima-Karasuyama.
Iwakoshi ..	Koriyama-Sakaya.
Biei	Ichinomiya-Yataomi.
Uwajima ..	Uwajima Yoshino Mura.
Imari	Imari Shin-Mura.

The annexed list is that of all the private lines in existence at the end of 1896, with the amount of their capital and the total mileage of road which it is their intention to construct:—

LIST OF THE CAPITAL OF PRIVATE RAILWAY COMPANIES, &c.

Name.	Capital.	Total Miles of Road.
	£	Miles Chains
Nippon	3,000,000	852 3
Sanyo	1,800,000	308 6

PROVISIONAL SANCTION GIVEN.

Number.	Capital.	Mileage.
	£	Miles. Chains.
22	7,037,550	1,559 2

EXPENDITURE ON GOVERNMENT RAILWAY CONSTRUCTION.

The total amount included in the Budget 1896-97 to be expended in the construction of new railways is 1,286,666, and a further provision is made as a continuing expenditure up to 1902-3, distributed as follows:—

Year.	Line.	Amount.	Total.
		£	£
1897-98	...Fukushima-Aomori	177,777	
	Tsuruga-Toyama	180,815	
	Hachioji-Nagoya	150,000	
	Shimonoi-Shiojiri	72,222	
	Yatsushiro-Kagoshima	11,111	
			591,925
1898-99	...Fukushima-Aomori	266,666	
	Hachioji-Nagoya	338,889	
	Shimonoi-Shiojiri	199,710	
	Yatsushiro-Kagoshima	188,889	
			994,163
1899-1900	...Fukushima-Aomori	223,333	
	Hachioji-Nagoya	555,555	
	Yatsushiro-Kagoshima	194,445	
			983,333
1900-01	...Fukushima-Aomori	227,083	
	Hachioji-Nagoya	511,111	
	Yatsushiro-Kagoshima	183,331	
			921,527
1901-02	...Hachioji-Nagoya	516,667	
	Yatsushiro-Kagoshima	166,666	
			683,333
1902-03	...Yatsushiro-Kagoshima		169,043
	Grand total.....	5,630,590	

Taking the Fukushima-Aomori Line, which will cover a distance of some 300 miles, and the amount set down to be expended on it, about 1,110,000, we arrive at the result that it will cost about 3,700, a mile. In my report of 1895 I stated that the estimate of the lines to be built was set down at about 3,500, a mile. It is, however, doubtful whether even the larger of these sums will suffice for the purpose, the price of labour having risen since 1895 about 30 per cent.

RECONSTRUCTION ESTIMATES.

For the reconstruction of Government railways, that is to say, the doubling of the existing single line of the Tokaido Railway, the following sums have been set down in the Budget in the form of continuing expenditure:—

Year.	Amount.
	£
1896-97	500,000
1897-98	333,333
1898-99	400,000
1899-1900	400,000
1900-01	400,000
1901-02	422,222
1902-03	427,812
1903-04	66,666

Total 2,950,033

A further sum of 2,062,450, is also estimated for railways in the Hokkaido, to be spread over 12 years. The doubling of the main Tokaido Line, that is from Tokyo to Kobe (only very small portions of this being at present doubled), has actually

been commenced, but owing to financial considerations, it is not expected that it will be entirely open to traffic until 1904. The only difficulty is the tunnelling, for which no provision was made when the line was originally built. I am told also that the landowners have proved rather obstructive. Nothing has been done towards connecting the two main lines which run into Tokyo, or in the matter of a central station. The question of altering the gauge provoked a good deal of discussion for some time, but appears to have been dropped again now.

Complaints against the management both of Government and private lines have been abundant. The permanent way of the main Government line, it is asserted, does not receive the attention it deserves. No improvement in the velocity of trains has taken place, indeed, rather the reverse. A passenger train now occupies 61 minutes going from Tokyo to Yokohama, a distance of 18 miles, and the fastest trains take 45 minutes. In the course of last summer, the majority of lines suffered considerably from the floods, and punctuality became the exception rather than the rule.

FOREIGN ADVISERS.

Two more of the foreign engineers on the Government lines have received notice that their contracts will not be renewed, and their places will be filled by Japanese.

QUOTATION OF SHARES.

It may not be without interest to compare the quotation of some of the railway shares at the present time with those ruling at the end of 1895. I then pointed out that they were for the most part abnormally high, owing to a wave of speculation in this direction, but taking this into consideration, the price of these shares has been well maintained, there being only a fall in the majority of those given of from 6 per cent. to 10 per cent., and in one case only is there a rise:—

	Paid up.	Price in 1895.	Present Price.
	Yen.	c.	
Japan Railway Co.	50	144 50	100
Ryomo "	50	84 50	88
Kobe "	45	146 00	145
Sanyo "	30	63 00	53
Kansai "	47	76 00	66
Kyushu "	41	70 00	66
Langsu "	50	91 00	91
Chikuho "	50	98 00	82
Sobu "	50	133 00	125

FORMOSA.

Very little new work on railways has been so far undertaken in Formosa, although the railway between Kelung and Taipei has been relaid. The locomotives and rolling stock are of such antiquated patterns, that they are not of much use, and their quantity is very inadequate. It is the intention of the Government to leave the construction of railways in Formosa to private enterprise, and the Diet has voted a sum of 1,289,250, as a subsidy to the company, equal to 6 per cent. of the capital. This payment is to be spread over 15 years. The country would then be divided up into four sections:—

Section	Line from—	District.
1	Kelung to Takow	West coast
2	Kelung to Giran	North
3	Takow to Hienchun	South
4	Hienchun to Giran	East coast

COMPETITION.

In my above-mentioned report, I pointed out that British manufacturers had hitherto practically had a monopoly in furnishing rails, locomotives, rolling stock, &c., but that it would require renewed exertions on their part to continue to be the purveyors in this line. Whether from an absence of such energy, or from other causes it is a fact that the tendency has latterly been for other countries to furnish such commodities.

RAILS.

As an example I may quote the following:—In September, 1896, a tender was granted to Messrs. Mitsui by the Government Railway Department for 13,000 tons of rails. They subsequently placed the order with Messrs. Carnegie, of Pittsburgh, at a price alleged to be 10 per cent. under that quoted by English makers. Some time previous to this contract being let, there existed a syndicate of American rail-makers to keep up the price of rails for home consumption, and also for export. English makers advanced their prices in sympathy with this movement, but it is asserted that, in spite of the syndicate, rails were exported by certain makers in America at prices lower than those quoted as the syndicate prices, and thus many orders went to America, but, with the advent of the McKinley régime and prospect of increased tariffs it is not improbable that Japanese orders may again be placed in England.

TENDERS.

The difficulties surrounding the system of tender have, to a certain extent, militated against orders being placed in England. The conditions of tender, purchase, and contract have lately been radically altered. Up to the end of 1895, Government requisitions and indents were sent "en bloc" to London, and the material required were purchased by Government agents under very rigid inspection and supervision. Since the end of 1895 all requisitions have been issued from the head railway office at Shimbashi, and this will probably continue to be the system adopted. In most cases a nominal fee is charged for specification, and the following conditions must be complied with:—

1. Applicants for specifications and forms of tender must be Japanese subjects.
 2. They must give proof of having been in business for at least two years.
 3. They must satisfy the department authorities that they are able financially to carry out the contracts.
 4. With the tender, an accompanying deposit of 6 per cent. of the amount of the tender must be made.
 5. In the event of the tender being accepted, such deposit must be increased to 10 per cent.
- These stringent regulations naturally reduce competition within extremely narrow limits; in fact, only some three or four Japanese firms can compete successfully. Take, for instance, the contract for rails referred to above, which would probably amount to 90,000. The required deposit would be 9,000, which is practically abstracted from the capital of a business firm during the time the contract is being executed, probably from 9 to 12 months, and this sum may also be forfeited under certain conditions.

LOCOMOTIVES.

In my report No. 390, of 1896, I pointed out the fact that a very large proportion of the locomotives on Japanese railways were of English make. I believe the proportion to have been at a comparatively recent date—English, 224; American, 6. Some of the latter were purchased in 1890, but did not give satisfaction, the finish being unsatisfactory and the consumption of coal greater than on the English engines. However, some more were ordered in 1894, with a like result. With this experience, it is not to be wondered at that the Japanese should prefer to purchase English-made locomotives, but we do not have a monopoly in this line.

In October, 1896, tenders were considered for 18 locomotives. Three Japanese firms and one foreign (French) firm tendered through a Japanese subject. The locomotives were to be of English make, six well-known manufacturers being selected. The contract was let to the French firm at 58,000, while the amount of other tenders ranged from 7 per cent. to over 50 per cent. higher. Subsequently, owing to the specified English makers being so busy, and the contractor, therefore, unable to fulfil the necessary conditions as to delivery within a specified date, the contract was thrown up, and the deposit money, 10 per cent., forfeited.

Now fresh tenders for the same 18 locomotives are being considered, but the number of approved makers has been increased to nine.

Probably owing to English makers finding it difficult to adhere exactly to a special date of delivery, which, in view of the fact that a considerable impetus has latterly been given to railway enterprise in Japan, is rather short, orders are now going to America. Some 60 or 70 locomotives have recently been ordered in America by the Government railways and the Japan Railway Company.

The building of locomotives at Kobe in Japan, referred to on page 11 of my previous report, continues, but facilities do not exist for building on a large scale. The total number built in those works now reaches nine. The last one turned out is a good engine similar to those used on the L. & N. W. R.

All the locomotives have been built at Kobe under the superintendence of Mr. R. F. Trevithick, M.I.C.E.

The Government apparently find the system of importing the material and setting up here satisfactory, as the material for six engines is about to be ordered from England and built in Tokyo. The cost of the locomotive referred to above as having been built at Kobe, I am informed, amounted to 18,237 dol., or about 2,026, made up as follows:—

	Amount.
Wages	\$ 4,650
Material's	10,100
Sundries	3,487
Total	18,238
Equivalent in sterling.....	£ 2,026

This may be considered the total cost of the locomotive ready for traffic, but no estimate is made for wear and tear of machinery or interest of buildings, for which about \$1,000 must be added, bringing the cost of the engine to 2,248*l*.

In 1894, 12 locomotives somewhat similar to that mentioned above were purchased from Beyer, Peacock, & Co., the cost of which was:—

	Amount.	£	s.	d.
Price	26,541	2	0	0
Freight, insurance and commission..	3,222	8	0	0
Total	29,763	10	0	0
	Amount.	£	s.	d.
One engine.....	2,480	5	10	0
Japanese expenses	200	0	0	0
Total	2,680	5	10	0

As against the 2,248*l*. mentioned above, an advantage in building in Japan of over 400*l*. per locomotive.

Under the most favourable circumstances, it is not likely that an English locomotive could be imported and placed in Kobe station ready for traffic under at least 2,200*l*. The foreign advisers of the Railway Department have frequently pointed out to their employers the advantage to be derived from building in Japan, but at present insufficient facilities exist for turning out any large number of locomotives.

THE "TENSIN MARU" ENQUIRY.

A Marine Court of Enquiry was opened on Friday, the 14th inst., at the Marine Bureau, Tokyo, to enquire into the circumstances of the stranding of the Nippon Yusen Kaisha steamer *Tenshin Maru*, Captain Frank J. Brown, master, which occurred on the 14th June last, near Fukuyama, while on a voyage from Otaru to Yokohama, the vessel being safely floated off a few days later.

The Court was composed of Mr. K. Morimoto, President, and Messrs. T. Wakura, T. Ito, and S. Kono, Assessors.

The statement of Captain Brown and the second and third officers had previously been taken in private by the Court, and the same witnesses were now called and examined on the statements then made.

Francis John Brown, in reply to the Court, said the statement he had already made was, to the best of his knowledge, true. He added:—

When 120 miles from the Sale Rock I took my departure—off the Lighthouse. The ship was supposed to be near the Flat Rock. At 5 o'clock a.m., I stopped the engines and hauled in the patent log. Then I turned the ship round in the opposite direction and put her head to the north-west. At 6 o'clock we saw what I supposed to be the Flat Rock, underneath the fog, and steered a little nearer, north-west, so as to see the rock clearer. I then sent for the second officer to come on the bridge and take bearings with me. At 7 minutes past 6 turned the ship's head round to the south-east. At 10 minutes past 6 went ahead slow, the bearing of the rock was then N.E. by N. $\frac{1}{2}$ N., magnetic. At the same time I saw a point of land bearing E. $\frac{1}{2}$ S. I supposed this was the point of land above Matsushima the bearing coming in correctly with the rock. I was not sure of my position till I found the bearing of the point corresponded properly with that of the rock. The steam in the boilers had run down and I telegraphed to get up more steam after taking the bearing. I then steered S.E. by S. $\frac{1}{2}$ S., so as to allow for the current and make good a S.E. by S. course. Just after, at 6.20, I rang the telegraph for half speed and directly afterward full speed. I did not see land on the port side, only the rock. I had two men on the lookout. At 6.25 we thought we saw something like rocks on the port side. We put the helm hard a port till the ship's head came to South-east. I thought that that course must take me clear of everything. Directly after the lookout men shouted to stop the engines and then the ship struck. Her head was then S. by E. Immediately after striking the sluice valves were closed at the water tight bulk-heads and the engines worked astern, but the ship was too fast embedded to come off. We sounded round the ship and found 23 fathoms round the bows and 10 fathoms (60 feet) round the stern. When the fog cleared we found we had mistaken the rock Aramatsa for Flat Rock. We were to the north of Flat Rock. From the bearings taken this did not seem possible.

To the President—From ten minutes past 5 till 1 minute past 6 we changed the direction of the ship's head several times to get in nearer to obtain a view of the rock. From 1 minute past 6 till 7

past six I steered north, and then stopped the ship to take bearings. This was when we saw the point of the land. I took the bearings myself and then asked the second officer to take them again to be sure we were right; his bearings were the same as mine; the rock bore N.E. by N. $\frac{1}{2}$ N. I went down to the chart room, just under the bridge to mark off the position. The deviation was 34 degrees westerly. As soon as I came out of the chart room I gave the order to keep a little more off the land to make allowance for deviation. I was steering S. by E. when the ships struck; the deviation was then 2 degrees westerly. The ship remained heading thus till she was hauled off the rocks. The speed of the ship when she struck was about 7 knots. Going slow the vessel would make about 5 knots. Seeing the point of land corresponded in its bearing with Flat Rock I felt sure we were right. Had we not seen the point of land I should have kept more to the westward. After we had struck we found there was a strong current setting in to the point; fully 4 knots. This current set us in. Had it not been for it the course we were steering would have cleared the rock. The third officer was standing by the telegraph and helping to keep a good look-out for dangers. I had been down to the chart room again and was just coming up on the bridge when the look-out man called out to stop the engines. The third officer had never been in that neighbourhood before, the second officer was an old ship-master and knew that coast. The damage to cargo would be about 3,000 packages of fish manure in the No 1 hold. It was taken out afterward at Hakodate and re-dried.

The whistle was used all the time; but it was a very bad one, in bad condition. I had requisitioned the Nippon Yusen Kaisha for a new whistle before I left Yokohama, but it had not been provided. I had notified the Superintendent Captain of the N.Y.K. that the whistle was useless.

Nils Neilsen, second officer of the *Tenshin Maru*, was next examined, and his statement corroborated that of Captain Brown.

Frederick Rehboldt, third officer of the *Tenshin Maru*, also corroborated the Captain's statement. He added that about 1 minute before 6, when the Captain was in the chart-room, witness saw an island which looked exactly like Flat Rock, and upon calling the Captain up he agreed that it was Flat Rock. At 6.7 the ship was stopped and at 6.10 went slow ahead and helm put hard a-port. The second officer was then called on the bridge, and the Captain asked his opinion as to the island, the second officer agreeing that it was Flat Rock. At 6.14 the second officer took a cross bearing and at 6.20 the engines were put at half speed. The course was altered by the Captain a little more to the south, but witness could not say at what time. At 6.28 the ship struck. About a minute before striking some rocks were seen ahead and the helm was put hard a-port. Witness had not been to Otaru before; it was the first time he had been on that part of the coast.

There being no other witnesses to call, the Court asked Captain Brown if he had any further statement to make. Capt. Brown said he forgot to tell the Court that directly the rocks were sighted and the look-outs called out, the engines were stopped. Also had it not been for the strong current, the ship would not have been so far in. They could not see the land, only the tops of some hills, which appeared to be several miles away; this led them to think they were a long way off the land. The rock which he took to be Flat Rock was very close to Aramatsa. When he said he did not consult his third officer he meant after the second officer came on deck; as the latter knew the coast and the former did not.

The second and third officers had nothing further to say.

The Court then adjourned, the President announcing that notice would be given when the finding will be delivered.

ALLEGED LARCENY AT TONOSAWA.

ACCUSED COMMITTED FOR TRIAL.

James Fergusson Morrison, of no occupation, was charged in H.B.M. Court for Japan on Monday, before James Troup, Esq., Assistant Judge, with the larceny of 3 yen and some small coins.

The Japanese police laid the charge, and Mr. Fukada Tatsuno, Public Procurator of the Yokohama Court, appeared for the prosecution.

In answer to the Bench, accused said he was 28 years of age. When asked if he preferred being tried by a jury or summarily, he replied—"I hardly know; I have had no experience of this sort of

thing. Had I known, I would have been defended by a lawyer.

Mr. Thomas Jones, a merchant on a visit from Australia, and at present residing at No. 87, Main Street, Yokohama, deposed—On the 11th of this month I arrived at the Tamanoyu, Tonosawa, engaged a room for the night and then went on to the verandah, where I saw accused sitting. He asked me to have a drink. Believing him to be a lodger and a gentleman, I sat down and we had a conversation. Shortly before retiring for the night he asked me to have another drink, which I declined. We then went to our respective rooms. I left my light burning dimly, and at about 3 a.m. I heard a noise in my room as of some one walking about. I looked up and saw the defendant standing by my trousers with a purse in his hand. I said, "Hallo, what are you doing there?" As soon as he saw he was discovered he feigned drunkenness, lifted up the mosquito net and threw himself across me in the bed. I said, "Get up out of this and go to your own bed." He got up and went out. I saw this purse lying on the quilt. I looked at it and found it was nearly empty. It contained only a few cents and several five cent pieces. When I put it in my trousers pocket it contained upwards of yen 5. I immediately raised the alarm. The watchman was going round the hotel. I called him into my bedroom and explained to him as well as I could about the robbery and while explaining defendant came into my room. He said: "Don't make a noise about it, in the morning I'll make it all right." I retired to rest and waited till the morning. In the morning, I called in a Japanese female who was staying at the hotel who could speak good English. I said to her I was sorry I had been robbed by my own countryman whom I took to be a gentleman but I was sorry to find a thief. A little later I went to the front of the hotel. The Japanese servant Ochikusan came to me hastily and said defendant had thrown my boots in the water and bolted out of the back door. I came to the back and found the man had disappeared. I have never seen him from then till now. When talking with Ochikusan, defendant came round and admitted he had taken the money, that he would refund it, and that we were not to make a noise about it, or words to that effect.

Cross-examined by defendant, witness said he had one glass of whiskey and a slight taste of a second. He remembered well what he did then and afterwards.

To the Court—I think accused went to bed about 10 o'clock. I saw him just before. I should take him to have been about half drunk then.

Police Inspector Takebashi Tetsuma gave evidence regarding the arrest of defendant at the Matsuzakaya, Ashinoyu, on the 14th inst.

Mr. Jones, recalled—I wish to correct the statement in my evidence-in-chief that I arrived at the Tonosawa hotel on the 11th. I arrived there on the 10th. What I previously said in my evidence was that I arrived there about the 11th.

This concluded the evidence for the prosecution.

After being duly cautioned, accused made the following statement—I wish to make a few remarks. In the first place, I wish to say that I am totally innocent of this charge. I am receiving regular and constant remittances from my father, and I appeal to anyone, is it likely that I would place myself in a position like this for three dollars? I never took a penny of the man's money. I had money of my own. Afterwards I ran short and immediately wrote to Yokohama for a remittance. That is all I have to say. I have never previously been placed in a similar position, and immediately the Inspector spoke to me I expressed my willingness to go with him and face the charge—I paying all my own expenses, which were over the amount named in the charge. I don't think there is anything I wish to add except that I am without actual friends here, although I have acquaintances who, I believe, will stand by me.

His Honour committed accused for trial.

Accused asked to be admitted to bail, and His Honour granted the prayer, fixing it at two sureties of \$500 each, to the satisfaction of the Court, accused to be remained in custody until the production of the sureties.

Messrs. Andrew and Son, cotton spinners, of Ashton-under-Lyne, have recovered £500 damages in an action for libel against Mr. Labouchere, proprietor and editor of *Truth*.

The French captain, Ronneaux, who was arrested on a charge of embezzling funds while acting as paymaster of the forces in one of the districts of Tonkin, committed suicide by hanging himself in his cell.

JUDICIAL COMMITTEE OF THE
PRIVY COUNCIL.

(LONDON, JULY 14.)

Before the Lord CHANCELLOR, Lord HOBHOUSE, Lord MORRIS, Sir RICHARD COUCH, Sir HENRY DE VILLIERS, and Sir HENRY STRONG.

The Right Hon. Sir John Henry de Villiers, K.C.M.G., Chief Justice of the Cape Colony, took his seat for the first time as a member of the Judicial Committee.

CAREW V. THE CROWN PROSECUTOR IN JAPAN.

This was a petition presented by Edith May Hollowell Carew, now imprisoned in Hongkong, praying that she might be granted special leave to appeal from the verdict given and the sentence passed on her in February, 1897, upon her trial for the murder of her husband.

Sir Frank Lockwood, Q.C., and Mr. M. Macnaghten appeared for the petitioner. The petition was *ex parte*.

Sir Frank Lockwood, Q.C., said that the petitioner, Mrs. Carew, was charged with and convicted of murder on February 1, 1897. The charge was that she murdered her husband on October 22, 1896. The case was tried before his Honour Judge Mowat and a jury of five persons at Yokohama, and the petitioner was found guilty and sentenced to death. The sentence of death was afterwards reduced to a sentence of imprisonment with hard labour for life. The petitioner desired leave to appeal from the verdict and sentence.

The Lord Chancellor—Under what jurisdiction was the lady tried?

Sir Frank Lockwood, continuing, said that she was tried under the provisions of an Order in Council, dated March 9, 1865, which provided for the government of British subjects in China and Japan. That order provided that a Court should be established for the trial of cases in which British subjects were concerned in China and Japan. It was provided that the Court should be presided over by a Judge, and that the jury should consist of five jurors. The petitioner was tried by a Court so constituted. It was contended on her behalf that the Order in Council, was *ultra vires*. Persons tried in her Majesty's Court in Japan were entitled to be tried by a jury of 12 men. The Queen, by an Order in Council, assumed to be empowered to alter the law with regard to the constitution of a jury.

The Lord Chancellor—There is no such law in Japan; the question is whether she has power to make laws in Japan. If her Majesty has power to make laws in another country she is not under any of the limitations prevailing in this country.

Sir Frank Lockwood, continuing, said that apart from statute the Queen had no power either to make laws for the government of her subjects in places outside her dominions. In 1858 a treaty was made between her Majesty and the Tycoon of Japan by which the Queen was granted power to try British subjects residing in Japan "according to the laws of Great Britain." Therefore, so far as Japan was concerned, she had jurisdiction to try British subjects in Japan, but only according to British law. The treaty, however, could give her no right against British subjects, and unless the Queen had been given power by statute to exercise such jurisdiction in Japan any exercise of that jurisdiction would have rendered her Majesty's officials in Japan liable to legal proceedings in England either for false imprisonment or for manslaughter as the case might be. Accordingly the Foreign Jurisdiction Acts were passed in order to make the exercise of such extra territorial jurisdiction legal. And the Foreign Jurisdiction Act, 1890, which was merely a codification of the various earlier Foreign Jurisdiction Acts, provided:—"Whereas by treaty, capitulation, grant, usage, sufferance, and other lawful means her Majesty the Queen has jurisdiction within divers foreign countries, and it is expedient to consolidate the Acts relating to the exercise of her Majesty's jurisdiction out of her dominions, be it enacted by the Queen's most excellent Majesty, &c., . . . that it is and shall be lawful for her Majesty to hold, exercise, and enjoy any jurisdiction which her Majesty now has or may at any time hereafter have within a foreign country in the same and as ample a manner as if her Majesty had acquired that jurisdiction by the cession or conquest of territory."

The Lord Chancellor—"By cession or conquest." A conqueror imposes such laws as he pleases. Her Majesty's powers are as conqueror, not as constitutional Sovereign.

Sir Frank Lockwood—By her Order in Council she only purports to administer British law to British subjects.

The Lord Chancellor—Do you mean that in every case where her Majesty has power to impose laws she is bound by the Constitution of England?

Sir Frank Lockwood—No, but she has no power to make laws for her subjects residing in Japan. She has jurisdiction to administer the law; she has no power to make laws there. Continuing, he said that the Foreign Jurisdiction Act enabled the Queen to exercise in Japan the jurisdiction granted to her by the treaty of 1858. But it only enabled her to exercise that jurisdiction—that is to say, the power to say what the law is—to administer the law—and to punish in accordance with the law if the law were broken; but it gave her no power at all to make laws for the government of her subjects outside her Majesty's dominions. That this was so was clear, not only from the Act itself, but from the amending Act of 1878.

The Lord Chancellor—That was my Act.

Sir Frank Lockwood continued—For by section 3 of that Act the Queen was empowered by Order in Council to apply certain Acts with such modifications as she might think fit to the various places outside the dominions where she had jurisdiction. If it were the fact that the Queen had already, either in right of her Crown or by virtue of the Foreign Jurisdiction Acts, power to make laws for the government of her subjects residing in these places it would be clearly unnecessary to give her the power.

The Lord Chancellor—Some countries were added to those already dealt with. That is all the Act of 1878 did.

Lord Hobhouse—Doubts had arisen whether British subjects were bound to obey the law in certain places. There was a doubt, for instance, as to the jurisdiction on the sea.

Lord Morris—Do you argue that a British subject carries with him the right to be tried in the manner adopted in his native country? Has a Scotchman the right to be tried by 15 jurors in Japan?

Sir Frank Lockwood—No, for I say the Queen has only the power to administer the law of this country to British subjects in Japan, whether of Scotch or English origin.

The Lord Chancellor—It is 30 years too late to argue that. It has been argued that it is the inalienable right of a British subject to be tried according to British law, but the Act has done away with that. If it could be argued now all the Courts in Turkey and elsewhere have been for years exercising a jurisdiction they had no power to exercise.

Sir Frank Lockwood continued.—The Foreign Jurisdiction Act enabled her Majesty to exercise that jurisdiction which she had by treaty acquired within various places out of her dominions. In the case of Japan, therefore, the Act enabled her to exercise the jurisdiction granted by the treaty of 1858. That treaty expressly and explicitly conferred upon her a jurisdiction to try British subjects in Japan "according to the laws of Great Britain." The Foreign Jurisdiction Act did not purport to enlarge that jurisdiction. It only purported to make its exercise legal. Therefore, it was clear that the Queen had power to try her subjects in Japan according to British law, and had no other power whatsoever. As their Lordships appeared to be against him on the question of jurisdiction, there were the further important questions as to misdirection by the Judge and the misreception of evidence.

The Lord Chancellor—That is never allowed. Have you ever heard in this country of applications for new trials in murder cases?

Sir Frank Lockwood—I was under the impression that your Lordships had such a power.

The Lord Chancellor—A new trial has been granted in a case where the decision was contrary to natural justice. The Judge in the case I am speaking of told the jury that if they did not convict the prisoner they would be accusing the Attorney-General of perjury.

Lord Hobhouse—This Court never interferes except where there has been a miscarriage of justice.

Sir Frank Lockwood—I am in a position to contend that there has been a grave miscarriage of justice. A deposition taken before the coroner who held the inquest on the deceased was admitted in evidence on the ground that the witness was too unwell to attend the trial. The admission of depositions taken before magistrates had in some cases been allowed, but there was no instance of depositions taken before a coroner being allowed.

The Lord Chancellor—That is not a ground on which we would interfere.

Sir Frank Lockwood—It was a most unfortunate thing that this deposition, taken without cross-examination, was admitted, because it was of such a kind as to have great weight with the jury.

Counsel having withdrawn, after a short deliberation,

The Lord Chancellor said—This is not a case in which we consider that it is desirable, or proper, or in the ordinary course, to give leave to appeal. Her Majesty has full jurisdiction to establish Courts outside her dominions and to provide for trial by juries of five persons. The arguments adduced against that proposition would go to prevent the establishment of any Courts at all. The statute was passed to remove doubts. It gave her power to exercise jurisdiction as though she had obtained the countries by cession or conquest. It was passed to establish her right to jurisdiction over her own subjects abroad. With reference to the other questions, it is not necessary to say much beyond saying that appeals will only be allowed in exceptional cases. In "*In re Abraham Mallock Diller*" (12 App. Ca., 495, at page 497) Lord Watson said:—"Her Majesty will not review or interfere with the course of criminal proceedings unless it is shown that, by disregard of the forms of legal process, or by some violation of the principles of natural justice, or otherwise, substantial and grave injustice has been done." No such ground of injustice has been shown here. Their Lordships will therefore advise her Majesty that no leave for this appeal ought to be granted.—*The Times*.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

TURKEY AND THE POWERS.

London, Aug. 12.

The Powers informed the Greek Government that the Porte declares its inability to evacuate Thessaly at once on the plea of want of funds, but guarantees to commence the withdrawal of troops on receiving payment of the first instalment of the indemnity (one million pounds sterling).

Greece has replied that she can only raise the money by a foreign loan, and that this is only obtainable if she is allowed to negotiate directly with her bondholders.

The difficulty in connection with the payment of the Greek indemnity still delays the peace negotiations.

GERMANY AND RUSSIA.

The German Emperor has left St. Petersburg, after cordial farewells. The Russian press appears satisfied that his visit has constituted a good augury for the future peace of Europe.

THE BRITISH EXPEDITION TO BENIN.

The King of Benin (West Africa) has surrendered to the British, after eluding pursuit for six months.

PERSIA AND TURKEY.

London, Aug. 12.

Bands of Armenians from Persia are crossing the frontier and raiding Turkish territory.

THE NILE EXPEDITION.

In the capture of Abu Hamed, the loss on the Egyptian side was 21 killed and 61 wounded.

THE ITALIANS IN ABYSSINIA.

PRINCE HENRI'S STATEMENTS RESENTED.

Prince Henri of Orleans, on returning to Paris, has been forthwith challenged to fight a duel by the Italian General Albertoni, owing to the Prince's letters in the *Figaro* casting aspersions on the Italian prisoners in Abyssinia.

London, Aug. 13.

It is reported that the Count of Turin has started secretly for France, having challenged Prince Henri of Orleans to fight a duel.

[Prince Victor Emanuel, Count of Turin, is 27 years old, nephew of the King of Italy and second son of the late Duke Aosta, the King's brother-in-law. The present Duke of Aosta is married to Princess (Ediene of Orleans.)

Prince Victor Emanuel (Count of Turin) and Prince Henry of Orleans fought a duel with swords on the outskirts of Paris on Sunday. The encounter was of a desperate character, and lasted twenty-six minutes. Prince Henry was seriously wounded in the shoulder and abdomen, and Prince Victor Emanuel was wounded in the hand.

London, Aug. 16.

The duel between Prince Victor Emanuel (Duke of Turin) and Prince Henry of Orleans consisted of five assaults of four minutes each. Prince Henry was hit in the shoulder at the outset, the skin being barely pierced. Later he received a wound in the abdomen which proved serious, though the intestines are not perforated. Prince Henry, half rising from the ground, shook hands with his antagonist, and afterwards was able to walk to his carriage without assistance. The Duke of Turin's wound was merely a scratch; he left Paris in the afternoon to return to Italy.

ANARCHISTS IN EUROPE.

The Governments of France and Spain are taking active steps to expel Anarchists, who are now taking refuge in London.

THE INDIAN FRONTIER RAID.

It has transpired that the 5,000 tribesmen who raided the Peshawur Valley and were repulsed by the British were mainly Afghans, who had been in constant communication with the Afghan Commander-in-chief. Large reinforcements are hastening to Peshawur from Rawul-pindi.

London, August 15.

Upwards of twenty thousand troops are concentrated at Pawal-pindi (North-West India) prepared for all eventualities.

CHINESE LOAN.

Sheng Taotai, as representing China, has signed a provisional contract with the Hooley-Jameson Syndicate (British) for a five per cent. loan of sixteen million pounds sterling at the issuing price of 95.

CHINESE ENVOY DECORATED.

H.E. Chang Yin-huan, the special Ambassador representing China at the Diamond Jubilee celebrations, has received the honorary Grand Cross of St. Michael and St. George.

ENGLISH COUNTY CRICKET.

In the County Cricket Tournament, Surrey has beaten Essex by ten wickets, and Lancashire has beaten Yorkshire by an innings and 26 runs.

THE INDIAN LOAN.

Tenders for the Indian Rupee Loan of three crores (thirty millions) amounted to 59,731,500. The minimum price at which tenders were accepted was 98.1, and 67.20 per cent. of the whole of the tenders were at this price. The average rate of acceptance was 98.5. 3.77.

THE PRINCES' DUEL.

London, Aug. 17.

Prince Henry of Orleans is progressing satisfactorily towards recovery from the wounds he received in the duel with Prince Victor Emanuel. In view of the result of that duel, General Albertoni has withdrawn the challenge he sent to Prince Henry.

ROYAL VISIT TO IRELAND.

The Duke and Duchess of York have started on a visit to Ireland.

TURKEY AND THE POWERS.

There is a hitch in the peace negotiations, as Great Britain objects to the proposal that Turkey be allowed to remain

in occupation of a portion of Thessaly pending payment of the indemnity and be only bound to withdraw gradually until the whole of the indemnity shall have been paid. Great Britain is alone in this objection.

GREAT RISING ON THE INDIA FRONTIER.

London, Aug. 18.

The Afridis are marching upon Jamrud, through the Khyber Pass. The Orakzais (? Waziris) are advancing through the Kurram Valley. Practically the whole Afghan frontier is aflame.

ATTACK ON PRESIDENT FAURE.

President Faure has started for St. Petersburg. A bomb filled with nails exploded, without doing any harm, on the Boulevard Denain in Paris a few minutes after President Faure had passed the spot.

EXPLOSION IN CONSTANTINOPLE.

An explosion has occurred beneath the Grand Vizier's Department at the Sublime Porte. One person was killed and several injured.

(SPECIAL TELEGRAM TO THE "JAPAN MAIL.")

NAVAL MOVEMENTS.

Hakodate, August 13.

H.M.S. *Rattler* has left to join the Squadron. The *Bayard* and *Eclairer* have left for the North.

(FROM THE "CHINA MAIL.")

SINGAPORE OPIUM FARM.

Singapore, Aug. 3, 3.30 p.m.

Tenders for the Opium farm have been lodged, showing an increase of revenue of \$500,000 yearly.

(FROM TONKIN PAPERS.)

FLOODS IN EUROPE.

Paris, July 31.

Terrible floods have taken place in Silesia and Bohemia, causing widespread damage and loss of life.

One hundred and fifty lives have been lost by inundations at Kertch in the Crimea.

Paris, August 1.

The floods are subsiding in Bohemia and Silesia.

TERRIBLE DISASTER IN RUSSIA.

Paris, August 5.

The Kremenchug baths in Russia have been carried away by the current. There were four hundred women bathing at the time, of whom two hundred were drowned.

(FROM THE "DAILY PRESS.")

FATAL EXPLOSION AT SHANGHAI.

Shanghai, August 9.

The magazine at the Arsenal Camp exploded at 1 a.m. to-day. It is reported that twelve persons were injured and two killed.

Later.

Twelve Chinese were killed and four dangerously wounded. It is supposed that a high wind blew down a rotten watch-tower, which fell on the small magazine. The magazine was filled with powder and percussion capped cartridges. Numerous buildings were destroyed. The large magazine happily escaped.

(FROM THE JAPANESE PAPERS.)

RUSSIA AND KOREA.

Söul, August 20.

The application of Russia for a piece of land upon which to establish a coal depot on Zekkei Island has been granted by the Korean Authorities.

Söul, August 20.

Last night all the Korean Ministers held a conference regarding the engagement of Russian drill instructors. Russia's application for a site on Zekkei Island for a coal deposit was also discussed.

CHESS.

2—Kt to Kt 4, mate	1—Moves R (K sq)
2—Kt to K 7, mate	1—Moves B
2—R to K 5, mate	

Correct solution received from W.H.S.

PROBLEM NO. 334.

By E. V. TANNER.

BLACK.

WHITE.

White to play and mate in three moves.

OVER THE CHESS BOARD.

The Hongkong Chess Club is feeling the want of a proper system of classification of its members. We have seen many ladder arrangements of the kind "Black Bishop" suggests, but none that seemed so perfect and gave so much satisfaction as the one devised two years back by the Messrs. Cleland of the Otago Chess Club (N.Z.). The "Cleland Ladder" has been adopted since by quite a number of Clubs in Australasia and we have much pleasure in recommending it to our Hongkong friends and indeed to all other Chess Clubs.

The system will perhaps be best understood if instead of an abstract, we give the code in Messrs. Cleland's own words:—

THE LADDER.

- 1.—All members of the Club shall be classified.
- 2.—The champion of the Club shall alone represent Class I. and shall not be displaced during the year; but any player in Class II. who beats him shall be promoted to Class I.
- 3.—Once only during the year a member may challenge any player in the class immediately above him; and if the challenger wins he changes places with the loser.
- 4.—Between classes I. and II. the procedure will be a little different. If any player in Class II. beats the champion he is promoted to Class I, but is liable to be displaced unless he also wins a second match with the champion, in which case he is fixed for the year, and any player in Class II. may score off him in the same way as if he were the champion.
- 5.—The matches shall be the best of three games, draws not to count; and all games in which the players rank in and above Class IV. must be played with clocks and score-sheets.
- 6.—All challenges must be handed to the Hon. Secretary, who will post them on the Club's notice board, such intimation to the challenged party being deemed sufficient, and all games must be played within one calendar month.
- 7.—If the challenged party refuses to play, the result shall be the same as if he had lost.
- 8.—No player may challenge or accept a challenge while he has a match pending or in progress.
- 9.—The challenger shall have the first move in the first game in every case, except in the return match with the champion or a fixed player in Class I.
- 10.—Any member may have his name removed from "the ladder" but in such case he is liable to

be di-qualified for important matches. His name can, however, be reinstated at any time, though not necessarily in the same position.

11.—In the event of any class becoming too small through names being withdrawn the vacancy will be filled by ballot from the class below. (It might also be necessary in the event of a class becoming too large, to ballot a player into the class below.)

REMARKS.

The holder of the championship of the Club is placed alone in Class I., because his play is the standard by which the other players are to be measured. The first classification of the Club is made by the match committee or any suitable person, and it is not necessary that it should be very accurate, because in a short time every player will find his proper level. Afterwards it goes on from year to year without any adjustment, except that the champion from time to time forms a new Class I. Rule 10 provides for those who, from any cause, are unable to play. They are at liberty to withdraw their names, but can be reinstated at any time. By withdrawal they may be disqualified for playing in matches, firstly because they have failed to show that they are capable of maintaining their position, and secondly because it pre-supposes a want of practise; but it is always understood that the match committee will take the facts of the case into consideration when selecting a team.

"How can I become a good Chess-player?" This question comes along regularly every week. Suppose you should ask a musician: "How can I become a good pianist?" He would probably answer: "You must, first, have some genius for music, then study and practise, and then practise and study, and keep it up." He might direct you as to the proper way to study and practise, but your success depends upon your own diligence. So it is in Chess. If you have some genius for the game, then study and practise. Study the best games. Study them carefully, diligently. Make yourself familiar with the various openings, and also the best defenses. Then practise carefully. Play slowly, thoughtfully; and remember that a game of Chess should be something more than skittles.

The *Hereford Times* believes, in spite of contradictions, that Tschigorin will be Lasker's next opponent.

Showalter will be prepared for a return match with Pillsbury next fall unless the latter is matched against Lasker in the meantime.

Lasker has been staying at Nice, the guest of a wealthy Russian amateur, and at latest accounts was at Heidelberg. It is asserted, says the *Illustrated S. and D. News*, that the chess champion will soon appear in a new rôle, as he is qualifying for a professorship of philosophy at one of the German Universities.

There is talk of arranging a tournament for chess players of the Greater New York at the New York City Chess Club. The first prize will probably be \$1,000. The idea is to have it on the plan of the tournament at the same club a few years ago, when Steinitz won first prize. It will be played in October.

The championship of South Africa has been won by Mr. Edward Roberts. Several well-known ex-Londoners took part in the contest.

Reichelm, in the *Philadelphia Times*, gives us the following list:—Champion, World—Lasker, Champion, America—Pillsbury, Champion, England—Blackburne, Champion, France—Janowski, Champion, Germany—Tarrasch, Champion, Russia—Tschigorin, Champion Club—The Franklin.

The Press Committee of the Metropolitan Chess Club, of New York city announces the following:—

"When, several months ago, the admirers of the royal game looked to the Russian capital for reports of the gigantic battle of the minds, the match between Steinitz and Lasker; when they saw their ever victorious idol meet the doom of adversity at Moscow, expressions of compassion for the veteran were frequently heard. Chess-players who had, during the Steinitz championship reign of twenty-eight years' duration, enjoyed his masterly performance, and Chess-students who appreciated the eminent services of Mr. Steinitz in the cause of Chess and particularly American Chess, gave vent to their feelings of heartfelt sympathy for the master-mind whose career was drawing to a close. A movement to aid Mr. Steinitz was in the air, and to the Metropolitan Chess Club fell the honour to inaugurate it. This club, whose members are among the most ardent admirers of the ex-champion, has re-

solved to honour him with a testimonial tendered by all American lovers of Chess, and to give a benefit entertainment in his behalf during the coming October. All indications augur a grand success, and the committee in charge of the matter entertain the most optimistic expectations."

"Black Bishop," of Hongkong, in reply to a question recently put in this column—who is Hazeland?—which we are sorry to learn unintentionally wounded the susceptibilities of some of our Kobe friends, to whom we extend regrets—says:—Mr. J. Hazeland is a Hongkongite who went to Japan some years ago and was very favourably known here as a good fellow. He has recently been contributing to the Problem Section of *The Times Chess Column*.

LATEST COMMERCIAL.

IMPORTS.

The Import market has shown a little more life during the past week in certain lines. There has been some enquiry for grey shirtings for early arrivals, but little business has been done. In fancy cottons and woollens transactions have been fairly active, at unchanged quotations. Nothing worth mentioning has been done in yarns, though gassed yarns are on offer by holders at prices below present Manchester quotations.

COTTON PICK GOODS.

	PER PIECE.
Grey Shirtings—8 1/2 yds. 39 inches	\$2.50 to 2.80
Grey Shirtings—9 1/2 yds. 45 inches	2.80 to 3.35
F. Cloth—7 1/2 yds. 39 inches	1.60 to 1.90
Indigo Shirtings—12 yds. 44 inches	1.95 to 2.90
Prints—Assorted, 24 yds. 30 inches	2.00 to 3.75
Cotton—Italians and Satteens Black, 32 inches	0.18 1/2 to 0.35
Valvets—Black, 35 yds. 32 inches	7.75 to 9.90
Victoria Lawn, 12 yds. 42 1/2 inches	0.75 to 1.00
Turkey Reds—2.0 to 2.4 yds. 24 1/2 yds. 30 inches	1.50 to 1.70
Turkey Reds—2.8 to 3 1/2 yds. 24 1/2 yds. 30 inches	1.75 to 2.10
Turkey Reds—3.8 to 4 1/2 yds. 24 1/2 yds. 32 inches	2.40 to 2.70
Turkey Reds—4.8 to 5 1/2 yds. 24 1/2 yds. 32 inches	3.00 to 3.50

Brown Manila	43.5 to 5.05
Brown Daitong	2.90 to 3.30
Brown Canton	3.30 to 4.20
White Java and Penang	6.60 to 6.70
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

A large business has been done during the week, quite a rush occurring for two days, when almost every lot of fine-sized filatures in the market was snapped up at advancing prices by buyers for Europe. Good re-reels are also in great demand for the American market. Total sales for the week amount to 4,079 boxes, or say 2,050 piculs. Stocks on the 19th amounted to about 2,300 piculs. Total settlements from 1st July to 19th inst. are 6,700 piculs. The *Ancona* took 456 bales for Europe on the 16th inst.

	PER POUND.
Filatures—Extra 9/11, 10/12 den.	\$89.00 to 90.00
Filatures—Extra 13/15, 14/16 den.	87.00 to 88.00

TEA.

A small but steady business has been done during the week, sales amounting to 243,000 cattie in Yokohama and 141,900 cattie in Kobe, principally of the better grades. Prices are still well maintained and rule from \$6 to \$7 per picul higher than at the same time last year, in spite of the fact that the quality is poor both in leaf and cup. The *Pathan* on the 16th took 184,686 lbs. for the States and Canada.

QUOTATIONS.

WANTED.

A GOOD firm of agents to represent a large London manufactory of good, cheap, and reliable cycles. Machines will be largely advertised in district and country. State full particulars, terms, and quantity can dispose of. Apply WILLIAM COOPER, 755, Old Kent Road, LONDON, S.E.

August 21st, 1897.

GENTLEMAN, with wide experience and very thorough knowledge of all the European and the American MACHINERY and TOOL MARKETS, and who at present holds in England a Managing position in large MACHINERY and TOOL BUSINESS, which, however, he intends leaving, is open to making an arrangement with a sound, active and enterprising firm to represent them in London as their

BUYER AND GENERAL AGENT.

Extensive connection amongst Manufacturers, etc. Very highest references. Address off to "C.A.," care of STREET & Co., 30, Cornhill, E.C., London, England.

August 21st, 1897.

IN THE KITCHEN.

LIEBIG COMPANY'S EXTRACT

Justus Liebig

GOES FARTHEST.

Added to gravies and soups it acts like a cook's talisman; but always look for the BLUE SIGNATURE; there are imitations which do not taste so nice, and are not so carefully manufactured.

August 21st, 1897.

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT

And see that each Jar bears Justus von Liebig's Signature in Blue Ink across the Label.

Justus Liebig

TO BE HAD OF ALL STOREKEEPERS AND DEALERS.

FINEST AND CHEAPEST MEAT-FLAVOURING STOCK FOR SOUPS, MADE DISHES AND SAUCES. Invaluable as an Efficient Tonic in all cases of Weakness. Keeps good in the hottest climates, and for any length of time.

August 14th, 1897.

7ins.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAXTER, in his work entitled "The Nile Tribes," in Abyssinia, says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, and horses fed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1896.

It's a Far Cry

FROM FOREIGN
LANDS TO

Chicago, U. S. A.

But no matter where you live, we are anxious to do business with you in Clothing, Shoes, Dry Goods, Watches, Jewelry, Sewing Machines, Harness, Saddles, Hardware, Tools, Guns, Revolvers, Ammunition, Bicycles, Agricultural Implements, Vehicles of all kinds, Furniture, Books on every subject. We handle only dependable goods—no trash.

We believe we can send to any clime, goods of any kind, perfect in quality, at lower prices, laid down, than the residents thereof can obtain them anywhere else. Our belief is founded on a quarter century's experience. To acquaint you with our facilities we will send you, or any other foreign resident, free of all charges, our "BUY-ERS' GUIDE," a 2½ pound book, 700 pages, 13,000 illustrations, 40,000 descriptions—it is unique, useful, valuable—and also our "HAND BOOK FOR FOREIGN BUYERS," which contains all necessary information to put you in close touch with our marvelous methods. WILL YOU ASK US TO DO SO?

YOKOHAMA: SATURDAY, AUGUST 28TH, 1897.

SUMMARY OF NEWS.

THE Hokkaido Cement Co. has declared a dividend of 15 per cent annum.

THE Second Marine Products Exhibition is to be opened at Kobe on the 1st September.

THE Japanese battleship *Fuji* left England on the 17th instant for Malta, en route to Japan.

NEARLY all the silver mines in Japan have stopped work of late, owing to the fall in silver.

TWO foreign residents of Yokohama were attacked by dysentery on the 21st inst. at Ikao.

THE steamer *Jinyu Maru* collided with the steamer *Tomoyoko Maru* off Hokkaido on the 22nd.

A PARTY of Formosan aborigines have lately been "doing" Japan, and were lionised in the capital.

THE regular general meeting of the Yokohama Specie Bank will take place on the 10th September next.

THE Tokyo Bay Steamship Company has opened a new line of steamers between Keiganjima,

Tokyo, and Shimoda, Izu Province. The steamer *Amagi Maru* commenced the service on the 24th instant.

A LAD of 19 was run over by a train at a crossing near Uyeno station on the 19th instant and killed on the spot.

THE work of laying a telegraphic cable through the Kurile Islands has been completed by the cable steamer *Okinawa Maru*.

A CHARTER has been given to some Yokohama capitalists to construct an electric railway from Kawasaki-machi to the Daishi temple.

VISCOUNT TANAKA, Vice-Minister of the Imperial Household Department, tendered his resignation some days ago on account of indisposition.

H.I.H. THE CROWN PRINCE will attain his majority on the 31st of August. He will return to the capital from Hayama on the 30th inst.

THE Kumamoto Emigration Company has received an order from the Albin Company in Hawaii for 105 Japanese contract emigrants.

COUNT MUTSU, formerly Minister for Foreign Affairs, and one of the ablest statesmen of Japan, died after a lengthy illness on the 24th instant.

DYSENTERY is spreading rapidly in several parts of the country. During the last three months 23,816 cases have been reported and 4,311 deaths.

M. DE SPEYER, late *Chargé d'Affaires* for Russia at Tokyo, left Japan for Korea on the 24th instant to take up his post as Minister to that country.

THE rising on the Afghan border appears to be of a very serious nature, though the Ameer denies all responsibility and blames the religious leaders of the tribes.

THREE pirates who have been committing robberies in the waters extending from Kannonzaki, Yokosuka, to Shinagawa Bay for several years, have been arrested.

REAR ADMIRAL OXLEY, second in command of the British China Squadron, left for home via America by the *Gaelic* on the 25th inst., owing to the critical condition of Mrs. Oxley.

It is reported that the greater part of the salaries of the Russian drill-instructors recently engaged by Korea is to be charged to the Russian Authorities, only a small portion being defrayed by Korea.

BARON ROSEN, the new Russian Minister, was granted audience by the Emperor at the Palace on the 24th instant, and presented his credentials. The Baron was afterwards received by the Empress.

ON Tuesday morning a special Cabinet Council was convened at the Palace; all the Ministers of State being present. The subjects discussed related to the Budget for the 31st fiscal year and other important matters.

THE Commandant of the Japanese Standing Squadron hoisted his flag on the *Itukushima Kan* on the 19th instant, the *Chinyen* having hitherto been the flagship. The Squadron left for Hokkaido waters on the 24th instant.

H.I.H. PRINCE ARISUGAWA proceeded to the Palace on Tuesday morning at 10 o'clock and had audience with the Emperor, when His Highness submitted to His Majesty a full report of the Diamond Jubilee celebrations.

TWO deaths occurred at Nagasaki a few days ago by an accident with kerosene. A little boy of four, nephew of Mrs. Feldstein, playing with

some matches, exploded a tin of kerosene. The child was immediately wrapped in flames, and Mrs. Feldstein in attempting to save him was so severely burnt that she, as well as the boy, succumbed to the injuries received.

EIGHT Chinese employed on board British men-of-war, probably as cooks, have been arrested at Hakodate by the Japanese police on a charge of gambling. It is reported that the British Consul at the port has protested against their arrest.

ON Sunday afternoon, the 22nd inst. a deplorable boating accident occurred by which two Portuguese residents of Yokohama, Messrs. V. Barradas and E. Perpetuo, lost their lives. The latter, with two companions, were upset in a small sailing boat near Honmoku, and though the other two succeeded in reaching the shore, Barradas and Perpetuo were drowned, their bodies being afterwards recovered and buried.

ON the 26th inst. a case which had been committed for trial by a Jury, in which a person named Arthur Fergusson Morrison was charged with stealing 3 yen from Thomas Jones, at the Tonosama Hotel on the 11th inst., came on in the British Court before Mr. Justice Wilkinson and a Jury, but the complaining witness not putting in an appearance in Court the prisoner was acquitted and released, the recognisance of the complainant, in \$100, being estreated.

ON the 24th a case was before the British Court in which a quartermaster on the P. & O. steamer *Verona* was arrested by the Japanese Police, locked up for a night and day and then brought up on a charge of being in possession of $\frac{1}{2}$ lb. of opium. As this was shown by the Assistant Judge to be no offence in British law, the charge was amended to that of smuggling the opium; but as the minimum quantity for smuggling which a penalty can be imposed under the Trade Regulations is one catty, or a pound and a third, the case was dismissed.

THE past week has been very disappointing to importers of piece goods, the little spurt of the previous seven days having completely died out. Raw cotton has made a big jump upwards, quotations being from \$4 to \$5 higher than last week, while supplies are also short. There seems to be every possibility of a glutted pig-iron market soon. Various ships have arrived lately with heavy cargoes and there are still several thousand tons afloat bound for this port. Buyers consequently are lying low, expecting to have it all their own way soon. Quotations for other lines are nominal in face of no demand. Very little is doing in kerosene just at present, but quotations remain unchanged. A small but steady business has been done in brown sugar during the week, principally for Manila sorts. White refined is quiet. There is less doing in raw silk, shippers apparently not caring to go on with heavy shipments at present rates, but holders are resolute and will not budge. In waste silk a few small transactions are recorded, but scarcely enough to make a market. Tea has been brisk, in spite of the poor quality of leaf now offering. Sales in Yokohama total about 435,000 catties and 165,000 catties in Kobe. Prices generally have run from \$19.50 to \$30 per picul, and are still well maintained. Shipments have been 382,069 lbs. by the *Empress of China*, 321,990 lbs., by the *Monmouthshire*, 90,431 lbs. by the *Gaelic*, and 78,845 lbs. by the *Kagoshima Maru*, all for American and Canadian ports. Total shipments of the season to date are 19,449,577 lbs. Exchange closes weak.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Whether the programme of military expansion mapped out by Japanese statesmen after the war with China was the result of a mere momentary impulse; whether the nation would persevere in carrying it out; whether the general increase of administrative expenditures inseparable from the inauguration of such a large scheme in two special departments, would not prove too much for the resources of the Treasury; whether the people would not grow impatient under the pressure of new burdens of taxation imposed by the necessity of undertaking productive works side by side with unproductive—these were questions that presented themselves vividly to every student of Japan's contemporary history two years ago, and as they are beginning to receive their answer now, signs of the time furnished by the writings of leading journals possess great interest. During the past twelve months, there have been many evidences that while the nation is a unit so far as approval of naval expansion is concerned, considerable difference of opinion exists as to the necessity of army expansion, the opponents of the latter measure being largely influenced by apprehensions lest the State expenditures should attain dimensions incommensurate with the resources of the people. An exhaustive argument of a general character is published by the *Nichi Nichi Shimbun* on this subject. Premising that the experiences of its first great foreign war naturally open a country's eyes to the need of efficient armaments if competence for self-defence be a means of securing tranquillity, our contemporary alludes, *en passant*, to the mutability of political views as illustrated by the attitude of the *Shimpo-to*, whose leaders, while in opposition, endeavoured to defeat the Government's programme of military expansion, declaring it too large for the needs of the country, whereas, so soon as their own friends came into power, they voted for the programme while the Diet sat, and had nothing to say against it after the session closed. Of late, however, newspapers generally supposed to be organs of officialdom begin to show considerable diversity of view. Some allege that in the absence of efficient means of communication, a large army is practically worthless: unless vehicles for transporting it exist, it can not be utilized. Others say that to carry out large schemes of army expansion in times of peace tends to disturb men's minds, and to precipitate calamities. Opposed to these views are writers who take the line that Japan's relations with a neighbouring country (Russia) are such as to involve peril of a collision, that it is hopeless to look for permanent peace between the two empires, and that unless Japan prepares for the contingency of war, she may suffer at the hands of her northern neighbour what she herself recently inflicted on her western. It is singular to find these positive and negative policies ranged side by side in the columns of ministerial organs, but the fact seems to be that as Count Matsukata came into power on a platform of financial retrenchment, the leader of the *Shimpo-to* inferred an intention on his part to reduce the scheme of military expansion by one half. On that assumption some of them apply themselves to discover reasons for such a reduction, whereas the organs in closest touch with the Cabinet take pains to popularize the opposite view. Yet the argument advanced by the latter school of publicists, namely, that Japan can not hope for continued peace with her northern neighbour and that she must make preparations for the inevitable conflict, is a shallow contention. Did the day for such a fight dawn, Japan could not expect to be allowed to carry on the combat in a closed arena, the other Powers playing the part of mere spectators. The struggle would certainly assume wider dimensions, and if her opponent joined forces with the third of the Three Powers (France), she would find that her five hundred-and-sixty thousand troops, and her two-hundred-and-fifty thousand-ton navy were very far below the standard of self-protecting efficiency. No such

short-sighted and unfriendly motives actuate her. Nothing could be more misleading than to allege that a country which, in developing its armaments, has for unique aim the preservation of tranquillity in the Orient, is in reality influenced by the project of getting ready to fight a neighbour. The recklessness and imprudence of journals adopting such a line of argument can not be too strongly condemned. As to the reasoning of those that decry the expediency of military expansion, it is scarcely less shallow. There is indeed, some semblance of justice in the contention that without vehicles of transport a big army is a useless machine. But instead of urging that the country should resign itself to a condition of self-defensive helplessness because it lacks the mechanical means to utilize its military strength, the wise and patriotic course is to urge the provision of those means with all possible speed. Again, to the contention that military expansion in times of peace disturbs men's minds by demanding large pecuniary sacrifices, the answer is simply that no such sacrifices are in reality demanded. The indemnity received by Japan from China would have amply sufficed to cover the cost of armament expansion, and there need not have been any financial strain, had not the Matsukata Cabinet embarked upon other enterprises requiring large outlays. It is because of these enterprises and of the general increase of administrative expenditures that embarrassment is now felt, and if some of the Cabinet's friends lay the blame on military expansion, they are merely seeking to find a scapegoat and to divert public attention from the true issue. That the country should take whatever steps are necessary to the preservation of its own safety and of the Orient's peace, can not be denied for a moment. If its financial strength be not equal to that fundamental duty, why talk of retrenchment in military matters only? There must be retrenchment all round. The Matsukata Cabinet has launched this country on a sea of extravagance where people, seeing no haven, are naturally perturbed. It has raised the expenditures of the State from 180 millions, the figure of its predecessors, to some 300 millions, and if its programme be pursued, a deficiency of 30 or 40 millions annually will have to be met by loans or by increased taxation. No wonder that the critics talk, and that the Cabinet's apologists seek to lay the blame on the shoulders of army expansion. But they succeed only in blinding men's eyes to the real purpose of expanding the national armaments, namely, the completion of the country's defences, a rudimentary necessity of which the practical acknowledgement can not be deferred to the eve of battle, and was not discovered for the first time during the war with China. An examination of the Imperial Messages to the Diet before the war broke out, shows that the exigencies of such a policy had already received full recognition, and that its consummation was regarded solely as a means of securing tranquillity for the country. There was no idea whatever of meaning strength with a neighbouring Power. No trisler or more mischievous interpretation of the policy of the State could be conceived.

The financial danger that menaces the country in connexion with the inauguration of gold monometallism from the 1st of October, is discussed at considerable length by the *Fiji Shimpō*. That journal was from the outset an opponent of the so-called "reform" of the currency, and it finds confirmation of its views in the present state of the bullion market. Silver has fallen to 25½d. per ounce, which means that the ratio connecting the two metals is no longer 1 to 32.34 but 1 to 36.1, so that 100 gold *yen* are intrinsically worth 226 silver *yen*. In view of such figures it is inevitable that all the silver *yen* in circulation should flow into the treasury to be exchanged for gold. The total quantity of silver *yen* coined since the establishment of the Mint is 150 millions, and of that aggregate it is believed that 35 millions are now circulating in Japan and 30 millions in China and the Straits Settlements, the remainder

having been "chopped" or gone to the melting pot. The Treasury will therefore have to exchange 65 million *yen* and it will incur a heavy loss by the transaction. What provision it has made to meet the contingency the public does not certainly know, but if it has to pay out 65 million *yen* in gold on account of the redemption of silver *yen*, no very large store of the precious metal will remain in its vaults. What course will then be adopted? Will the American plan of selling bonds be employed? If so, we shall see Japanese 5 per cent. securities offered at a low rate in the open market, and the price of all public stocks will depreciate correspondingly. The *Fiji* then proceeds to show that the one great benefit anticipated as the result of adopting gold monometallism—namely, free access to foreign capital on easy terms—has not been secured, and that the inherent disadvantages of the change are already felt in the domain of the export trade. Our contemporary dismisses as unpractical the two contentions that the loss incurred in exchanging silver *yen* will be partially covered by re-minting them into subsidiary coins, and that a large field for the profitable circulation of the latter may be found in Formosa.

The *Fomiori Shimbun* devotes no less than four articles to combatting the fears entertained on this subject of silver *yen* coins, and as our contemporary's figures may be regarded as at least semi-official, we proceed to quote them here. The total quantity of silver *yen* coined since the establishment of the Mint in 1872 is 165,124,948, out of which 46,904 have been recoined into subsidiary tokens; 15,886,684 are lying in the vault of the Bank of Japan; 34,540,889 are circulating in Japan, and 114,236,471 have found their way abroad. With regard to the coins circulating at home, it is doubtful whether any very large amount of them will be offered for exchange against gold, since the holders in rural districts will take little note of exchange fluctuations. With regard to the coins that have gone abroad it seems certain that, according to the highest calculation, not more than 50 millions retain the quality of legal tender or remain in circulation: the rest have been chopped, stamped, or otherwise defaced so as to disqualify them for exchange, and many millions have gone to the melting pot. Moreover, those 50 millions are discharging the functions of media of exchange in Hongkong, Singapore, Tientsin, and the interior of China. If they are withdrawn for exchange against gold in Japan, some other coins must be substituted for them. Evidently the operation of collecting and shipping them to Japan must be more or less protracted. Taking, however, the most unfavourable view of the situation, and omitting the fact that of the 34½ million originally circulating in the interior of Japan, some ten millions passed into the hands of Chinese and Koreans during the war, as well as the fact that in the rural districts of Japan the idea of undertaking exchange operations will not be entertained, the figures are that 50 millions will come from abroad for conversion into gold, and 34 millions from domestic supplies. Now silver was quoted in London on the 11th instant at 25½d. per ounce, which corresponds to a ratio of 1 to 36.98 against the Japanese ratio of 1 to 32.34, a difference of more than 4. Silver may fall still further in terms of gold before October 1st, but it may also rise. The cost of production is 24d. per ounce, and below that it can not descend, so that there remains a margin of only 1½d. However, at the present rate, 100 *yen* in the Japanese system are worth 114 *yen* in the open market, so that the operation of exchange at existing rates would involve a loss of 14 per cent to the Treasury. Of course, no such profit is within reach of persons presenting *yen* for exchange: many factors would contribute to diminish their gains. But the expense to the Treasury would be 14 per cent., or a total loss of 11,700,000 *yen*, in round numbers, on 84 millions. On the other hand, a very large quantity of subsidiary coins must be struck to supply the deficiency in Japan and to meet the demand in Formosa. It is estimated that at least

60 million yen worth of silver will be required for that purpose, and as the transaction will show a profit of 6 million yen, the net loss to the Treasury, on the most unfavorable hypothesis, stands at 5,700,000 yen. To some such loss the country must reconcile itself. The contingency was foreseen from the very outset. Such an immense reform as a change of the monetary system from a silver to a gold basis could not be achieved without some cost, and a loss of 5 or 6 million yen is not to be spoken of in the same breath with the immense gain of securing an absolute, stable currency and entering, for commercial and manufacturing purposes, into the financial system to which all the leading nations of the West belong. That Japan will be able to maintain the ratio she has chosen, goes without saying. In England silver circulates, for subsidiary purposes, at a ratio of 14.519 to 1; in Germany, at 15.02 to 1; in the countries of the Latin Union, at 15.5 to 1. Japan's 32.34 to 1 places her twice as close to the practical reality as is any of these nations. Turning, now, to the question of the reserves forming the basis of the new system, we find that the Bank of Japan has a store of gold coin and gold bullion amounting to 39,200,586 yen, and the amount in the Treasury's vaults is 72 millions, so that the total immediately available is 111,200,586 yen. Even supposing, then, that 84 million silver yen were presented for exchange within a few months—an evidently extravagant supposition—there would still remain upwards of 27 million yen. Moreover, the Government has 43 million yen in gold lying in London, the proceeds of the recent sale of bonds, and large sums are still to accrue from the Indemnity, a portion of which will be available for reserve purposes, since convertible notes can be issued to a corresponding amount in Japan. Thus, even assuming that the whole volume of silver yen flowed at once into the Treasury for exchange, there would still remain a store of 70 million yen in gold, independently of sums hereafter obtainable from the Indemnity. Further, the stock of silver bullion in the Bank of Japan is now 40 million yen, and that in the Treasury's vaults, 29 millions. These 62 millions, if not needed for subsidiary coins, could be exchanged for gold as opportunity offered, and the same would be true of any surplus that might remain from the stock of silver yen presented for exchange. Hence, the worst possible case is a loss of less than 6 million yen to the country, and the consummation of gold monometallism with a gold reserve of 70 millions, to be subsequently augmented by drafts from the Indemnity; a silver reserve of 69 millions, to be gradually converted into gold, and a stock of 85 millions in silver yen, to be gradually converted into subsidiary coins.

The *Chuo Shimbun* discusses the same subject and arrives at the conclusion that to put the gold monometallic system into operation would be ruinous to the country. We need not reproduce its arguments. They have been urged frequently in the editorial columns of this journal as part of the general case against the single gold standard, and their gist is, first, that a very heavy loss will be entailed upon Japan in connexion with the exchange of the silver yen; secondly, that her stock of gold will be so greatly reduced in the operation as to become insufficient as a basis for the new system; and thirdly, that the silver-using countries of the East will have an immense advantage over her in the field of exports. The *Chuo* recommends Count Matsukata to resign at once, in view of the huge failure he has made, and further recommends that steps be taken to postpone the operation of the gold system. Its expression of opinion on this latter point, which is probably dictated chiefly by party considerations, is roundly condemned by other journals. They justly claim that Japan has no choice now but to go forward, and that her international credit would be permanently wrecked if she deviated from the path deliberately chosen by her.

The action of Russia in undertaking the

training of the Korean troops after Japan had withdrawn from that field was calculated, in the first place, to destroy the equilibrium between the relations of the two empires towards Korea; in the second, to impair Japan's rights and prestige; and in the third, to bring about finally the closing of Korea to Japanese subjects. Such is the exordium of a very strong article in the *Sekai-no-Nippon*. A question of that magnitude demands the attention of all lovers of their country, continues our contemporary, and has been frequently discussed in these columns. On the 26th of February Count Okuma declared in the Diet that the steps taken by Korea up to that time in employing Russian military experts were within her rights as an independent State, and did not warrant interference from without. Subsequently, when the Representatives of England and America in Seoul contrived to prevent any extension of such a policy on Russia's part, Count Okuma gave out, through the columns of his newspaper organs, that the result had been achieved by his own representations. Again, when a new ingress of Russian officers and soldiers into Korea occurred, the same newspapers were made to say that the arrival of Baron Rosen in Japan had to be awaited before taking any steps. If Korea had an independent right to employ Russian drill instructors, why did Count Okuma make any representations on the subject? If his representations were successful on the first occasion, what necessity was there to await the coming of Baron Rosen on the second? Were not the same avenues of negotiations open throughout? One or other of the Count's statements must be untrue. It seems that for the past six months we have been the dupes of the Foreign Minister's evasions. Baron Rosen is now in Tokyo and will present his credentials in a few days. What will be the basis of the negotiations opened with him by Count Okuma? The *Sekai-no-Nippon* thinks that there can be only one basis, namely, the complete withdrawal of the Russian *Mission Militaire* from Korea. The second clause of the Moscow Convention is perfectly clear. It provides that Korea shall organize her army without any foreign assistance. It was in consequence of that clause that Japan withdrew her military instructors, and the obligation devolving upon Russia as the other signatory of the Convention is not less emphatic. Nothing is required of Count Okuma except that he should insist upon the same covenant being equally binding on both its signatories. There was, in fact, no occasion whatever to await the coming of Baron Rosen. Count Okuma seems to be still living in an era a decade old. He apparently labours under the impression that European Governments continue to await reports from their Representatives in the East before deciding diplomatic questions. His true and proper plan would have been to approach the Government in St. Petersburg through the Japanese Minister there. At all events, the opportunity has now come for which he declared himself to be waiting, and it is to be hoped that he will remember that only by procuring the withdrawal of the Russian drill-instructors can equilibrium be preserved in the positions of Russia and Japan in Korea and amity maintained in the relations between the two empires themselves.

The *Yorodsu Choho* writes on the same subject but in much more moderate terms. The gist of its arguments is that although the Lobanow-Yamagata Convention contains no provision explicitly relating to the despatch to Korea of drill instructors by either of the High Contracting Parties, the undoubted purpose of the agreement is to place the two empires on a footing of equality towards the peninsular kingdom, which purpose can not be achieved if the Korean army is to fall under Russian management.

The cases of dysentery in Kanagawa Ken now number 180 or 190 in all, the epidemic being very rife in the districts of Tsukui, Aiko and Koza.

THE BANK OF JAPAN.

The half yearly general meeting of the Bank of Japan took place on the 21st instant, Baron Iwasaki, President of the Bank, being in the Chair. The report presented by the President and passed at the meeting shows, says the *Mainichi Shimbun*, that the receipts during the first half of the current year amounted to yen 4,132,566 and the expenses to yen 1,118,307, leaving a profit of yen 3,014,258, to which yen 138,777 brought forward from the previous account were added, making a total of yen 3,153,036. Of the above sum yen 675,000 were devoted to payment of an ordinary dividend at the rate of 6 per cent. per annum, yen 1,300,000 carried to reserve, yen 150,000 voted as remuneration to officials, yen 787,7000 appropriated for the payment of a second dividend at the rate of 7 per cent. per annum, yen 240,535 being carried forward to next account. As the above figures show, the dividend declared is altogether at the rate of 13 per cent. per annum. The profit and loss of the branch offices during the period were as follow:—The profit at the Osaka branch amounted to yen 696,208, that of the Western section branch, yen 129,590, that of the Hokkaido branch, yen 46,998, that of the Nagoya branch, yen 5,278, that of the Kyoto branch, yen 10,549, while a loss was incurred at the Sapporo branch of yen 5,828 and at the Taipei (Formosa) branch of yen 162,224.

MILITARY OFFICERS.

The number of military officers has gradually increased, says the *Nippon*, since the late war with China. The following table shows the total number of officers on the strength in August for the past three years:—

	28th year of Meiji.	29th year.	30th year.
Generals	4	4	4
Lieutenant Generals ...	12	12	19
Paymasters-General ...	—	—	1
Surgeons-General	—	—	1
Major-Generals	30	32	32
Paymasters	2	3	2
Surgeons-Principal	3	3	2
Colonels & other officers of corresponding rank	106	101	91
Lieut.-Colonels, &c. ...	148	170	173
Majors, &c.	376	418	493
Capt. & other officers of corresponding rank..	1,555	1,573	1,641
Lieutenants, &c.	1,225	1,119	944
Sub-Lieutenants, &c.	1,629	1,687	2,231
Grand Totals	5,162	5,121	5,572

These figures show that a decrease of 41 officers took place in 1896 as compared with the number recorded for 1895. But an increase of 401 is noticeable in 1897, chiefly due to the armament expansion scheme. It may confidently be asserted that the number of military officers in actual service will, on the completion of the scheme, exceed 10,000.

DYSENTERY.

The spread of dysentery in the Kwanto districts this year, according to the *Mainichi*, is accounted for by the fact that preventive measures have been neglected of late years in those districts. The Epidemic Inspection Bureau of the Home Department give the following figures up to the 23rd inst.:—

	Patiente.	Deaths.	Percentage of deaths.
Tokyo	2,518	551	20
Kanagawa	1,859	140	0.8
Saitama	2,122	430	20
Chiba	1,002	202	21
Ibaraki	746	172	23
Gumma	2,560	361	14
Tochigi	704	143	20
Yamanashi	3,162	411	18

Total 14,673 2,319 —

The number of cases throughout the empire totalled 23,816, of which 4,311 resulted in death, the percentage of deaths being 18.

JAPANESE TOPICS.

The keel of the *Shikishima*, the iron-clad recently ordered by Japan in England, was laid on the 7th instant. She is to be completed in 1899, and it is expected that her launch will take place in August or September of next year. Her displacement will be two thousand tons more than that of the *Fuji*.

The *Official Gazette* says that as the fees for shooting licences are to be paid henceforth with stamps, applicants should be careful not to write over, or impress their seals upon, the stamps attached to their applications. The stamps will be officially marked when the licences are granted.

It would seem from a paragraph in the *Nichi Nichi Shimbun* that the question of the Russo-Japanese Protocol is to be dragged, as we feared from the first, into the arena of party controversy. Our contemporary says that Russia shows signs of construing the Moscow and Soul agreements in a sense entirely favourable to herself, and that Count Okuma is perplexed to determine what attitude he shall assume in his negotiations with the new Russian Minister. Whatever may be Russia's solicitude for her own interests, we are bound to say that this disposition on the part of Japanese newspapers to complicate international problems for party purposes, can not conduce greatly to the interests of Japan.

The reports recently circulated that Count Matsukata had actually tendered his resignation, and that Baron Iwasaki was about to follow suit, are declared to be absolutely baseless.

It is said that the stagnation now prevailing in the share market has had no parallel for the past six years. Business is practically *nil*. Such a state of affairs is difficult to explain, seeing that the silk trade is good and that the prospects of the rice crop are excellent. Various causes are assigned by the vernacular press. Some of them are political; namely, anxiety about complications with Russia in Korea; uncertainty about the issue of the Hawaiian question; the prospect of an impending change of Cabinet, and so on. But other and more comprehensible reasons also are suggested; for example, disappointment at the failure to effect sales of Japanese bonds abroad; apprehensions about the fate of various companies started during the industrial fever that followed the war, and now in a precarious state; a feeling of uncertainty on the subject of the national finances in general; the probability of a further rise of rates by the Bank of Japan, and the dullness that generally prevails in business circles during the dog-days.

The *Official Gazette* gives an account which shows that since the 31st of July, Shirane-san has been in a state of more or less violent eruption. At 5 a.m. on the 31st, five or six violent shocks of earthquake were felt, and a discharge of stones, earth and ashes took place to the right and left front of the shaft leading to the sulphur mine, which is situated between the old crater and the larger lake. The ejected matter was thrown over a wide area, and rocks measuring 3 or 4 feet in diameter fell upon the mine railway. A new crater thirty or forty feet deep was

found. On the 2nd instant at 2 a.m., there were fresh indications of activity. Loud reverberations were heard, and these were followed by several discharges of large stones. On the following day at 2 p.m., the phenomenon was repeated, and a labourer was injured. Thenceforth the rumbling continued with little intermission. It resembled discharges of artillery. A number of the workmen were sent away from the mine. At 2.30 a.m. on the 13th instant, the greater lake gave forth a loud noise, and stones weighing from 400 to 500 lbs. were ejected, crashing down on the roofs of the buildings connected with the mine, and breaking them. The record on the 15th instant was still worse. Rocks of larger size and greater quantities of mud and ashes were ejected, the roofs of the buildings being destroyed through a length of 40 feet. Fortunately there was no injury to life or limb, but it was considered necessary to send all the workmen down to Kusatsu.

The Liberal organ (*Tokyo Shimpō*) will have nothing to do with the *Fiji Shimpō's* proposals for an amalgamated Cabinet. It ridicules the Mita Sage and says that his protégés, the Matsukata Ministry, having proved themselves incapable, he can not bring himself to abandon them to their well deserved fate, but is trying to obtain for them a new lease of life, suggesting a union with Marquis Ito and Count Itagaki. It appears to us that the *Tokyo Shimpō* is blessed with a convenient memory. For several years the *Fiji Shimpō* has been a persistent advocate of a combination Cabinet, and if any wiser policy can be discovered, we fail to see it.

Mr. Abe Sanemasa, Inspector of Police in the Nippon Bashi District, of Tokyo, and Mr. Okada Nobuoki, Inspector in the Akasaka District, have both been placed on the retired list, the former in consequence of the disaster on Ryogoku Bridge, and the latter for dispersing the lecture meeting of the Kwanto Jiyu Seinen Association.

The *Japan Gazette* has been at some pains to demonstrate the legality of the action recently taken by the Danish Consul in arresting one of his nationals on board a British vessel in Japanese territorial waters, outside the limits of a treaty port. Our contemporary contends that there have been instances in the past of arrests made by foreign consular authorities outside the Treaty ports, and cites one case in particular, the shocking affair of the *Iris*, in 1875, when the accountant and sub-accountant of the Comptoir d'Escompte attempted to escape from Yokohama with a large sum of money stolen from the Bank. The *Iris* was pursued by an English steam-launch, the *Sea-gull*, overtaken in Kaneda Bay, whereupon the two fugitives committed suicide. "What was right in the case of the *Sea-gull* could hardly be wrong in the case of the *Columbia*," is our contemporary's conclusion. It need only be pointed out, we imagine, that there is a fundamental difference in the two cases. The *Sea-gull* pursued men flying from the consequence of a crime committed in Japan; the arrest made on the *Columbia* was that of a man charged with committing a crime in a foreign country. There is no analogy whatever. The Japanese have always permitted the Consular Authorities to make extra-settlement arrests when the offence was committed on Japanese soil. Even in the

case of Campos, who was apprehended at Arima and released by Mr. Fraser in deference to the protest of the Japanese Government, we think it more than probable that had his crime been committed within Japan's territorial limits, no objection would have been evoked in connexion with his arrest. But a fugitive from the consequences of a crime committed abroad is another affair altogether. A wholly different principle is involved, and action taken in one case constitutes no sort of precedent for procedure in the other.

Among the stories that have been handed down from the days of feudal Japan, few are at once so pitiful and so admirable as that of Sogoro, the central figure in the Sakura disturbance. Mr. Mitford, in his "Tales of Old Japan" has recounted the outlines of Sogoro's history. Doubtless most of our readers have thus become familiar with the farmer patriot's doings and his terrible fate. Now, however, an incomparable fuller record is accessible. It is a literal translation of a book compiled by a Japanese author many years ago, and printed in 1887. The Rev. George Braithwaite is the translator. He seems to have done his work with great fidelity, and has been fortunate enough to find an illustrator and a publisher of considerable merit. The book, though doubtless accurate as a narrative of facts, partakes somewhat of the character of romance. It undertakes to enlighten the reader not merely as to incidents, but also as to the thoughts and motives of the principal actors. Still, since they are motives and thoughts attributed to Japanese people by a Japanese author, they have an interest of their own, and the book may be regarded as a tolerably accurate picture of Japanese village life and local administration two hundred and fifty years ago. We strongly recommend it to our readers.

The question raised by the British Consul on Tuesday at the close of the trial of Antonio Barcas, who was charged with smuggling opium, strikes one as decidedly interesting. Mr. Troup asked why Barcas was arrested without a warrant, and said that it would be his duty to call the attention of the Authorities to the matter. Barcas was detected in the act of carrying a half-pound tin of opium from the P. & O. steamer *Verona*, and was handed over to the police by a Customs Official. Is it conceivable that under such circumstances the police had no right to effect the arrest immediately, and that their duty was to apply in the first place for a warrant? We can not think it. Barcas was caught in the very act of breaking the law. Had he been committing an assault or stealing a purse, there could have been no question about the propriety of his immediate apprehension. In the interim of seeking out the British Consul at 7.20 p.m., and obtaining a warrant from him, the smuggler might have made himself effectually scarce. Is that result consistent with any rational police procedure? It turns out, indeed, that Barcas was not doing anything criminal. His smuggling was not on a sufficiently large scale. His tin contained five-sixths of a pound short of the minimum quantity for which the law prescribes a fine of 15 yen. It is a very peculiar law. Doubtless Mr. Troup administered it correctly, the drafting alone is in fault, but the result is bizarre. Since, then, the act did not involve any penal consequences to Barcas himself, his arrest must

have been illegal, warrant or no warrant. Apparently, the law being what it is, there ought to be a weighing machine in the Custom House for the purpose of ascertaining whether the *corpus vile* turns the scale at 1½ lbs. If it does, then the smuggler can walk away, and make provision against being accessible when the necessary warrant has been procured.

A most extraordinary and complicated story comes to us from Nikko. We do not vouch for the details, but they run in this fashion:—A gentleman on a visit to Japan had a difference of opinion with his Japanese servant. He dismissed the man and told him to return at once to Tokyo. The servant preferred to remain in Nikko. The master bought a railway ticket, put the ex-servant in the train, and shut him into a carriage. How these latter operations were effected, we are not informed. The man presently jumped out of the carriage, and indicated his ex-master to the police as a traveller without a passport. The police, acting on the hint, arrested the traveller, and marched him through Nikko, in custody which occasionally went to the length of laying on of hands. A lady acquaintance of the gentleman meets the procession, and rescues him from his ignominious position. At this point the story loses its continuity, somewhat. The next scene opens at the house of the lady. The children of the family are playing some game in which the rescued friend is taking part. A number of Japanese little ones crowd into the gate to see the fun. They are told to make themselves scarce, and as they show want of alacrity in obeying, their exit is hastened by water thrown—at the suggestion of the friend—from a tin ladle fixed on a bamboo handle. The implement being vigorously wielded and the attachment defective, the tin head flies off and strikes one of the Japanese children on the head, knocking it down, hurting it more or less and alarming it more. That evening, or the next day, the inevitable redresser of wrongs, a *Soshi*, appears on the scene and demands reparation, but being driven to admit that the injured child is no relative of his own, he takes himself away, and incites the child's father to complain. The father and his eldest son, having imbibed freely of *saké*, proceeded to the scene of the incident, force their way into the house, and require the lady to produce the ladle-wielding child that they may kill it. Of the two the father, being the more inebriated, is also the more obstreperous. He manages to get up-stairs, and the lady is terribly alarmed. But finally an inspiration comes to her. She tenders the son a *yen* and asks whether, in consideration of that douceur, he will remove his father. The son responds by throwing the father down-stairs, and thereafter the lady detains the drunken complainant until the police arrive. Then occurs the queerest episode of all. The police declare themselves incompetent to remove the complainant because he won't go! There are evidently some links wanting here. At all events, the intruders are induced to take their departure, and the lady, well known for her kindheartedness, is now deliberating whether she will prosecute. The police say that if she does, something like five years' imprisonment will be the lot of the father, who, they add, is a respectable, peaceable man, except when he is carrying a *shô* of *saké* and has had his child's head damaged.

Such are the circumstances as they come to us. The gentleman without the passport does not shape well in the affair, but the lady is a heroine.

It is arranged, we understand, that the funeral of Count Mutsu shall take place on the 28th instant. Full details will doubtless be published in due time. Very great sympathy is felt with Countess Mutsu. The past few years have been intensely sorrowful for her. Not long ago she followed her only daughter to the grave, and now she is bereaved of her husband. Young Count Mutsu also lies ill, so that the house at Nasu-no-hara is truly a house of mourning.

We are glad to be able to say that Mr. Gubbins is mending. He seems to have caught a chill when returning from Kusatsu, where he had undergone the usual but very severe course of baths, with the hope of dispelling the remnants of a rheumatic attack from which he recently suffered. The cold settled on his lungs, and complications of a typhoidal nature ensued, so that for a time his illness was quite serious. But he is now on the road to convalescence, and will doubtless be able to return to Tokyo next month.

Dr. MacDonald has gone to Karuizawa to attend Mr. Terry, who lies ill with dysentery. It is said that Mr. Terry did not contract the malady at Karuizawa, but that he brought it there from a trip in other parts of the country. We shall doubtless, therefore, be taken to task for giving Karuizawa a bad name, as we were last year. There remains, however, another case of dysentery to be accounted for, and whether the favorite resort be sinned against or sinning, it is certainly an unlucky spot, according to the records of last season and of this. With reference to dysentery, it is not irrelevant to recall an experience noted formerly in these columns, namely, that every epidemic of cholera among the Japanese has been preceded by an epidemic of dysentery among the foreign residents. Of course the syllogism is not perfect. It does not follow, that every epidemic of dysentery among the foreign residents precedes an epidemic of dysentery among the Japanese. But it appears to be possible—though we do not think of dogmatizing in such a context—that the germs which produce cholera in the system of a Japanese are not capable of more serious mischief than dysentery when they have the hydrochloric acid of the Occidental digestive organs to contend against.

The *Kobe Herald*, writing up the case of alleged assault upon an American lady in a Japanese store, says:—"For the benefit of the *Mail*, whose inherent consciousness of misrepresentation causes it to fancy that its contemporaries are all similarly devoted to the prostitution of truth, &c." That is a misconception. Sometimes we think that papers like the *Kobe Herald* do infinite credit to British journalism in the Far East by the courtesy and moderation of their style, but "devotion to the prostitution of the truth"—what a dreadful idea!

We observe that the case of the injured lady is now the subject of judicial inquiry. If she really was assaulted in the brutal manner stated, we sincerely hope that an example will be made of her assailant. The Japanese in Kobe may

think that they have a record to wipe off against the foreigner. We daresay that they have. The old times left an unsightly legacy. But there is nothing to be said against the average foreigner now-a-days. He is quiet, self-contained, and, on the whole, considerate. If the Japanese undertake to visit the sins of the free-handed, masterful fathers upon the peaceable, long-suffering children, they will put themselves terribly in the wrong. Leckey, in his immortal work, says:—"The spirit of patriotism, in its relation to foreigners, like that of political liberty in its relation to governors, is a spirit of constant and jealous self-assertion." That seems to us to describe exactly the state of affairs in Japan at present. But if the Japanese hope to be judged by philosophical tribunals, they are mistaken. The general public does not employ ethical factors when it has to solve problems of assault and battery. There will be an ugly verdict written on the wall unless matters mend speedily.

The deaths of Mrs. Feldstein and her two-year-old nephew at Nagasaki were most shocking. The burning of the poor little lad under such circumstances would have been in itself sufficiently appalling, but that the brave lady who so nobly struggled to save the child should have followed it to the grave, makes a record too terrible to contemplate.

We shall not add any lengthy comments of our own to the appeal preferred by the Rev. Gilbert Reid in our correspondence columns. Our readers have been fully informed of his scheme and kept *au courant* of its progress. That they sympathise with it, and will extend to it any help in their power, we entertain no doubt. But we venture to suggest to the Japanese that the project should interest them specially. It really appears to be one of the forlorn hopes of prising China out of the Conservative rut, and that is a result which we believe the Japanese to be sincerely desirous of consummating. Count Okuma, when he took over the portfolio of Foreign Affairs, is known to have mapped out for himself a most conciliatory and sympathetic policy towards China. He appreciates her difficulties, and believes that if she could be induced to regard Japan with honestly friendly eyes, she would recognise in her neighbour the most serviceable and least uncongenial medium for drawing to herself whatever elements of Western civilization are essential to the preservation of her integrity. She has to go through the mill; that is inevitable; and Japan having been through it already and being also racially closer to China than any Occidental nation, as well as herself a large and conscious debtor to Chinese civilization, it would be at once less hurtful to the Middle Kingdom's sensitiveness, and more convenient from many concrete points of view, to have recourse to Japanese assistance than to go far afield for Western aid. That is understood to be Count Okuma's idea of the situation, and it is an idea worthy of his general policy. The present occasion seems, therefore, to offer a suitable instrument for the pursuit of the Minister's programme. By allying himself with the supporters of the Rev. Gilbert Reid's project—many of them influential men—His Excellency might not only present to China an object lesson calculated to show the sincerity of

Japan's mood towards her recent foe, but might also be largely instrumental in promoting a really helpful scheme. The step would also be incidentally beneficial as constituting a bond of association between Japan, Great Britain, and the United States, the nationals of the latter two Powers being, thus far, prominently interested in the scheme.

It is curious to note that the Japanese newspapers publish a telegram announcing the ratification of the Revised Treaty between the Netherlands and Japan. The ratification is said to have been made by the Queen of the Netherlands on the 21st instant, but, as a matter of fact, the ratifications were exchanged in Tokyo on the 20th instant, His Excellency the Chevalier de Testa having been duly authorized for the purpose. We presume that the Minister's telegram to the Hague announcing the event has been perverted by rumour into the erroneous form referred to above.

On the 20th instant, Count Mutsu asked at what time Marquis Ito's return was expected, and when he was told that the 5th or 6th of September was the probable date, he smiled sadly as though conscious that he could not hope to meet his friend again on this side of the grave. It is said that during the last week of his illness, he wandered a good deal, and that his favorite position was to lie facing in the direction of the Imperial Palace. On learning from the Countess that the Emperor and Empress had returned to Tokyo, he made as though he would join his hands and bow towards the Palace, but his strength proved unequal to the effort. Immediately before his decease, he seemed to know that the end had come, and his lips were observed to move, but no sound issued, and sinking apparently to sleep, he breathed his last. The funeral, as already announced, will take place on the 28th instant, the cortège leaving the residence of the deceased at Nishi-hara, near Oji, at 2 p.m., and proceed to the temple Kaizen-ji, in the Asakusa district of Tokyo, where Buddhist funeral rites will be performed. The body will subsequently be cremated, and the ashes sent to Osaka for interment in the ancestral sepulchre at Tenno-ji. The route of the procession will be from Nishi-ga-hara by the Komagome road past the front of the Imperial University; then by Kiridoshi along the foot of Ueyeno hill into Matsubamachi. It is probable that the bier will reach Kaizen-ji at about 3.15 p.m.

Folks in Osaka are said to have become alarmed about the prospects connected with the inauguration of gold monometallism. They talk of the quantity of silver *yen* in circulation as 114 millions, and predict that two-thirds of that number will be presented for exchange against gold, the consequence being such a reduction of the Treasury's specie reserves that the convertibility of the bank notes will become problematical, and the nation will have to return to a fiat currency. They therefore contend that an Urgency Ordinance ought to be issued at once, postponing the adoption of gold monometallism. It is very plain that party politics are largely responsible for this pusillanimous talk. The issue of such an Ordinance would involve the immediate resignation of the Matsukata Cabinet, and that is precisely what the prophets of evil desire to contrive. We have always opposed the adoption of gold monometal-

lism in Japan, but if the danger connected with the exchange of the silver *yen* pieces were the only trouble in sight, we should not deem the question worthy of serious discussion.

We stated in a recent issue that some apprehensions were entertained lest the work of coining silver *yen* should be undertaken in China, in the event of an appreciation of gold so considerable as to render such an operation profitable. The *Tokyo Shimbun* alleges that certain foreigners in Canton have already made arrangements to strike *yen* which will be perfect in quality and execution as to defy differentiation from the genuine coins. Our contemporary adds that if the exchange of *bona fide* coins alone is likely to over-tax the resources of the Treasury, this addition of an unlimited number of new coins will prove the last straw. But a moment's thought will make it clear that no operations of the kind can be successfully conducted on a large scale.

It seems idle to recall, at this late date, an incident connected with the Gold Bill, yet we can not help regretting that the recommendation made in these columns when the Bill was placed in the hands of the Lower House, did not receive some attention. We pointed out very clearly the danger of loss and embarrassment in connexion with the exchange of the silver *yen* coins, and urged the expediency of leaving them to circulate as subsidiary tokens, making them legal tender to a limited amount. Instead of pledging itself to exchange the *yen* for gold, the Treasury might then have taken steps to gradually withdraw all those coins from circulation, replacing them by subsidiary tokens of smaller dimensions, and when the operation had proceeded far enough to insure its consummation against inconvenient results, a period for the final cessation of the *yen*'s circulation might have been fixed. But Japanese financiers were too sure of themselves to listen to counsels. Perhaps they were right, but we suspect that they would be greatly pleased now if they had dealt differently with the silver-*yen* phase of the problem.

According to the *Nichi Nichi Shimbun*, the Cabinet contemplates establishing another Department of State, to be called the *Komu-sho* (Department of Manufactures). The object is to promote the combination of engineering and economics, a somewhat vague programme which we do not profess to understand. However, as the Department is not to be organized until next April or May, there is plenty of time to learn more about it, if it be not altogether a mythical affair.

Our readers will have observed that the departure of Japanese emigrants for Hawaii has re-commenced and that very considerable numbers have left, or are about to leave, for that destination. The explanation is that contract labourers are permitted to enter the islands without difficulty. The immigration of free labour only is at a stand-still. Steps have been taken however, to put a complete stop to the ingress of Chinese labourers, in view of annexation.

The building in Queen's Road Central, Hongkong, known for over half a century as the home of the Hongkong Club, will still be retained and used for a like purpose by a new institution to be called the New Club.

DEATH OF COUNT MUTSU.

Count Mutsu expired on Tuesday afternoon at 3.45 o'clock. During the three or four days ended on the 23rd instant, his condition had been slightly better, but on the morning of the 24th, he fell into a state of unconsciousness, and in the afternoon he passed quietly away. For years he had been a sick man, but the disease of the lungs from which he suffered did not appear hopeless to his physicians in the early part of 1896, and could he then have resigned himself to protracted abstinence from all business, a long sea voyage and a residence of some months in a recuperative climate, his health might have been restored. Unfortunately, however, it is one of the troubles of that particular malady that while the physical strength is steadily sapped, the mental activity grows more and more intense. Count Mutsu did indeed make a trip to Honolulu, and benefited perceptibly by the rest and the change. But from the day of his return politics busied him again, and his health failed week by week. His attenuated frame and evident feebleness, supplemented by an invincible ardour to keep himself acquainted with public affairs and make some contribution to the welfare of his country, led his friends to expect that the end could not be long deferred, and the wonder is that the sad event which we have now to record, did not take place weeks ago. It is not an empty phrase to say that Count Mutsu's death is an immense loss to his country. To statesmanlike qualities of a high order, a keen and penetrating intellect, and a judgment as luminous as it was prompt, he added a most attractive personality and a disposition that won more than the friendship of those brought into contact with him. He held the portfolio of Foreign Affairs throughout the most momentous epoch of Japan's modern history, the consummation of the Treaty-Revision negotiations and the war with China. It would be unjust to attribute to him the chief share in procuring Japan's admission to the comity of Western nations. Count Inouye stood in the forefront of that battle, and though the victory was not given to his hands, he did so much of the preliminary fighting that the difficulties to be overcome by his successors were immensely lightened. During the time that he presided at the Foreign Office, the diplomatic attitude of Foreign Powers towards Japan underwent a radical change. He secured for her in practice the courteous and considerate treatment due to an equal, though he did not obtain conventional recognition of her equality. Count Okuma, following, accomplished the disintegration of the phalanx of Treaty States, and would certainly have achieved Revision had his countrymen appreciated him. Of Count Mutsu, therefore, it must be said that, in a certain sense, he reaped where others had sowed. But it must also be said that only a statesman of great ability could have turned to such good account the situation prepared by Counts Inouye and Okuma. In domestic politics, also, he was a prominent figure. His influence over the Liberals was almost dominant, and his death certainly postpones the end for which politicians have struggled during so many years, party cabinets. His record is eloquent. A Samurai of Wakayama fief, he became a pupil of the celebrated Katsu,

and adopting the latter's progressive views, opposed the doctrine of seclusion and advocated the opening of the country. Subsequently to the battle of Fushimi, he interested himself in foreign affairs, and having made the acquaintance of Messrs. Lowder and Satow, obtained an introduction to Sir Harry Parkes, and after exchanging views with that able man, submitted a representation to the Government. His appointment to a post connected with foreign affairs followed, in 1867, and shortly afterwards, he became Governor of Hyogo. Resigning the latter office in 1865, he returned to Wakayama, and busied himself in reforming the local administration. Under the auspices of the fief he proceeded to Europe in 1870, and coming home in 1871, publicly advocated the abolition of the fiefs and worked to bring about that result. In the same year, he was nominated Governor of Kanagawa, where he organized the first genuine police of Japan, the *rasotsu*, as they were then called. Always retaining his place in the forefront of progress, he urged, in 1872, the necessity of re-assessing the taxable value of land, and was appointed head of the taxation bureau. When the Senate was established in 1875, he was one of the first members, soon becoming manager. Then followed the one great misfortune of his career. Having been convicted of complicity with the Satsuma insurrection, he was sentenced, in 1878, to five years' imprisonment, but received his pardon in 1882, after which he proceeded to Europe and America, remaining abroad until 1885. Thereafter he was appointed to represent his country in Washington, where he did much to strengthen the friendly relations between Japan and the United States. Instructed by Count Okuma, in 1888, he concluded the Treaty with Mexico, the first instance in modern times of a treaty on equal terms between an Oriental and an Occidental State, a success which procured for him the Second Class of the Order of the Rising Sun. In 1890, he accepted the portfolio of Agriculture and Commerce, and in August 1892, he became Minister of State for Foreign Affairs, receiving a patent of nobility as Viscount, exactly two years later, for distinguished services, and being raised to the rank of Count in August 1895. It will thus be seen that His Excellency's appointment to the Foreign Office, his elevation to the peerage as Viscount, his further promotion to the rank of Count and his death, all took place in the month of August. He had not completed his fifty-fourth year, we believe, at the time of his decease. On the 23rd instant, the Emperor conferred on him the very marked distinction of raising him to the First Class of the Second Grade of official rank. Count Mutsu was eminently a friend of foreigners, above all of Americans and Englishmen, and his influence in the councils of State never failed to be exercised in a liberal and large-minded sense.

PRIVATE INTERNATIONAL LAW.

Mr. J. F. Lowder, replying to our comments on his letter to the *Japan Times*, takes the position that the fears he expressed therein were based, not on any deficiency in the laws of Japan, but on the defective qualifications of the Judges administering them; and he suggests that had we examined his letter with greater discrimination, we would have appreciated

that distinction. Having been careful to re-produce Mr. Lowder's letter *verbatim* when commenting on it, we placed our readers in a position to estimate the justice of our remarks. We shall now quote the passages from which our interpretation was derived:—"When we speak of Private International Law, what we really refer to is the full recognition by the Courts of a given country, say Japan, of rights acquired in a foreign country, say France."

It was among other things the fear lest the principles of this branch of law might be ignored which prompted the opposition to the abolition in Japan of the extraterritorial jurisdiction exercised by our Courts.

The doubt in the minds of foreigners in Japan has been (perhaps is) whether cases coming for decision before Japanese Courts would not be arbitrarily decided by the local or territorial law where the law properly applicable would be, not that law, but the law of another country.

Would the Courts of Japan recognise this principle, and recognising it, enforce rights acquired under it? With these words before him, it would not have been possible for any reader to suppose that reference was made solely to the knowledge that Japanese Judges might possess of the principles of Private International Law, and not at all to the degree of recognition extended to those principles by the Code of Japan. Indeed, even though Mr. Lowder's language had been much less explicit, we should still have been justified in inferring a reference to the Code, for let Japanese Judges be ever so well versed in Private International Law, their knowledge would be of little service to foreign suitors unless the Code authorized its application. But Mr. Lowder's language lacks nothing, so far as we can see, in point of explicitness. When he expresses apprehension about the principles of the law in question receiving recognition in Japanese Courts, and about the local or territorial law being applied where the law properly applicable would be that of another country, we are bound to suppose that he refers to the provisions of law by which the procedure of the Courts is governed; and not merely to the ignorance or erudition of the Judges sitting on the bench. On that supposition we quoted, from the "Law of Application of the Laws in General of Japan," ten clauses explicitly binding Japanese Courts to extend remarkably full and liberal recognition to the principle of Private International Law. It is therefore plain that there are no grounds to fear lest the principles of that Law should be ignored by Japanese Courts, or lest local or territorial laws should be arbitrarily applied in cases where the laws of another country are properly applicable. Mr. Lowder, however, says that the nature of the Japanese Code was not present in his thoughts when he wrote his letter, and that he referred solely to the study of Private International Law by Japanese students. Well, we should willingly admit that we had misapprehended him could we discern any ground for such an admission, but as things stand we must adopt the formula that his language misled us.

At all events some good has been done since the community has been made cognizant of an important feature in the Japanese Code, of which even Mr. Lowder himself was ignorant. For our part, we very fully endorse Mr. Lowder's criticism

of the fact that Private International Law is only now becoming a compulsory study in the law schools of Japan. The circumstance is not by any means reassuring, but before commenting further on it, we shall take steps to assure ourselves of the accuracy of the statement.

As to Mr. Lowder's assertion that "the discussion of a subject on which the mind of one's opponent has ceased to be judicial is wearisome and futile," it appears to us to be a little inartistic. He might at least have subjected his inclinations to the gentle violence of sparing us such a stroke. We, too, find something "wearisome and futile," namely, the apparent impossibility of carrying on any journalistic discussion in Yokohama without personalities.

With regard to the Codes and the manner of procuring them, we find, on reference, that the copies in our possession were obtained, several years ago, from the Hakubunsha, in Tokyo. Apart from the Penal Code and the Code of Penal Procedure, the following have been published, so far as we know:—

Loi Organique des Tribunaux.

Law of the Application of the Laws in General of Japan.

Book of the Law of Persons.

Book of the Law of Acquisition of Property.

Code of Civil Procedure.

Commercial Code.

Whether the volumes are now procurable, we can not tell.

DEATH OF MR. COMMISSIONER A. G. S. HAWES.

From Hawaiian journals we learn with much regret that Mr. A. G. S. Hawes, H.B.M.'s Commissioner and Consul-General in Hawaii, expired in Hilo on August 5th. The immediate cause of death was blood-poisoning from a carbuncle, but it seems probable that the trouble had its origin in injury to the back of the head and neck sustained from a fall during a voyage to Hilo on the S.S. *Kinaw*. The ship was rolling so badly that Mr. Hawes became apprehensive for the safety of a friend seated near him on the deck, and rising hurriedly to render assistance, was himself thrown down with considerable violence. He appears to have taken a more serious view of the accident than its character suggested to others, and it is said to have had the effect of weakening him so much that he was unable to bear up against the virus of a carbuncle which developed some time afterwards. The probability is, however, that the carbuncle resulted from the fall, for from the time of his arrival in Hilo he was confined to bed and grew weaker day by day. Mr. Hawes, even in his young days, showed a tendency to *embonpoint* and of late years had increased greatly in weight, so that a severe fall could scarcely fail to injure him. He is said to have passed cheerfully and uncomplainingly through his last illness, though the accounts suggest that he entertained little hope of recovery. The body was carried to Honolulu, and having been embalmed there, was taken to the deceased's residence in Palama, where it lay in state until August 12th, when the funeral took place. The obsequies are described by our Honolulu contemporaries at considerable length. They were evidently on a large scale, and we observe

that the procession included 250 men from the I.J.S. *Naniwa* and *Hiei*.

Mr. Hawes was only fifty-five at the time of his death. By many in this country he is remembered with feelings of sincere regard, for during the thirteen years of his service in the Japanese Naval Department, he made numerous friends. The ability that he showed in matters connected with the organization of the Japanese Imperial Marines and the useful assistance that he rendered in naval affairs generally, were fully appreciated by the Government of this country, and the Emperor conferred on him the Third Class of the Order of the Rising Sun. In conjunction with Mr. (now Sir Ernest) Satow he compiled the first guide-book of Japan, a work so admirably done that it added permanently to his reputation. The sadness of the news now received is intensified by the fact that Mr. Hawes was engaged to be married, and that September 1st had been fixed for the wedding. The following is his record of service:—

"Hawes, Albert George Sidney, F.R.G.S., entered the Royal Marines, December, 1859; retired, February, 1869. Was in the Japan Service from January 1, 1871, to January 31, 1884, and received the Third Class of the Order of the Rising Sun. Was appointed Consul for the territories of the African Kings and Chiefs in the districts adjacent to Lake Nyassa, January 16, 1885. Was employed on special duty at Zanzibar from December 30, 1888, till June 15, 1889, and was Acting Agent and Consul-General there, from April 4 to 29, 1889. Was appointed Consul for the Society Islands, to reside at Tahiti, October 1, 1889."

CURRENT TOPICS.

We observe that the *Nagasaki Press* has met with some difficulties at the outset of its career. Owing to the non-arrival of its new plant, the date of the first issue has had to be postponed, and the publication of the *Nagasaki Shipping List* and the *Rising Sun* and *Nagasaki Express* will be continued for some time longer.

We can no longer depend implicitly on the *Pomfuri Shimbun* as an exponent of Count Okuma's views, but the probability of its accuracy lends interest to the following statement attributed to that statesman by our contemporary:—"There is nothing to be perturbed about because silver has fallen in sterling value. If we had not adopted the gold standard, then indeed the state of affairs would be serious, and we have reason to congratulate ourselves sincerely to-day that such a reform in our currency system has been effected. Gold will be taken out of the country in exchange for silver *yen*, we are told. Well, let it go. If gold becomes scarce, prices will fall in terms of it, and if prices fall, exports will increase and gold will come back again. That is the ordinary sequence of events. If the price of gold be high in Japan and the prices of commodities low, gold will be sent hither from abroad to purchase our commodities. *Per contra*, if the prices of commodities be high, foreign goods will pour in and our cheap gold will flow out. We need not be alarmed about the contingency that silver *yen* will be imported for exchange against gold. What we have been hearing lately was a complaint that everything had gone up in price. But that result was perfectly clearly foreseen when the so-called "post bellum programmes" were passed in the ninth session of the Diet. The large increase of circulating media caused by bringing the Indemnity to Japan could not fail to contribute to the general appreciation. Building barracks here, erecting forts there, constructing harbours somewhere else, laying railways in other localities—government and people both engaged simultaneously in all kinds of enterprises, and of course the price of timber rose, the price of bricks rose, the price of cement

rose, everything was pushed up. Why, in the case of cement the manufacturers were embarrassed a few years ago about the low figures ruling, and were trying to find a market in distant Vladivostok. But how is it now? The demand for cement has increased so much that the domestic production does not suffice, and the price is about twice what it was two years ago. That is a fair example of the way prices have been driven up by the post-bellum programmes. There can be no doubt that in consequence of the appreciation of gold, market prices will fall after the introduction of the gold standard. Of course falling prices means temporary depression in the field of commerce and industry, but the fact is that prices are now inordinately high and that a little lowering would be decidedly wholesome. You shall hear the same folks that complain now of high prices complaining then of low. That's the way of humanity: there's nothing surprising about it. Of course so long as the Indemnity has to be handled there will be more or less disturbance in the economical sphere, but the Indemnity will not last for ever. It is inevitable that prices should fall and that depression should overtake commerce and industry, but the remedy for that will be automatically supplied by increased exports, and inflow of bullion and a consequent appreciation of prices. These habits of rejoicing or grieving, laughing or raging about paltry trifles, are really much to be deprecated."

It will be observed that Count Okuma devotes scarcely a moment's attention to the question about which the vernacular newspapers are making so much fuss at present, the question of a deluge of silver *yen* for exchange against gold. He takes the right course, we venture to think, when he dismisses that chimera in a sentence. Japan has to face a loss in introducing her gold system, and there is not the slightest use in making grimaces over the inevitable. But our readers will probably agree with us in finding it very singular that the prospect of a general fall in the prices of commodities should be held up as a happy contingency for any nation to contemplate. Europe and America have been groaning under the bitterness of low and lowering prices ever since the demonetization of silver, and now Japan is to jump into the same slough of despond with a smiling face. Circumstances assuredly alter cases.

The *Kobe Chronicle* is delightfully persistent. It keeps pegging away at the bribery question, conscious, of course, that it failed very signally to establish its sweeping accusations, but not conscious, apparently, that the most prudent plan when defeat has been total, is to lower one's lance and retire quietly from the arena. The *Nippon* says that the police, notwithstanding their wretched salaries, and notwithstanding the fact that a few officials in the higher ranks of public life remain uninfected by the chronic disease of bribery, maintain their character pure and uncorrupted. "There you are," the *Kobe Chronicle* cries exultingly. "The *Nippon* uses almost similar language concerning officialdom to that denounced by the *Mail* when it appeared in the *Chronicle*." "Almost similar"! No, no. The *Chronicle* said that, according to its experience, every official appointment was tainted with bribery. We did not "denounce" its language. We did not deny that bribery exists. We expressly explained that our own knowledge on the subject was negative, and therefore of limited value. What we did was to ask the *Chronicle* for some of the "experiences" on which it founded its wholesale accusation, and, behold, our contemporary had no experiences whatever to adduce. It might be relevant to ask now whether, when the *Kobe Chronicle* declared every official appointment to be tainted by bribery, it made a mental reservation in favour of the police. But that would be mere controversy, and controversy is not our object. Our point is simply that if all this bribery exists among high officials and low officials, it is strange that accusation should be so

general, and that no one of the accusers has the courage to give the chapter and verse of his text. That bribery does exist, we hold to be unquestionable. The dimensions of the evil are the only point at issue. As for the *Nippon*, which the *Kobe Chronicle* says is "popularly credited with having a considerable and intimate knowledge concerning the working of the Government and its administration," we can only write "!!!". The *Nippon* stands credited with having advanced a greater number of foul and false charges against Japanese and foreigners than any other newspaper in Japan.

THE CHINESE INDEMNITY.

China has been contemplating various schemes, remarks the *Tokyo Asahi*, for raising new loans to the amount of sixteen million pounds. She seems to have nearly succeeded in the project, and it may therefore be expected that the balance of the indemnity will be paid in a lump sum at no distant date. The indemnity account stands thus:—

	Yen.
Total amount of indemnity	200,000,000
First installment received	50,000,000
Second " "	50,000,000
Third " "	16,666,666
Balance due	83,333,333

Article IV. of the Shimonoseki Treaty provides that if the whole indemnity be paid in less than three years after the ratification of the Treaty, the amount of interest thereon should be cancelled, and that any interest paid within that term shall go towards payment of the principal. The figures for interest are:—

	Yen.
For the first installment	1,250,000
For the second " "	5,000,000
For the third " "	416,666
Total	6,666,666

If this amount of interest is subtracted from the balance of the indemnity above mentioned, the remainder will be little more than 76,660,000 *taels*, being the final installments of the indemnity in addition to the expenses for the garrison of Wei-hai-wei.

SAD BOATING FATALITY.

TWO LIVES LOST.

On Sunday afternoon five Portuguese residents of Yokohama, Messrs. V. F. Barrados, E. Perpetuo, B. Fernandez, Da Rosa, and a young nephew of Mr. Barrados, together with a seaman from the U.S. flagship *Olympia*, hired a small rowing boat, without keel or centre-board, from a Chinaman—Ah Teek—on the Creekside and went out for a sail to Honmoku. Before they had gone far outside the harbour the boat was very nearly capsized in a puff of wind, which was blowing very squally at the time. Fernandez and the young lad, Mr. Barrados's nephew, very shortly after this mishap, were landed, and went home in jinrikisha, the others continuing their sail. On the way back a much more serious accident befell the company. Soon after leaving the neighbourhood of Honmoku, between 5 o'clock and half past, the boat ran nose in under the choppy seas, and was gradually swamped, turning turtle immediately afterwards. The four occupants of the boat were thrown into the water, some distance from the shore. Smith, the *Olympia* man, and Da Rosa struck out for shore and were picked up by a passing Japanese boat and landed, but Barrados and Perpetuo were not seen to rise. The body of the latter was recovered by the Water Police on Sunday night, and that of Barrados was found at Kawasaki on Thursday. Perpetuo's funeral takes place this afternoon. Barrados, we believe, was in the employ of Mr. Shand.

From the *Echo Macaense* we learn that on the 13th August, an explosion of gunpowder took place at a cracker factory at Sakong. Of the five workpeople engaged in the place two were killed outright, two were so seriously injured that no hope is entertained of their recovery, and only one escaped.

PRIVATE INTERNATIONAL LAW
IN JAPAN.

A LETTER over the signature of Mr. J. F. LOWDER, appears in the *Japan Times* of the 19th instant, from which quote a portion:—

It is gratifying to learn from a paragraph in a recent issue of *The Japan Times* that the study of Private International Law, or, as English and American writers usually call it, The Conflict of Laws (both of which terms are open to criticism), is receiving in Japan the attention that must necessarily be given to it if the Courts of this country are to become equal to the demands that will shortly be made upon them for the administration of justice in the sense understood by foreigners. It was, among other things, the fear lest the principles of this branch of law might be ignored which prompted the opposition to the abolition in Japan of the extraterritorial jurisdiction exercised by our Courts. When we speak of Private International Law, or the Conflict of Laws, what we really refer to is the full recognition by the Courts of a given country, say Japan, of rights acquired in a foreign country, say France; or, as Professor Holland calls it, "the extra-territorial recognition of rights;"—and the doubt in the minds of foreigners in Japan has been (perhaps is), whether cases coming for decision before Japanese Courts would not be arbitrarily decided by the local or territorial law, when the law properly applicable would be, not that law, but the law of another country. The position is well illustrated by Sir William Scott in his well-known judgment in the case of *Dalrymple v. Dalrymple*, where a question arose as to the law regulating the validity of a marriage celebrated in Scotland; and as this question was being "entertained in an English Court," said the Judgment, "it must be adjudicated according to the principles of English law, applicable to such a case. But the only principle applicable to such a case by the laws of England is, that the validity of Miss Gordon's marriage rights must be tried by reference to the law of the country where, if they exist at all, they had their origin. Having furnished this principle, the law of England withdraws altogether, and leaves the legal question to the exclusive judgment of the law of Scotland." Would the Courts of Japan recognize this principle, and, recognizing it, enforce rights acquired under it, after the revision of the treaties? For if they would not, injustice must inevitably result. This, as I have said, has been among our fears; and as you informed us last week that the study of Private International Law has only "recently been made compulsory upon" all law students, being now one of the subjects upon which they are examined for admission to the judiciary and the bar, it must be admitted that the fears entertained and expressed by us were not unfounded. My object in addressing you is not to provoke controversy; on the contrary, as I was among the foremost of those who publicly opposed the revision of the treaties, it is right that I should be among the first to recognize the efforts that are being made, however tardily, towards remedying and, let us hope, eventually removing one of the reasons upon which that opposition was based.

It will not be supposed, we trust, that in commenting on the above we entertain any controversial purpose. Mr. LOWDER himself will be the first to agree that if a misapprehension exists among the foreign residents, and if he himself lent the weight of his legal authority to support it, no journalist conversant with the facts ought to refrain from setting them forth.

Mr. LOWDER asks whether the Courts of Japan would recognise the rights acquired by a foreign litigant in his own country, and whether, recognising them, they would enforce them after the Revised Treaties go into operation. He adds that foreigners have doubted whether "cases coming for decision before Japanese Courts would not be arbitrarily decided by the local or territorial law, when the law properly applicable would be, not that law, but the law of another country." He further says that fears "lest the principle of this branch of law might be ignored" were "among the things which prompted the opposition to the abolition in Japan of the extra-territorial jurisdiction

exercised by our Courts;" and, finally, he claims that the fears "entertained and expressed" on this subject are now proved to be not unfounded by the fact that "the study of Private International Law has only recently been made compulsory on all law students in Japan."

These propositions cause us some surprise, first, because Mr. LOWDER writes as though the ground now taken by him had already been taken in connexion with the anti-revision movement, and secondly, because he appears not to have made any examination of the Japanese Codes before coming forward to proclaim their deficiencies. As a matter of fact, this question of Private International Law was not among the "expressed" motives of the organizers of the celebrated meeting of 1890. It found no place among those motives, so far as the general public were aware. Doubtless to men well versed as Mr. LOWDER is in legal matters, the point presented itself; but we do not think that half a dozen persons in Yokohama were cognizant of it, and certainly it was not discussed or referred to at the meeting. That, however, is a comparatively trivial matter. What is of real importance is that, whereas Mr. LOWDER and others have been labouring under an apprehension lest the principles of Private International Law should not be recognised in Japan, and have been making that apprehension one of the bases of their opposition to Treaty Revision, it happens that the Code of Japan not only recognises those principles, but does so to an extent and with a degree of explicitness probably not surpassed, or even equalled, by the Code of any Occidental country. To demonstrate that fact, we have only to turn to the "Law of Application of the Laws in General of Japan," from which we proceed to quote some Articles:—

3. The civil status and legal capacity of persons are governed by the law of the country to which they belong.

The same applies to the relation of consanguinity and the rights and duties arising from it

4. Movables and immovables are governed by the law of the place where they are situated.

With regard to successions and legacies, they are, however, governed by the law of the country to which the ancestors and legators belong.

5. With regard to an agreement made in a foreign country, the law of whichever country is to be applied thereto, is determined in accordance with an express or implied intent of the parties.

Where the intent of the parties is not clear, the law of the country to which they belong is applied if they are the people of one and the same country; if otherwise, the law of the place which bears in fact the greatest interests in the agreement is applied.

6. Where in Japan a foreigner makes an agreement with a Japanese, such one of the laws of the country to which he belongs and that of Japan as is more favourable to its existence, is applied in regard to his legal capacity.

7. Undue enrichments, unlawful injuries and legal administrations are governed by the law of the place where their causes have been produced.

8. In every case in which the law of the country to which a person belongs is applicable, the person who has no nationality, or the people of a country in which law is different in different localities, are governed by the law of their domicile; if it is not

known, they are governed by the law of their place of residence.

Any person who has both the Japanese and foreign nationalities is governed by the Japanese law, and those who have two or more foreign nationalities, are governed by the law of the country where they have last acquired their nationality.

9. The formalities of authentic documents and documents under private signature are governed by the law of the country where they are made. With regard to documents under private signature which are made by a person or several persons who are the people of one and the same country, they can be made in conformity with the formalities provided for by the law of the country to which they belong.

10. Even formal agreements or acts are valid so far as their formalities are concerned if the formalities of the country where they are made or done are complied with. The case, however, in which the Japanese law has intentionally been disregarded, is excepted.

12. The formalities of public notification established in favour of third persons are governed, if they relate to immovables, by the law of the place where they are situated, and in any other cases they are governed by the law of the country where their causes have been produced.

13. The procedures of suits are governed by the law of the country where such suits are conducted.

The manner in which decisions and agreements are executed is governed by the law of the country where such execution is made.

17. The Judges cannot refuse to decide under pretension of the obscurity, insufficiency or deficiency of the laws.

We have no doubt that with the above Articles before them, Mr. LOWDER and those sharing his apprehensions in this particular matter, will agree that, so far as the law is concerned, no cause for uneasiness exists. He and they have, in fact, been labouring under one of the drawbacks that vitiate so many of the criticisms uttered by the opponents of Treaty Revision, namely, want of knowledge. The Law from which we have quoted was promulgated on the 7th of October, 1890. The anti-Revision Meeting was held on September 11th of that year. It was well known by the promoters of the Meeting that under no circumstances was there any idea of bringing foreigners under Japanese Jurisdiction pending the operation of the new Civil Code. The Code had then been compiled, revised, and was awaiting promulgation. We have shown by quoting some of its articles that it is an eminently satisfactory and exceptionally liberal Code with respect to the very question which Mr. LOWDER now declares to have been one of the reasons that prompted him and others to organise public opposition to Treaty Revision. The fact that before organising such opposition they did not take steps to inform themselves about the provisions of the Code—information easily accessible—can not, we think, be regarded as a proof that they were actuated by any serious sense of the responsibilities they were incurring. That they still remain without that information, though the Law has been in the hands of the public for nearly seven years, does not, we think, suggest that their desire to make themselves acquainted with the nature of the jurisdiction which they so greatly distrust, is very active. At all events, if Mr. LOWDER'S ignorance that these provisions of law

existed justifies, in his opinion, some of the fears he entertained, he will doubtless admit that persons more conversant with the Code were equally justified in their freedom from such fears.

THE NEW CURRENCY.

THERE is a great deal of uneasiness in Japan about the working of the gold monometallic system, which goes into operation from the 1st of October. During the past few days, silver has depreciated so rapidly that the price quoted in London is 24½d. per ounce, and the dollar in Hongkong and Shanghai stands at 1/10, or even less. The sterling value of the *yen* in the Japanese system being 2s. ½d., in round numbers, there is a difference of at least from 11 to 12 per cent. in the gold values of the Mexican dollar and the *yen*, and, of course, with such a margin, the collecting of *yen* pieces in China and Singapore and their shipment to Japan for purposes of exchange, become highly profitable operations. It is stated that the *yen* is at a premium of 10 *sen* in Hongkong and Shanghai, and if the report be true, speculators must be working on the assumption of a further appreciation of gold, for it would scarcely pay to buy *yen* at 110 *sen* for shipment to Japan. The cause of the great decline in the gold price of silver seems to perplex financiers in the East, but apparently the dominant opinion is that the United States Government has begun to unload some of its large stocks of the white metal. As for the Japanese, they ought to remember that some trouble and expense in connection with the exchange of 1-*yen* silver coins were anticipated from the outset. It was for that reason that a Bill was submitted to the Diet last session, providing that the profits derived by the Mint from the operation of striking silver subsidiary coins should be set aside as a fund to meet the cost of exchanging 1-*yen* pieces. The subsidiary coins being only 800 fine, there is a gain of 10 per cent. in minting them, and so long as, first, the quantity of 1-*yen* pieces presented for exchange against gold does not exceed the requirements of the subsidiary circulation, and, secondly, the difference between the market price of gold in terms of silver and its price according to the Japanese ratio does not exceed 10 per cent., no actual loss will result to the Treasury from the operation of exchange. There will, indeed, be a deprivation of profit that would otherwise have accrued in connexion with the subsidiary coinage, and there will be a loss to the nation of a certain amount of gold, but the Government's accounts of expenditure and income will not be thrown out of balance. Already, however, the margin of 10 per cent. has disappeared, and an actual loss of 2, or perhaps 3, per cent. is in sight. But that is not a very serious

matter. The country has to pay the piper if it wants to dance to the jingling of the guinea. If it incurs a loss of 3 per cent., or even 5 per cent., on thirty million *yen*, the total will be only from nine hundred thousand to a million and a half of *yen*; not an alarming figure. The vernacular journals, indeed, talk of 85 million *yen* as the aggregate likely to be presented for exchange. That is on the assumption that 50 millions circulating abroad and 35 millions circulating at home, will all be presented for exchange. But why should Japanese holders of silver *yen* desire to exchange them for gold? There is no apparent reason. Hoarders of coin may have a *penchant* for the yellow metal just as they have now a *penchant* for the white. That, however, is a question apart. In the ordinary routine of business the Japanese owner of five silver *yen* can make nothing by exchanging them for one gold piece. If exchange suggests itself, his purpose will be better served by receiving a bank note. The *yen* pieces circulating abroad are the only really appreciable factor of loss. With a net gain of from ten to twelve per cent. in view, bankers, merchants, and speculators will collect every *yen* that can be procured in China or the Straits Settlements, and will despatch the pieces to Japan for redemption. What the total may aggregate it is difficult to foresee, but if it passes thirty millions we shall be surprised. Meanwhile, the outcry raised by several Japanese journals seems extravagant. As the *Yomiuri Shimbun* justly remarks, the adoption of gold monometallism was bound to cost Japan something. We ourselves do not regard the loss contingent on the exchange of the *yen* piece as worthy of mention in the same breath with the incomparably greater losses that the country will suffer in other directions, above all in the fact that the bounties hitherto enjoyed by its exporters to gold-using countries will be abolished. It is unnecessary to repeat what we have often said upon that subject; what we have been saying for the past seventeen years. The object-lesson now presented to the Japanese is more eloquent than any verbal exposition. Chinese silk already enjoys an advantage of some 12 per cent. over its Japanese rival in European and American markets, and Japanese staples exported to China fetch 12 per cent. less than they did three months ago. Stability has been secured, it is true, and a stable currency is an immense blessing, but in a country just embarking upon an industrial career, as is Japan's case, the encouragement afforded by being able to sell the products of her industry for tokens constantly appreciating in terms of the coins by which she measures the cost of labour and raw material, is of very great efficacy. However, the die is cast, and lamentations are futile. All that we have to do is to express

our surprise that any Japanese journalist should be thrown into a state of perturbation by the silver-*yen* prospect, seeing that it was anticipated and provided for at the outset, and that its dimensions, after all, are insignificant.

Allusion may be made to one other point. Considerable stress is laid on the fact that by adopting the gold standard Japan has not gained access to the stores of Occidental capital, as was hoped and expected by the advocates of the measure. Here again we find ourselves in the position of repeating what we have often said already, namely, that until Occidental capitalists are well assured of the stability of Japan's new system, in other words, well assured that nothing can induce her to go back to silver, they will not pay a premium for her securities. The bonds that she sold to a British syndicate in May last were specially guaranteed against any peril of that kind. But the sterling value of her public securities in general depends on her own legislative constancy, and if European capitalists were somewhat startled by the apparent precipitancy with which she passed to the gold standard, the moral disturbance now shown by some of her writers in the presence of a practically trivial crisis will not help to restore Western confidence. Time never works more slowly than when it engages in building up credit. If Japan hoped to legislate herself into the gold markets of the Occident by means of an eight-hours bill, she was over-sanguine.

CONSULAR CURIOSITIES AGAIN.

TROUBLES never come singly. Just as we imagine that the catalogue of possible complications connected with extraterritorial jurisdiction has been exhausted, two fresh incidents present themselves. The case heard on Tuesday in Her Britannic Majesty's Court at this port, could certainly not have been anticipated: it is too comical. Never before has the doctrine been gravely and judicially propounded that when the police observe a flagrant delict, they are to march off and procure a warrant for the arrest of the offender, leaving him meanwhile to spirit himself away by steamer or railway or any other convenient vehicle. HOMER was certainly nodding when he enunciated that principle from the bench. But if our present Consul sometimes trips among the snares and pitfalls of the strange system he has to administer, what the public feels is nothing more than annoyance that such difficulties should beset the path of an official so universally liked and trusted. He himself must be mightily tickled at the defence that has been journalistically set up on his behalf. It is urged, in the first place, that the man who was found in possession of opium when landed, was ignorant of the prohibition against importing the drug into Japan.

What a charmingly naïve plea! A quartermaster of a Peninsular and Oriental steamer ignorant that opium is contraband! If such an excuse were advanced on behalf a Japanese, it would be received with a chorus of mocking laughter. In the second place, it is urged that the principle of *flagrante delicto* did not apply, "since no personal harm would have resulted to anybody" if the man had been left at large until a warrant could be obtained! Fancy British excise officials happening upon an illicit distillery and confining themselves to a seizure of the plant and products while the distillers fled unscathed because no warrant for their arrest had been procured, and because "no personal harm would result to anybody" by waiting till that formality could be complied with. Or fancy an English game-keeper applying the same doctrine to the case of a poacher—seizing the game in the poacher's possession, and then going home to get a warrant for the man's arrest. A lofty notion of the average Britisher's intelligence must be conveyed to a Japanese who reads such arguments. If he arrives at the conclusion that his country's officials are to be convicted of "ignorance and meddlesomeness" *per fas et nefas*, he can not be much blamed.

Hakodate has furnished another of these extraterritorial entanglements. We are not yet in possession of exact details, but it seems that some Chinese *employés* of a British man-of-war landed at Hakodate, went to the house of a Japanese and began to gamble. The police surprised them in the act, apprehended them, carried them off to prison and arraigned them before a Japanese tribunal. Vernacular newspapers, reporting the affair, say that Her Majesty's Consul claimed to have the men handed over to him, on the ground that they were borne on the books of the war-ship, but the Japanese authorities declined to entertain the application. It is difficult to imagine that such a version can be correct. The true complexion of the case becomes at once apparent if we apply the test so often useful, namely, substitute an analogous situation with less equivocal data. Suppose that the *employés* of the man-of-war had been Japanese subjects; is it conceivable for a moment that they would have been judicable by the British Consul for a crime of gambling committed on Japanese territory? The substitution of Japanese for Chinese is perfectly logical, for since China does not possess any extraterritorial privileges in Japan, Chinese subjects stand on exactly the same footing as Japanese subjects for jurisdictional purposes in this country. Had the men been subjects or citizens of any Power vested with extra-territorial jurisdiction in Japan, they must of course have been handed over at once to their own Consular Authorities, but being Chinese subjects, no Court

in Japan except a Japanese Court has competence to deal with them. If Her Majesty's Consul did apply in the manner described, and if the Chinamen had been handed over to him, he would have been confronted by a pretty dilemma. Certainly no stretch of imagination could have enabled him to discover in himself competence to punish the malefactors. His only course would have been to send them back to their ship without any penalty whatever, and thus the precedent would have been established that any Chinese, Portuguese, Greeks, Mexicans, or Japanese, serving in a British vessel, would be able to land on Japanese soil and perpetrate any crime they pleased with absolute impunity. It seems strange that this particular problem never before presented itself for solution, but stranger still is the kind of solution described by the vernacular newspapers.

THE AMERICAN SILVER COMMISSION.

THE three distinguished American Senators now on a visit to Japan, contemplate spending some two months in the Far East. They may possibly proceed at once to China, or they may defer their trip thither until September, but under any circumstances Japan is to be the field of their inquiry, and if they take China into the programme of their tour, it will simply be because their proximity to that country tempts them to seize the opportunity of visiting it. They are all advocates of bimetalism, and one certainly receives a vivid impression of the strength of the bimetallic movement when one finds it supported by men of such knowledge and capacity. They have not come to Japan as propagandists of any cause. Apart, indeed, from their sympathy with Japan's industrial and commercial efforts and their consequent regret that she should have embraced a system which, in their opinion, will impede her material progress, they regard her choice as a matter of congratulation from their own particular point of view, since every addition to the ranks of the gold monometallic nations tends to accentuate the situation and render it more unendurable. On the other hand, they do not look to international action to provide an exit from the financial quagmire. International action, they say, has had its show. It has been amply tried and abundantly proved hopeless. Indeed, only romantic or exceptionally sanguine persons could ever have regarded it with confidence, since nations are not a whit more likely to abandon "the good old plan" at the close of the nineteenth century than they were at the beginning of it. The creditor gold-using States, having absorbed and locked up in their strong-rooms all the available stores of the yellow metal, are in a position to dictate

to their silver-using debtors the terms on which the latter shall discharge their obligations, and to expect that the creditors will voluntarily step down from such a pedestal of vantage, would be to repose a large measure of faith in humanity's altruism. The Senators think, therefore, that it is futile to sit waiting any longer at Europe's feet. America must select the currency that she thinks will suit her best—a right of eclecticism which belongs above all others to a free nation—and she must adopt it practically at once, confident in her undoubted strength to consummate the programme. The Senators do not attach the slightest importance to the new Tariff as an invigorator of existing industries or a creator of new ones. There was protection enough already, and a rise of duties is not going to inaugurate any reign of prosperity. Incidentally they are opposed to taxing Japanese silk fabrics heavily, their view being that America can not compete in that special branch of industry, and that, since she must have the silks, she is only penalizing her own consumers when she puts big duties on the article. The Tariff, then, having been weighed in the balance and found wanting, and the Government's attempts to secure an international agreement about bimetalism having failed signally, the next election will see an overwhelming majority of votes cast for the Democrats and for the free-silver platform. It was because of the MCKINLEY Cabinet's confident promises to contrive an international agreement that many moderate silver men supported them at the polls last Fall, and when the fallaciousness of those promises is demonstrated, and the futility of the Tariff established, the Republican following will melt away incontinently. As for the visit of the Senators to Japan, its object is simply to collect information. To understand the motives of the Japanese people it is essential to know what they are doing and what they may reasonably hope to do. An investigation directed towards the acquisition of that knowledge is what the Senators contemplate, not necessarily with the intention of publishing it, and certainly not for the purpose of erecting any *doctrinaire* edifice upon it, but simply that they may be in a position to deal intelligently with the Japanese problem whenever it comes upon the *tapis*. It should undoubtedly be a source of great satisfaction to the Japanese that their affairs are receiving such expert and potential scrutiny. This country has nothing to desire more ardently than that her condition should be thoroughly understood by the leading politicians of the great Western Powers, and from that point of view, apart from any considerations of hospitality, every possible facility will doubtless be extended to Senators PETTIGREW, DUBOIS and CANNON.

THE TEA MARKET.

Tea found a good sale, says the *Kokumin*, during the latter half of last month. Prices stood firm until the third crop was brought in for sale, when the market became glutted with fresh arrivals. Prices have now begun to fall, and foreign firms have become less eager in purchasing. Native dealers are not pressing sales at present, in spite of a general fall in the price of their goods by one or two dollars per picul; both buyers and sellers waiting for the opportunity to ripen. The following are the arrivals and sales during the past half month:—

	Catties.
Arrivals	928,000
Sales	568,700
Stock	560,600

The figures for the 29th and 30th years of *Meiji* for the first crop in each year up to the 15th August are as follows:—

	30th Year. Catties.	29th Year. Catties.
Arrivals.....	17,873,400	18,107,100
Sales	17,312,800	17,541,100
Stock in market	560,600	600,000

FOREIGN RESIDENTS OF TOKYO.

The *Mainichi Shimbun* states that the foreign residents in the capital at the end of June totalled 652, of whom 391 were males and 261 females. The following are the various nationalities:—

FOREIGN RESIDENTS WITHIN TREATY LIMITS.			
Nationality.	Males.	Females.	Totals.
Chinese	5	12	17
American	51	69	120
Spanish	6	3	9
Belgian	2	2	4
Swiss	1	—	—
Italian	1	—	—
English	19	25	44
French	10	10	20
German	3	—	3
Total	98	121	219

FOREIGN RESIDENTS OUTSIDE TREATY LIMITS.			
Nationality.	Males.	Females.	Totals.
Chinese	42	3	45
Belgian	2	—	2
Italian	6	—	6
American	59	45	104

Danish	2	1	3
Total	294	140	434

KOREAN TOPICS.

Mr. Everett Frazar, of Messrs. Frazar and Company, and Mr. J. R. Morse, have been appointed Consul-General and Commercial Agent, respectively, for Korea in New York.

The *Independent* says that the newly arrived Russian officers—three commissioned and ten non-commissioned—have commenced to drill the first and second regiments. These are the Russians who just looked in at Seoul for a few days' recreation during the hot weather. We should like to hear an official Russian exposition of the Lobanow-Yamagata Convention. 'Tis said that a coach and four can be driven through any act of Parliament. International agreements are probably no less manageable.

The final survey of the Seoul-Chemulpo Railway has been completed, and six hundred men are at work on the line.

Hanging is still the punishment for coiners of counterfeit money in Korea. Two men who coined \$100 of copper tokens have been sentenced to that fate. In Japan in old times such malefactors used to be compelled to work for

life in the Mint. It was a much subtler and more refined kind of penalty.

The *Independent* vehemently denies a statement recently made by the Seoul correspondent of the *Fiji Shimpō* and translated into these columns that beggars dying, or dead, from hunger are to be seen in Korea. Our Korean contemporary takes occasion to denounce the want of veracity of many newspaper correspondents, which is, doubtless, a very just criticism. But the *Independent* itself falls into an error when it says that "the beggar nuisance is always complained of by the foreign residents at the ports in Japan."

The *Independent* contains the following paragraph, the accuracy of which we take leave to doubt:—

The Japanese Minister Mr. Kato wrote an official letter to the Korean Foreign Office stating that he heard three Russian officers and ten non-commissioned officers had arrived in Seoul at the request of the Korean Government. If so he desired to be informed of the reason which prompted the Korean Government in making the request and what steps were taken in forwarding the said request.

The Foreign Office replied that the request was made by the War Department and not by the Foreign Office, therefore the Foreign Office asked the War Department for information on the subject after receiving the official communication of the Japanese Minister. The War Department replies that as to employing foreign military instructors, the Korean Government has the right to employ whomsoever it sees fit; therefore it is a matter upon which the Department does not feel obliged to enlighten the Japanese Minister.

The Japanese Minister went to see the Minister of Foreign Affairs last Saturday and had a talk with him. What transpired during the conversation is not known. The Japanese Minister went to the War Department to see the War Minister but Minister Sim was indisposed at his house and did not see Mr. Kato.

The 13th instant was the 505th anniversary of the founding of the Ye Dynasty in Korea, the present King being the thirtieth sovereign of the line. There seems to have been some celebration in Seoul, but no account is yet published.

The King of Korea has issued two edicts of which the following translations appear in the *Independent*:—

Edict:—"We have been looking into the condition of the country. We have realized the imminent danger which threatens the maintenance of the nation. But the people of both high and low classes do not seem to mind the coming calamity and act indifferently. Under the circumstances, the country cannot prosper. We are depending upon Our Ministers for their advice and help, but they do not respond to our trust. How are we going to bring the nation out of its chaotic condition? We desire them to pause and to think that they can not enjoy their homes unless the integrity of the nation is preserved. We confess that We have not performed our part properly, but Our Ministers and other officials ought to have advised Us to refrain from wrong-doing, as their ancestors had done to Our forefathers. We will endeavour to do what is right and proper for our country hereafter, and We trust Our subjects will renew their loyalty and patriotism in helping us to carry out Our aim. Our hope is that every citizen in the land will consider the country's interest first before thinking of his private affairs. Let Us all join Our hearts to preserve the integrity of Our country."

Edict:—"The welfare of Our people is our constant thought. We realize that since last year's disturbance Our people have been suffering greatly on account of lack of peace and order. The dead suffer as much as the living but the Government has not done anything to ameliorate the existing condition. This thought makes Us worry to such an extent that the effluence by which We are surrounded is rather uncomfortable. If this fact is known to Our provincial officials they will do their best to ameliorate the condition of the people. Compulsory collection of unjust taxes and thousands of lawless officials and Government agents rob the helpless masses upon one pretence or another. Why do they treat Our people so cruelly? We hereby order the provincial officials to look into the various items of illegal taxes now being collected and abolish them all without reservation. Whoever does not heed this edict will be punished according to the law."

It is to be presumed that these strange documents were evoked by the 505th anniversary alluded to above. They are sufficiently enigmatical and very quaint if judged by Occidental standards.

NEWS OF THE WEEK.

Rear-Admiral C. L. Oxley left for home on Wednesday by the O. & O. steamer *Gaelic*.

A branch of the Hongkong and Shanghai Bank has been opened at Chemulpo at the office of Messrs. Holme, Ringer & Co., the Manager being Mr. W. G. Bennett.

Dr. Patrick Manson, formerly of Amoy and Hongkong, has been appointed physician and adviser to the Colonial Office, in succession to Sir Charles Gage Brown, who has retired.

The U.S. tariff bill makes new concessions to American vessels engaged in foreign trade or trading between the Atlantic and Pacific, by exempting from internal revenue taxes distilled and fermented liquors, tobaccos and cigars carried as supplies on such vessels.

Mr. William Ogilvie, Chief of the Canadian International Boundary Survey, says that Klondike, or Clondyke, is a mispronunciation of the Indian word "Thron-dak," or "Thron-duick," which means plenty of fish, from the fact that the river is a famous salmon stream.

For the East Asiatic station the new German cruiser *Victoria Louise* has been chosen to replace the lost gun-boat *Illis*. Pending the arrival of the *Victoria Louise* the *Mosse* is to come to East Asiatic waters. The Australian station will be increased by the cruiser *Geler*, while the cruiser *Arcona* is to go to America.

It seems that the O.S.K. *Taihoku Maru* was sunk off Lisbon through collision with the British steamer *Eastbourne*, from Smyrna. The latter steamer had her bows badly stove in. The British ship *Millfield* stood by the *Taihoku* till she sank and then towed the crew and officers into Lisbon, they having all managed to get out the boats before the *Taihoku* sank.

On Wednesday morning in H.B.M. Court, before Jas. Troup, Esq., Assistant-Judge, Donald McVicar, Master of the British ship *Lord Wolsley*, charged Ole Otterbeck, an able seaman, with being absent without leave, the offence having been committed on the 24th inst. Defendant pleaded guilty and volunteered to go back on board ship. He was fined two days' pay and the costs of the court \$1.50.

The remains of the late Mr. Perpetuo, who had the misfortune to lose his life in the sad sailing fatality on Sunday, were interred in Yokohama Cemetery on Monday afternoon in the presence of a large number of people, including every member of the Portuguese community, also of the Consul-General for Portugal and Brazil. The sympathy of deceased's friends and others was displayed by the numerous wreaths which covered the hearse.

Nose Yasutaro, a grog-shop keeper of Kobe, whom one of the English witnesses declared to be the "most notorious pimp in Japanese town," charged James Connors, a British seaman, in the British Consular Court, at Kobe with assaulting him on the 9th inst. After hearing a good deal of evidence, Mr. Playfair, Acting-Consul, dismissed the case, not being satisfied that the proper man was charged, or that complainant's evidence was to be believed.

Permission was given some time ago, says the *Fiji*, to the promoters of the scheme to construct an electric railway between Osaka and Kobe. Another charter having lately been granted to extend the line from Kobe to Amagasaki, a conference was held between the two parties in Osaka and Kobe interested in the project, with a view to amalgamate the two companies and apply for further permission to construct a line from Amagasaki to Osaka.

The Hydrostatic Electric Company in Bukogawa proposes to supply electric motion to the extent of a thousand horse-power. If the new Company's plan is sanctioned, however, steps will be taken to purchase the Bukogawa Company's establishment.

The following are the Raw Silk shippers per O.R. & N. Co.'s steamer *Monmonthshire*, for Portland, Ore.:

	Fales.
Otto Rimmers & Co.	203
Vivanti Brothers	185
Siber, Brennwald & Co.	178
Nabholz and Osenbüggen	149
Sieber & Co.	105
Bavie & Co.	98
Middleton and Smith	67
Herbert Dent & Co.	45
Kai Tsu Gomei Kaisha	32
China and Japan Trading Co.	25

Total 1,087

The amount of Japanese coal exported to Hongkong during the first half of this year, according to the *Shogyo*, was as follows:—

	Tons.
Miike	90,685
Mozu	132,555
Hokkaido	9,487
Karatsu	3,600

Total 236,327

These figures show a decrease of 50,757 tons as compared with the corresponding period of last year. The import of other coal into Hongkong amounted to 84,400 tons, showing a decrease of 5,140 tons against the amount for last year.

The machinery for the circulation of money in Formosa, remarks the *Shogyo*, is by no means satisfactory, and not a little inconvenience is felt by merchants in the island. A Branch of the Bank of Japan, and another of the *Chiuritsu* Bank are established in the island, but as the function of the former is limited to transactions with the Governor General's Office, no benefit is derived from it by private individuals, who are compelled to depend upon the latter Bank for loans. Formosans have shown a strong aversion to paper money; and the exchange of paper for cash involves a loss of thirteen or fifteen *yen* per thousand. Daily interest on loans is generally fixed at five or six *sen* per hundred *yen*, whereas deposits are received at the rate of only eight *rin* per cent. per day.

The M.M. *Laos* has achieved a record in doing the run from Shanghai to Kobe in 51 hours. She left Marseilles on July 18th and delivered the London mail at Singapore in three weeks; and at Yokohama in 34 days. The *Laos* is a twin screw steamer of 6,357 tons, English measurement, 2,331.39 tons net, and 8,000 horse-power. Her measurements are:—Length, 465 feet 7 in.; beam, 54 feet 2 in.; depth, 36 feet 1 in. Her internal fittings and appointments are very fine. The *Laos* had an exceptionally good run up from Kobe. She left that port at 3.55 p.m. on Friday and arrived at the Quarantine Station at Nagaura at 12.47 on Saturday, or 20 hours, 52 minutes. After a little delay at the Station she came on and entered the harbour at 1.13. This fine ship, we understand, after discharging cargo, will be opened by invitation to the inspection of the community.

The *Tokyo Shimbun* says that the third crop of tea this year is very inferior in quality and native dealers are making a mistake in forcing it upon the market. Our contemporary asserts that the short-sighted hopes of these men—who expect to recoup all their losses out of the third-crop sales—will meet with speedy disappointment. Foreign buyers are only filling immediate requirements, and are refusing to pay the advance of 2 *yen* per picul that dealers demand.

The silk weaving enterprise in Yonezawa, the *Mainichi* remarks, has made considerable progress of late. The Weavers' Guild consists at present of 420 members, all zealous for the improvement of the quality of the goods produced. A fair prospect of success now lies before them.

The annual output has greatly increased, but a deficiency of operatives is apparent, wages having risen nearly twenty-five per cent. as compared with the amount paid two or three years ago. The wages paid at present are on the following scale:—

Per 100 momme.	Weaving.	Per loom.
Reeling raw silk	9	1.50
Re-reeling raw silk	45	1.50
Twisting silk for warp	45	1.50
Twisting silk for woof	80	3.30
Dyeing.		3.70
Warp, dark blue or black	95	4.30
Warp, light blue or black	45	4.30
Woof, any light colour	45	3.60
Woof, coloured first iron and then green	75	3.30

Although Captain "Shinagawa" James had no love or liking for the Press, so long as he formed an integral part of the Marine Court of Enquiry sitting in Tokyo, he always saw that the representatives of foreign journals published in Yokohama or elsewhere had proper accommodation in the way of chairs, tables, and convenient positions adjacent to the Bench. But now that Captain James has transferred his restless activities to another part of the world, a complete change has come over the Marine Court of Inquiry, and foreign journalists find themselves more than ignored. They are not wanted, it would seem, for no provision of any kind is made for them. At the last Enquiry they had to sit at the rear of the Court on most back breaking chairs, without a table, and almost out of hearing distance. The change is not for the public benefit, we imagine.

A certain professor of Engineering, says the *Mainichi*, lately expressed the following views in regard to the improvement of the public thoroughfares of the capital:—(1.) The central part of every highway should, according to width, be paved with stone for a space of from two to five or six *ten* across. (2) Sendai stone in blocks of six feet by three in size should be used for the purpose, the stone obtained in Tokyo being too brittle to withstand the constant passage of carriages for any considerable time. (3) Granite is also excellent for the purposes of pavement, but four or five joints would have to be made in a single *tsubo*. (4) Brick is brittle and requires many joinings in pavement, and is therefore inferior in this respect to stone. (5) The number of *tsubo* covered by the highways in Tokyo is a little more than 1,900,000. Two-thirds of this area form carriage roads. If 25 *yen* were allowed for paving one *tsubo*, the whole work could be completed for 31,666,650 *yen*.

Their Majesties the Emperor and Empress arrived at Yokohama Station *en route* to the capital, at 20 minutes past 3 o'clock on Monday afternoon, by a special train of 12 cars, and, after a stay of less than three minutes, proceeded, without alighting, to Tokyo. Both the platform and the Station yard was crowded with hundreds of persons, including fifty or so naval officers from the Japanese war-vessels in Yokohama Harbour, the Governor of Kanagawa, the Superintendent of Kanagawa Police, the Station Master, and a large number of members of the Japan Red Cross Society of Yokohama, all of whom made a profound obeisance when the special train drew near. The eight men-of-war in Yokohama Harbour—Japanese, English, American, French, German, and Austrian—fired a salute of 21 guns on the arrival of Their Majesties at the Station. The crossings along the line on which the Imperial train passed were crowded with spectators.

According to the *Shogyo*, the silk trade in Europe, America, and China has revived considerably of late. Prices in Japan are now steadily rising, orders on a large scale having been received from abroad by many foreign firms in Yokohama. No considerable sales were effected on Monday last on account of scarcity of goods of a suitable quality, 250 bales only being taken delivery of. There can be no doubt as to the failure of the agricultural industry in Europe this year. China, too, seems to have yielded a smaller crop than was originally reported. In short, there has been a general falling off in the production of the world, whereas

the demand for silk is increasing rapidly. So far as present conditions indicate, nothing can show better prospects of success in Japan than the silk industry. Yokohama may fairly expect at no distant date to see some extraordinary transactions concluded on the arrival of goods from the various silk districts.

An engine room artificer of the U.S. flagship *Olympia* got into trouble in a house of ill-fame in the native town on the night of the 15th inst. and was arrested by the police and turned over to the U.S. Consular authorities on a charge of assaulting a Japanese named Kinoshita, who claims to have served several years in the American Navy. The case was set down for hearing at 10 a.m. on the 20th, notice to that effect having been sent on the previous day to the Procurator at the Saibansho. No prosecutor put in an appearance at the U.S. Court, however, on Friday morning, and it was eventually discovered that the communication from the Consulate had been pigeon-holed or mislaid at the Saibansho. In the meanwhile the complaining witness, Kinoshita, came to the wise conclusion that it would be more profitable to himself to effect a compromise with the accused, and this was effected with the consent of the Consul-General, Kinoshita receiving 15 *yen* wherewith to pay medical expenses and soothe his wounded feelings, and the *Olympia* man, who had already been in jail over four days, was released.

The progress of the establishment of telephones in Japan, the *Yomiuri* remarks, has been extremely rapid. According to the original programme the number of telephones throughout the country was to be increased by 500 during the 29th year of *Meiji*; by 1,500 during the 30th; and by 2,500 during the 31st. Overhead lines, however, are liable to be damaged by storm and fire, and considerable injury was done by the snowfall of January this year. The neighbourhood of Tokiwa bridge, in particular, is so crowded with lines that the appearance of the street is much impaired thereby. Having completed the necessary investigations on this point, the Department of Communications now contemplates changing the overhead lines to subterranean for the existing as well as for future connections, in spite of the greater cost thus incurred. The more permanent character of the new project makes it really economical in the long run. The work will consist in laying beneath the surface a succession of small iron pipes through which hundreds of telephonic lines can be passed. It will be commenced during the current fiscal year.

We mentioned in a previous issue, says the *Shogyo*, that the suspension of the free coinage of silver, as a prelude for the enforcement of gold monometallism in October next, could scarcely fail to enhance the value of the *yen* and impair trade with China, in consequence of the abnormal rise in the rate of exchange at Shanghai. The prophecy has been verified. The export of cotton yarn is beginning to be unprofitable. At one time it had overcome competition with the Bombay manufacture, but is now again threatened with displacement by its old rival. Matches too are suffering. The Match Manufacturers' Guild in Hyogo have resolved upon suspending work from the 1st of next month. In short, almost all commodities for export to China appear to have met a similar fate. It is hardly necessary to say that the growing appreciation of gold and depreciation of silver will deprive transactions with China of any prospect of success.

If the armament expansion scheme is not to be curtailed in any way, recourse must be had, the *Shogyo* alleges, to an increase of taxation. It seems too late now to adopt any curtailment of the expansion scheme. The opportunity was lost, and there remains only one process of relief. Yet the Cabinet seems to have not yet decided upon this scheme of increased taxation on land or on *raffia* as source of revenue. The tax on *saki* has already been raised 75 per cent. in the current fiscal year,

and it might affect the credit of the Government to have the rate increased to ten *yen* per *koku* before a year had elapsed since the last increase; a tax of ten *yen*, moreover, is extremely heavy. There is great difficulty in prohibiting the brewing of *sake* for domestic use, while the import of alcohol increases year by year. Under these circumstances the scheme of augmenting the tax on *sake* can not be carried out without serious trouble. Increased taxation on land can be more easily and more effectually undertaken, but unfortunately for Japan the existence of various latent influences renders it impossible to adopt such a decisive step. Rumours are afloat that the authorities are likely to advocate the scheme of revising the land assessment. It is not a matter of wonder that as the Cabinet lacks union, and difficulties with the Diet are anticipated, no decision has yet been arrived at in regard to the increased or new taxation.

General Nogi, Governor General of Formosa, has succeeded, says the *Tokyo Shimbun*, in obtaining the sanction of the Minister of Colonization to establish a military training school, which may be regarded as an enterprise preparatory to the organization of a native Formosan army. Schools are to be established in Ilan under the First Brigade, in Pulisho under the second, and in Taitung under the Third Brigade. The principal officers of these schools are to be convened at Taipeh from the 1st September till the 15th November, to be instructed in the general course of discipline to be pursued. It is said about eighty natives are to be engaged for training between December 1st of this year and March 31st of next.

The foreign trade returns for July published in the *Nichi Nichi* show the excess of imports to have reached 6,903,787 *yen*. Among staple imports, cotton amounted to 2,630,352 *yen* in value, railway cars to 1,060,486 *yen*, sugar to 2,154,291 *yen*, rice to 1,102,048 *yen*, kerosene to 926,287 *yen*, machinery to 841,676 *yen*, miscellaneous goods to 425,935 *yen*, muslin de laine to 309,432 *yen*, watches to 183,603 *yen*, making a total of 17,540,099 *yen*. These figures, added to the excess of imports from January this year constitute a total of 30,873,527 *yen*. As regards exports, raw silk aggregated 1,638,846 *yen* in value, *noshi* and waste silk 70,912 *yen*, *habutae* 523,710 *yen*, silk handkerchiefs 367,915 *yen*, cotton yarns 1,745,338 *yen*, tea 1,246,933 *yen*, matches 476,750 *yen*, coal 1,038,930 *yen*, and miscellaneous goods 1,843,533 *yen*, making a grand total of 10,636,311 *yen*, an increase of 3,300,000 *yen* as compared with the figures for the corresponding period of last year. With regard to the export and import of gold and silver it may be noted that the amount of silver coin and bullion exported during July was 551,092 *yen*, while gold coin and bullion aggregated only 454 *yen*. The import of gold coin and bullion amounted to 112,369 *yen*, while silver, did not exceed 20,997 *yen*. The excess in the export of gold and silver, therefore, did not fall short of 418,180 *yen*. That is probably due to the decrease in the drafts made by Government upon the indemnity. The customs duties for July reached 672,976 *yen*, which, together with the sums received from January, makes an aggregate of 4,215,886 *yen* for the seven months.

It is a great error to imagine, the *Shogyo* asserts, that since prices will fall with the appreciation of gold when Japan becomes a gold country, this will tend towards a restoration of the balance in trade, viz., an increase of exports and a decrease of imports. Gold's appreciation and silver's depreciation will be universal throughout the world. The price of commodities in gold-using countries will fall, but will rise in silver using countries. The fact of Japan's being a gold standard nation will of course contribute to a fall of prices in proportion to the appreciation of the yellow metal, but it must be reckoned that a similar phenomenon will present itself in other countries enjoying a gold monometallic system. While Japan remained

a silver country, other nations, in consequence, were able to purchase her commodities at comparatively cheaper prices compared with gold. These advantages will be lost upon her adopting a gold system. Trade will then go to China and other silver-using countries. In regard to imports, it may be noted that while Japan was a silver nation she paid higher prices for goods from abroad on account of the relative value of gold. Her adoption of gold monometallism completely changes the situation. The fall of silver enables her to obtain her stock at low quotations, the result being a decrease in exports and an increase in imports in so far as dealing with gold countries are concerned. It is beyond question that with respect to a silver country like China the excess of imports must necessarily grow larger in proportion to the appreciation of gold. For these reasons there is no prospect of any improvement in the country's commerce. The balance of trade, on the contrary, will grow more unfavourable than ever.

The body of the late Mr. Vincente Barradas, who was drowned on Sunday last near Honmoku, was found by the Water Police on Thursday morning on the shores of Kawasaki Bay. Information was at once given to the Portuguese Consul, and he and some of the friends of the deceased proceeded to Kawasaki, where the corpse was identified as that of Mr. Barradas. The features were unrecognisable but the clothes worn by the deceased, and his watch and a letter in his pocket enabled a friend to identify the body, which was placed in a shell and brought in to Yokohama, where it was deposited at the mortuary. The funeral is to take place this evening at 6 o'clock.

By the death of Mr. Charles St. George Cleverly, says the *Daily Press*, a connecting link with the early days of Hongkong has been removed. The deceased gentleman was appointed Assistant Surveyor when the Colonial Government was established, and a few years afterwards succeeded to the office of Surveyor-General. St. John's Cathedral, the Public Offices, and various other Government buildings were designed by him and erected under his supervision, and he was one of the committee which selected the design for the Pokfulam Waterworks, for which competitive designs had been invited. The uncomfortable but very durable pavement which is still to be found in Shelley Street and several other streets running up the hill, consisting of slabs of granite with the rows alternately raised and depressed, was Mr. Cleverly's invention. It may also be mentioned that Mr. Cleverly drew the plans for the Shanghai Club. He retired in 1865, since when he had been in receipt of a pension of \$2,000 per annum, equivalent at 4s. 2d. to the dollar, to over £400. Mr. Cleverly some years ago paid a brief visit to the colony.

The system of promissory notes seems to have been developed *pari passu* with the rapid progress of commerce. The amount of notes exchanged at the Tokyo Exchange for the past two years and the first half of this year, according to the *Nippon*, was as follows:—

	Yen.
28th year of <i>Meiji</i> (1895)	289,102,424
29th " " (1896)	417,425,507
30th " " Jan. to June (1897).....	250,352,677

The above figures show an increase of 128,320,000 *yen* in 1896 over those for 1895, while the amount for this year, already over 250 million *yen*, will doubtless total 600 millions by the end of the twelve months. Such a remarkable development may be ascribed to the simplicity of the process as compared with the inconvenience common to dealings in cash, which is slowly but steadily dispensed with in the course of social progress. The country indeed ought to be congratulated on the economic changes so effected. The facilities afforded by the system, however, are often marred by the failure of the banks to provide for the payment of promissory notes or bills of exchange at the specified time. This want of precaution on the part

of individuals or banks has led, and still leads, to serious abuses. Steps were taken to remedy these abuses by the bankers of Tokyo, in the 27th year of *Meiji* (1894) when they issued a declaration to the effect that any person failing to pay the notes punctually would be refused the privilege of entering into further transactions with the bank, until his credit was re-established. Of late, the number of persons refused accommodation by the banks in Tokyo and Yokohama is increasing. In 1895 there were only 12 such persons; in 1896, 8; but this year, from January to June, the number increased to 22. The provisions decided upon by the various banks in Tokyo and Yokohama were as follow:—1. Whenever a note or cheque for which no money is lodged, is refused payment by a bank, the bank which declined payment shall present to the Banks' Assembly Hall notice of the name and residence of the issuer and the amount involved. Steps shall then immediately be taken by the officials of the Hall to communicate these particulars to each of the allied banks. 2. No bank in the alliance is allowed to enter into transactions with a person so scheduled, until the fact of the restoration of his credit has been reported by the bank which refused to honour his paper.

Count Matsukata, the Premier, lately proceeded to Kyoto, the *Sekai no Nippon* alleges, for the purpose of obtaining the Emperor's sanction to the revised regulations for the administration of Formosa and to the appointment of Departmental Councillors of *Chokunin* grade. He failed, however, to reply satisfactorily to His Majesty's questions, and was refused the sanction applied for, bringing upon himself great disgrace. When he addressed the Emperor about the appointment of *Chokunin* Councillors, His Majesty replied as follows:—"You, some time ago, created more than ten governors whose names were unfamiliar to Us. We have felt no little anxiety about it, but now you again propose to appoint a number of men with whom we are unacquainted, to the important posts of Councillors of *Chokunin* rank. What explanation do you give of that?" The Count could make no reply and only bowed. With regard to the official organization for Formosa, too, the Emperor remarked:—"It seems that the Governor General of the Island is to be appointed from among the Generals of the first two grades of the Army. We do not suppose that the Generals, though capable military officers, are endowed with abilities for civil administration. What is the necessity for selecting for the governorship of Formosa personages connected with the army?" This question the Count also failed to answer. When the Premier requested imperial sanction for the establishment of new ranks in the Navy corresponding to those of Lieutenant-Colonel and Lieutenant in the Army, the Emperor spoke thus:—"We were informed that the grades of naval officers had been organised in accordance with foreign models, despite a lack of uniformity with military organizations. What is the reason, then, that you now propose a change?" "The existence of these two ranks being exclusively confined to the army," replied the Count, "has produced a somewhat unpleasant feeling among naval officers." "Are not the Army and the Navy the main instruments for my personal protection?" asked the Emperor again. "I will myself do whatever is necessary for harmonising the two divisions of the country's martial strength." It is very difficult to credit the above. Had Count Matsukata received such replies from the Emperor, he could scarcely hesitate to tender his resignation, and it being the object of the Opposition to bring about that result, we must take the utterances of the *Sekai-no-Nippon* with a pinch of salt. Our readers will also be curious to know how the details of an audience granted to the Prime Minister can have become known to a Tokyo journalist. It is true that the *Sekai-no-Nippon's* sources of information are exceptionally good, but we nevertheless remain sceptical about this particular incident.

THE RISING ON THE INDIAN FRONTIER.

From telegrams appearing in the Indian papers we gather that the Malakand position was attacked on the night of July 27 by a body of a thousand tribesmen, believed to be people of Swat, led by a Mullah known as a mad fakir, who now appears to have been preaching sedition in the neighbourhood for some time. Severe fighting took place and six British officers are said to have been wounded, amongst them Major Taylor of the 45th Bengal Infantry, Major Lamb of the 24th Bengal Infantry, Captain Holland of the 24th, and Captain Herbert, lately of the Commander-in-Chief's Staff, the last shot through the leg. Next morning the Malakand garrison were able to act on the offensive. Further fighting ensued. Reinforcements were at once sent to relieve the little garrison. The performance of that splendid corps, the Guides, has been much admired in connection with the affair. They had the news at Mardan on Monday midnight of the attack on Malakand, and marched twenty-five miles to the place, expecting the enemy all the way, arriving on Tuesday afternoon fit to take a prominent part in the next day's fighting. It is reported that the mad fakir was badly wounded and his companion and supporter killed on the second day. The *Pioneer's* special correspondent at Malakand, writing on the 28th ult., says it is known now that the Utman Khels, the Ranozais, the Lower Swatis, and a certain number of the Upper Swatis have all joined the rising, and the enemy's forces work in relays of about 6,000 men. Telegraphing on the 31st, the same correspondent said:—Reliable reports from the North Western frontier show that three sections of the Bunerwals, namely the whole of the Salanzai and a portion of the Gudaizai and Ashazai, have risen and joined the Swatis. Wounded returned from the fight have been found in Ashazai villages, so this news is probably correct. Altogether the Bunerwals number some seventeen thousand fighting men, and their joining against us not only increases the number to be disposed of at Malakand but may make trouble in British territory along the eighty miles of the Usufzai and Hazara border.

A telegram dated at Bombay July 30th says:—Professor Gokhale landed this morning from the *Caledonia*, and was met by the Commissioner of Police who asked for an explanation of his statements in the *Manchester Guardian* in a report of an interview. What transpired is not yet known, but in an interview by a *Bombay Gazette* representative, Mr. Gokhale said the *Guardian* made one or two remarks of his rather stronger than was warranted by what he said. The statements re the treatment of women were made on the strength of the representations of friends whose names he would rather not give at present. Asked as to the statement attributed to him by the *Guardian* that he said the plague operations had begun before he left, although they did not start till a week after, he denied having said so. His statement was that the excitement had commenced.

In the House of Common on Aug. 1st Sir William Wedderburn explained that, in view of Professor Gokhale's withdrawal of his statements, he begged to express his deep regret that he had aided to give currency to unfounded charges against the British soldiers in Poona.

The following telegrams are taken from the *San Francisco Chronicle*:—

Bombay, August 2nd.
Fort Chakdara, which was besieged by a force of insurgent natives, has been relieved by the British force under General Blood. The fighting was severe, and the tribesmen lost heavily. The loss of the British was light.

The relief forces under General Blood advanced in two columns, commanded respectively by Colonels Goldney and Meiklejohn, at dawn to-day, and brilliantly attacked and routed the enemy surrounding the fort.

London, August 2nd.
The Secretary of State for India, Lord George C. Hamilton, confirmed in the House of Commons to-day the dispatches announcing the relief of Fort Chakdara, in the Chitral district. Lord G. Hamilton further announced that the garrison at the fort were safe.

Bombay, August 2nd.
Gangadhar Tilak, the native member of the Legislative Council who was arrested on the evening of July 27th, charged with inciting the natives of Bombay to disaffection, was again brought up in the police court here and formally committed for trial. To-morrow Gangadhar Tilak will take an appeal to the judges for an order requiring the authorities to release him on bail pending his trial. Gangadhar Tilak's newspaper, the *Kesari*, prints to-day a highly inflammatory article, attacking the Indian Government for "the prosecution of obscure people," and "for making an obsolete police regulation to do duty as a secret assassin."

A Bombay telegram appearing in a Colombo paper says that bail has been refused by the High Court to Gangadhar Tilak.

FATAL ACCIDENT AT NAGASAKI.

The danger attending the careless exposure of kerosene, says the *Nagasaki Shipping List* of August 20th, was again exemplified on Wednesday night by a sad accident that occurred at No. 15, Oura, involving the loss of one life; another person receiving injuries of so serious a nature that not much hope is entertained of her recovery. It appears that during the temporary absence of Mrs. Feldstein, who had gone into another room, her nephew, a little fellow aged four, with his sister, aged seven, paid a visit to the lamp-room and picking up a box of matches, lying there, struck one and applied it to a kerosene tin which was half full of oil. An explosion immediately followed and the lad was enveloped in flames. Mr. Hoffmann, a boarder, hearing the noise, at once rushed out and carried the girl out of danger, intending to return and succour the boy. In the meantime, however, Mrs. Feldstein, alarmed by the cries, had proceeded to the spot and was endeavouring to extinguish the flames in which the boy was surrounded when the dress she wore also caught fire. Mr. Hoffmann on his return succeeded in smothering the flames, but unfortunately not until the victims had received terrible injuries, to which the boy has succumbed, and the woman now lies in a very precarious condition.

Our Nagasaki contemporary announces the death of Mrs. Feldstein, from injuries received under the sad circumstances related above.

CORRESPONDENCE.

ACCESSIBILITY OF THE CODES.

TO THE EDITOR OF THE "JAPAN MAIL."
Sir,—You are pleased to twit me with a want of knowledge of the provisions of the New Civil Code of Japan; a knowledge which you affirm was as easily accessible to the public a month before the promulgation of that Code in October, 1890, as it has been ever since; from this you draw the conclusion that the desire of the Yokohama Community to make themselves acquainted with the nature of the jurisdiction (*sic*) they so greatly distrust is not very active; and you add that "at all events if Mr. Lowder's ignorance that these provisions of law existed, justifies, in his opinion, some of the fears he entertained, he will doubtless admit that persons more conversant with the Code were equally justified in their freedom from such fears." Well, I should; but that my fears were not attempted to be justified by my ignorance, which is nonsense, nor were they based on the existence or non-existence of the provisions of the law to which you refer, as will presently appear. But first, I should much like to know where the Civil Code of Japan could have been procured in 1890; and should be still better pleased to know where it can be procured now; for I have been and still am unable to obtain a copy of it. Three years ago, a Japanese friend, a practising barrister, to whom I stated my difficulty, kindly presented me with the Commercial Code; but I understood from him that neither it nor any other of the books of the Code could be purchased. Again, only

last week, having occasion to consult a certain book of the Code, I sent to Maruya, the leading Japanese bookseller in Yokohama, for it; but he was unable either to supply me with it himself, or to procure a copy of it from Tokyo. It will therefore be apparent that the New Civil Code of Japan is not so easily accessible to the public as you imagine.

But let that pass. Even if I had had the Code before me when addressing to the Editor of the *Japan Times* the letter upon which your comments are based, I must have expressed myself somewhat obscurely if anything can be found in it, or in what I have written or said during the last seven years, to justify your criticism that I "appear not to have made any examination of the Japanese Codes before coming forward to proclaim their deficiencies." You will at all events do me the justice to acquit me of having intentionally proclaimed the deficiencies of a book that I have never seen; and I even venture to think if you will examine my letter with greater discrimination, you will find that the object I had in mind was, not to criticize the Code, but to express gratification that the study of Private International Law was, though tardily, engaging the attention of the future judges of this country; and that I based myself on a statement in the *Japan Times* that that study had only recently been made compulsory upon all law students, it being now one of the subjects upon which they are examined for admission to the judiciary and the bar. The point, you will observe, is that even though the Civil Code may have been accessible to the public for the last seven years, the study of an important branch of the jurisdiction conferred by that Code has only recently begun. And here I take the liberty of reminding you that what was apprehended in 1890,—what may be apprehended now,—has less to do with the codification than with the administration of the law. But I will not re-open the controversy; I have said what I had to say upon it years ago; and the discussion of a subject on which the mind of one's opponent has ceased to be judicial is wearisome and futile.

Very faithfully,
J. F. LOWDER.
Yokohama, 23rd Aug., 1897.

"CIVIL GOVERNMENT AND ROMAN CATHOLICISM."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your editorial note on my tract on the above subject in your issue of the 20th, you think my case is made out against the Hierarchy if I limit the discussion to mediæval times. You fail, it seems to me, to note the fact that one of my principal contentions is to show that Romanism has not changed in reality its attitude towards civil governments. I cited cases to show this to be true. It is only in states where the Hierarchy is in the minority that a change in her attitude seems to have taken place. In such positions she is still the wolf, only in sheep's clothing.

Very truly,
E. SNODGRASS.
Tokyo, Tsukiji, 14, Aug. 21, 1897.

We stated the impression produced upon our own mind by a careful perusal of the book, and the belief that our own observation has created.—[Ed. J.M.]

GIFU AND AICHI KEN INUNDATIONS RELIEF FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

Dear Sir,—The work carried on in Gifu and Aichi Ken in aid of the sufferers from last year's inundations having been concluded, I am now able to send you a full report of the way in which the funds entrusted to me in answer to the appeal made by the late Bishop Bickersteth and the *Japan Mail* have been expended.

The total of subscriptions received and interest on bank deposit amounted to ¥1,342.03. Out of this the sum of ¥100 was transferred to the Rev. J. Cooper Robinson of Nagoya for relief work in the devastated districts of Owari, ¥70 being used by him in supplying bedding and clothing in Seko and surrounding villages, and ¥30 distributed in cash, with the co-operation of the local authorities, to the neediest sufferers in the town of Kanie.

The larger portion of the money used in Gifu Ken was spent in providing bedding-four-hundred and eighty-one *futon* being distributed singly or in pairs to the neediest families.

Four houseless and friendless aged people were given a permanent home in the Nagoya Yō-ō-In, two orphan girls were placed in the St. Hilda's Orphanage, Tokyo, and one man, who had lost both property and eye-sight by the floods, was provided with a year's maintenance and training

in the Gifu Blind School, from which he will go out able to support himself.

Help in money was given to the amount of \$123 17, chiefly in sums of from 25 *sen* to one *yen*. Help was given in this way throughout the winter, and in fact until the ingathering of the wheat and barley harvest—this year a plentiful one. Relief was given in four towns and twenty-five villages in Gifu Ken, to families numbering in the aggregate 1,115 people, of whom 557 were children, 111 widows, and a number of others sick, blind or aged.

Thanking once more most heartily all who have helped in this good work and appending a brief financial statement.

Yours faithfully, G. H. HAMILTON.

FINANCIAL STATEMENT.

Receipts—

Subscriptions received	\$1335.68
Interest on Bank Deposit	6.35
	1342.03

Expenditure—

481 <i>Futon</i>	\$853.65
Packing, Freight, &c.	14.20
Clothing	10.57
Travelling Expenses of aged and orphans	7.51
Help in cash	123.17
Nagoya Yōrō In	160.60
St. Hilda's Orphanage	40.00
Gifu Blind School	32.33
Aichi Ken relief, cash	30.00
Aichi Ken relief, <i>futon</i> and clothing	70.00
	1342.03

Gifu, August 1897.

A RECENT KOBE OUTRAGE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your paper of yesterday I notice a letter from a person named Matsumoto regarding the outrage committed on a lady at a silk store, Kobe. I happen to know the lady and her husband, and being in Kobe at the time, I had an opportunity of seeing for myself, the state of the lady's arm after she came out of the silk store—it was swollen, and black and blue from her elbow to her shoulder. I consider it out of the question to entertain for one moment that she ever attempted to leave the place with the silk without paying for it. Any one who goes into the shop in question alone runs a serious risk of similar treatment—should they question the price asked.

I remain, Sir, yours faithfully,

ONE WHO KNOWS.

August 21st, 1897.

[This is certainly a most wonderful charge. The rudeness of coolies and *zoshi* is one thing, but that a shopkeeper should deliberately drive away customers by assault and battery is one of the strangest things we have ever heard.—Ed. J.M.]

A MISCONCEPTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Under the caption of "The Most Costly Publications in the World," a recent issue of *The Fourth Estate* gives what the editor is pleased to call "a carefully compiled list of the most expensive newspapers in the world." But, although I subjoin a portion of the list, it seems to me that the compilation is anything but "careful":—

Name.	Appears.	Price per Copy.	Price per Year.
Calcutta En. Ishman	Monthly	\$ 1.50	\$ 17.00
Shanghai Emp. re	Fortnightly	1.25	30.00
Piji Isl.-Ind. Times	"	1.25	30.00
Yokohama Mail	Weekly	1.00	50.00
Tientsin Times	"	0.80	40.00
Singapore Times	"	0.75	39.00
Hongkong Mail	Semi-monthly	0.75	16.00
Shanghai Mail	Weekly	0.40	30.00
Hongkong Report (sic)	Daily	0.14	38.00
Bombay Statesman	"	0.12	36.00

Besides these, *The Fourth Estate* adds the names of the London Times, the Alexandria Gazette, Prague Nádodn. Lísty, Vienna Neue Freie Presse, Galgani's Messenger (Paris), Courant (Amsterdam), and Zeitung (Berlin), the annual subscription to which is given as ranging between \$26.00 and \$16.00.

The most costly magazines in the world are stated to be the *American Architect* of Boston (\$25 a year or 50 cents a copy), and the *Monthly Law Journal Report*, of London, "which is \$2.50 a copy." The editor then adds, "Fancy little Japanese new boys shouting through the streets 'Yucker Hum a Mail! Just out! \$1!'" I fancy there must be some misconception here, for all the above figures represent U.S. gold, and the *Japan Weekly Mail* costs its subscribers only 24 *yen* in

Japanese silver, yearly—or used to do so. Stay: has the subscription-price gone up in sympathy with the cheapening of silver?

Yours, &c.,

W. E.

Tokyo, August 23rd, 1897.

(Of course the figure is wrong.—Ed. J.M.)

THE INTERNATIONAL INSTITUTE IN CHINA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—To the readers of the *Japan Mail* it is already known that a project is on foot to start in Peking an International Institute. The scheme, as I presented it to the Chinese Office of Foreign Affairs, and which received its formal sanction under its own seal, includes a library, a museum, reception rooms, class-rooms, and a large auditorium for public and popular lectures. The estimated cost for the buildings is 100,000 taels.

Of the amount estimated I have raised in China one-fifth, or 20,000 taels, and of this amount two-thirds came from the Chinese. The China Merchants Steamship Company offered to give 1,000 taels, if I should find five others. I have secured thus far seven others, two of whom are Americans, and five Chinese.

All this indicated that so far as the Chinese are concerned there is here and now a chance to promote the methods and principles of progress and reform. In such an endeavour may we not look to Japan for friendly co-operation?

With such a belief I have seen several men in Tokyo and Yokohama, representing large interests, and if rightly understood I have every reason to hope that aid will be rendered. Being unable to stay any length of time in Japan, as already I have delayed too long to open the campaign in America and Europe, I can only trust that leading men will of their own accord consult together and *con amore* decide to join in with the enterprise, making a favourable impression both in the East and West.

China is in a critical condition. Reforms are needed at once, but no one comes forward to lead the forces. There must first come the bearer of enlightenment. This institute supplies a part while other parts will come in other ways immediately after. The institute will aim to influence the old men in power and the many younger men with literary degrees and holding official position. It takes the present generation and does not wait. A National University, like that in Tokio, will probably be started later on, but this would train the rising generation to hold power twenty or thirty years hence. An impetus to enlightenment and reform is needed now. "Now is the day of salvation."

The establishment of a Museum will interest the men of Japan, since here will be found an opportunity to show forth the signs of rapid improvement in Japan, their skill, samples of their work, and illustrations of the new civilization out here in the East.

The institute being International, will ever aim to be truly cosmopolitan and broadly sympathetic and evangelical.

While away my address will be Warsaw, N.Y., U.S.A.

I am, etc.,

GILBERT REID.

Yokohama, August 25th, 1897.

A CRUISE ON THE "DAIMYO."

Again on my sloping deck I stand
And feel the heave of the sea,
With the trembling tiller in my hand,
As we bound along so free!
Oh, give me the grace of, bellying sail,
With the wind abaft the beam,
And Heaven forbid I should ever avail
Myself of that demon, steam.—*Anon.*

There were three of us—a Counsellor-at-law; a member of the staff of one of the Consulates; and a journalist—vagabonds, as it were, thrown up on the shores of Japan after drifting from lands afar. I need not enter into any more minute description of our party; the above should suffice for ordinary mortals. But for the reason of our foregathering on the Yokohama Bund that hot—terribly hot—Saturday afternoon: as to that I can be more explicit. Well, it was in the hope of getting some quiet fun out of a few hours of idleness Dame Chance had suddenly, and withal carelessly, thrown to us from her tangled basket to be disposed of absolutely as we thought fit. A glorious thing it is to come across a holiday without the slightest warning; more glorious still if two other fellow of

* The American Trading Company has also just subscribed 1,000 taels.

conductive temperament happen to be similarly blessed; most glorious of all if one of the trio owns a trim ten-ton cutter.

The *Daimyo*, on which we proposed to voyage, was built in Japan on English lines by a learned professor of the Imperial University, who afterwards disposed of her, finding photography a less absorbing mistress. Once aboard, the man-of-the-law took supreme command as skipper, the Consul-man quickly subsided into place as *chef* and butler-in-chief, while the journalist fell naturally into the position that men of his profession always fill so gracefully, that of critic-at-large and adviser-in-general. Of course, we had a couple of *sando*, the elder of whom rejoiced in an euphonious name, while the younger escaped for short with the title of No. 2. Quickly they ran up the mainsail and set the jib and foresail, then slipping the moorings, we slowly forged ahead. We had to make the best of our way out between the red and white lighthouses into the Bay, and before this was done successfully, the topsail was sent up aloft. Six bells rang out from the Honmoku lightship—one mile from Yokohama—as we passed her. It was terribly hot, despite the slight afternoon breeze, but what cared we! Had we not nothing to do till Monday morning, and one of the fairest land-and-sea-scapes that eye could wish to dwell upon spread out before us! The Gulf of Yedo is very pretty in its own quaint way. The majestic cone of Fuji-san dominates it on clear days to the south-west, and on every hand, far as the eye can reach, are wooded heights, some running up into respectable eminences, alternately with lovely lateral valleys. Here the tufa cliffs rise sheer out of the water; there stretches of sand or shingle make ideal beaches, while tiny little bays and curiously formed inlets open out one after the other as the yachtman skirts the coast. Yes, it was well to be alive that day, to have nothing to do but to lay back and catch the whispers of the water as we cut our way slowly along. As the afternoon drew on, the wind gradually died away, but, fortunately, we struck a current and this helped us to double Saratoga Spit and the baffling headland of Kannon-zaki. By this time the Boshu hills were looming up high and massive on the port bow, with the evening shadows already beginning to play hide-and-seek in the ravines that cut into their widespread base. Right under their lee we could see, in the purpling twilight, the white sail of a foreign yacht making but poor time of it in the gentle zephyrs now barely rippling the surface of the Bay. Everything looked solemnly peaceful in the strangely beautiful opalescent light that descends towards evening in these latitudes. But most of the ineffable charm of the hour was wasted on our ship's company; their sole wish just then was to make Uraga Harbour before sunset, and this haven was still some distance away. So all the delicate fancies born of the time and scene were rudely banished, and we thought only of what we should do when the wind came towards us again. For by this time we were out of the current.

Our sails from heaven received no motion,
Our keel was steady in the ocean.

It was no use whistling for the wind; that only made one athirst, and it is not well to be athirst at this time of the year, before the sun has set; no use reviling a fussy little steamboat that passed us with a triumphant hoot of its whistle—that did not help one bit. At last, just as hope was beginning to entirely disappear a few gentle catspaws came creeping over the glassy sea, fore-runners of the breeze that was "to take us to the haven under the hill." Uraga in the days of old was an important place and the official seat of a *daimyo*. Here every Japanese ship or boat entering or clearing the Bay had to stop and pay tribute to the powers that were. Here the American Commodore Perry, with his "black" warships, anchored when he came to demand the opening to foreigners of the mysterious land of Japan, and here many weary days were spent by him in what at first appeared fruitless negotiations. For a time the glory of Uraga has departed, but in years to come it will undoubtedly rise and develop into a big shipbuilding port.

Imagine, if you can, a fire-embowered fird of the Norway pattern, but on a smaller, gentler, Japanese scale; with houses built from the water's edge and thence up the mountain sides, with the harbour separating the hills as a long wide tongue. That is Uraga. At the further end is a small plateau, on which barracks have been built, so the inhabitants rise and go to bed by sound of bugle. We entered—

In the glory of the sunset,
In the purple mists of evening.

—But almost within the twinkling of an eye the short twilight had given place to night, and then from a hundred different points among the

hills around sprang into sight hundreds of lights. For a moment comparisons between a Dairy Lane pantomime or a scene from fairy-land were quite admissible. We had to be careful in going up to our moorings at the end of the harbour, owing to the large number of ocean-going junks that were about anchoring for the night. Huge and unwieldy are these junks, bearing a family resemblance to the caravels that Columbus patronised on his voyages to the Spanish Main. But in a few minutes our anxieties were over, and we were at anchor. The *chef* immediately went forward to investigate the state of the "prog" chest, and to prepare the evening meal, the skipper to fuss about generally in the way all yacht skippers do, while the journalist did nothing save lay back and endeavour to conjure up world-altering thoughts in the manner men of the Fourth Estate are supposed to do when they nothing have better on. Anon dinner was ready: rather peculiar in some of its combinations—as was only to be expected—but still appetising to hungry mariners. Having digested this we foregathered on the hatches beneath the awning—it was "a night with stars," and a heavy dew was falling—and all of us yained inconsequently for the next few hours. And what a talk it was! Ranging from observations of men and manners as personally experienced by some of the *voyageurs* in the course of their wanderings to and fro; talk of the far away Southern Seas, of quaint customs, curious beliefs, and pretty manners still flourishing in Fiji, Samoa, Tahiti, and many another island home of the brown men, despite the invasion of their sanctuaries by the white man with his fell desires and diseases. Anon we spoke of queer happenings in the crowded waterways of the Middle Kingdom, of piratical forays on the Canton, Pearl, and Red Rivers. Then, when these topics began to pall, the journalist had an innings and carried his companions along with him among books and bookmen of many lands. And so the talk went on, and the quiet hours stole away, the silence around being occasionally shattered by the deep-toned boom of a temple-bell, perched far up the mountain side, as some late worshipper drew the attention of her deity to her humble prayers. For in Japan, as elsewhere in this sin-weary world, 'tis the "woman's part to pray." We were loth to turn in, though past midnight; and then, so sound were our slumbers that we scarcely believed the *sendo* when they roused us at half-past three to wash decks and prepare to get under way again. It was dreadfully chilly and misty at that hour, and the *chef*, very torpid and full of sleep, drowsily refused to brew the matutinal coffee. But we managed in time to thoroughly evict this too-contumacious spirit from his gentle soul, and by 4.30, just as day was beginning to struggle through the mist, we crept out of harbour, and once more faced the heaving waters of the Bay.

I need not describe that early morning—the *opry* right of "Sunrise" belongs, I believe, to William Black, and anyhow I have not a copy of it handy to quote from. In all verity, it was of a beauty that could only be dimly felt, experienced by the senses, but not reduced to prose. The day was still chilly, but yard by yard the sun worked through, and by the time we made Sagami the mists had all but vanished, and it was hot again. A heavy sea was rolling in from the far-stretching Pacific, making a tremendous blather on this rocky outpost of Japan; but the *Daimyo* rose to the swell very calmly, and soon we were right out to sea, bearing down on Jogashima. This is a tiny island that looks like a bit of the South Downs, chopped off and transported to the coast of Japan. Near to it is a curious pinnacle rock that appears, at certain angles, very much like the statue of Victoria R. and I, that Sir Edgar Boehm carved. This rock, to yachtsmen in these parts, is known as "Queen Victoria," and the ledges and pinnacles around—that are always in a white lather of foam—are "her subjects." We left her Majesty on the starboard hand and then ran through a rocky, intricate channel into Misaki, a typical fishing village of Japan, built right down to the water's edge. Just as we entered, the fishermen were coming in with the night's spoils, some 70 or 80 huge bonito. The men spear these enormous fish at night, the bonito being attracted towards the boats by the flare of many torches. Exciting work it must be and at times, I am told, attended by much danger.

Misaki harbour possesses a bottom of silver sand, and though several fathoms deep, by an optical delusion one feels that there is hardly sufficient depth of water beneath the yacht to allow of her riding safely. I was sceptical of the phenomenon at the time, and was induced to dive to test it. I dived, but did not touch that bottom—the floor of the sea seeming to fall away suddenly directly my head was immersed. We did not stay at Misaki long, but ran straight out to sea for some distance to

avoid a huge ledge of rocks that rear their jagged heads at half-tide. Then, this danger cleared, we put the helm over and made for Aburatsubo (the oil-pot), a tiny harbour, the beauty of which cannot be equalled anywhere in Japan. The fringed hills that extend all the way from Sagami along the coast to Misaki, and then start afresh there, seem to continue in unbroken line straight along to Kamakura, but upon approaching the land, one perceives a small opening, or break, in the cliff. Through this we pass, and in a minute the Pacific is blotted out of view by a curve of the land. A lovely panorama of inlet, hill, dale, and waterfall, with here a stretch of white sandy beach, and there a collection of rocks of most curious formation, bursts upon the view. The intense quiet after the roar of the sullen rollers breaking on the fretted rocks outside is not the least pleasant of the complex impressions received. Verily we had found a harbour of fair delight! What mattered the storm now plainly visible in the sky?—little harm could come to the boat in this land-locked haven. Hardly had we got the sails housed and all made snug when the first signs were given:—

The wind, that grand old harper,
Struck his thunder-harp of pines,
—and sent the message of the storm hend reverberating in no measured accents along the adjacent hills. Then came the rain. How it flashed and dashed upon the waters of our little harbour! How it disappointed our hopes of further cruising for that day! After a few hours of the gale we resolved to leave the *Daimyo* in charge of the *sendo*, and come back for her on a more auspicious occasion. A long twenty-mile tramp lay between us and the nearest station, but we did not care. Tramp it we did, though the force of the gale at times prevented us from making much headway. Towards six o'clock that evening we paddled—for we were soaked to the skin, water streamed off us, and our boots "squelched" in the mud—into Yokosuka, still some miles from Yokohama, and took train home. We were the weariest, dreariest, dirtiest mortals that hot baths had had to receive for many a day. A.B.B.

HOW THE "DAIMYO" CAME HOME.

The sea is a jovial comrade,
He laughs wherever he goes;
His merriment shines in the dimpling lines
That wrinkle his hale repose.
He lay himself down at the feet of the sun,
And shakes all over with glee;
And the broad-backed billows fall faint on the shore,
In the mirth of the mighty sea.

—Bayard Taylor.

Once again were three Vagabonds gathered together on Yokohama Bund. Their gaze was seaward as they quietly absorbed the blazing sunshine of mid-July, and the hope expressed by all was that the weather might be reasonably fair—though none objected to a "wet sheet and a flowing sea, with a wind that follows fast." They were not exactly the same three that had taken the *Daimyo* down to Aburatsubo a week before. The Consul-man had fallen out, and a younger enthusiast in all that concerned yachting was filling the vacant place: likewise the duties of *M. le Chef* had descended on his shoulders. But though the party was slightly changed in composition, the desire of all was the same. Their thoughts were far away from the busy treaty-port, with its long, black ocean steamers and predominating white-walled men-of-war. Far away in lonely Aburatsubo the good yacht *Daimyo* was lying at her ease, and there also the three longed to be. To bring her home was their great desire. But how to reach the *Daimyo* was the absorbing question. Many ways offered, and it was finally decided by the Man-of-law that we should train it down to Yokosuka, the great naval arsenal of Japan which lies so snugly ensconced on the south-western side of Tokyo Gulf. From there the Vagabonds took jimikisha to Uraga, the road traversing a pretty district of hill and dale affording ever varying glimpses of the dimpling sea on one hand, and occasional peeps at solitary villages and secluded valleys on the other. At Uraga, an old ramshackle coasting-steamer was getting under way for "Misaki *vid ports*," and on being hailed, her purser kindly consented to take the hardy yachtsmen to the terminal port of call. The *Fuyo Maru* was a fearful box of crank machinery, having a perpetual list to starboard—a list that the captain assured passengers contributed greatly to the speed, comfort, and seaworthiness of his craft. The three foreigners had doubts on all points, but anyhow the fare was small, six *sen* per man, and they took chances on Providence deferring a

boiler explosion, or shipwreck, until next trip. After some unearthly howling, and screamings that woke every echo in the hills around, the good ship cleared the harbour of Uraga and set out to sea. Parenthetically we may remark that the highest ambition of the Japanese captain of a small coasting steamer before starting is to scare all his immediate neighbourhood with the most diabolical screaming he can possibly get out of a steam-siren, no matter whether the time be daylight or the dead of night.

If the previous Saturday had been as hot as the proverbial Aden frying-pan, this particular forenoon was the very cooking-stove fire itself. How we fizzled and sizzled on the unprotected fo'c'sle-head of the *Fuyo Maru*; how the purple hills across the bay and the middle distance of glassy water shimmered in the too fervent heat; and how delightfully soothing to the eye was the sight of the white sails and awnings of a cluster of fishing boats away down the offing. Yet, if it was hot while the steamer was moving, what was it when she stopped, every now and then, at a little collection of houses to send a boat ashore to distribute or collect barrels of *saké* or bales of rice or charcoal? Then all we could do was to crawl behind the wheel house and lay back and pant, while a grimy stoek-hole boy ministered unto us a none too delectable *ocha*. But all things come to an end in time, even a voyage on a coasting steamer in Tokyo Gulf. At three o'clock we arrived at Misaki. We had burdened ourselves with a supply of fresh provisions ere leaving Yokohama, so some village inns had to be engaged to carry the stuff over the hills that still lay between us and the yacht. The tramp across to Aburatsubo need not be detailed; it was hot and wearisome. Towards five o'clock we breasted the last incline, and then saw the *Daimyo* floating calmly below us, her pennant barely fluttering in the light zephyrs playing about the tiny harbour. A hail brought off the younger *sendo* with the dinghy, and three minutes later saw the company on board the yacht. A pleasant surprise greeted us. The hills around the little harbour swarm with countless lilies of the huge white and striped mountain variety, as well as a particularly attractive species of the tiger lily family. The *sendo*, anticipating our arrival, had collected a boat-load of the fragrant flowers, and made them up into garlands and bouquets. The cabin and cockpit accordingly presented a fairy spectacle that afternoon; one that the imagination can more easily conceive than the pen describe. After slaking a superabundant thirst, each Vagabond betook himself to the position previously assigned—it was still too hot to bathe. The skipper fussed around to see that nothing was amiss; the *chef* had his cooking outfit to attend to, while the journalist had all he required in the way of occupation in watching the shoals of many-coloured fish that swam and disputed in the pellucid waters of this harbour of Fair Delight. A casual conversation with the *sendo* revealed the fact that they were glad to see us back again. Aburatsubo, according to their account, possesses a ghost of peculiarly hair-raising propensities, a disembodied spirit who delights in meandering around the harbour on moonless nights bewailing the fate that befel him and his house three centuries ago. For this wraith is an aristocrat of aristocrats. Three hundred years ago, or thereabouts

So the legend runneth,

So the old men tell,

—there lived on the peninsula that shuts in Aburatsubo from the Pacific, a lordly *daimyo*, yclept Miura Dosun. Great was he in his own estimation, and mightily pretty as well as imposing must have been his *yashiki*, built on the high ground overlooking the sea. On three sides he had the Pacific for a moat and on the landward prospect a huge causeway, protected by lofty gates, was built and worthily maintained. But in the course of years, troubles rose between Miura and a much mightier personage who lived at Odawara, and soon the picturesque peninsula became the scene of a medieval siege that lacked little in the way of sanguinary persistency. The holders of the castle by the sea held on bravely, but provisions ran out, their boats were captured, their mightiest men were slain. Then the order went forth that the chief would commit *harakiri*, while he graciously gave permission to any of his followers who chose to accompany him to the Elysian fields in similar fashion, that they might do so also. Of course the whole garrison that remained preferred to attend their master and their lord on his last long journey, and when the Odawara men burst through the landward gate, they found the castle in flames, with none of its heroic defenders left alive to tell the tale. Such is the legend as we picked it up that day, though a diligent search in history books and other works translated into the English tongue, has not rewarded any of us with authentic corroborations.

tive testimony. But though the annals of Japan at present accessible to foreigners do not tell the story, the fishermen at Misaki and its neighbourhood have all the details at their command, if properly approached. Their faith is borne out, they allege, by the regular appearance of the dead lord's wraith at Aburatsubo, when the season of the year approximates to the time of his downfall. The old fellow's rice-godown, provision store, and his freshwater springs still exist under the cliff, while the outlines of his castle can be traced in the deep trenches dug along and across the peninsula, in the ruined causeway, and in the cleared plateau that crowns the breezy hill top.

But enough of Miura's ghost, and feudal history generally. Dinner was served on board the *Daimyo* in broad daylight. Then

Twilight and evening bell,
And after that the dark.

But we landed to observe these beautiful phenomena of evening. Climbing the cliff leading up to the old *daimyo's* domain, we sought out a clearing among the trees that gave a full view of lordly Fuji, with the sun preparing to sink behind his mighty flanks. Rugged old Thomas Carlyle, in one of his lectures on "Hero Worship," attempts to depict the thoughts of the primeval savage—following on Aristotle's speculation upon the same subject—while gazing upon his first sunrise. Awkwardly chaotic are the sentences that Carlyle gives utterance to, yet one gathers some dim idea of what the rugged old sage of Chelsea intends to convey. But inexpressibly nobler must be the thoughts of a man of this later day—an heir of all the ages—who may stand alone at the close of day on some quiet sea-shore and gaze upon the wonders of the setting sun. The glories of sea and sky are then inexpressibly melancholy,—though so beautiful,—and most soul-stirring, for sunsets affect us more powerfully than sunrises simply because the setting luminary of day suggests a thousand analogies to the close of life. To the three Vagabonds looking towards Fuji that soft July evening nature seemed to have decked herself in the splendours of celestial glory: the impressions forced upon them in the vast stillness were such as to render speech inarticulate, the tongue incapable of coherent utterance. What wonder, then, that sleep fell softly and swiftly that night on all the little company.

It must have been but a few minutes past four o'clock when a loud splash announced that the skipper had gone over the side for a swim. The other members of the crew were not slow in following such an example and some healthy fun ensued. Then breakfast. By half past six we were exploring the peninsula opposite for the old *daimyo's* sake; then descended to the beach to paddle about in the pools left by the outgoing tide, behaving for all the world like children who had yet to learn the trials and griefs of the world and become acquainted with their accompanying shadows and indelible stains. It is so seldom that one can get back to the pleasures of childhood's days; so seldom that the hurry and rush of life, even in sleepy Treaty-ports, will allow of a short breathing space in which to hark back on our tracks, as it were, to assume the manners of children who can let the hours slide by with impunity without worrying or thought for what the next may bring. Verily, on that morning, Nature seemed so pleasant that nothing soured our laughter or darkened our merriment. But ere long the head *sendo* signalled that we must come aboard, and that hurriedly. Then we found that the barometer was falling rapidly with indications of the approach of a gale. So we put out and ran for the entrance to the Gulf of Tokyo. The wind served us up to Misaki; then it fell, and hour after hour went by, and still Sagami Cape was not rounded. By noonday we could see the storm in the distance but, as is usual here, a great calm prevailed for some miles in front of it. We were

As idle as a painted ship
Upon a painted ocean.

The heat was intense, and notwithstanding solar topees, two people had to go below, "sick with the sun." Even the *sendo*—used as they are to the heat—were anything but happy on deck. But ere long the storm, so long in coming, began to make up for lost time; so we shortened sail, made all things secure, and prepared to run for a safe holding ground. Soon the first angry puffs of wind came tearing along. Bravely the good ship buckled to her work, and began making the best of records past Sagami Cape, and up into Kaneda Bay. She had all the wind she wanted, and also sea, but all was in our favour, and we held on to the end with the least amount of canvas possible. The pace was terrific, the water swirling and boiling past the bows as the *Daimyo* cut her way through angry seas. Fortunately

Uraga lay at a convenient angle to our course, and we made for it. We reached safety just in time. I never want to ride out another gale like that on a 10-ton yacht—no, never again. There was nothing for it beyond getting a tight grip on Cromwell's well tried axiom:—"Put your trust in God and keep your powder dry." Once in Uraga, all fear was at an end, and we supped that night right merrily. Our *Chef* had to leave us next morning early, going home by train, but the skipper and the journalist stuck by the *Daimyo* until Yokohama anchorage was reached, late on Monday afternoon. And so did the *Daimyo* come home in safety, and thus was a pleasant holiday brought to a happy close.

A.B.B.

BRETT AND COMPANY, LIMITED.

REPORT.

The statement of Assets and Liabilities, also Profit and Loss Account for the year ended 30th June, 1897, accompany this report.

As will be seen from the accounts, business for the year may be considered satisfactory.

Six debentures of the value of yen 600.00 have been redeemed, thus leaving the balance yen 12,400.00.

JNO. H. BOAG,
Managing Director.

Yokohama, 21st August, 1897.

Balance Sheet—30th June, 1897.

E. & O. E.

I certify that I have examined the foregoing accounts and compared them with the Books and Vouchers of the Company and find them to be correct.

W. G. MACVICAR, Auditor.

Yokohama, 13th August, 1897.

Keen disappointment, says an exchange, is felt in Germany at the findings of the South Africa Inquiry. The German newspapers had apparently made up their minds that Mr. Chamberlain would have been found guilty of "lese majesté," and that Mr. Rhodes would have been recommended for punishment.

THE WRECK OF THE "ADEN."

MR. FRANK GILLET'S NARRATIVE.

Mr. Frank Gillett, one of the survivors of the wreck of the P. & O. steamer *Aden*, writing on board the steamer *India*, nearing Plymouth, July 13, sends *The Times* a graphic and touching account of the disaster. He states that the *Aden* left Yokohama, where he joined her with his wife and little girl 7½ years old, on April 28, and experienced good weather as far as Colombo. The full complement of passengers was 17 adults, two children of 11 to 13 years, and 12 children of tender years, with three Chinese nurses. The writer gives the names of the passengers, and mentions that there was a delay at Colombo for extra coaling, it being desired to pass Aden and thus avoid quarantine at Havre, where the ship had to call. He goes on to say:—

"We left Colombo on June 2 at about 1.30 a.m., and here our troubles began, as within one day after leaving the monsoon began to break upon us with considerable force, the seas ran high, violent squalls of wind accompanied by blinding rain and spray were constantly met with, and the ship, although behaving throughout as a first-class sea boat, began pitching and rolling heavily. Day by day as we proceeded the weather increased in violence, seldom was the sun visible, and the squalls increased in force, while the waves began to get truly mountainous. Naturally things began to take rather a depressing shape on board the ship, many were the vacancies at table at meal-times, the children got fractious and restless, and the sufferers from sea-sickness were numerous, my own wife being one of the worst, and utterly unable to leave her cabin the whole time, and as everything, of course, was closed up, your readers will understand that the moist heat of the air in the cabins was stifling in the extreme. Not more than three or four days had elapsed before the big seas washing over the port or weather side began to break up the stack of coal on that side of the ship, and it was found necessary to get it shifted by the crew in baskets down to the bunkers, an operation by no means without danger to life and limb, taking into consideration the rolling of the ship, the slippery decks, and the increasing violence of the seas that broke over us aft. Things got from bad to worse, until June 7 and 8 we were running in the teeth of such violent monsoon weather as was described to me by Mr. Carden, the chief officer, a bluff, good-hearted seaman of the kind that one likes to meet, as by far the worst that he had ever met with in his experience. The seas were tremendous, and the tops of the waves were carried along in blinding spray by the violent squalls which constantly struck us. At the same time, he it said, there was nothing in the nature of a typhoon or cyclone, the wind was always in one direction, somewhat west of south-west, and it must simply be described as of extremely violent monsoon force. The waves were breaking over the hurricane deck both fore and aft, and the good ship was rolling to such an extent that we took in seas on the lee side over the scuppers on the upper hurricane deck. Although ordinarily steaming 12 knots, or better in fair weather, our last 24 hours run was recorded as only 188 miles, a trifle under eight knots, and unfortunately the coal left on the starboard side had been washed away to such an extent that it was anticipated by the chief engineer that even if all got in the bunkers it would be short by 30 or 40 tons of the 100 tons first taken aboard. Early, therefore, on the morning of the 8th the captain decided to head the ship up nearer into the wind and slow down to half-speed, so that by lessening the heavy rolling it might be possible to clear away the balance of the coal, and get it safely stowed in the bunkers. This change of course doubtless carried us down a little further south than where we should otherwise have been, but as we were going so slowly the deviation from our original course was probably of small extent, and by about 11.30 a.m. on June 8th the coal was all cleared and the ship headed round in a north-west direction to clear the eastern end of Sokotra island, which it was expected would be reached somewhere about 10 or 11 o'clock that night.

"During all this time Captain Hill, whom we shall always remember with affection for his unfailing geniality and kindness, had been doing his best to cheer up the distressed ladies and their children by kindly words and assurances that it would be the last bad night, and that before dawn we should be running into smoother water on the northern side of Sokotra, and protected by it from the extreme violence of the monsoon. Would to God that it could have been so and that the morning of the 9th might have seen us still sound and running on safely homeward, instead of lying a dismantled wreck on that fearful reef off Sokotra! What was the fatal error in judgment that

brought us to that pass it is not for me to consider; the matter will be doubtless made the subject of official inquiry, and I must pass on to what I have now to tell your readers of the horrors that ensued. The rolling of the ship on the night of the 8th, together with the discomforts consequent on the fact that the seas washing over us had entered many of the cabins on the starboard side alleyway, induced many of the lady passengers to seek rest by having their mattresses brought into the saloon, and placed together on the floor, and the appearance of the saloon that night was more like a camp hospital than anything else, it being difficult to cross it without treading on somebody. The few male passengers were mostly wandering about the ship unable to sleep—I, myself, being still in my day clothes and trying to get a little rest on a seat in the companion way at the top of the saloon stairs. Thoroughly tired out I must have dropped asleep on my rather uncomfortable seat, and it was with a dreadful shock that I was awakened at about 3 a.m. on that fatal June 9 by feeling four violent bumps in quick succession towards the fore part of the ship, followed immediately by a horrid, grinding noise somewhat nearer the part where I was, and the horrible certainty was forced upon me that the good ship had struck, as I jumped from my seat and rushed down the saloon to seek for my wife and child. I met them leaving their cabin with agonized faces and in the lightest of sleeping dresses, and after begging my wife to be brave I rushed into our cabin to secure for them extra clothing.

"Meanwhile, shouts were heard from above, 'All passengers on deck.' 'Bring your life-belts,' and tearing down the three belts placed in our cabin I hurried out again to join my dear ones and get them upon deck. Ere we had crossed the saloon the steam was coming in thickly, presumably from the engine-room, and immediately also the electric light, which had been burning brightly, went out, leaving the saloon full of horror-struck ladies and children in utter darkness, frantic in their efforts to reach the staircase and get to the upper deck. There was an awful crush on the stairway, and the screams of women and children were piteous and heartrending; but, eventually, the stairway was cleared and we passengers found ourselves huddled together on the lee side of the upper deck, most being totally unprotected from the violent wind and sheets of spray which had already begun to dash over us as the seas were hurled over the port side forward. The night was hideous in its blackness, faces were impossible to distinguish, and it was only by imploring cries heard on all sides that one could form an idea of those who were round about us. It was not until some little time and the immediate shock had passed that one could gather who particularly wanted relief in clothing or protection, but now stewards and others began bringing up articles of clothing and blankets, &c., which were passed round for those who required them; and the poor, frightened creatures hurriedly wrapped themselves in anything that could be found for protection against what was really a cold night air, and made infinitely worse by the sheets of spray coming over us.

"Meanwhile the officers and crew were busily engaged in getting ready for lowering what boats remained on the wreck, which, of course, were carried inboard when at sea. The three boats on the port side had been all carried away almost immediately the ship struck, and also a little dinghy that hung over the poop, so that but three boats on the starboard (lee) side remained, and when eventually dawn began to steal upon us preparations were made to lower away the after boat. In the act of lowering, however, she was carried away by a heavy sea, which also threw into the water three of the native crew who were in her to ease off the tackles. These men, however, succeeded in getting into her and recovering a few oars, and in a half water-logged condition she gradually floated away from the ship's stern. Seeing this the chief officer, Mr. Carden, jumped overboard with a life-belt on to endeavour to swim to her assistance, but as far as I can find out no one seems to have seen that he succeeded even in reaching her, and he was never seen again by us left on the wreck. God rest his soul! If that was his last act in life it was one of noble self-sacrifice at the call of duty and may it comfort those dear ones who mourn his loss to know how bravely he gave up his life in his endeavour to help the distressed.

"Seeing the disaster to the after boat, the centre boat was then launched by the second officer, Mr. Miller, who himself had sustained serious injury from a ghastly wound on the head caused by some falling wreckage when the ship struck. This boat was only a cutter, and was manned by about 12 of the native crew with Mr. Miller at the helm, and started to pull off with the hope of bringing back the other boat. It was, however,

soon apparent that they had no chance of keeping her in the wished-for direction. She was carried away by the force of the wind and sea, and was soon lost to view, and so far as we know never sighted again. Then the third and last lifeboat was taken in hand by the third and fourth officers, Mr. Ralph Manning and Mr. E. Hurlstone, and calls were made for provisions and water to put into her before lowering away. These were passed up by the stewards from below, and after being handed in the third officer, two able-bodied quartermasters, and the stewardess took seats in the boat. While she was being lowered, however, by some mischance, either from defective tackles or a heavy sea, the after tackles gave way and the boat hung by her fore tackles only; the four occupants, together with all stores and contents, being precipitated into the water. The three men succeeded in keeping themselves afloat by grasping floating oars and spars, while a lifebuoy was flung over and grasped by the stewardess, who, however, appeared to be in imminent danger of drowning right under us, through her abortive attempts to get into proper position in the lifebuoy. By this time, however, the boat had been launched, and the fourth officer, young Hurlstone, who had got into her, plunged from the side to swim to the assistance of the stewardess, amidst the cheers of all on deck, and succeeded in bringing her back and getting her safely into the boat. Then the remainder of the foreign quartermasters and carpenter took up positions in the boat, and calls were made for ladies and children to come aft to be lowered away, the boat having been passed back nearer the stern to avoid the heavy seas breaking over the fore portion of the ship. Using a sling as the means of lowering, and under the superintendence of the captain, the surgeon, Mr. Forman, who worked most manfully to assist the frightened passengers, and two of the stewards, the following passengers were gradually lowered—Mrs. Reilly and her two children, Mrs. Collins and two children, Miss Hogan, Mrs. Robertson and three children, Mrs. Smyth and infant, Mrs. Suttis and infant, Mrs. Sinderson, and Miss Hewitt. Calls were then made for the remainder of the ladies and children, but, although I cannot say that I heard the order distinctly given, it would seem that word was passed along that the husbands would not be able to go that trip in the boat, but would have to wait for its hoped-for return. On this, however, both Mrs. Strain, Mrs. Pearce, and my own wife declined at once to be separated from their husbands, nobly preferring what then looked like imminent death to all on board, through the ship breaking up or heeling over, to being parted from them at that fateful time; and for some reason, I do not know what, Miss Weller and Miss Lloyd remained behind also; and thus it came about that when the boat left the wreck 17 passengers were left behind, who were as follows:—Mr. and Mrs. Strain, two infants and Chinese nurse; Mr. and Mrs. Pearce, two infants and Chinese nurse; Miss Lloyd, Mr. Valpy, the Chinese nurse employed by Mrs. Smyth, my own wife, and little girl, and myself.

"Probably with the view of securing a strong crew for the boat no native sailors were taken, and seats were occupied by the first and second engineers, Mr. Carmichael and Mr. Chisholm, the surgeon, chief and two other stewards, Carey, Rolls, and Barrow, and the winchman, W. Atkins, and was under the charge of the third and fourth officers. The boat left the side, and, after being partially bailed out, was pulled away from the wreck in the direction of the nearest land, about one mile or more distant. Very soon, however, after leaving the partial shelter afforded by the ship it became once more painfully evident to those left on board that the chances of the boat being able to reach land in the direction intended were most remote, and, after straining our eyes to watch their manful efforts for over half-an-hour, we saw at last that they had to put the boat about and let it run before the heavy monsoon sea on a course which might have crossed the track of any ships passing between Colombo and the Gulf of Aden, but which, with that track once crossed, could only leave them at the mercy of the wind and waves, with no chance of reaching any nearer shore than the remote coast of India; and if, as I believe to be correct, the boat left without anything in the way of provisions and water, let your readers picture to themselves the awful prospects in store for the poor occupants, of whom so many were half-clad ladies and children of tender years! What were our feelings on board as we saw them drift further and further away I can scarcely tell you. All hope of rescue now seemed gone; there were no more boats; the weather was increasing in violence every minute; and it seemed to us only a question of how long before we should be called upon to meet our deaths through the breaking up of the ship.

Besides us 17 passengers there remained now only the captain, whose reason, I firmly believe, was to some extent unhinged by the fearful calamity, and the third and fourth engineers, Mr. T. A. White and Mr. Peter Kelly, also a youth of about 19 years, Wallace Cave, who had served in the ship in the capacity of writer, each of whom on some impulse preferred standing by the ship to going in the boat.

"And now comes what, for me, is the hardest part of my story, which to write about, even at this considerable interval of time, I am not ashamed to say still causes that gulp in the throat which even the strongest men cannot at times conceal, and that is to relate the agonizing and heartrending sights of the remainder of that awful day, when gradually we had to see so many of those who were left, one by one, oft-times maimed or bruised and bleeding, with broken limbs and weakening powers, dashed backwards and forwards on the wave-swept deck, and eventually carried away by the angry seas, until nearly half our number had gone. May it be less painful to your readers than it is to me! The picture remains so vividly in my mind that now, lying awake at night, I many times seem to live the whole scene of horror over again. By the time we had lost sight of the last boat it was getting on well towards 8 a.m., and we had taken up our positions on the lee side of the engine-room bulkhead, sheltered to some extent from the immense seas breaking over us by that as well as by the wooden structure forward, which then remained intact. We were holding on for dear life to an iron rail which ran along the side of the bulkhead, my wife and little girl being at the extreme forward end of it, while I was grasping the sides of an iron ventilator just ahead of it, and next to the captain, who declined to hold on to anything, and stood shivering, and with a nervous twitching movement of his hands, just outside the saloon companion way. I several times begged him to catch hold of one side of the ventilator with me, we being the nearest exposed to the seas breaking over from the weather side, but he always refused, and his replies to anything said to him were so strange and incoherent that, as I have already stated, I fear that the good, kind fellow had partially lost his reason. The seas from the fore part still increased in violence, and often one or another was torn away from our shelter and swept along the deck. But for some time we managed to bring them back to comparative security; but ere long there began to rise up from the lee side, above the level of the scuppers, near to where we were standing, immense green seas, which would come licking over the side of the ship from the after part forward toward us, fearful return waves which we who remained on that ship so long a time never remembered to have witnessed; and these waves steadily increased in volume, until sometimes they came sweeping over in one solid green wall as high or higher than our heads, were for the most part the cause of the awful havoc amongst us. They rose up and came over entirely without warning, and as from our position our backs were towards them, they could not be guarded against like the bigger but more broken waves coming over from the weather side.

I think the first to go was the little infant son of Mrs. Pearce, torn from its mother's arms; and, at the risk of venturing on to sacred ground, we can hardly think of this otherwise than as the act of a merciful Providence, as it is barely possible to conceive that we could have kept alive without suffering an infant of such tender age on the scanty provisions left to us during the long 17 days we were together on the wreck. Mrs. Strain's little infant in arms was also early taken.

... Mr. Strain and his wife were soon afterwards carried right forward, he being immediately carried overboard by a sea from the weather side, while Mrs. Strain got her leg jammed under a piece of iron broken away from the winch pipe, and was only extracted after several minutes hard work, through the assistance of the captain and others, who managed to lift up the iron and brought her back to the shelter torn and weakened, but still able to hold on. Time went on. A Chinese nurse employed by Mr. and Mrs. Pearce, whose cramped feet had made it painfully difficult for her to retain her foothold on the seething deck, was seen to be lying cut and maimed on the deck within a few feet of where the rails were broken away, and although offered assistance and implored to come back to shelter she wearily declined, and waved away all help as she waited for the next sea, which mercifully soon came, to carry her away.

"Not long after this poor Mrs. Strain, who was already fearfully weakened and horrified at the loss of her husband and infant, was torn away from the rail by another of the green monsters and hurled along the deck forward with fearful violence against the iron rail, the sea as it swept past

and over her denuding her of every particle of clothing, and she was left lying there perfectly naked, with right arm broken close to the shoulder, rising and falling loosely on the seething water. She was yards away from any of us, and must have been from her appearance, thank God, quite unconscious. . . . We could only turn away our eyes from seeing her carried away by the next sweeping sea. Her little girl Jeannie, two years of age, was left behind, and I had her passed on from hand to hand up to where I was standing, so as to be able to do what I could to protect and shield her. I had myself been washed away and swept along the deck several times already, but, although probably badly bruised and battered about, I do not remember feeling sensibly weakened up to that time; but before long another enormous green sea caught us all, and, it coming on me solid fully as high as my shoulders, I was swept away with the child right up to the forward end, and dashed with fearful violence against the rail, only there to be met by a wave from the weather side, which cast us both back again past all the rest to about ten yards lower down, leaving me lying on the extreme edge against an open space where the rails had been broken away, and with little Jeannie about a yard further on. With both legs and feet torn and bleeding, nose and forehead gashed, and both lips badly cut, while scarcely a breath remained in my body with the awful violence from which I struck the railings, I distinctly remember, even now feeling, that it was no use to try and hold on against such odds; that to prolong life was not worth the struggle, and that it was easier far to be there where I was and wait for the next sea to wash me quietly overboard. Truly for me then the bitterness of death was passed, and I only felt the desire to keep my eyes on my wife and little girl and see the last of them ere floating overboard. But missing me, after saving herself and our child from the effects of those last dreadful seas, my wife turned round and saw me lying there, and, bidding our little Evelyn to hold on tight, she rushed aft to me and implored me to brace up, at the same time throwing out both hands to assist me. I told her, "it was no use"; but, as she again begged and implored me, I remember reaching out one arm to pull little Jeannie towards myself and her, and finding just enough breath to say, "Help Jeannie; I'll come." With the help of her other hand as she grasped the child I managed to crawl on to my knees, and eventually once more regained our place of shelter. Truly to that heroic act of my dear wife I owe my life at this moment, as by myself I should never have attempted a further struggle.

"Gradually recovering strength at the rails, I stood still endeavouring to shield between us the poor little girl Jeannie, who was sobbing pitifully; her troubles were soon over, as the next big sea that struck us carried her away to join her parents. I have omitted to mention that during this time my wife had been carried away herself several times, and once must have struck with fearful violence some iron loose on the deck as, on being helped back to the rail by me she had felt horrible pain, and I saw blood flowing at her feet, and, turning aside the loose dressing gown that she wore, discovered an awful open gash fully three inches long on one of her legs. She had turned ghastly pale, and seemed likely to fall immediately away in a fainting condition; but being implored on both sides by Mrs. Pearce and myself to brace up and hold on, she bravely responded, and succeeded in shaking off the faintness."

"Meanwhile the captain had been several times washed about, although now holding on when he could; but at last a big sea coming over from behind us carried away both himself and me, and after recovering from its effects I found him lying a little distance off, sitting on the deck with his left leg broken, there being a horrible gash about 3in. wide in the forepart of the leg above the ankle, through which the jagged end of the bone was protruding, while the foot hung loose in the retreating sea. He had not lost consciousness, and calling on me by name asked me to help him up, as, of course, he could not stand."

"We were only able to drag him aft to partial shelter, he easing himself along on his hands and with the other leg. We kept him there covered as far as we could by our legs, but it was hopeless to try and save him, as after he had been once or twice washed away and brought back again, a bigger sea than usual carried him right away from us forward over the rail, and we never saw him more. He stayed by his good ship to the last, saying farewell to her and life together."

"The next to suffer was poor Miss Weller. She was a rather short, heavily-built lady, and at one time when being washed about by the seas must have sustained some serious injury to her lower limbs, as she was quite unable to rise and sat rolling her head in a partially unconscious con-

dition. Her friend, Miss Lloyd, who, so far as I know, was uninjured in limb, sat down beside her, leaving the rail, and rested her head upon her shoulder with one arm thrown around her, and although they were only a yard or so from us, and we implored them to take our hands and come back to safety, Miss Lloyd, with perfect self-possession, calmly refused and said she would sit there with her dear friend. . . . She had not long to wait for the rest from her troubles, as another big sea swept both these ladies right forward, leaving poor Miss Weller an inert and helpless body against the rails forward, while it carried Miss Lloyd right out over the side, and as she had still her lifebelt round her chest we saw her floating quickly out to sea, still waving an arm above her head as a last "Good bye" to us all.

"All these accumulated horrors had so preyed on our minds that we had scarcely thought of the lapse of time or of our own or children's condition through lack of any sustenance whatever since morning, it being then well on towards 4 p.m. But by this time the whole of the woodwork structure in front had been carried away, the bridge and chart-room, captain's cabin, and roofing and sides of the companion way, leaving the stairway to the saloon open to the seas and unprotected; and as now for a little time the extreme violence of the seas began to abate, we took advantage of any opportunity to look down in the saloon with a view to seeing whether it might not be possible to get better shelter there. . . . So, after a hurried consultation together, those who were left—viz, the Peaces and ourselves, with Mr. Valpy and our children, determined to make a shot for it and get down below. To do this we had to go round forward to the weather side, in front of where the captain's cabin had been. We managed to get all round and down. . . . Wandering about we came across the third and fourth engineers and the writer, who were together in a little room, used as the bar, on the port side alleyway, where they had found a few stores, liquors, &c., which had been brought there for the daily use of the ship; and, on their suggestion that our small party should join them, we assembled there later on and after getting a little food and drink—the first that had passed our lips that day—we decided to remain together for what the night might bring us, there being in all to us huddled together in that little box, 9ft. by 6ft., Mr. Valpy and Cave finding a bunk elsewhere. We, of course, were in a dreadful state, all of us having sustained more or less serious injuries, while the third engineer had his left arm useless, and believed he had broken his collar bone. This we eventually found was not the case, but that the trouble was dislocation of the shoulder, a far more serious matter, which we without any experience, although trying to pull into joint, failed utterly to move. Of course we none of us slept; seas continued breaking over us all round and smashing things right and left, and we knew what to expect at any moment. But dawn at last came, and with slightly quieter weather, Kelt, fourth engineer, managed to find for us somewhere a bottle of water, which was very welcome and reserved for the little boy."

"Throughout the second day, the heavy weather continued almost unabated in its fury, and late in the afternoon we very nearly lost one of our small number, Kelt, who, it would seem, although he never remembered how it all happened, had been trying to get aft to the poop for more water. I was sitting in this bar, after a heavy sea had rushed past the door, and looking out, and at the far end of the alleyway aft I noticed what I took to be a mattress floating in the rush of water; by-and-by more big seas came over, and again looking out to watch their effect I saw an arm waving on the water above the dark object. I rushed out and down the alleyway and, reaching the end by holding on with one arm inside a doorway, was just able to seize poor Kelt by the belt and stop him from being carried out and away. I shouted for help, because, with my right arm and side quite useless from the effects of rheumatism, I was unable to do more than stop him, and hearing my shout my wife also rushed out, and calling on Mr. Pearce also to come along, quickly came to our help, and between us we dragged the helpless body, which I had already noticed was frothing at the mouth and was apparently three-parts drowned, back through the seething water and got it on a slab in the pantry, the next room to where we were. There we found that poor Kelt had two frightful gashes on the scalp, besides a deep cut in one of his hands, which was bleeding profusely, and after tying up the wrist as tight as we could to stop the severe flow of blood we proceeded to try and induce respiration by the usual artificial means, there being no sign of breathing in the body. We worked at him more than an hour before succeeding in getting what we thought with our scanty knowledge to be sufficient signs of re-

turning life, and even then had only managed to get a little of the water out of his body, which we could hear gurgling inside. To shorten my story, we were working at him in turns for between four and five hours before we felt it safe to relax our efforts and leave, and for fully five days afterwards he lay in a comatose condition, just taking sustenance when forced on him, but scarcely ever opening his eyes, and then evidently without recognition."

The second night we also passed together in that confined space, but it was dreadful work, and as next morning, June 11, brought us rather calmer weather, we determined to make a sortie with the idea of trying to find better quarters. Eventually, on the starboard side, the lee side of the ship, we found three passenger cabins fairly sound, one of which was allotted to the third and fourth engineers, Valpy and Cave, while the other two, which had been partially knocked into one by the smashing of the wooden partition, was taken possession of by the remaining party—viz., Mr. and Mrs. Pearce and their little boy of two years (Robbie), my wife and myself and our little girl (Evelyn), and the two Chinese nurses whom we had thus taken under our protection. We got shifted round all stores that we could lay our hands on, and found that our staple food must be Barcelona nuts, of which we had found a tinful, or about 10lb. in weight, about half a tin (5lb.) of small biscuits, one or two tins of fruit, and a fair supply of liquor in the shape of soda water, tonic, and such like, with two or three bottles of whisky. . . . We instituted what I am thankful to say we kept up day by day during all the time we passed on that awful reef—namely, meeting together after breakfast, and again at night after dinner to pray for our safety and rescue. The 12th passed without a change, except that we established a scale of rations. . . .

On the afternoon of the 13th a ship was sighted, but steamed past the wreck away to the northward. It appeared afterwards that this ship did not call at Aden or at Perim to report the wreck, but pursued her course to Suez and gave information there which led eventually to the rescue of the survivors."

The shipwrecked party continued to make in the ship's cabins most welcome finds of biscuits, soda-water, two bottles of a patent food for children, &c. On the 17th Mr. White was presented with two boxes of matches by the Lascars, and he gave one box to Mr. Gillett. This, which made smoking possible, greatly relieved the sufferings of the male survivors. On the same day another vessel was sighted, which appeared to be an oil-tank steamer, and though, in Mr. Gillett's opinion, she must have seen the signals made from the wreck, yet she continued her course, heading for the east end of Sokatra. Mr. Gillett endeavoured to relieve the despondency of the party, and especially of White, whose shoulder was very painful, by pointing out that the P. and O. Company were their own insurers and would be certain to send ships to the rescue. The survivors suffered a good deal from boils and swollen ankles, their strength ebbed daily, and their rations had to be further reduced. Mr. Gillett thus describes the three distinct communities on the wreck:—

"Forward in the forecabin were what I call the Portuguese community, consisting of nine men in all, mostly stewards, with the butcher, assistant cook, &c., all, I think, of Goanese extraction. Then amidships we, the foreign element, had taken up our quarters, and lastly in the poop, across the after well deck, were 24 men, whom I shall call for short Lascars, the survivors of the native crew—firemen, coal trimmers, &c. Except in moments of calm weather communication between either of these three positions was well nigh impossible, unless at great risk of life and limb, and the three communities kept for the most part separate and distinct. We saw, therefore, but little of these 33 native survivors, but their behaviour when we at last got off the wreck was fully praiseworthy, they all waiting quietly for their turn until all of our party had got into the boat, while they did capital work in keeping up an excellent watch for passing vessels."

On the 22nd, the Jubilee Day, the survivors toasted the Queen in their small rations of whisky and soda. That same evening young Cave, in spite of his severe wounds and general weakness, pluckily ventured across the open decks to search for stores. He returned next day with several bottles of spirits and wine, and further journeys undertaken by several of the male survivors resulted in the discovery of two large hams, which the party were glad to eat in spite of their uncooked condition."

Mr. Gillett concludes with a vigorous description of the rescue of the party on the 26th by the Royal Indian Marine steamship *Mayo*, on which ship they were treated with the greatest possible kindness and consideration. On the 28th, when the *Mayo*

was lying in Aden harbour, the crew of 13 who had volunteered for the dangerous work of rescue were called out separately from the rest, and the thanks of the captain and of Mr. Gillett, as spokesman of the survivors, were interpreted to them.

THE HONGKONG AND SHANGHAI BANKING CORPORATION.

The ordinary half-yearly meeting of the shareholders in the Hongkong and Shanghai Banking Corporation was held at the City Hall, Hongkong, on August 4th. Mr. St. C. Michaelsen presided and there were also present—Hon. J. J. Bell, Irving, Messrs. J. D. Boning, R. M. Gray, D. Gubbay, A. J. Raymond, R. L. Richardson, N. A. Siebs, and Gerald Slade (Directors), Thomas Jackson (Chief Manager), Hon. C. P. Chater, C.M.G., Hon. E. R. Bellios, C.M.G., Messrs. H. N. Mody, V. A. Caesar Hawkins, G. Stewart, J. H. Lewis, G. H. Potts, A. Coutts, J. D. Stewart, C. J. Gonsalves, J. E. Thompson, E. George, A. Hancock, D. Gillies, Geo. Murray Bain, Henry Humphreys, F. Henderson, W. S. Ramsay, H. M. Mehta, W. Lysaght, S. B. Bhutta, J. R. Michael, J. M. S. Alves, A. Wright, T. Brown, F. N. Firth, G. C. Cox, C. S. Sharp, M. Chinoy, E. S. Wheeler, Ho Fook, G. Dwyer, Dr. Hattigan, C. Palmer, Anderson, E. Jones Hughes, Findlay Smith, A. Haupt, Sugden etc.

The CHIEF MANAGER read the notice convening the meeting.

The CHAIRMAN read the report of the Court of Directors.

The CHAIRMAN—Gentlemen, the directors are pleased to meet you on the present occasion with a very favourable report. The half year has been one of many fluctuations, and of more than ordinary anxieties to the management of Eastern Banks generally. Dealing as we have been with what we are sorry to describe as a depreciating currency, it has been a difficult matter to meet all the demands of our constituents for sterling and rupee remittances, and at the same time to safeguard the interests of the Bank. It is well known to all our friends that in trying times we have not shirked our responsibilities in the matter of facilitating their exchange operations, and the report just read is a very satisfactory proof that we have succeeded in making their interests harmonize with ours. On previous occasions we seldom referred to the silver question, perhaps prudently leaving the difficult question to wiser heads than ours; however it is expedient to take this opportunity of defining our position with regard to the white metal. It will be seen from the report that we have £3,065,900 *gs.* 10d. in current accounts in London; this large amount is principally owing to the Governments we have recently been negotiating loans for and is held there in liquid securities. Our ordinary current accounts in London are about one-sixth of the amount, say a little over £500,000, which may be taken to represent our sterling liability with regard to current accounts. Our other sterling liabilities are our fixed deposits in London, amounting to £2,610,278 *gs.* 3d. These are employed in our ordinary outward business to the branches, and are at all times covered by the sterling and rupee investments we have in London, by bills in hand and by sterling remittances on the way from the East. At no time are our sterling liabilities allowed to exceed our sterling assets, in fact very much the reverse, so that while the fall in silver is a matter of regret to us, it is not, and will not be allowed to be a source of loss to our profit and loss account.—(Applause.) I hope I have made myself perfectly plain upon this point and that my explanation will be satisfactory to all our shareholders and depositors. Home investors in our shares will naturally look to the depreciating value of the dollar. Our capital consists of ten millions of dollars. Only quite recently the sterling value of the same at an exchange of 2/6 was £1,250,000, still more recently at exchange of 2/7, it represented £1,000,000, and within the last few weeks it has gone under that amount, and at 1/10½, the lowest point touched, it represents £927,083. To make up for the shrinkage in the sterling value of our capital I have great pleasure in stating that the value of our sterling securities in London exceeds by £95,890 the amount at which they stood in our books on the 30th of June last.—(applause)—not taking into consideration the difference in exchange on the £250,000 Consols standing in our books, as you will observe from the report, at 95 and Ex. 2/6½, as compared with 1/11¼d. on the 30th of June.—(Applause.) You are aware that a large portion of our business is with India where we have to deal with a protected and a contracted currency. Before the closing of the mints in June, 1893, we could count upon an out turn of 221 for any dol-

lars shipped to India for conversion into rupees, said rate was looked upon as a minimum. Within the last few days the rate touched Rs. 144½ for \$100, a very heavy margin for the Indian export trade to the Far East to contend with. Rs. 50 lacs of the Bank's capital are devoted to the Indian, Ceylon and Burmah agencies. The capital stands at an exchange of Rs. 200 for \$100, so that if it were withdrawn at an exchange of Rs. 150 for \$100 we would net the round sum of Rs. 12½ lacs.—(Applause.) You will therefore see that with our rupee, as also with our sterling commitments, the Bank is in a very fine position. From the 1st of October next Japan will be on a gold basis, and silver will only be used as a subsidiary currency. In thus changing their standard a sturdy prop is taken from silver. When their decision became known a sharp drop took place which has continued with more or less regularity ever since. Under Japan's new currency laws we can look for a steady exchange there, and should silver either decline still further or remain about present price we will realize a very handsome profit on the large amount of the Bank's funds in that country. Therefore from many points of view the recent heavy depreciation in the price of silver cannot be looked upon as an unmixed evil to the Hongkong and Shanghai Bank.—(Applause.) At our last meeting reference was made to the expectation of an increasing trade in the Far East, and although development has not yet come with giant strides, signs are not wanting that a more enlightened policy in the treatment of foreign trade by the rulers of the vast Chinese Empire will conduce towards this desirable result. We have in the opening of ports on the West River and facilities to trade there the first fruits of this policy, which is receiving more than encouragement from our official representatives. The depreciation in silver has placed surrounding countries which are now on a gold basis at a disadvantage in their trade with China, and will unquestionably give a further impetus to manufacturing enterprise in China and Hongkong, so that we may see considerable change in the current of trade in the not very distant future, but whatever changes may be in store for us it will be the earnest endeavour of this Bank to be always ready to meet them with benefit, not only to our constituents, but also to our shareholders.—(Applause.) The profits for the half year admit of paying the usual dividend of £1 *gs.* per share, placing five lacs to reserve, and carrying forward about three lacs. I need hardly remind you that the lower exchange goes the more onerous the task will be of maintaining a sterling dividend of £1.5/- per share; however, without being over sanguine I wish to express our confidence in being able to do so. During the late prosperous years we have made our accounts very comfortable, and have still unappropriated a considerable amount of the profits realized on the negotiations of the loans we recently participated in. After transferring the above five lacs our reserve fund will stand at \$7,000,000, and it is our intention to add to this as much as possible at the end of each half year. So that our position is an excellent one and with the steady support of our shareholders and constituents we have every reason to look confidently to the future.—(Applause.) In conclusion, I have great pleasure in recording our high appreciation of the able manner in which we have been served by the Chief Manager and the staff generally during the half year.—(Applause.) It is to their efforts we are principally indebted for the successful working of the Bank during a period which called for very careful steering. Our thanks are specially due to our Chief Manager,—(applause)—to whose foresight and ability a very considerable portion of our success is due. I have no doubt that shareholders, not only here but everywhere, will cordially concur in what I have just stated.—(Applause.) Before moving the adoption of the report and passing of the accounts, I shall be glad to answer to the best of my ability any questions shareholders may wish to ask.

There being no questions, the CHAIRMAN moved the adoption of the report and passing of accounts.

Mr. J. H. Lewis—Mr. Chairman and gentlemen, I am sure that we all have listened to the remarks of the Chairman with much interest.—(Applause.) The report before us is to my mind a highly satisfactory one, and remembering what we have just been told regarding our sterling investments, funds in Japan, and capital in India, I think we may safely congratulate ourselves in being in a remarkably strong position. The strength of it, as revealed by the very full statement which you have just heard, should have the effect of removing any apprehension which may have arisen in the minds of those who feared the fall in silver might adversely affect our interests. The Chairman has so clearly and fully explained the position

of the Bank that it is unnecessary for me to refer to it beyond saying that all shareholders must agree with me that seeing our reserve fund so steadily mounting up is a sure indication that in spite of fluctuations in exchange and competition we are still able to hold our own, and that we may confidently look forward to our interests being as ably guarded in the future as they have been in the past. I have, therefore, much pleasure, gentlemen, in seconding the adoption of the report and statement of accounts.—(Applause)—Carried.

Mr. HENRY HUMPHREYS proposed the confirmation of Messrs. David Gubbay, A. J. Raymond, Gerald Slade, and G. D. Boning as Directors.

Mr. G. STEWART seconded.—Carried.

The CHAIRMAN—That is all the business, gentlemen. I thank you for your attendance. Dividend warrants will be ready on Monday.—(Applause.)

Mr. D. GILLIES—Gentlemen, I have great pleasure in expressing a few words of satisfaction at the very excellent report which has been presented to shareholders and in complimenting the Board of Directors on this occasion for the very skillful and able manner in which they have conducted the business of the Bank. For although we have had to contend against much keen competition and rivalry, yet I feel justified in stating that at no former period of our history has the Bank ever rested on a more solid foundation. At any rate I am sure the position is such as must commend itself to every shareholder who holds the welfare of the Bank above either private or personal considerations. Our prosperity during the past six months, notwithstanding the great uncertainty that has attended most commercial enterprises and the very great anxiety and difficulty that must have been experienced in following the right course with regard to silver, indicates that our Board of Directors, our very able Manager and his staff—(applause)—have all exerted their talents and their zeal to the utmost in order to place before us such a very creditable balance sheet.—(Applause.) As a proof of our confidence I most cordially ask you to accord a very hearty vote of thanks to those gentlemen, the Board of Directors, our able Manager, and the staff.—(Applause.)

The CHAIRMAN—On behalf of the Directors, the Chief Manager and staff, I beg to thank you for your vote of thanks.

THE QUEEN'S THANKS.

(FROM A SUPPLEMENT TO THE London Gazette.)

Whitehall, July 16th, 1897.

The following letter from The Queen has been received by the Right Honourable the Secretary of State for the Home Department:—

Windsor Castle, July 15th, 1897.

I have frequently expressed my personal feelings to my people, and though on this memorable occasion there have been many official expressions of my deep sense of the unbounded loyalty evinced I cannot rest satisfied without personally giving utterance to these sentiments.

It is difficult for me on this occasion to say how truly touched and grateful I am for the spontaneous and universal outburst of loyal attachment and real affection which I have experienced on the completion of the Sixtieth year of my Reign.

During my progress through London on the 22nd of June this great enthusiasm was shown in the most striking manner, and can never be effaced from my heart.

It is indeed deeply gratifying, after so many years of labour and anxiety for the good of my beloved country, to find that my exertions have been appreciated throughout my vast Empire.

In weal and woe I have ever had the true sympathy of all my people, which has been warmly reciprocated by myself.

It has given me unbounded pleasure to see so many of my subjects from all parts of the World assembled here, and to find them joining in the acclamations of loyal devotion to myself, and I would wish to thank them all from the depth of my grateful heart.

I shall ever pray God to bless them and to enable me still to discharge my duties for their welfare as long as life lasts.

VICTORIA, R.I.

RECESSIONAL.

God of our fathers, known of old—
Lord of our far-flung battle-line—
Beneath Whose awful Hand we hold
Dominion over palm and pine—
Lord God of Hosts, be with us yet,
Lest we forget—lest we forget!

The tumult and the shouting dies—
The captains and the kings depart—
Still stands Thine ancient Sacrifice,
An humble and a contrite heart.
Lord God of Hosts, be with us yet,
Lest we forget—lest we forget!

Far-called our navies melt away—
On dune and headland sinks the fire—
Lo, all our pomp of yesterday
Is one with Nineveh and Tyre!
Judge of the Nations, spare us yet,
Lest we forget—lest we forget!

If, drunk with sight of power, we loose
Wild tongues that have not Thee in awe—
Such boasting as the Gentiles use
Or lesser breeds without the Law—
Lord God of Hosts, be with us yet,
Lest we forget—lest we forget!

For heathen heart that puts her trust
In reeking tube and iron shard—
All valiant dust that builds on dust,
And guarding calls not Thee to guard—
For frantic boast and foolish word,
Thy Mercy on Thy People, Lord!

Amen.

RUDYARD KIPLING.

The Queen and her people, never, during her long and memorable reign, brought into more intimate relations with one another than during the past few weeks, will be bound still more closely together by Her Majesty's dignified and touching letter which we publish this morning. It is a message of thanks, divested of all the formalities of a Court and filled with true human sympathies, for "the spontaneous and universal outburst of loyal attachment," from all her subjects throughout the vast Empire over which she rules, which greeted her in the streets of London on the completion of the sixtieth year of her reign. It was, indeed, a demonstration of loyalty and enthusiasm which might cause the heart of any Sovereign to swell with gratitude and pride, and as such it is appreciated by the Queen. She is not content with the official utterances that have conveyed her thanks to the nation: "What is now published is her own outspoken expression of simple, genuine, and hearty feeling. All the subjects of the Queen, both in the United Kingdom and in the colonies and dependencies of the Empire, will cordially respond to Her Majesty's gracious Message. Her people would, indeed, be dull-witted and ungrateful if, after an experience of threescore years, they were incapable of understanding the value of the Queen's long and arduous labours as a constitutional Sovereign, which have so largely contributed to strengthen the character and to confirm the usefulness of Monarchical institutions in a free State. It is pleasing to learn that the Queen knows how thoroughly her devotion to duty has been appreciated by her subjects. "In weal and woe," she writes, "I have ever had the true sympathy of all my people, which has been warmly reciprocated by myself." The exclamations of the Jubilee have stirred up emotions which cannot be suppressed. To this unique gathering of her subjects, whether home-bred or colonial, or from conquered and alien lands, the Queen says, "I would wish to thank them all from the depths of my grateful heart." She ends by praying God to bless her people and to enable her still to discharge her duties for their welfare as long as life lasts.

The deep sense of religious feeling and of moral obligation which has coloured the whole of the Queen's life will bring her heartily into unison with the spirit of the fine poem by Mr. Rudyard Kipling which we print this morning. There is a tendency, in these days, to rush into dithyrambic raptures over every great exhibition of national power. It is well that we should be reminded by a poet who, more perhaps than any other living man, has been identified with pride of Empire and with confidence in the destinies of our race, that there is a spiritual as well as a material side to national greatness. The lesson has been taught before by some of our noblest men of letters—by Milton and Wordsworth, by Burke and Carlyle. We all acknowledge its truth, in our hours of serious thought, but none the less, we need, all of us, the warning words of the seer and the bard—"Lest we forget—lest we forget!" The most dangerous and demoralizing temper into which a State can fall is one of boastful pride. To be humble in our strength, to avoid the excesses of an over-confident vanity, to be as regardful of the rights of others as if we were neither powerful nor wealthy, to shun "Such boasting as the Gentiles use, Or lesser breeds without the Law,"—these are the conditions upon which our dominion by sea and land

is based even more than on fleets and armies. At this moment of Imperial exaltation, Mr. Kipling does well to remind his countrymen that we have something more to do than to build battleships and multiply guns. All that is, of course, a matter of duty, and, indeed, of necessity; but our immense Imperial power depends for its effectiveness on the spirit that is behind it, not only on the courage and firmness of our people, not only on their patience and reasonableness, but on their strong and sincere conviction of moral responsibility. Among all the splendours of the Jubilee, among the justifiable expressions of national pride and of personal devotion to the Sovereign, this last feeling was, we rejoice to believe, a dominant note. It rings out as clearly in the simple grandeur of the Queen's message as in Mr. Kipling's stirring verse.—*The Times*.

THE BEHRING SEA DESPATCH.

No doubt seems to have been thrown by any of the great American newspapers upon the authentic character of the extraordinary despatch on the Behring Sea seal fisheries ascribed to Mr. Secretary Sherman in the *Tribune*, while several of the New York papers have commented upon it as genuine. In these circumstances we can hardly affect to regard it as suppositions, however difficult it may be to reconcile the tone and substance of the document, not merely with the ordinary usages of diplomacy, but also with the explicit declarations made by Mr. Sherman himself long after the date at which, if authentic, it must have been signed. Last Tuesday week our New York Correspondent informed us that, in consequence of rumours then in circulation, the Secretary of State had expressly denied that the despatch in question imputed bad faith to the British Government. Mr. Sherman explained that all that he had done was to lay the bare facts before the Foreign Office in the hope of securing joint action for the protection of the seals. This account of the action of the State Department was, of course, accepted as correct in this country, and tended to encourage the expectation that an amicable and business-like adjustment of the points in dispute might readily be reached. The disappointment caused by the publication of what purports to be the substance of the despatch will be all the deeper upon this account. It is quite unnecessary to use strong language in describing the document attributed to Mr. Sherman. Of the merits claimed for it by the *Tribune* one at least is indisputable. Its meaning is absolutely unmistakable. From first to last the whole point of it is to do the thing which Mr. Sherman ten days ago repudiated all intention of doing. It is a manifest attempt to fasten upon this country a charge of bad faith, and this attempt is made in offensive language. Whether this was or was not Mr. Sherman's intention when he wrote it is a subjective problem with which we need not concern ourselves. If it was not, he has shown himself singularly unfitted for the delicate and responsible duties of his high office. If it was, the statement which he is said to have made ten days ago was deliberately misleading. In either case, the tone of the Secretary of State's despatch is of a kind which no European Minister would think it consistent with the dignity of his country or with his own position in society to employ. When Mr. Sherman was first appointed to conduct the foreign affairs of the United States, doubts were entertained and even expressed in some quarters as to the wisdom of the choice. If this despatch was really sent by him, they will be fully confirmed.

It is stated that President McKinley has come to the conclusion that the publication of the correspondence of which Mr. Sherman's despatch forms the most important portion would be injurious to the progress of the pending negotiations, and that this is the reason why the papers have not been made public in an official form. This decision is perfectly intelligible if the version of the principal document given in the *Tribune* is even approximately correct. The President is credited with an honest desire to come to a friendly arrangement with us on the question of the fisheries. Naturally he would refuse to sanction the publication of a paper which is directly calculated, as any tyro in politics and indeed any man of common good sense and good feeling would tell him, to defeat his object. We must, therefore, attribute the appearance of the unfortunate composition ascribed to Mr. Sherman to the operation of other agencies, and it is by no means difficult to surmise what they may have been. The correspondence was prepared on the resolution of Senator Morgan, the well-known "Jingo," and the "Jingoes" of the Senate who have been baffled repeatedly by the moderation of the

President in their efforts to create or embitter controversies between the United States and foreign Powers, are not all persons to be restrained, by scruples of honour and loyalty, from violating their duty to the State and to its chief magistrate. If the despatch is genuine there can be little doubt that it has been made public with the connivance, if not with the active aid, of some of the "Jingo" Senators who were under a solemn obligation to treat it as confidential. Such a breach of public trust will hardly tend to revive the somewhat decayed reputation of that once illustrious body in Europe, or, as we should imagine, amongst the larger and the better class of American citizens. The voice of condemnation in regard to the despatch has already made itself heard very loudly and clearly in certain American journals, one, at least, of which is apparently quite prepared to decide the main controversy against this country without troubling itself much to investigate the merits. We shall be surprised if this tone does not become general amongst the more respectable organs of the American Press, and still more general amongst their readers, when they have had further time to consider the language addressed to a friendly Power by Mr. Sherman in the name of their country. The *Tribune*, which published the despatch, feels bound of course, to give the document an unequalled approval, but, so far as the telegraphic summary of its contents shows, it does not even attempt to argue the issues in dispute, but contents itself with general assertions as to the attitude of the two Powers, most of which are quite unfounded, and to an amiable expression of hope that England "will surely show herself, as she has done hitherto, amenable to appeals to friendship, reason, and justice." Are we to understand that the despatch comes within the American conception of such appeals? If it does not, it certainly is a most unfortunate preparation for the arguments addressed to our judgment and our sensibilities which are to follow.

The New York *Times* is not a journal which can with truth be accused of over-fastidious refinement of language or of excessive courtesy towards England. It declares that in the present controversy our Government has acted "in outrageously bad faith," and that America has "caught the English cheating." But even the New York *Times*, which apparently does not regard the phrases we have quoted as objectionable or unworthy of an influential journal engaged in the discussion of an international question, is shocked at the contents of the despatch. It assumes that America is ready to rely upon "the fairness of the British public" and upon the facts, and then asks very pertinently why these facts should be put "in the most wantonly irritating way." "It is not unfair," continues this journal, "to describe Mr. Sherman's letter as a string of insults." That is the acknowledgment which a leading newspaper that does not shrink from taxing us with "cheating" and "outrageously bad faith" feels constrained to make about an elaborate State-paper ascribed to the responsible mouthpiece of the United States in their dealings with other Powers. In Europe, it need hardly be said, such a confession would be felt to involve the deepest humiliation on the country which had to make it. It would be recognized as an acknowledgment that the most important affairs of the nation had been intrusted to hands which did not know how worthily to support the national credit for ordinary courtesy and good breeding. The comments of the New York *Post* make it clear that a similar feeling is being experienced in America. The *Post* agrees with the *Tribune* in thinking that the despatch "imputes bad faith to Great Britain." No other conclusion is indeed possible if the words of that document are taken in their ordinary and natural sense. The suggestion which it makes that the report of the British expert was tampered without any regard to "the political exigencies of the situation" is justly censured as calculated to make further negotiations difficult. If Lord Salisbury had used such a phrase, says the *Post*, "it would have been considered impertinent and insulting." But the *Post* knows better than to suppose that a document emanating from the State Department at Washington will be construed in this country by the canons habitually applied to the diplomatic correspondence of European Chancelleries. It does not derive much consolation from the fact or from the explanation to which it feels itself driven. If the phrase is not considered impertinent and insulting by Englishmen, says the American paper, "it must be because they think that Americans are not used to refined manners and do not recognize the force of words." It is not for us to question the assertion. We sympathize with the feelings which dictated it. At the same time we would remind

Americans that, as a glance at our Money Article shows, "Jingoism" has a business aspect, and that it is not an aspect favourable to the revival of American prosperity.—*The Times*.

CHARLES DICKENS AT THE END OF THE CENTURY.

The immense and almost unparalleled popularity of Dickens has, as was inevitable, suffered some diminution. The social abuses which he satirized are for the most part extinct. The social habits which he chronicled have largely disappeared. The taste for "wallowing naked in the pathetic" is not what it was. A generation has arisen which can be charitable without waiting for Christmas, and cheerful without drinking to excess. But these are small points, and it is impossible to imagine a time when Dickens will not be regarded as one of the great masters of English fiction. The late master of Balliol, a keen and fastidious critic, a refined and delicate scholar, regarded Dickens as beyond comparison the first writer of his time. It is the language of compliment and not of detraction to call him the cockney's Shakespeare. In Shakespeare he was steeped. His favourite novelist was Smollett. But his art was all his own. He was the Hogarth of literature, painting with a broad brush, never ashamed of caricature, but always an artist, and not a dauber. There is little or no resemblance between Falstaff and Sam Weller. But they are the two comic figures which have most thoroughly seized upon the English mind. Touchstone and Mr. Micawber may be each a finer specimen of his creator's powers. They are not, however, quite so much to the taste of all readers. They require a little more fineness of palate.

It must be admitted that Dickens, though not intellectually a socialist, was a very sentimental politician. He hated political economy, and he coupled with it the name of Sir Robert Peel. A gushing and impulsive benevolence, which in Dickens's case was thoroughly genuine, is often offended by the cold-blooded temper and cautious methods of parliamentary statesmanship. When Dickens began to write, public affairs were on rather a low level, and were conducted on rather a small scale. Dickens's early work was a more or less conscious revolt against fashionable shams. His novels, unlike Thackeray's, were in a sense a part of politics. They were meant to affect, and they did affect, the political temper of the nation. I sometimes wonder that the Independent Labour party does not make more of Dickens. For Dickens, though he did not trouble himself much about abstract propositions, was possessed with the idea that both political parties were engaged in preying upon the public.

To Dickens as an historical novelist imperfect justice has been done. The "Tale of Two Cities" is said to be most admired by those who admire Dickens the least. A similar remark has been made of "Edmond." The "Tale of Two Cities" is founded upon Carlyle's "French Revolution." It has no humour, or next to none. But it is a marvellous piece of writing; the plot, though simple, is excellent, and whatever may be thought about the genuineness of the pathos in "Dombey and Son," or the "Old Curiosity Shop," the tragedy of Sidney Carton is a tragedy indeed. The use of Christ's words, especially of words which occur in the burial service of the Church of England, is always a dangerous experiment. But at the end of the "Tale of Two Cities," Dickens has justified it by the reverence and the dignity of his tone. "Barnaby Rudge," the story of Lord George Gordon and his riots, is, I cannot help thinking, an underrated book. The execution of the executioner may be melodramatic. But nobody who has read the passage can ever forget it, and the rant of Sim Tappertit deserves immortality as much as the name of Dolly Varden. Of course Dickens's historical knowledge was neither wide nor deep. His most popular history is "David Copperfield," the history of himself, his own favourite among his own books, and a remarkable exception to the rule that an author is the worst judge of his own performances. I take it that the key to a proper understanding of Dickens and his work is to be found in the master-passion of the man. Dickens was a born actor. When he was not performing in private theatricals himself, he liked best to be at the play. The famous soliloquy of Jaques expressed his philosophy of life far more thoroughly than it expressed Shakespeare's. To Dickens all the world was a stage, and all the men and women merely players. When he wrote, he had in his mind not so much the way in which things would have happened as the way in which they would act. There is no "realism" in Dickens, if realism means the worship of the literal.

He drew, no doubt, as everybody must draw, from his own experience. He made ample use of his early opportunities as a reporter in the House of Commons and the courts of law. But Dickens's dramatic instinct was the strongest of his qualities, so strong that it overmastered all the others, except his humour, which was, perhaps, a part of it.

For his humour hardly any praise can be too high. It has every merit except the depth and subtlety which are found only in the greatest masters of all. About his pathos there always have been, and probably there always will be, two opinions. It differs in different books, and even in the same book. It differs, I should say, in kind as well as in degree. Little Nell and Sidney Carton scarcely seem to have a common origin. When the old washerwoman denied that one person could have written the whole of "Dombey and Son," she perhaps only meant to express enthusiastic admiration. But people sometimes mean more than they know. If any one will compare the death of Mrs. Dombey with the death of little Paul, he must be struck by the impressive beauty of the one scene and the harrowing extenuation of the other. It is hardly strange that there should be controversy when evidence can be produced on both sides. Dickens had a singularly simple and straightforward character. There is no humorous element in his pathos, and no pathetic element in his humour. He could not have drawn a Mercutio if he had tried, and he knew better than to try. He has been reproached with not understanding the upper classes, or uppermost class, or whatever the proper term may be. The point is not very important, though a man of genius ought, perhaps, to know everything and everybody. Lord Frederick Verisoph and Sir Mulberry Hawk are not creations worthy of the master. I remember a discussion in which it was said broadly that Dickens could not draw a gentleman, and the negative instance of Sir Leicester Dedlock was produced from "Bleak House." The reply was, "You forget Joe Gargery in 'Great Expectations' and to my mind the answer is conclusive.

Dickens has been called the favourite novelist of the middle classes. If the statement be true it is creditable to their good taste and freedom from prejudice. He certainly did not flatter them. He disliked Dissenters quite as much as Mathew Arnold, whereas Thackeray gave them the Clapham sect, to which they are not entitled. But the popularity of Dickens in his lifetime was in fact universal. Everybody read his books, because nobody could help reading them. His influence upon literature, apart from his contributions to it, has been disastrous. The school of Dickens, for which he cannot be held responsible, is happily at last dying out. With their disappearance from the stage, and consignment to oblivion, the reputation of the great man they injured is relieved from a temporary strain. The position of Dickens himself is unassailable and unassailable. In this or that generation he may be less read or more. He must always remain an acknowledged master of fiction and a prince of English humorists.—Herbert Paul, in the *Nineteenth Century*.

MESSAGES THROUGH SPACE.

A most interesting lecture was recently delivered by Mr. W. H. Preece, F.R.S., before a crowded house at the Royal Institution, the subject being "The transmission of signals through space without wires." The marvellous electrical waves in ether which enable signals to be made in this unique manner, are almost as wonderful as the much-talked-of Röntgen rays, and will doubtless excite as much enthusiasm in the public mind when their magical properties become more widely known. The lecturer first proceeded to show, by means of the simple and well-known experiment of suspended pith balls, how "waves" are propagated. It was with waves electricity, however, that he dealt in his lecture, and more particularly with those to which the name "Herzian" has been given, in honour of their discoverer. The history of the transmission of signals without wires does not commence with that of Herz's wonderful investigations. Some years ago it was noticed that messages which were being sent along an overhead wire in Gray's Inn-road were transmitted to a gutta-serena-covered wire lying under the street, and were, in fact, capable of being read by means of the instrument attached to that wire. Subsequent investigation showed that where two wires are running parallel, a current flowing through one will be induced in the other, even though the second wire be situated at a very considerable distance from the first. The intensity of the current will, of course, vary with the distance. Mr. Preece illustrated this phenomenon by a very beautiful experiment.

Taking a coil of wire about one foot in diameter, he placed it on a second coil, the ends of which were attached to a telephone, which gave utterance to unearthly sounds whenever a current passed through it. As soon as the current was sent by a battery round the first, a current was induced in the second coil, as shown by the sound in the telephone. As he separated the coils from one another the intensity of the sound diminished. He then explained how he had conducted an experiment of this kind on a large scale between Flatholm Island, in the Bristol Channel, and the mainland, a distance of about four miles. Both on the mainland and on the island were erected long wires, and, by passing an alternating current through one of these, messages were transmitted to the other. This novel method of telegraphy was actually adopted shortly afterwards across the Sound of Mull, when the breaking of the submarine wire had left the post office officials in a difficulty as to how to send their telegrams. After he had experimented with this kind of electric transmission of signals for a considerable time, Mr. Preece turned his attention to the Right Radiator, the principle of which, without doubt, is one of the most marvellous discoveries of the nineteenth century. Its use for signalling at long distances was suggested to him by Mr. Marconi, a young Italian who has spent much time in perfecting the instrument. It consists essentially of two solid brass spheres separated from one another by a space of $1\frac{1}{2}$ inches, which is filled with oil. Outside these are two smaller brass spheres, which are connected with the secondary wires of a powerful induction coil. When the instrument is at work sparks are seen flashing through the oil, and these sparks set up a vibration in the ether at the rate of about 200 billion pulsations a second. This part of the instrument is called the "transmitter." The receiver consists of a short brass tube, inside which are placed two silver bars, forming two poles, separated from each other by a space of about half a millimetre. In this space is placed a very fine powder, consisting of about 96 per cent of nickel and 4 per cent of silver, with a very small quantity of mercury. The effect of the waves from the "transmitter" is shortly to render this dust a good conductor, so that a current from a battery is able to pass through the tube. This current then magnetises a small iron bar suspended near the tube, and the result is that the bar swings round and strikes the glass, when the sound so produced acts as a signal similar to the "tap" of an ordinary telegraphic apparatus. The effect of the magnetisation of the iron is to cause the dust again to become non-conducting, so that the instrument is in its former condition. Thus a series of taps can be given by the person who is controlling the "transmitter." For the purposes of the lecture room an electric bell was introduced into the circuit of the "receiver," so that the effect of any disturbance became apparent all over the room. The first experiments with this instrument were conducted on Salisbury Plain, with the astonishing result that signals were quite easily transmitted to a distance of four miles, e.g., the "transmitter" was separated from the "receiver" by that distance. With improved apparatus messages have even been sent nine miles. But the most startling fact in connection with electrical waves is the ease with which they pass through opaque substances, and in this particular they would appear to resemble the X rays. By a series of beautiful experiments this property was proved to demonstration, and the interest of the audience was raised to the highest pitch. In the first place, the "receiver" was placed in the centre of the theatre, and the "transmitter" was set in motion on the lecture table. Instantly the electric bell, connected with the "transmitter" by no visible conductor, responded to the action of the ethereal vibrations. The "transmitter" was then placed in the cellar of the Royal Institution, when the same effect was produced; and, finally, while the "transmitter" was still in the cellar the "receiver" itself was placed inside an iron box, and still the tinkle of the bell, though somewhat weakened, was distinctly audible! With regard to the practical uses to which this marvellous discovery may be put, Mr. Preece did not say much, but it is clear that as a means of communicating with lightships and lighthouses far out at sea its application may become invaluable. There is even now a project on foot to form a telegraphic connection with the island of Sark by means of this apparatus. Furthermore, messages of the most private character might pass between two people separated from each other by blocks of houses without even being disclosed, as they are at present, to the clerks in a telegraphic office.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

GOLD IN NORTH-WEST CANADA.
FURTHER RICH DISCOVERIES.

London, August 20.
It is reported that new and rich discoveries of gold have been made on the Stewart River and Upper Yukon (in the North-West Territory of the Dominion of Canada).

TROUBLE ON THE "ROYAL SOVEREIGN."

Two members of the crew of the *Royal Sovereign* have been brought before a court-martial, on a charge of striking their captain. The commander has reported that serious discontent prevails on board, and that the *Royal Sovereign's* cells are filled with defaulters.

THE HAWAIIAN QUESTION.

London, Aug. 21.
The reply of the Hon. John Sherman, U.S. Secretary of State, to the latest Note from Japan on the Hawaiian question, is markedly friendly in tone, and repeats the assurance contained in former Notes that Japan's rights will be safe-guarded.

BRITISH WAR-SHIPS IN COLLISION.

The British torpedo-destroyer *Thrasher* (264 tons) and the second-class cruiser *Phaeton* (4,300 tons) collided in the English Channel during heavy weather. The *Thrasher* was badly damaged.

EXECUTION OF A MURDERER.

The murderer of Senor Canovas (Spanish Premier) has been executed.

ELECTRIC CABS.

Cabs propelled by electricity have started running in London.

THE CONSTANTINOPLE CONFERENCE.

The Imperial Ottoman Bank has offered to advance a million pounds to the Greek Government to pay the first instalment of the indemnity to Turkey.

London, Aug. 22.

Lord Salisbury's attitude, in regard to the negotiations for the settlement of peace between Greece and Turkey, is greatly resented by the other Powers, which accuse him of desiring to cause a disruption of the Concert of Powers. The deadlock in the negotiations still continues. Germany threatens to withdraw from the Concert unless the Article in the Treaty relating to the evacuation of Thessaly is adopted in the same form as proposed.

The Ambassadors have received a letter from the Armenian Committee similar to that of 1896, declaring that the Armenians are weary of waiting for Europe to aid them and are resolved to act for themselves.

London, Aug. 23.

Lord Salisbury has proposed that the Powers should come to an arrangement enabling Greece to raise a loan and pay off the indemnity to Turkey, the Powers exercising control over Greek finances to an extent that will suffice for securing payment of interest out of the revenue.

London, Aug. 24.

The Powers agreeing to Lord Salisbury's proposal [to make arrangements enabling Greece to raise a loan and pay off the indemnity so that Thessaly can be evacuated by the Turks at once], inquiries are now being made of Greece as to what portion of her revenues she would be able to assign towards payment of the Indemnity Loan interest.

THE INDIAN FRONTIER RISING.

London, Aug. 20.

The Porte formally and positively denies, and characterises as "malevolent," a report that an agreement had been made between the Sultan of Turkey and the Ameer of Afghanistan to foment a *jehad*, or religious war of Mahomedans, against the British.

London, Aug. 23.

The Afridi tribesmen have attacked the British forts at Ali Musjid and Maude yesterday. It is officially stated that there is reason to fear all the tribes on the Afghan frontier have risen in arms against the British. The Ameer of Afghanistan denies all responsibility for the rising, and blames the fanatical Mollahs (religious leaders of the tribes).

London, Aug. 24.

The Afridis have captured and burnt Fort Maude. The garrison (native) retired to Ali Musjid, which is surrounded and their fate is at present unknown.

THE AMERICAN MARKETS.

London, Aug. 23.

There is great excitement in the American markets, wheat having reached the price of a dollar per bushel (25 per cent. above normal).

The excitement in American wheat markets has extended to the British markets, and the price of home wheat in some places has reached 37 shillings a quarter.

[A month ago, according to latest mail papers, the price was 26 to 29 shillings.]

THE FRENCH PRESIDENT IN RUSSIA.

President Faure was accorded a grand reception at Peterhof.

PRINCE HENRY OF ORLEANS.

Prince Henry of Orleans has recovered from the wounds he received in the duel with Prince Victor Emanuel of Italy, and intends to return to Abyssinia in March next.

PRESIDENT FAURE IN RUSSIA.

London, Aug. 24.

At a banquet given by the Tsar in honour of President Faure at Peterhof, cordial toasts were exchanged, and speeches were made affirming that the visit would draw closer the powerful ties uniting France and Russia; but no word of an alliance was mentioned.

THE RUSSIAN MINISTER AND THE KOREAN GOVERNMENT.

Söul, August 21.

It appears that the matter connected with the engagement of Russian military instructors will not be settled until the arrival of the Russian Minister, Mr. Speyer, in Korea.

Söul, August 21.

Respecting the engagement of Russian military instructors, the Russian Minister has made a vigorous representation to the Korean Government reminding the latter of the existence of a promise entered into on the subject. A Cabinet meeting was convened, but no decision was taken because several Ministers were not present.

(SPECIAL TELEGRAM TO THE "JAPAN MAIL.")

ADMIRAL OXLEY.

Hakodate, Aug. 22nd.

H.M.S. *Grafton* left here for Yokohama yesterday to land Rear-Admiral Oxley, who leaves for home suddenly on account of the serious illness of his wife.

(FROM THE JAPANESE PRESS.)

ARREST OF CHINESE FROM A BRITISH MAN-OF-WAR.

Hakodate, August 21.

The British Consul here has protested against the arrest of some 10 Chinese belonging to a British man-of-war, who were accused of gambling.

DYSENTERY.

Mitajiri, August 22.

Dysentery is very rife here at present. Among others Mr. Yamanaka, Post-master of Miyachi, has succumbed to the disease.

Kofu, August 22.

The cases of dysentery in Yamanashi Prefecture now number 3,600, of which 500 have proved fatal.

SENTENCE FOR EMBEZZLEMENT.

Gifu, August 22.

Hirata Kumejo, an official of the 16th National Bank, who embezzled money from the Bank the other day, has been sentenced by the Local Court to three years' imprisonment and six months' police supervision.

COLLISION NEAR KOBE.

Kobe, August 23.

The evening before last the steamer *Energia* collided with the Japanese junk *Totomi Maru* off Takamatsu. One of the crew of the junk was drowned, three others being saved and this morning arrived at this port.

THE RUSSIAN COAL DEPOT IN KOREA.

Söul, August 24th.

The Korean Government has officially sanctioned the application of the Russian Minister to occupy a piece of land in Zetsuei Island for a coal depot.

INSURGENTS IN FORMOSA.

Taipei, August 24.

On the 23rd inst. about five hundred insurgents rose in the vicinity of Goshisan. A party of gendarmes under Captain Takenouchi soon met them and dispersed the rebels. Thirty of the rebels were killed by Captain Takenouchi. During the fighting the Japanese force lost only one man and three wounded. Heichosan and other localities are in a disturbed condition.

PIRATES ARRESTED.

Yamaguchi, August 24.

Four pirates who have been carrying on their avocations in the Suwo Sea and the waters of Hiroshima Prefecture during the past ten years, have been arrested by the Shimomatsu Police.

RAILWAY ACCIDENT.

Osaka, August 25th.

To-day at 1.17 a.m. three cars of a luggage train were derailed near Nishinomiyai. In consequence, traffic on the line between Kyoto and Osaka was interrupted for some time.

FIRE AT A COTTON MILL.

Last night about 9.15 p.m. fire broke out in the store house of the Nippon Cotton Spinning Co. The loss is estimated at yen 8,000. Happily the mill itself escaped the flames. The cause of the fire is now being investigated.

EXPLOSION OF GAS IN A MINE.

Sapporo, August 25.

At the Horonai Colliery an explosion of gas occurred to-day. Six persons were wounded more or less severely.

Söul, August 26.

Mr. Li Kaei, Korean Minister to Japan, is to leave here for Japan on the 28th inst.

Chin Shokun (Chin Sang bun) Minister of War, has tendered his resignation and left the capital.

The funeral of the late Queen of Korea has again been postponed.

The Cabinet Council regarding the engagement of Russian drill-instructors has not yet been opened. Mr. Waecher will leave the Peninsula at an early date.

All the Ministers in favour of Russia, besides Chin Shokun who has resigned, are now in despair. Li Saijun, Minister of the Imperial Household, has also tendered his resignation.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokyo Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

The following is the solution of Problem No. 333:—

WHITE. BLACK.
1—Kt to R3 1—Any move
2—Q mates accordingly

Correct solution received from D.D. and W.H.S.

PROBLEM NO. 335.
By P. K. TRAXLER.

WHITE.

White to play and mate in three moves.

OVER THE CHESS-BOARD.

The enthusiasm prevalent in Hongkong Chess Circles is remarkable. Apart from the many tournaments and matches that are going on during the year, there is also a constant fight kept up for the championship cup, the holder being put to the severe strain of having to meet three challengers every three weeks. This is certainly too much of a good thing and the committee is already considering the advisability of amending this rule.

The Yokohama Club, on the contrary, is closed for the summer and during its last season neither tournament nor any other Club contest was indulged in. The 4th October will see the beginning of the new season and we hope Japan's senior Club will show up better this time. At any rate, we expect a championship tourney this year, for we know of several members willing to compete for the cup, which at present is held by Mr. Griffin, the Club's champion.

We welcome back to local Chess circles His Excellency M. Wollheim, the most genial of players.

The name of the recently formed Colombo Chess Club has been changed to the "Ceylon Chess Club," Mr. Walker offering the use of the Royal College Hall for Tournament matches on Mondays, Thursdays, and Fridays until suitable club-rooms have been found. The club comprises now 21 members.

The first of the two correspondence games between two Kobe players and Mr. Jordan of Nagasaki, has been decided, Kobe resigning on the 26th move. We publish the game below.

The second game is a French defence and remains to be decided, 25 moves having been made so far.

GAME No. 737.

RUY LOPEZ.

White—Kobe.		Black—Nagasaki.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	14 P KB4	Castles

13 Q K2	B Kt2		and White resigns.

Bird and Lee were engaged during July in playing a match of five games in the public room of Simpson's Divan, 101 Strand. The first game

resulted in a victory for Mr. Lee after thirty moves. Lee had the move and adopted the Vienna opening, and, continuing with P to K Kt 3, he kept things very slow. This did not suit the veteran's lively style at all, and he ultimately lost.

Steinitz was expected to take part in the tourney of the New York State Chess Association, held at the Murray Hill Hotel, Thousand Islands, August 2nd to 7th. He was entered as a representative of the Staten Island Club, and although a protest has been made against his entry by the Manhattan Club, it is tolerably certain that the veteran will not be passed over. Harry N. Pillsbury also determined to attend the meeting as the representative of one of the clubs.

"CHESS IN THE VICTORIAN ERA."

From a very interesting article in *The British Chess Magazine* showing the progress in Chess during the last sixty years, we take the following information:—

"In 1837, Chess was the pastime of the few only—the leisureed and the opulent classes; now it is the intellectual recreation of the majority of the vast middle classes, and even the artisan is becoming a votary of the game. . . . In 1837 there was not a single periodical devoted to the interests of the game; indeed, its very existence was almost entirely ignored by the Press. In 1897, the Chess-column is a noted feature of nearly every leading weekly journal, and is further supplemented by the daily papers, which record the progress of all Chess events both at home and abroad. . . . The first International Chess-Tournament was held in London, in 1851, when the first prize was won by Professor Anderssen, by which success his claim to be considered the Chess-Champion of the World was firmly established. Since then, International Chess-Tournaments have been held in almost every part of the world. . . .

When Queen Victoria ascended the throne, Alexander McDonnell, the brilliant Irish player, had been dead two years; but his great rival, Louis Charles de Labourdonnais, was still alive. He was, then, the foremost figure in English Chess circles. He died in December, 1840, at the early age of 43. After Labourdonnais's death, the sceptre naturally fell into the hands of Howard Staunton, who, by his victory over St. Amant, in 1845, became Champion of the World. Old Löwe, Harrowitz, Horwitz, and Falkbeer gradually became more or less famous, and, finally, in 1851 Professor Anderssen won chief honours in the International Tournament, and Staunton's reign ended. Then came the palmy days of Bird, Boden, and Buckle, and many others, all young, fervid, and enthusiastic. Then came Morphy, the marvellous Chess-genius, with his splendid record of unbroken success. Morphy played brilliant Chess, because he played much better Chess than those opposed to him. Then came Steinitz with his wonderful play, which was one thing, and his wonderful theories, which are another. He, in turn, became Chess-Champion of the World by defeating Anderssen in 1866, which position he held until his defeat by Lasker in 1894. . . . Since Staunton's time (1843-51) no native Englishman has wielded the Chess-sceptre of the world."

LATEST COMMERCIAL.

IMPORTS.

The little spurt in the market reported last week has died out and business generally is worse than last, the only transactions recorded in shittings, fancies or woollens being on a very small scale for immediate requirements. Quotations for raw cotton have made a big jump, amounting to a rise of from \$4 to \$5 per picul. This is probably owing to the falling off in the supply from Bombay.

COTTON PICK GOODS.

	PER PICUL.
Grey Shittings—8 1/2 yds, 38 1/2 in.	\$2.50 to 2.80
Grey Shittings—9 1/2 yds, 45 in.	2.80 to 3.35

RAW COTTON.

	PER PICUL.
American Middling	\$28 to 29
Indian Broach	24 to 25
Chinese	25 to 26

Pig iron seems likely to be a drag on the market before long. Besides heavy arrivals during the past month, five or six cargoes are known to be on their way out. With this in view buyers will make no offer at present, expecting to have things their own way shortly. Very little has been done in any lines during the past week, and quotations remain nominally the same.

	PER PICUL.
Round and square 4 inch. and upward	4.15 to 4.60
Iron Plates, assorted	4.40 to 4.50
Sheet Iron	6.20 to 6.50
Galvanized iron sheets	10.00 to 10.50
Wire Nails, assorted	6.00 to 6.50
Fin Plates, per box	5.90 to 6.50
Pig Iron, No. 3	2.10 to 2.30
Hoop Iron (1 to 1 1/2 inch)	4.80 to 5.00

KEROSENE.

Very little business has been transacted, demand being dull, and quotations remain unchanged.

	PER PICUL.
American	\$2.00 to 2.05
Russian	2.00 to 2.05
Langkat	—

SUGAR.

A small but steady business has been done during the week in Brown, principally Manila, at current rates. White refined remains quiet and quotations unchanged.

	PER PICUL.
Brown Tahao	\$36.5 to 37.5
Brown Manila	43.5 to 50.5
Brown Daitong	2.90 to 3.30
Brown Canton	3.30 to 4.20
White Java and Penang	6.60 to 6.70
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

Less doing but prices well maintained. Holders are strong but shippers do not apparently care to go on with heavy shipments at present rates. Shipments include 132 piculs by the *Empress of China*, 1,120 piculs by the *Monmouthshire*, and 969 piculs by the *Gaelic* for America, and 1,088 piculs by the *Saghalien*, for Europe.

QUOTATIONS.

	PER PICUL.

TEA.

Buying has been brisk during the week, in spite of an accumulation of stocks at New York, and the poor quality of the second crop. Sales in Yokohama total about 435,000 cattie and 165,000 cattie in Kobe. Prices generally have run from \$19.50 to \$30 per picul, and are still well maintained. Shipments have been 382,069 lbs. by the *Empress of China*, 321,990 lbs. by the *Monmouthshire*, 90,431 lbs. by the *Gaelic*, and 78,845 lbs. by the *Kagoshima Maru*, all for American and Canadian ports. Total shipments of the season to date are 19,449,377 lbs.

QUOTATIONS.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Couran, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, SEPT. 4TH, 1897.

BIRTH.

On August 6th, at St. Edwin's, Robinson Street, Cinnamon Gardens, Colombo, the wife of J. K. TRAFFORD, of a daughter.

DEATHS.

On Monday, the 30th August, at 217B, Bluff, CARL SON of Leopold Abenheim, aged 24 years.

At Ikao, on the 2nd instant, CHARLES GEORGE BUCHANAN-DUNLOP.

SUMMARY OF NEWS.

SPRAY won the "Molly Bawn Cup" last week.

THE Colonization Department has been dissolved.

RUSSIA is to establish Consulates at Fusan and Gensan, Korea.

THE Constantinople conference still drags its weary length along.

SOME aquatic sports will take place in Yokohama harbour next week.

THE Indian frontier is quieter this week; and progress is reported along the Nile.

MR. HOSHI TORU, Japanese Minister to the United States, will, it is said, return home short-

ly, leaving Washington about the middle of September.

RINDERPEST has broken out at Osaka and Nagasaki.

THE new Japanese battle-ship *Fuji* arrived at Malta on the 27th ult., en route for Japan.

By the cave-in of a tunnel on the O-U railway on the 1st inst., 17 workmen lost their lives.

THE new Japanese cruiser *Takasago* arrived at Port Said, en route for Japan, on the 27th Aug.

THE ports of Mokpho and Chinnampo in Korea were opened to foreign trade on the 1st Sept.

MR. C. G. BUCHANAN DUNLOP, an old resident of Yokohama, died at Ikao on Thursday, of dysentery.

THE Second Fisheries Exhibition in Japan was opened on Sept. 1st, at Kobe, by Prince Komatsu.

MARQUIS ITO and suite are expected to arrive at Yokohama about the 5th of September by the *Empress of Japan*.

VISCOUNT AOKI, Minister to Germany, arrived in Japan on the 31st ult. by the N. D. L. mail steamer *Hohensollern*.

Two hundred and thirty-one Japanese labourers of both sexes returned from Hawaii on the 26th ult. by the steamer *China*.

THE new Foreign Language School in the Higher Commercial School, Kanda, Tokyo, was to be opened on the 1st of September.

THE Kobu, Nippon, Osaka, Sanyo, Kynshu, Sobu, Chikuhō and Kansai Railway Companies are conferring on the question of raising their passengers rates.

It is reported that the United States Government has imposed a special tax of 10 per cent. *ad valorem* on silk goods imported into the United States through Canada.

AN Agricultural and Commercial Bank is to be established in Shizuoka Prefecture with a capital of yen 1,000,000, of which yen 300,000 are to be granted by the Treasury.

THE Colonization Department was abolished by Imperial Ordinance on the 1st inst., and a Formosa Administration Bureau, under the direct control of the Premier, established in its place.

THE Minister of Communications has issued a notification requiring that all accidents which may occur on railway lines, shall be reported to the Communications Department without delay.

ON the 24th ult. at the Naetsu Railway Station, a locomotive while entering the station ran off the rails, breaking through a fence into the street; but happily no accident occurred to life or limb.

A RETICULE containing three \$5 gold pieces, these Japanese bank notes and a pair of gold rimmed spectacles, the property of Mrs. Buck, was stolen from the U.S. Legation on the 25th ultimo.

MR. E. D. VON WALKER, Vice-Consul for the Netherlands, who has been transferred to Shanghai, has been succeeded by Mr. J. H. Dole, Consul, who recently arrived at Yokohama to take charge of the Consulate.

ON the 23rd ult., while horse-races were going on at Tokaichi in Hiroshima Prefecture, the stand on which a number of spectators were sitting suddenly gave way and some scores of

persons were more or less seriously wounded three it is feared, fatally.

It is reported that the firm of Sassoon & Co. of Bombay, owners of an extensive Cotton Spinning Mill, will shortly open a branch at Kobe, to import Bombay raw cotton and export Japanese yarns to China.

THE Quarantine inspection stations at Nagahama (Yokohama), Kagoshima, Moji, and Wadamisaki for vessels coming from Formosa and Amoy have been closed, now that the plague epidemic at those places has been stamped out.

A scheme has been decided on by the Railway Bureau for the construction of a central railway station and a number of elevated railway lines in Tokyo. It is expected that the work will be undertaken by the Japan Railway Company.

THE epidemic of dysentery is increasing alarmingly in many parts of the country; on the 23rd ult., the cases numbered 1,793 and deaths 383; on the 24th, 1,029 and deaths 222; and on the 25th, 1,754 cases and deaths 355. The latest returns show over 3,000 cases.

THE loss of life and damage from the recent floods and landslips in Niigata Prefecture was as follows:—By floods: persons drowned 94, wounded 57, houses washed away 284, houses damaged 1,102, houses flooded above floor 31,996. By landslips: persons crushed to death 81, wounded 42, houses demolished 288, houses damaged, 431.

THE silk market at Yokohama since the beginning of August has shown very bright prospects. According to investigations made by the Mogi Shoten, the silk trade from the 1st of June up to the 25th inst. was as follows:—Stock brought from previous year, 5,523 bales; arrivals, 25,827 bales; sold, 17,525 bales; sent back to interior, 3,198, and remaining stock 7,071 bales, of which 1,309 are awaiting delivery.

THE Import market during the past week has been more inactive even than is usual at the hot season, owing to the general feeling of uncertainty as to how the change in the currency next month will affect business, and the continued fall in silver. In piece goods nothing at all has been done, with the exception of a solitary transaction each in Turkey Reds and Velvets. Yarns and woollens have suffered the same, and very little business has been done in metals, quotations remaining unaltered. Kerosene is still dull, but demand is expected to spring up shortly and prices are likely to harden. There is plenty of stock both ashore and afloat to supply all probable requirements. Some business has been done in brown sugar at somewhat lower quotations, arrivals of Manila, China and Formosa sorts being considerable. Very little has been done in refined white. The Export market has been fairly brisk, purchases of raw silk having been considerable, and would have been larger were dealers disposed to reduce their demands a little. Total settlements from 1st July to date amount to 11,575 piculs. Next to nothing has yet been done in waste silk. Tea buyers still continue to purchase freely, particularly of the good medium to finest sorts, at well maintained prices. It is reported that the picking of the third crop will be discontinued in a week's time in several districts. Shipments from May 1st to date amount to 19,970,000 lbs., some two million pounds more than last year at same date, but less than the average of five previous years. Exchange has, it is hoped, reached its bottom level.

SPRIT OF THE VERNACULAR PRESS DURING THE WEEK.

According to the views of the *Fuji Shimpō* the Japanese people are somewhat intoxicated by their country's success in the late war with China. Men that grew suddenly rich during the war or have amassed wealth by taking clever advantage of the conditions arising in the sequel of the war, appear to think that no further exertions are needed; that the time has come to eat, drink and be merry; that building handsome houses, laying out beautiful gardens, collecting works of art, forming reunions of dilettanti, and erecting monuments, are the chief businesses of life. Others retire on their gains and devote themselves solely to ease and luxury. Yet the truth is that although the State has undoubtedly been raised by its warlike successes to a position of consideration in the world, and has obtained admission to the comity of nations, its difficulties have been augmented in a very much larger ratio than its prestige has been increased. There now devolve on it in connexion with its new position obligations that will tax its abilities and resources to the utmost. Its foreign affairs present most disquieting features. Rest and indolence are absolutely forbidden to any patriotic subject. If men find that they have money to spend upon luxuries like gardens, villas, objects of virtu and so forth, their duty as lovers of their country is to devote every yen to national purposes, as the building of war-ships and the equipping of fortifications, or the furnishing of funds for purposes of foreign policy.

The old complaint which used to be so often made by foreign critics of Japan is now once more up taken up by the *Nichi Nichi Shimbun*; the complaint that the spirit of independent enterprise is lacking in Japan, and that people are still prone to rely upon official guidance. No explicit grounds for the statement are adduced. Our contemporary is satisfied to rely on its own undemonstrated conclusion. It quotes the case of France after the war with Germany as an illustration of the great results that can be achieved by a nation when its units rely upon their own exertions and initiative, but its analysis of France's history is somewhat peculiar. For, while admitting that the disasters suffered in the war spurred a proud and patriotic people to immense efforts, it appears to think that the extreme instability of French Cabinets and the volatile character of French policy weaned the nation at large from placing any reliance on the Government in the domain of industry and commerce, and thus indirectly contributed to the development of a wholesome spirit of individual enterprise—a spirit which worked wonders, and in an incredibly short space of time, carried the country to a higher pinnacle than ever of material prosperity and military strength. It is much to be desired, says the *Nichi Nichi*, that a similar disposition would show itself among the Japanese.

In the same article—which partakes of the character of a general exhortation—the *Nichi Nichi* addresses a warning to the Government. Recalling Sir Charles Dilke's dictum that, although he advocated most heartily an adequate increase of the country's armaments, he could not hide from himself the fact that their increase beyond a certain point must impair, rather than promote, the maintenance of peace, our contemporary reminds the Authorities and the nation that the steps taken by Japan to develop her army and navy have already created uneasiness in the minds of foreign statesmen, and the consummation of the programme should be accompanied by earnest efforts to convince the world that Japan's prime object is the preservation of tranquillity in the East.

The *Nippon* has an interesting article on the subject of the conditions in the Pacific Ocean. It commences with the Japanese Navy and the basis of its increase. When the war with China broke out, Great Britain, Russia, China and

Japan were thus represented in Far Eastern waters:—

	Ships.	Tons displacement.
Great Britain	19.....	42,000
Russia	10.....	25,000
Japan.....	28.....	58,000
China.....	52.....	70,000

With respect to China and Japan, however, it is to be noted that the number of sea-going ships fit for battle possessed by Japan was only 13 (out of a total of 28) with an aggregate tonnage of 42,000, and that the corresponding figures in China's case were 19 and 49,000. The conclusion to be drawn from these statistics is that the Japanese Government at that time took the British squadron as a standard of comparison, and the Russian Government's naval arrangements were on a defensive basis. The result of the war was that China's naval power was completely shattered, and some of her best ships passed into Japan's possession. Moreover, Japan has since then been busily increasing her navy, so that it now comprises 45 vessels with an aggregate displacement of 109,000 tons; of which the battle-worthy section may be put at 19 with a displacement of 60,000. Two line-of-battle ships, the *Fuji* and the *Yashima*, will very soon be added, however, so that the strength may be put at 21 ships with a total displacement of 85,000 tons. On the other hand, Great Britain and Russia have not been standing still. Russia seems to have changed her defensive armament to an offensive: she has 16 ships with a total displacement of 55,000. England, meanwhile, has raised her Squadron to 26 vessels with a displacement of 64,000. Nor is England content with that increase. She appears to have decided upon raising her Far-Eastern squadron of second class cruisers—of the *Immortalité* and *Narcissus* type—to six vessels, and upon sending out the *Powerful*, so that she will soon have a fighting force of 29 vessels with a total displacement of 109,000 tons. Turning now to Russia, it is understood that she contemplates adding to her Pacific fleet within the course of the present year, the first-class cruiser *Rosnia*, of 12,130 tons, the *Vladimir Monomach* of 5,796 tons, and a gun-boat of 936 tons, so that her squadron will number 19 vessels with a total displacement of 75,000 tons. It will thus be seen that while England's naval force in these waters will soon be superior to Japan's, Russia's will be well able to hold its own against this country. The general survey indicates that the Pacific Ocean has become the naval arena of the Great Sea Powers. England's activity is not limited to ships. She is increasing her dock accommodation at Hongkong, and she seems to be bent on carrying out the policy suggested by Sir Henry Keppel some years ago; namely, that of making Singapore her second great basis for Far-Eastern purposes. Hitherto she has been virtually content with Hongkong, but Singapore is now to have one big dock, probably two, added to its facilities, and is to be treated as a place of the utmost importance; which, indeed, it is, for it occupies the position of a kind of gate, between the West and East. Every ship, whether French, German or Russian, making its way from Europe to the Far East has to call at Singapore. Going a little farther afield, we find that Great Britain recently occupied Palmyra, an island lying in the middle of the Pacific, almost as centrally situated as Hawaii. That was undoubtedly England's precaution against the annexation of Hawaii by the United States. Holding the group to which Palmyra island belongs, she can have a coaling station in mid-Pacific, and a telegraph station, also, if she pleases. Russia, ever since, 26 years ago, she changed her naval basis in the Far East to Vladivostok, has spared no pains to strengthen and improve the latter place. She has spent large sums on its fortification; last June, she opened a big dock there, the work of several years; and she has now made such arrangements for ice-crushing that the port will be open all the year round. Still, as a place so far north does not suit all her purposes, she is directing her attention to obtaining other ports in China and Korea. Circumstances do not lend themselves to the immediate acquisition of such ports, but looking at the relations between Rus-

sia and China, it is impossible to avoid the conviction that Port Arthur will not be left permanently as it is at present. It is generally reported, also, that the St. Petersburg Government has asked Korea to lease to Russia a part of Chol-yong island. France, also, has given unmistakable signs of activity. She is not content with her position at Saigon, and seeks a basis of operations farther north. Germany also obeys a similar impulse. It was for that these two Powers sided with Russia in the Liaotung crisis. Moreover, Germany has greatly increased her naval force in the Far East, though it still remains of comparatively insignificant dimensions—7 ships with a tonnage of 12,000. Finally, the United States of America has entered the Pacific arena. If America annexes Hawaii, her flag will soon be seen much more frequently in these waters than it is at present. The lesson taught by this survey is that Japan's efforts to increase her national armaments are not regarded with indifference by Western Powers. For every thousand tons that she adds to her naval forces, they too add a thousand, and it is evident that such a competition may easily be carried far beyond the limits of Japan's resources. England maintains a fleet that can defy the world combined, but if she does so, it is because her immense wealth sanctions the effort. Japan is without that necessary preliminary. Still she must not suppose that what she is doing now will suffice. Her present programme provides fully for only three naval districts, with admiralty stations at Yokosuka, Kure and Sasebo. Partial provision is made for a fourth with an admiralty at Maizumi. But a fifth district will unquestionably have to be added in the north, with an admiralty station at either Muroan or Ominato, and a sixth must be provided for in Formosa. On the whole, the country must look forward to doubling its present naval programme, and it will probably have to raise a foreign loan for the purpose by hypothecating the customs revenue. It is because of that prospect that the *Nippon* opposes the increase of the army. Military and naval expansions simultaneously are not undertaken even by England.

The *Hochi Shimbun* contrasts the facts of Japan's situation with the aspirations that she entertained after the war. She imagined, then, that she had made for herself a name, and established a title to the world's consideration, but her record at present does not bear out that idea. In Korea her influence has waned, and the fruits of her victory have slipped from her grasp. In China, she has made a fine treaty, but the profits of its privileges are likely to be enjoyed by others. In Europe, the French seem disposed to recede from the treaty already concluded by them, and Austria-Hungary is raising all kinds of difficulties. In America, prohibitive rates are imposed on articles of Japanese manufacture, and the annexation of the Sandwich Islands without regard to her conventionally acquired interests, is contemplated. Even little Hawaii snaps its fingers at her. Finally, in Formosa she has not proved her administrative capacity, or succeeded in bringing the island completely under subjection. Turning, again, to domestic affairs, the finances are found to be in disorder, and the development of industrial enterprise is checked by want of capital. It is a most discouraging outlook, when presented as the *Hochi* presents it, but our contemporary urges its countrymen not to lose heart. The troubles now so thick are only temporary, and can be remedied by resolute and persevering effort.

The *Yomiuri Shimbun* has two articles the object of which is to advocate the imposition of a tax on sugar as the best device now available for increasing the income of the State. Sugar, according to our contemporary's figures, is one of the only articles of daily consumption that has not shared the general rise of prices. Ten years ago, one catty of the best refined sugar was equivalent in price to 3 *shō* of rice; a catty of medium-quality sugar, to 2 *shō*, and a catty of brown sugar to 1 *shō*. Now, the correspond

ing equivalents in rice are from 8 to 9 *go* for best quality sugar; from 6 to 7 *go* for medium, and 4 *go* for brown. (One *go* is the tenth part of one *sho*.) Our contemporary then adduces general considerations to show that sugar is a proper article of taxation, mentioning, among other things, that while the upper classes have to pay a tax of 7 *sen* on every *sho* of *sake* drunk by them, the lower classes pay nothing at all on their sugar; and that even a necessary article like kerosene is subjected to a heavier impost than a comparative luxury like sugar. The new British Tariff provides that the tax upon refined sugar shall not exceed 10 per cent. *ad valorem*, but the fourth article of the Protocol says that if Japan thinks it necessary at any time to levy an additional duty on the production or manufacture of refined sugar in her own dominions, she may make a corresponding addition to the import duty on foreign sugar. Hence no Conventional obstacle stands in the way of the *Yomiuri's* scheme. As to the revenue that would be obtained, the proposal is to put a tax of 4 *sen* per catty on the first quality; 3.5 *sen* on ordinary white sugar and 1.5 *sen* on brown sugar. The domestic production of brown sugar is now 116 million catties and that of white sugar 8 millions. From the former, an income of 1,740,000 *yen* would be obtained, and from the latter 280,000 *yen*, or a total of 2,020,000 *yen* from both kinds. Turning to foreign sugar, the importation last year was 134,072,561 catties of white, and 91,808,779 catties of brown, the revenue from which would be 4,692,784 *yen*, and 1,377,131 *yen* respectively, making a total of 6,069,915 *yen*. In order to show the net increase resulting from the proposal, it is necessary to deduct the customs dues now levied and the dues that would be levied on refined sugar under the new British Tariff. The revenue from imported sugar then becomes 4,860,000 *yen*, and adding the revenue from domestic sugar, as shown above, the final result is an addition of 6,880,000 *yen* to the Treasury's assets.

FAREWELL DINNER TO MR. N.W. MCIVOR.

"He was a veray parfit gentil knight," sang Chaucer five hundred years ago, and this was the burden of the refrain in all that related to the farewell dinner tendered to Mr. Consul-General McIvor on Monday evening by the members of the Yokohama United Club. About eighty sat down under the presidency of Mr. W. J. S. Shand, who had on his right the guest of the evening, Mr. N. W. McIvor, and on his left Mr. James Troup, Her Majesty's Consul General, while next to Mr. McIvor sat Mr. Justice Wilkinson. The Vice-chairs were filled by Mr. W. Ross, and Mr. H. J. Snow. After a *recherche* repast, the Chairman in a few felicitous phrases proposed the toast of the evening. He alluded to the regret felt at his departure by every member of the Club who knew Mr. McIvor; touched on his eminent social qualities; his services on the Committee of the Club; his abilities in his chosen walk of life, and then wished him God-speed and all success and prosperity in his native country, to which he was on the eve of returning. The *Olympia* band, which during dinner had played a splendid selection of music, struck up the "Star-splangled banner" as the Chairman finished speaking: then the toast was drunk up-standing with musical honours. Mr. McIvor acknowledged the kindness shown him in feeling terms. He spoke of the happy times he had enjoyed in the Y.U.C., dilated upon its many clubbable qualities, and continued—"One lesson you have taught me. I came here in utter ignorance of such a principle, but I stand before you to-night a convert to it. You are the missionaries who have brought it to my knowledge. You may be surprised that I charge you with being missionaries, but I charge you only with what is good in such a cognomen. You have taught me that the kinship of mankind is broader, is stronger, is a better reliance than even national patriotism.—(Hear, hear.) I came here an American and I leave here an Ameri-

can. But I have learnt here among you that rare lesson. It is, that there can be developed here a friendship that rises superior to any limits that nationality may seem to impose." In humorous terms, the speaker referred to his service on the Committee and then concluded with expressions of sincere regret at having to part with so many loved friends. Mr. Justice Wilkinson, in response to strenuous calls, made a choice little speech, introducing "a slight touch of the brogue" with fine effect. Said he, "Eighteen years and a half ago ye 'waked' me and here I am, after all those years, most substantially resurrected. I can only hope, should Providence will it, that the corpse whom ye are 'waking' this night, when resurrected here will appear among us with less grey hair than I own to." Loud applause greeted the happy sally. Mr. Consul-General Troup, who followed, craved pardon for not possessing the ready Irish wit of the previous speaker, and then paid a high meed of praise to Mr. McIvor as an official and a man. Mr. A. C. Read, in response to calls, next spoke of games that he had played in the Club with Mr. McIvor; games that certainly were not played

On a cloth untrue,
With a twisted cue,
And elliptical billiard balls.

Mr. Read's remarks were most entertaining and received punctuation in hearty applause. Dr. Eldridge, Hawaiian Consul; Mr. B. C. Howard, and Capt. Gridley, of the U.S. Flagship *Olympia*, also spoke, while before the evening closed Mr. Hyde Pearson gave the toast of Mrs. McIvor, which was heartily received. Songs were contributed by Mr. A. C. Read, Mr. G. Middleton, Mr. Townley, Mr. Coghill Jackson, Mr. Bevis, Mr. Showler, Mr. Wilder, and a violoncello solo by Mr. Davis.

INCREASE OF THE CURRENCY.

According to the *Shogyo*, the increase of currency since the late war with China is surprising. The following shows the amount in circulation during the first half of each of the past three years:—

	1897. Yen.	1896. Yen.	1895. Yen.
January	291,326,879	273,022,178	210,094,669
February	282,538,414	260,777,804	236,624,655
March	280,357,098	258,672,035	235,691,656
April	277,744,319	255,473,484	235,268,436
May	286,083,143	266,204,075	234,015,643
June	292,014,629	271,750,606	243,719,397

The above figures constitute the aggregate of convertible notes issued, Government and bank paper, and gold, silver, copper, and nickel coins in circulation at the end of each month. Thus we learn that the national currency at the end of June this year reached the amount of two hundred and ninety millions of *yen*, showing an increase of twenty millions as compared with the corresponding period of last year, and of forty-eight millions as compared with the year before last. An increase of fifty million *yen* in the currency within three years is a phenomenon which can hardly fail to excite public wonder. This rapid expansion in the volume of the currency has naturally led to a rise in the prices of commodities. Investigations carried out by the Bank of Japan show the prices for the 28th year of *Meiji* to be 135 against the 100 normal figure, those for the 29th year 145, and those for July of the 30th year, 159. The corresponding increase in the demand for capital must have considerably affected the circulation of money, the interest on which was consequently raised. These facts may be proved by the following table showing the ups and downs of daily interest on loans issued by the allied banks in Tokyo for the first seven months of each of the past three years:—

	1897. Loan- Interest. Sen.	Dis- count. Sen.	1896. Loan- Interest. Sen.	Dis- count. Sen.	1895. Loan- Interest. Sen.	Dis- count. Sen.
Jan.....	2.75	2.78	2.52	2.62	2.73	2.86
Feb.....	2.73	2.77	2.52	2.62	2.85	2.84
March ..	2.65	2.71	2.48	2.53	2.72	2.81
April ...	2.74	2.75	2.46	2.47	2.74	2.83
May ...	2.80	2.82	2.43	2.43	2.74	2.83
June ...	2.76	2.84	2.45	2.44	2.63	2.86
July ...	2.81	2.82	2.45	2.50	2.69	2.75

The average value of the principal shares quoted on the Tokyo Stock Exchange during the past three years may be tabulated as follows:—

	1897. Coal Mining. Yen.	Steam Navigation. Yen.	1896. Coal Mining. Yen.	Steam Navigation. Yen.	1895. Coal Mining. Yen.	Steam Navigation. Yen.
Jan.....	83.40	70.10	90.00	95.60	81.10	76.30
Feb.....	92.60	75.30	93.50	90.60	81.00	76.50
March ..	98.50	77.10	94.10	92.70	87.40	75.10
April ...	95.00	71.50	93.70	96.10	91.40	80.60
May ...	92.00	97.10	100.70	109.80	87.70	77.90
June ...	89.90	59.80	108.10	111.70	86.40	77.90
July ...	87.10	57.00	103.80	76.80	89.50	81.20

Thus the expansion in the volume of currency caused prices of commodities to rise, the money market to tighten, the rates of interest to increase and the value of shares to fall considerably.

The Bank of Japan has undertaken to meet the increasing demand for capital by an issue of notes beyond legal limits; but the greater the issue the greater the demand, and the higher the clamour for supply. This anomaly in the economic world is, in fact, growing and becoming more serious.

The enforcement of gold monometallism in October this year is expected by many to conduce to a better state of affairs. Serious warning, the *Shogyo* asserts, is necessary at the present juncture.

OPIUM IN FORMOSA.

The Opium Law, says the *Yiji*, was enforced in the districts round Taipei, Formosa, from the 1st of April this year. On account of the inefficiency of police, however, and the frequent occurrence of raids by the insurgents in various places, it was hardly possible to put the Law in operation in villages and hamlets lying far from the towns. Nevertheless, the authorities have so far succeeded in securing its operation in Tainan, Taichiu, Changhua, Hsinchu, Keelung, Tamsui, and other localities, and it expected that during August one-third of the whole island will be brought within the control of the Law. The estimates for the 30th year, compiled at the Governor-General's Office, place the amount of sales of opium at 3,577,000 *yen*. As those estimates were made with the prospect of enforcing the Opium Regulations throughout the island from the current year, it is clear that the partial enforcement only of the same will tend to reduce the estimated receipts. Could the Law have been enforced over the whole island from the outset, no difficulty, it is said, would have been experienced in collecting the amount above stated. It may be noted that in one of the towns in Taichiu prefecture, containing a population of 21,816 who live in 4,536 houses, licenced opium smoking establishments amounted to 557 in number, while in another, possessing a population of 10,787 in 3,924 houses, there are 86 smoking establishments besides a few licenced retailers.

NEW WAR-SHIP BUILDERS.

We observe that Mr. H. S. Bickerton Brindley, of Tokyo, has been appointed sole representative for Japan of Messrs. Vickers, Sons, & Co. Ltd., of Sheffield. We gather from the *Sheffield Telegraph*, that this firm, who recently acquired the Naval Construction Works at Barrow, have secured their first order from the Admiralty for the only first-class battleship required from private builders in this year's naval programme. This battleship will be of the *Cánopus* class, of 12,950 tons. She will be able to pass through the Suez Canal. Hitherto Barrow has done all classes of Admiralty work, except the building of a battleship. Messrs. Vickers now intend to devote their principal attention to warship building, and have every prospect of success. In addition to the work mentioned above, the firm have received extensive orders from the British Admiralty for gun-forgings, gun-hoops, steel forgings, and heavy ordnance, to which will be fitted their own patented breech mechanism.

JAPANESE TOPICS.

It is scarcely necessary, we should hope, to disavow the attitude ascribed to us in connexion with the opium-smuggling case. We are represented as "very much exercised because the prosecution of the culprit failed to secure his punishment." Of course we have not, and never had, the smallest desire to see the man punished. To ascribe any such feeling to us is only another instance of the method invariably adopted by certain local English journals in their discussions with the *Japan Mail*. Unable to refute its arguments, they endeavour to discredit it by the imputation of mean and miserable motives. 'Tis an experience so familiar that its repetition only provokes a smile. As to the result of the quartermaster's arraignment, H.B.M.'s Assistant Judge had no competence to inflict a fine. The faulty drafting of the Regulations rendered him powerless. Yet that the compilers of the Regulations intended the penalty of fine to have no application unless there was question of at least 1½ lbs. of opium, seems quite incredible. A catty of opium is a very considerable quantity; a quantity far too large to be classed as "medicinal." If those that plead for the quartermaster could offer any reasonable explanation of his action in carrying the opium ashore, there would be no unwillingness to acquit him of unlawful procedure. But to tell the public that "really it was so little, don't you know;" and "really he showed so much innocence in carrying it openly, don't you see"—such lame excuses are on a par with the silly contention that the police ought not to have arrested him because he was the quartermaster of a ship lying at the pier," and "because he was not likely to forfeit his appointment by absconding under the apprehension that he had rendered himself liable to the payment of a small fine." Tide-waiters and police-constables have nothing to do with fine distinctions of that kind. A police-magistrate might exercise such discretion. The question is, however, not what a police-magistrate might have done after the man's arrest, but whether the tide-waiters and constables were acting illegally when they arrested him. With that question the man's status had nothing whatever to do. If it appeared that Japanese policemen allowed such personal considerations to influence them in the discharge of their official duties, then indeed there would be reason to anticipate with apprehension their manner of executing the law hereafter. It is strange, in truth, that the agitators can not appreciate the extreme unreason of their position when, on the one hand, they allege that the Japanese police are likely to discriminate improperly against foreigners in the future, and, on the other, blame the same police for not discriminating illegally between foreigners in the present. A quartermaster of a Peninsular and Oriental steamer is certainly "a personage" from some points of view, but to expect that he should be immediately recognised as "a superior man" by every Japanese tide-waiter and police constable at a treaty port, does seem rather "cook-a-doodle-doey."

The vernacular press publishes an epitome of a despatch said to have been addressed by the Representative of Denmark to the Japanese Foreign Office, with reference to the recent arrest of a Danish

subject on board a British steamer outside the limits of the foreign settlement, and the alleged epitome has been translated into the columns of a local English contemporary. We are in a position to state that the version thus given to the public is very erroneous.

Among the "items" circulated with reference to the Hawaiian annexation question, here is one:—

A Special to the *Herald* from Washington says:—Japan will insist that the United States assume a contingent responsibility in the matter of the arbitration of her differences with Hawaii on the subject of immigration and the tariff.

It is understood that this is one of the essential conditions upon which Japan will consent to arbitration, and that if this responsibility is not assumed by the United States Japan will break off negotiations looking to arbitration and back up her demands by a naval demonstration in Hawaiian waters.

The State Department has not yet received any official communication from the Japanese Government on this matter and the administration has not indicated whether or not it will comply with the Japanese demand when made.

There is no truth in the above. Japan has never preferred such a demand; has never asked America to accept any contingent responsibility with reference to the arbitration question. She has simply expressed her opinion that the annexation of Hawaii should not be allowed to invalidate any just claims she may have against the Island Republic.

It remains an enigma to discover the amount by which the proposed expenditures for the fiscal year 1898-9 really exceed the income now in sight. The *Fiji Shimpō* says that the appropriations demanded by the various departments aggregate 250 million *yen*, which is 30 millions more than the available income, but whether that total includes or excludes a sum of 5 millions on account of the encouragement of navigation, and 6 millions on account of Formosa, we are unable to discover. Apparently those sums are included, for after remarking that the Treasury has cut down the excess of expenditure by 20 million *yen*, and that probably 10 millions of the amount thus elided will have to be restored, our contemporary arrives at the final conclusion that about 20 million *yen* of additional revenue will have to be provided.

In connexion with this subject of the Budget, we invite our readers' attention to an article from the *Yomiuri Shimbun*, epitomized in our Weekly Summary of the Spirit of the Vernacular Press. It appears to us very probable that the tax on sugar indicated by our contemporary is an idea seriously entertained by the Cabinet.

The *Nichi Nichi Shimbun* has a timely note about the behaviour of Japanese travelling by rail. Formerly the great majority of Japanese travellers used to ride in third-class carriages, but now they prefer the second, and even the first, class. That is all very well, says our contemporary, but such folks ought to remember that when they get into a second class or a first class, the duty devolves upon them of behaving according to the rules of social propriety. They seem to think that the payment of their fare entitles them to do just what they please, and the result is that they often disgrace themselves and disgrace Japan also. Sometimes they are to be seen wearing a single garment with the sleeves tucked up over the shoulders; at others, they bare their legs

and straddle on the seat opposite to a lady, foreign or Japanese, without the least sense of decency. Then again, they pull off their coats and waistcoats and even their shirts, appearing in what they call an *ami-ori*, which performance may be compared to dressing oneself in a wide-meshed fish-net. Others act even more immodest are not infrequently seen. The long and short of the matter is that such persons are not fit to mix in the society to which a first-class or second-class railway carriage gives access.

We heartily endorse these remarks of the *Nichi Nichi Shimbun*'s. The risk of encountering such persons as our contemporary describes renders railway travelling in Japan a hazardous experiment for ladies. But instead of preaching to the offenders only—though that is a useful step in its way—why not urge the railway authorities to put up notices instructing people that they are not allowed to outrage their fellow-passengers' sense of decency by exposing bare legs or bare bodies, and by certain other acts which may not be described in an English newspaper, but which might be set forth in an interdict hung in a suitable place. The question is well worthy of consideration, not, indeed, in the interests of foreign travellers, for they are comparatively few, but in the interests of the Japanese themselves. To the abuses enunciated by the *Nichi Nichi Shimbun*, the average foreigner applies only one term, "Semi-savage." He makes no remonstrance *in loco*. Where would be the use? The person addressed would fail to appreciate the justice of the complaint, and might resent it angrily. But the foreigner goes his way, having taken a mental note, and when he gets home, he expresses a new opinion about the courteous, gentle-mannered Japanese. The essence of true courtesy consists in never shocking or distressing the feelings of those with whom one is brought into contact. In the case of the Japanese traveller we believe that ignorance alone is to blame. If he knew that a particular line of conduct was offensive, he would carefully avoid it. But he does not know, and it is not from the columns of a journal written in highly classical *gangan*, like the *Nichi Nichi Shimbun*, that he will learn. The railway is a comparatively new institution in Japan. The lower orders have yet to be taught the duties connected with travelling by it, and the railway companies ought to undertake the business of affording instruction. We greatly fear that the greedy, truculent coolie and the rustic dressed in a fish net will ultimately succeed in diverting from Japan's shores the Pactolus stream that began to flow thither a few years ago.

Here is a paragraph which we translate literally from the *Sekai-no-Nippon*:—The year 1899 will see the inauguration of mixed residence. Foreigners will then be free to trade where they please, and the Japanese must at once make up their minds as to how they are to compete in foreign trade under the altered circumstances of that time. It is to be noted, however, with regret that a good many Japanese anticipate no change in the present trade routes, and expect to send their goods to the foreign settlements just as they do now. Such persons must be informed that already foreigners are making preparations to push their enterprises into the interior so soon as ever mixed residence is permitted. Thus foreigners that deal in rice,

ammonia, straw braid, figured matting, minerals, camphor, bamboo ware, wooden articles, and marine products, intend to establish branch offices at the places of production, whence they will ship the goods direct, without sending them to Kobe. Thus the foreign middleman will become more than ever necessary to the Japanese producer, and the Japanese merchant will be shut out of the direct trade. Notably large plans in that sense are said to be contemplated by Messrs. Samuel Samuel & Co. of No. 45 (Kobe), and Messrs. M. Raspe & Co., No. 91. The former firm concerns itself specially in the rice-export business, and will establish a branch at Bakan (Shimonoseki); the latter will have branches in the Tohoku district, in Kiushiu, in Shikoku and in the Sanyo district for the sale of machinery, rails and timber, and for the export of products of those regions. Other Kobe firms revolving similar projects are Messrs. Hunter & Co., No. 29; Messrs. Delacamp & Co., No. 121; Messrs. Smith, Baker & Co., No. 3; Messrs. Mori & Co., No. 82; Messrs. Jardine, Matheson & Co., No. 107; Messrs. Iles & Co., No. 12; Messrs. Lucas & Co., No. 20; Messrs. Sale & Co., No. 46; and Otto Reimers & Co., No. 8."

It is reported that when Mr. Hoshi Toru returns to Japan from Washington, where he now represents his country, he will be succeeded by Mr. Hatoyama Kazuo, President of the House of Representatives. In that event, the expectation is that Mr. Kono Hironaka will be a candidate for the presidency of the House. Mr. Kono used to be the parliamentary leader of the Liberals, and at one time he enjoyed immense influence in the Party. But he left it last session, and there are not wanting persons who hint that if the influence of the Government be exerted to secure for him the post of President, it will be by way of reward for his moderate attitude last session. We cull these assertions from vernacular newspapers, and are not in a position to confirm or deny them. The presidency of the House of Representatives is not, however, a great prize at present, for a general election takes place next year, after which a new President must of course be chosen.

From the persistency shown by the vernacular press in stating that, despite many turns of the screw dictated by the Minister of Finance, it has not been found possible to compress the aggregate of Departmental Expenditures for next fiscal year below 240 million *yen*, or push up the revenue above 220 millions, we infer that these figures may be regarded as tolerably accurate.

There is nothing very alarming in an increased expenditure of a couple of millions sterling, considering how very petty Japan's national outlay has hitherto been. The question is, however, when may the process of expansion be expected to stop. We do not, for our own part, feel in the least degree anxious on the subject. Japan is like a young lady that has just made her *début*. She wants a wardrobe and other essentials that were quite superfluous while she lived in retirement. But her cloth is not without limit, and one would like to be sure that she is keeping that fact well in mind as she cuts her new coat. As for twenty million *yen*, she can get 12 or 13 millions by imposing a not unreasonable tax on sugar

and by putting the revised Tariff into operation. The latter expedient, however, is not available for next year's needs, so we presume that building lands and *saké* will have to supply the required funds. In our review of post-bellum finance, published last month, we showed how plainly the tax now levied on urban lands falls short of the proper figure. Indeed, we insisted on the fact eight years ago, though our argument was not at that time supported by conclusive arithmetic. The State has plenty of sources from which to obtain additional revenue.

What appears to us much more interesting than this problem of a slightly increased annual expenditure is the course to be pursued about the domestic loans included in the last Budget—a total of nearly 69 million *yen* for railways and other productive purposes. Five months of the fiscal year have passed, and there is no indication of any attempt to float a portion of the loans. Of course the money market is eminently unfavourable for any such operation at present, and there is little probability of its becoming favourable, so far as we can see. People are plainly persuaded that the work of inaugurating gold monometallism will tax the Treasury's energies to the full, and until that effort is successfully accomplished, there will be hesitation about subscribing for new bonds. Besides, a greater and more radical difficulty presents itself: the people want all the capital they can command. They want a great deal more, for the matter of that, but they have no hope of getting it till the issue of this gold experiment is placed beyond doubt. Meanwhile, what is to become of the extension and improvement of the State Railways, of the riparian works, of the telephone expansion and of other measures approved by the Diet last session? It looks as though the Government intends to rely on the payment of the Indemnity *en bloc* by China. There is every appearance that China will pay in that manner. Probably the Japanese Ministry has accurate information on the subject. But to pay before the 9th of next May would be a mere waste of money on China's part, and since the Japanese fiscal year ends on March 31st, the funds coming from China can not tide over the wants of the present Budget. Still, it will probably be the Government's wisest plan to forestall the receipt of the Indemnity rather than to have recourse to a domestic loan at present. Such, we presume, is the intention. A year hence, foreign capital will be accessible enough.

We read in the *Nichi Nichi Shimbun* that it has been decided to send the following gentleman abroad for study:—Mr. Oda Kenjiro, a teacher in the First Upper School, to proceed to America for two years to study chemistry; Mr. Nakajima Kametaro, Assistant Teacher in the College of Medicine of the Imperial University, to proceed to Germany for three years to study medicine; Mr. Takahashi Sakuye, a student of the Imperial University, to proceed to England for three years to study international law; and Mr. Yamada Saburo, also of the Imperial University, to proceed to Germany and France for three years to study private international law.

It appears that quite a brisk episode

added to the fervour of the farewell dinner given on Monday evening at the Yokohama Club to the departing American Consul-General. Some of the waiters, having provided too carefully against any waste of heel-taps, developed a Berserker mood, and went for the Steward, against whom they entertained some grudge. One against several, the Steward would have fared badly had not certain members of the Club gone vigorously to the rescue, the result being that two of the waiters are now in the hands of the police. The quaint part of the affair—if such an expression be permissible—was that, having turned off the electric light, the waiters transferred their attentions to an unfortunate member, whom they mistook for the Steward. It is to be hoped that they will have a tranquil time in jail for a few weeks.

Sir N. J. Hannen, in his Trade Report for Shanghai, says:—

Japan seems to be bent upon the introduction of a gold standard, and those here in China, who see in silver-using countries the future manufacturing countries of the world, look upon this step on the part of Japan as one which will greatly assist China in recovering her own markets first and afterwards in capturing the neutral markets of the world. Whatever effect, if any, the adoption of a gold standard by Japan may have, it cannot raise the value of silver. But as almost every commercial nation except China will soon be gold monometallic, the effect for good or evil of the fall in the gold price of silver will be the same for all. If, as is believed by the majority of commercial men here, a silver-using country has an advantage, China, or the enterprising men of other nations who have made her their field of labour, is going to try and make the most of it, and the present generation will receive an object lesson in the good or evil effects of having the cheaper metal as a monetary standard. In twenty-five years, if no change takes place in the relative rates of gold and silver, we shall be able to see by a study of Chinese manufactures whether those who advocate the silver standard are right. One circumstance consoling to British trade is that she will only be effected in the same way as every other nation, and that as her trade with China is larger than that of any other nation, China's prosperity is likely to be of more advantage to her than to any other country.

There has been a very general opinion among thoughtful persons that in allowing a period of five years for the presentation and redemption of 1 *yen* silver coins, the Japanese Government erred greatly on the side of liberality. Why, in adopting the gold standard, is the country called upon to give more for its silver coins than their actual worth in the open market? Before the gold Bill passed the Diet last session, the silver *yen* had no fixed gold price. Its equivalent in gold was precisely the amount of yellow metal for which its weight of pure silver could be sold in Europe or America. Its holders had received it subject to all exchange fluctuations, and could not reasonably expect to be guaranteed against its depreciation. Certainly, if the Government did not retain the *yen* piece as a subsidiary coin in the new system, they were bound to give gold for it when withdrawing it from circulation. But they were not bound to accept a maximum of risk in effecting the exchange. They were not bound to leave the *yen* in circulation for five years, taking their chance of being required to buy it back at the highest rate touched by gold during that long period. A reasonable interval was all that need have been allowed to holders of the coin abroad for sending it to Japan and effecting its exchange. In view of these considerations, we are not surprised to read in vernacular newspapers a statement that the Govern-

ment will probably present to the Diet next session a Bill for abbreviating the five-year period to six months. The *Yomiuri* adds that the coins, after redemption, will not be sent to the melting pot, but will probably be again put into circulation in China, Korea and the various southern colonies where silver coins are scarce. We fail to see what profit would accrue from the latter course, except that the strain upon the country's stock of gold might be slightly lessened.

The *Spectator* has the following:—

The week has been curiously full of instances of unusual courage. The *Times* on Saturday published an account of the loss of the "Aden," written by a Mr. Gillett, one of the passengers who survived. It is as impossible to condense it as to condense one of Mr. Stanley Weyman's stories, but the man who can read it without wishing to know Mr. Gillett and his wife is insensible to heroism. (Note, by the way, the remarkable literary skill which nowadays displays itself among men who are in no way literary.) The *Pioneer* received on Monday contained an account of a Sikh orderly who, in the midst of the treacherous attack at Mamar, "picked up a gun weighing 200 lbs. single-handed and carried it to the gun-mule. The mule was shot dead, so he carried it to the relief-mule. Then he went back and brought in Lieutenant Cruickshank's body." And we have all been reading how Herr Andree, the Swede, with two companions, left Danes Island on July 11th by balloon for the Pole. He hopes to see and photograph the true Polar region, and then drift on to Alaska, a journey of twelve hundred miles. That is to say, he and the two men of science with him face an imminent risk of a horrible death in an unknown land, whence their fate cannot even be reported, in order to extend the domain of human knowledge. It is a perfectly useless enterprise, even a ridiculous one, but is there a man capable of understanding the adventure who is not a little prouder because the world contains Herr Andree?

Our London contemporary makes very brief allusion to Mr. Gillett's literary skill, but it has been appreciated by all readers of his story. He has succeeded because he set down his experiences and his emotions in the simplest and most direct manner. That is the best way to tell such a story. It needs no word-painting. True art would be outraged if mere tricks of language were preferred to incidents of the kind that happened on the Socotra reef.

Mr. Sugimura Ei has hitherto discharged the functions of a foreign affairs official for the Governor-General's Office in Formosa. It is thought probable that he will henceforth have the assistance of Mr. Uchida Kosai, who recently returned from Peking, where he had been First Secretary of Legation. Mr. Uchida will have the rank of Minister Resident.

Madame Sono Yoshiko, who has already borne four children to the Emperor, two sons and two daughters, is again *enceinte*, and expects to be confined during the present month. Madame Sono, whose title is *Gon-tenji*, has taken up her residence in the *Ban-jo Go-ten* of the Aoyama Palace. *San-jo*, or in popular parlance *ubu-ya*, is a building specially set apart for occasions of the kind, according to the old *Shinto* custom. Madame Sono's first child was Prince Aki, born on the 22nd of August, 1887, and died on the 12th of November, 1888. Her daughters are the little Princesses Tsune and Kane whom many of our readers have seen at Nikko during the summer. Her last child was Prince Mitsu, born on the 30th of November, 1893, and died on August 17th, 1894.

Vague rumours have reached Tokyo from time to time about the ownership of

land by foreigners in Formosa. From the first that question was understood to be likely to give trouble, the arrangements made by the Chinese Authorities having been of a somewhat slipshod nature. After some delay, it was finally decided that, as land can not legally be owned by aliens in Japan, the only course was to grant perpetual leases to the foreigners who had acquired land under the Chinese regimen. That has been done, the *Nichi Nichi Shimbun* says, in over seventy cases. But it appears that the Spanish priests obtained land for church sites under a special arrangement, according to which the Chinese conferred on them an exceptional title, and they are said to be now pressing for official recognition of that title. We have no information of our own on the subject, but we are disposed to doubt whether the Spanish fathers have adopted any such course. A perpetual lease differs only in name from a title in fee simple, and it would be distinctly bad policy on the part of the priests to urge a claim which the Japanese Authorities have no power to recognise, and which possesses no practical value.

The Second Marine Products Exhibition was opened in Kobe on the 1st instant. His Imperial Highness Prince Komatsu performed the opening ceremony at 10 a.m., and read the following message from the Emperor:—

We hereby announce the completion of the Second Exhibition of Marine Products, and declare it open. We regard marine products as a highly important commodity of Our sea-girt country, and worthy to be called one of its sources of wealth and strength. For that reason, an exhibition was formerly opened in Tokyo and a second is now opened in Kobe. Doubtless it will be found on comparison that progress has been made. We urge you to promote the enterprise vigorously so as to increase the national wealth and strength.

Mr. Oishi, Vice-Minister of Agriculture and Commerce, then read the following address on behalf of Prince Komatsu:—

We have met to-day for the purpose of opening the second Exhibition of Marine Products, which is now completed. Our country, being surrounded by sea on all sides, is gifted above all lands in the richness of its marine products, so that they constitute, equally with the products of the land, a source of national wealth. An exhibition of marine products was formerly held in Tokyo, and another is now held in Kobe for the purpose of encouraging the enterprise. There are evidences of its great prosperity. The exhibits shown here number over fifty-six thousand, being nearly double the aggregate at the First Exhibition. That happy result is attributable in part to the judicious efforts made by local officials to guide the people, but certainly it could not have been attained had not the nation been moved by the encouragement that His Majesty the Emperor extends to productive enterprise. It is to be hoped that, in accordance with the Imperial wishes, further steps will be taken to develop this industry.

It is a little curious to observe the prominence that the above speech gives to official exertions. Confucius had a very exalted notion of the value of official guidance, and the Japanese have been faithful in that respect to his philosophy for many generations. But the sooner they abandon it, the better for themselves, and we confess that we do not find it a healthy sign to hear the local officials lauded for their exertions in the cause of an industry which depends for its development on the enterprise of the people themselves.

The *Yiji* has an interesting table showing the appreciation of building land at several centres of trade during the past ten years. Taking 100 as the market price of land at those places in the year

1887, our contemporary gives these figures:—

	Prices in 1887.	Prices at end of 1897.
Tokyo	100	170
Kyoto	100	162
Osaka	100	222
Yokohama	100	240
Kobe	100	167
Bakan (Shimonoseki) ..	100	214
Hakodate	100	625
Maebashi	100	173
Otaru	100	429

Hakodate's figure is remarkable—a six-fold increase. Kyoto, it will be observed, stands lowest.

"JINSAI NO TOYO."

These words signify "the selection and employment of able men," and the phrase represents a policy attributed to the present Cabinet from the time of its assumption of office. Some folks might call the policy by a different name—the spoils system—for in practice it means that official appointments are found for the Government's supporters. That version of the innovation can not, indeed, be gainsaid. The law requires that admission to the ranks of officialdom shall be by examination, and the system of *jinsai toyo* ignores the law for the sake of drafting into the public service men whose most apparent qualification is activity in the field of party politics. However, in all countries with parliaments, the Cabinet must establish links between itself and the national assembly, and further, if Ministers of State have party relations, there ought also to be in each Department at least one official identified with the Minister in politics and capable of assisting him confidentially. Experience is teaching to Japan lessons already learned and applied elsewhere. If should be added, too, that when we speak of what the law prescribes in the matter of examinations, we do not allude to a law duly enacted by the Diet, and incapable of being set aside without the Diet's assent. The Emperor possesses absolutely autonomic authority in everything that relates to the appointment and dismissal of officials, and a rule laid down by his Majesty for the general purposes of selecting officials, can, of course, be waived by the same authority in special cases.

The total number of persons to whom important appointments have been given by the present Cabinet under the *Jinsai Toyo* system is twenty-three; namely:—

Mr. Komuchi Tomotsune to be Chief of Bureau.
Mr. Takahashi Kenzo to be Chief Secretary.
Mr. Oishi Masami to be Vice-Minister.
Mr. Inagaki Manjiro to be Minister Resident.
Mr. Taketomi Tokitoshi to be Chief of Bureau.
Mr. Takata Sanae to be Chief of Bureau.
Mr. Koizuka Riu to be Chief of Bureau.
Mr. Muro Kojiro to be Local Governor.
Mr. Hadano Denzaburo to be Local Governor.
Mr. Kashiwada Moribumi to be Local Governor.
Mr. Tamura Sei to be Local Governor.
Mr. Kikuchi Kiyo to be Local Governor.
Mr. Nakamura Hikoji to be Local Governor.
Mr. Yondo Kwanichi to be Local Governor.
Mr. Ishida Kwannosuke to be Local Governor.
Mr. Yumoto Yoshinori to be Local Governor.
Mr. Matsuda Rentaro to be Local Governor.
Mr. Mitsuno Torajiro to be Local Governor.
Mr. Ozaki Yukio, to be Departmental Councillor.
Mr. Minoura Katsundo to be Chief of Bureau.
Mr. Gamo Sen to be Departmental Councillor.
Mr. Tokutomi Ichiro to be Departmental Councillor.
Mr. Shiga Juko to be Chief of Bureau.

To the above list various other names might be added, but the offices in question are minor. Twelve of the names we have set down belong to men who have

made their mark in the House of Representatives as supporters of the present Cabinet. Seven are journalists, namely:—

Mr. Takahashi Kenzo, former editor of the *Osaka Asahi*.

Mr. Takata Sanse, former editor of the *Yomiuri Shimbun*.

Mr. Koizuka Riu, former editor of the *Mainichi Shimbun*.

Mr. Ozaki Yukio, former editor of the *Hochi Shimbun*.

Mr. Minoura Katsundo, former editor of the *Hochi Shimbun*.

Mr. Tokutomi Ichiho, former editor of the *Kokumin Shimbun*.

Mr. Shiga Juko, former editor of the *Nippon Jin*.

Mr. Inagaki Manjiro has distinguished himself by his writings about the South Pacific. Undoubtedly the twenty-three men have a just title to the term "men of talent," and their inclusion in the ranks of officialdom greatly strengthens the latter. But it is not to be denied that the appointment of eleven party politicians to local governorships in the year previous to a general election invites significant construction, and will be reckoned by historians among the weak acts of the present Cabinet.

FUNERAL OF COUNT MUTSU.

The obsequies of the late Count Mutsu were performed on the 28th ultimo, the cortege leaving the residence of the deceased punctually at 2 p.m., the hour announced, and reaching the temple (*Kaisen-ji*), in the Asakusa district of Tokyo, at 4.20 p.m. Owing to the great distance between the Nishi-ga-hara villa, where the Count breathed his last, and the Asakusa temple, the Ministers of State, the Foreign Representatives, and many other distinguished personages, refrained from joining the procession, and contented themselves with leaving their cards at the villa, whence they proceeded independently to the temple, there to await the arrival of the bier. The troops, also, numbering about eight hundred, did not fall into the cortege until it had entered the bounds of the city proper. Thus the dimensions of the procession were not specially imposing. The temple, however, and all the temporary resting places erected within its enclosure, were crowded with mourners, and a profusion of wreaths and bouquets testified the universality of the regret caused by the death of the eminent statesman. The service lasted an hour and a half. It was conducted according to Buddhist rites, and several eulogies of the deceased were read before the Shrine, one, sent by the Liberal Party *en masse* and read by Count Itagaki, being particularly eloquent and sympathetic. On the conclusion of the religious ceremony, the usual sad and impressive custom was observed: all the relatives and friends of the deceased, from his eldest son, the chief mourner, to the general body of those present, advanced to the Shrine, and placed a lighted stick of incense in the censer. It would be useless to attempt the task of compiling a list of those present at the temple. So far as could be ascertained, nearly all the leading officials and residents of the capital were present. During the forenoon of the day of the funeral, chamberlains despatched by the Emperor and Empress, proceeded to the residence of the deceased to convey the Imperial condolences to the family, together with the gifts usual on such occasions. His Majesty sent two

rolls of red and white silk, various sweetmeats and cakes, and three thousand *yen* in money; the Empress, a thousand *yen*.

The order of the procession was as follows:—

Outriders, two gendarmes.
Troops, half a battalion of Infantry.
Two banners.
Stands of flowers sent from the Imperial Palace.
Stands of flowers sent by the Princes of the Blood.
Musicians, ten men.
The *Fukudo shi* (Priest)
The *Bekkaku doshi* (Priest)
The *Dai-doshi* (High Priest)
Flag bearing the name and rank of the deceased.
Censer.
Mortuary Tablet.
Bouquets of flowers.
Dragon Flag and Dragon Lamp.
The deceased's Orders of Merit, &c.
The Bier, with twenty Wakayama officers on either side.
Dragon Flag and Dragon Lamp.
The Chief Mourner, on foot.
Near Relations, on foot.
Countess Mutsu (in a carriage).
Wives and Daughters of Relatives (in carriages).
Troops, half a battalion of Infantry.
General Body of Mourners.

THE BANK OF JAPAN.

The *Shogyo Shimpō* publishes the following report on the amount of loans issued by the Bank of Japan and its branches and agencies in various parts of the Empire during June of last year and the current year:—

	June, 1896. Yen.	June 1897. Yen.
Head Office—		
Loans	22,034,899	14,178,027
Temporary overdrafts	936,110	4,812,317
Notes discounted	16,757,989	13,013,151
Osaka Branch—		
Loans	7,331,600	5,874,850
Temporary overdrafts	1,345,003	1,067,776
Notes discounted	12,060,136	7,870,129
Western Branch—		
Loans	1,338,270	706,492
Temporary overdrafts	181,500	82,100
Notes discounted	1,789,884	431,040
Hokkaido Branch—		
Loans	315,285	135,000
Temporary overdrafts	203,308	35,000
Notes discounted	2,140,923	214,500
Nagoya Branch—		
Loans	1,197,470	—
Temporary overdrafts	47,426	—
Notes discounted	702,585	—
Kyoto Agency—		
Loans	1,892,650	—
Temporary overdrafts	250,000	—
Notes discounted	606,750	—
Sapporo Agency—		
Loans	—	20,000
Temporary overdrafts	—	60,459
Notes discounted	—	235,848
Totals—		
Loans	34,110,174	20,914,369
Temporary overdrafts	2,963,348	6,057,653
Notes discounted	34,058,269	21,764,668

The above figures show an increase of over thirteen million *yen* in loans, and of twelve million *yen* in notes discounted, temporary overdrafts alone decreasing by more than three million *yen*. On the whole, however, there was an increase of no less than 22,300,000 *yen*. This is chiefly due to the increased demand for capital consequent upon the expansion of various enterprises and excess of imports during the first half of this year, as compared with the corresponding period of last year.

The following is a comparative table showing the amount of deposits held by the Bank of Japan and its branches and agencies throughout the empire during June of this year and last:—

	June, 1897. Yen.	June, 1896. Yen.
Head Office—		
Fixed deposits	6,000	15,000
Temporary deposits	5,838,886	11,218,517
Osaka Branch—		
Do.	8,600	1,600
Do.	106,235	77,417
Western Branch—		
Do.	—	—
Do.	546	1,538
Hokkaido Branch—		
Do.	—	—
Do.	2,140	5,862

Nagoya	Do.	—	—
Branch...	Do.	103,246	—
Sapporo	Do.	—	—
Agency...	Do.	10,500	5,574
Kyoto	Do.	—	—
Agency...	Do.	4,030	—
Taipei	Do.	—	—
Agency...	Do.	1,023	—
Totals	Do.	14,600	16,600
	Do.	6,066,611	11,308,963

From the above it will be seen that the deposits decreased by more than 5,200,000 *yen* during the first half of this year, as compared with the figures for the corresponding term of last year. The reason is to be found in the fact that out of the general heading of temporary deposits a separate item was made of Government deposits in December last, and consequently these do not appear in the list for this year.

According to the *Tokio Asahi*, the amount of gold and silver coin and bullion held by the Bank of Japan and their actual value at the end of June this year were as follow:—

	Face value. Yen.	Actual value. Yen.
Gold coin	156,438,615	19,769,715
Standard gold bullion	3,091,312	19,769,715
Gold coin (English)	728,796	6,415,243
Gold coin (American)	523,271	2,046,744
Old coin	156,884	225,200
Gold bullion containing iron	10,808	806
Silver bullion (in possession of the mint)	—	21,775,230
Total	—	102,889,217

The *Shogyo Shimpō*, also says the amount of convertible notes and excess of paper, issued by the Bank of Japan, as well as specie and other reserves held by the Bank during the week ended the 21st ult., were as follow:—

August.	Actual issue of Notes. Yen.	Excess above legal limit. Yen.
16	197,168,799	11,808,665
17	196,572,763	11,212,643
18	196,136,520	10,827,770
19	195,476,728	9,810,426
20	194,656,217	9,045,459
21	194,424,233	8,748,413
August.	Specie Reserve. Yen.	Securities. Yen.
16	106,449,839	90,708,960
17	106,459,825	99,112,938
18	106,408,455	89,728,065
19	106,685,505	88,791,223
20	106,629,961	88,026,256
21	106,695,023	87,729,210

From the above it may be perceived that the amount of issue of notes beyond the legal limit during last week decreased from 11,800,000 *yen*, to 8,748,000 *yen*, while no considerable change has occurred in the specie reserve. The decrease in the Securities seems to have caused a reduction of the amount of convertible notes issued, and a corresponding diminution in the amount of excess beyond the legal limit. Such a state of affairs may be regarded as the result of a diminished demand for capital, the decrease of issue beyond the limit indicating the amount of money repaid to the Bank during the week under notice. In fact, the Bank's Weekly Report of transactions shows the actual discounts and loans on the 21st to have diminished as follows, compared with the figures for the 14th:—

	August 14th. Yen.	August 21st. Yen.
Notes Discounted	36,752,605	38,573,717
Loans	125,583,890	126,674,107
Total	162,336,495	165,247,824

Thus a decrease of over three million *yen* is noticeable in discounts and loans. On the whole, it seems that the close of the *Bon* festival, the increase of the rates of interest by the Bank of Japan, the steady sale of silk, and the precautionary measures taken by the Bank, have contributed to restore large funds to its vaults.

Mr. F. X. d'Almada e Castro, who served his articles with Mr. C. D. Wilkinson, has been admitted a solicitor to practise in the Hongkong Supreme Court. The Chief Justice, in making the order, said he understood that Mr. d'Almada e Castro was the first gentleman of Portuguese descent to practise as a solicitor in that Court.

THE NEW CHOKUNIN COUNCILLORS.

THE long-talked-of appointment of *Chokunin* Councillors of the Departments of State has become an accomplished fact.

Five persons are gazetted to these newly created posts. Two of them, Messrs. TAKETOMI TOKITOSHI and KOMAI CHOKAKU, were already holding official positions. Three are drafted direct from the ranks of party politicians, namely, Messrs. OZAKI YUKIO, GAMO SEN and TOKUTAMI ICHIRO.

Perhaps the easiest way to explain the nature of the new office is to say that a *Chokunin* Councillor in Japan corresponds very closely with a parliamentary under-secretary in England. The word *Chokunin*, we should perhaps add, has nothing to do with the office. It merely signifies that the official in question is of *Chokunin* rank. Every Department of State has hitherto had "Councillors," and so also has each Provincial Government. According to the Law of Organization of the Government, the number of Councillors in a Department must not exceed three, and in practice the average has been two. Provincial Governments have only one. It will naturally be supposed that a special term has been chosen for the new Councillors to distinguish them from the old. Such is not the case, however; both are called *Sanji-kan*. Neither does the Ordinance creating the new office indicate any particular duties to be undertaken by its holders. The evident intention is that they shall discharge functions similar to those hitherto devolving on Councillors; namely, the examination and revision of drafts of law, and the investigation of such matters as may be indicated by the Heads of Departments from time to time. But it is understood that the Councillors now appointed will be nominated Government Delegates in the Lower House, and that it will be their business to explain to the House whatever legislative projects or financial measures relate to the Departments represented by them: in short, they will have charge of such projects and measures in their passage through the Diet. Four of the five officials thus far gazetted are publicists. Mr. OZAKI YUKIO, who becomes Councillor in the Foreign Office, was long conspicuous as one of the most brilliant and uncompromising members of the *Kaishin-to*, before that Party's amalgamation with other political coteries into the *Shimpo-to*. He is a man of remarkable eloquence and much skill in debate, and it may be expected that association with officialdom will supply the ballast hitherto not conspicuous in his conduct. Mr. TAKETOMI TOKITOSHI, who goes to the Finance Department; and Mr. GAMO SEN, who goes to the Colonial Department, have also dis-

tinguished themselves in the Diet; and Mr. TOKUTAMI ICHIRO, who becomes Councillor in the Home Department, is well known as the founder and editor of the *Kokumin Shimbun*, and the *Kokumin-no-tomo*, publications that breathe a strong spirit of aggressive patriotism. It will thus be seen that the Cabinet materially strengthens its position in the Diet. The Government Delegate in the Lower House has hitherto been nobody's friend. Every political party seemed to regard him as a fair target for hostile shafts, and though many of the Delegates, especially during recent sessions, succeeded in commanding respect and attention by their masterly expositions and thorough grasp of details, none has ever been able to win the sympathy of the House. The explanation appears to be that the Delegates do not belong to the House: they are a part of officialdom. There is something plainly anomalous and impractical in the conception of a constitutional assembly which, while invited to coöperate with the Administration for legislative and financial purposes, has not the advantage of collating its views with those of the Cabinet in actual debate. We have often commented on this peculiarity of the Japanese Constitution. If the Ministry has no real responsibility towards the Diet, as was formerly claimed, and as the Constitution indicates, then there is no reason why Ministers of State or Government Delegates should address the Houses or ever appear there in person to answer questions. All necessary information could be furnished by them to the Special Committees. Their attendance in the Lower House has hitherto proved only a source of friction, for, while in the House, they were not of it, and however willing they might be to conciliate opposition and place themselves at the disposal of honest inquirers, something invariably happened to mark their alienation and "aloofness." Their supporters had no means of turning their presence to good account, and the opposition soon learned to regard their appearance in the rostrum as an opportunity for flogging the Cabinet over their backs. The new Delegates however, as members of the House, party politicians and practised debaters, will not be handicapped by the above disadvantages. Their appointment should certainly have the effect of improving the relations between the Government and the Diet, and facilitating legislative business.

Several months have elapsed since the project of creating this new office was attributed to the Cabinet, and the delay has given rise to many curious rumours. Our information, however, furnishes a very simple explanation. In the first place, the scheme itself, though conceived in general outline, did not take definite form for some time. The ori-

ginal idea was to appoint Parliamentary Vice-Ministers, an arrangement which naturally received the endorsement of party politicians. But objections having arisen in other quarters, the more modest alternative of Departmental Councillors was adopted. It will of course be understood, however, that as no appropriation for the salaries of such officials had been included in the Budget for the current fiscal year, funds for the purpose were not forthcoming, and had the appointments been made in May, when they were first talked of, the necessary money could not have been obtained except at the cost of other officials. But nearly the first half of the fiscal year having now elapsed, some of the Departments doubtless find their finances in such a condition that they can undertake to employ an additional official at 250 *yen* monthly. No profounder reasons for the delay appear to be forthcoming.

RECRUITING THE RANKS OF THE GOVERNMENT.

MR. ARAI SHOGO has been appointed Director of the Northern Bureau in the Colonial Department. The announcement probably signifies very little to our readers. Mr. ARAI SHOGO has no existence in their catalogue of familiar personages. Yet he is a man of mark in Japan. Back in the eighties, he occupied a brief but prominent place in the vista of public observation when, from the prisoner's dock in Osaka, he addressed a political speech of nearly two days' duration, nominally to the Court, but really to the country at large. He had been arrested on suspicion of complicity in a plot to raise a rebellion in Korea, and he received a term of imprisonment—two years, if we remember aright. Probably Mr. ARAI was a believer in the philosophy of *MENCIUS*, and saw in himself the heaven-appointed instrument of Korean reforms. His next appearance upon the political stage was when the Diet met for the first time. He then presented a series of questions on the subject of Treaty Revision, and elicited from Viscount AOKI a reply that filled six columns of the *Japan Weekly Mail*. But Viscount AOKI's eloquence was nothing to that of Mr. ARAI. We have sat listening to him for hours in the House of Representatives, marvelling at his command of language and his power of marshalling his arguments. All these things happened seven years ago. The impression they left was that Mr. ARAI must be counted one of the keenest debaters in the House, and certainly one of the Government's most bitter enemies. Suddenly, however, for a reason that we never could fathom, he stepped down from his place of prominence, and thenceforth he might as well have been living in some remote corner of the

Empire as sitting in the House, so completely did he efface himself for all parliamentary purposes. Men of many words are mistrusted in Japan. Mr. SHIMADA SABURO, whose speeches in parliament it is a pleasure to listen to, seems to have concluded that he must condemn himself to silence for a while. During the past two sessions his voice was scarcely heard. The same is true of other members whose orations used once to fill pages of the *Official Gazette*. It is a strange feature of Japanese political life. There appears to be a lack of continuity in the parliamentary careers of many brilliant men. They flash out for a moment, meteor-like, and then sink below the horizon. As for Mr. ARAI, however, it must be confessed that if he showed himself an impetuous and somewhat violent politician seven years ago, he has proved by his persistent quietude ever since that noisy epoch, that he understands the value of patience and knows how to practise it. Yet his emergence from such a long obscurity is a surprise. Two days ago we should have deemed it a most remote contingency.

From an article in the *Mainichi Shimbun* we gather that these recent appointments are part of a large programme which aims at putting an end to the much condemned *Fojitsu* system of administrative organization; that is to say, the selection of candidates for office by favour of person. Marquis ITO's method of accomplishing the same reform was to enact, in 1885, a rule that all aspirants for official posts must pass an examination. Evidently if examinations are not merely qualifying but genuinely competitive, they oppose a complete barrier to the abuse in question. But it appears that these examinations have not been really competitive. Something more is needed, and the present Cabinet finds that something in the homœopathic device of curing like by like. This "selection of men of talent" may be otherwise described as the selection of prominent party politicians. That they are persons of proved ability can not be doubted, but still they are party politicians, and the gradual drafting of such men into the ranks of officialdom, means that the party they represent will no longer be able to attack the Government as a Clan Government, or to denounce its administration as corrupt and incompetent. How far is this process of "reform" to be carried, we wonder. The *Mainichi* hints at something extensive. It says that despite the opposition of the conservative section of officialdom—the old-fashioned folks to whose views it applies the now-almost-forgotten epithet *sakō shugi*, or policy of seclusion—the Government means to come out boldly, and draft "the talents" into several places at present vacant; for example, the presidency of the Iron Foundry, the control of the Railway

Construction Bureau, of the Marine Products Bureau, of the Temples and Shrines Bureau and so forth, as well as into every post of importance that falls vacant hereafter. It is impossible to have faith in the wisdom of leavening officialdom so largely with party politics, but we shall wait to see the *Mainichi's* prediction fulfilled before we form any final opinion. Meanwhile one thing is self-evident, namely, that the "talents" are not limited to one party only. If this programme be really what its advocates represent it to be, some members of the present Opposition ought to be found, by and by, among the new nominees. If that test be not satisfied, the public will be apt to conclude that there is over-much homœopathy in the new process. Apart from such criticisms, however, we may fairly consider ourselves on the eve of one of those kaleidoscopic changes which have imparted to Japan's modern history so much piquancy and picturesqueness. The very phalanx of men who, in former sessions, used to make the baiting of the Cabinet their sole parliamentary aim, will be seen, next session, ranged on the benches of the Government Delegates.

THE COLONIZATION DEPARTMENT.

ON Tuesday the vernacular journals supposed to be closest in touch with the Ministry, announced confidently that the idea of abolishing the Department of Colonization had been abandoned. On Wednesday, the *Official Gazette* contained an Imperial Ordinance declaring that, from the 2nd instant, the Department should cease to exist. Shorter shrift was never given to a State office, we imagine. Twenty-four hours' notice, and then, led out and executed! The Opposition organs have amused themselves taunting the Cabinet with want of courage to adopt this measure of abolition. We fail to see what special courage was required, but, at any rate, the Cabinet's manner of doing the thing should satisfy the most drastic of its assailants. Here are the Ordinances relating to the matter:—

We hereby announce Our sanction of the abolition of the Department of Colonization.

(Sign Manual)
&c., &c.

IMPERIAL ORDINANCE No. 294.

The organization of the Colonization Department shall be abolished from the 2nd day of the 9th month of the 30th year of Meiji. (Sept. 2nd, 1897).

(Signed) MINISTER PRESIDENT.
(Dated) Sept. 1st, 1897.

IMPERIAL ORDINANCE.

We hereby announce Our sanction of the organization of a Formosa Administration Bureau.

(Sign Manual)
&c., &c.

IMPERIAL ORDINANCE No. 295.

Organization of the Formosa Administration Bureau.

Art. I.—A Formosa Administration Bureau shall be organized in the Cabinet, for the management of all affairs relating to Formosa.

Art. II.—The following officials shall be appointed in the Formosa Administration Office:—

One Chief of Bureau :	Chokunin rank.
Three Secretaries :	Sonin rank.
Twelve Clerks :	Hannin rank.

Art. III.—The Chief of Bureau shall direct all the business of the Bureau and superintend its officials, in accordance with the instructions of the Minister President of State and the guidance of the Chief Secretary of the Cabinet.

Art. IV.—The Secretaries shall discharge their duties in accordance with the instructions of the Chief of the Bureau.

Art. V.—The Clerks shall attend to their business in accordance with the guidance of their superior officials.

This Ordinance shall become operative from the 2nd day of the 9th month of the 30th year of Meiji.

(Signed) MINISTER PRESIDENT.
&c. &c.

The important point to be noticed in the above is that the Minister President of State henceforth assumes direct responsibility for the conduct of the new Bureau's affairs. It has been generally understood that one of the original reasons for organizing the Colonization Department was connected with this question of responsibility, and there can be little doubt that the Japanese public will welcome the course now taken. On the other hand, only a very superficial idea of the value of the new Bureau can be formed without knowledge of its functions, and of the relation in which it stands to the Governor-General's Office in Formosa. That relation must be of a slender character, we imagine. The Governor-General will certainly not be prepared to make reports to, or receive instructions from a bureau the head of which is under the guidance of a chief secretary. It would appear, therefore, that one effect of the change will be to increase the independent authority of the Governor-General. Frankly speaking, we do not think that he ever gave himself much concern about the Colonization Department or that the Department ever made any serious attempt to control him. Indeed, we have never been able to discover how the Department occupied itself. It was the last place in the world to go for information about Formosa. Thus, though the Governor-General was theoretically supposed to be more or less under its direction, he went his own way pretty much as he liked, and the only change now effected is that he will enjoy the form of independence as well as the reality. Still, there being a Formosa Administration Bureau in the Cabinet, it is to the Minister President of State that the nation will hereafter look for the responsible direction of Formosan affairs, and considering how very little credit the island has hitherto brought to any Japanese connected with it, we can not congratulate the Minister President on this new addition to his functions.

With regard to the saving effected by abolishing the Department, it will probably be insignificant. The appropriation or the service of the Department in the Budget for the current fiscal year stands

at 141,420 *yen*, but it does not follow that any such amount will be economized. The Hokkaido Bureau, which formed a moiety of the Department, will be transferred to the Home Department, where it used to be, and, as we have seen, the Formosa Bureau passes to the Cabinet. Hence the Department is distributed rather than dissolved.

The curious thing is that, within the past few days, no less than three appointments have been gazetted to this very Department. Mr. GAMO SEN became its new *Chokunin* Councillor and Mr. MOTOMURA MATAHISA, Private Secretary of its Minister on the 27th ultimo, and Mr. ARAI SHOGO was gazetted Chief of the Hokkaido Bureau on the 30th ultimo. Thus up to 48 hours before abolishing the Department, the Government was appointing new officials to it. That is peculiar. It looks as though the resolve to abolish was as sudden as its execution was rapid.

THE HAKODATE JURISDICTION AFFAIR.

THE six Chinamen, employés of British men-of-war, who were arrested by the Japanese police in Hakodate for gambling, have been sentenced to 15 days' imprisonment by the local authorities. It is understood that a protest was lodged by Her Britannic Majesty's Representative—acting, doubtless, under instructions from the home Government—against the assumption of jurisdiction by the Japanese authorities in this case, but in spite of the protest, jurisdiction was assumed and exercised. We are unable to discover any reasonable grounds for the protest. A moment's consideration will show that a man's connexion with a British man-of-war does not, under ordinary circumstances, constitute any obstacle to the assumption of jurisdiction over him by the civil power of a foreign country. Suppose that a British war-ship visited a German port, and that some of her crew, going on shore, were apprehended by the police in the act of violating German law. Is there the slightest doubt about the tribunal before which they would be arraigned? Of course not. They would be tried and punished by a German Court. The same is true, *mutatis mutandis*, of a German war-ship in a French port, or a French war-ship in an English port, and so on. In no Occidental country does the fact that a man is serving in a foreign war vessel exempt him from the jurisdiction of the civil courts of that country with respect to a violation of its laws committed on shore. If, then, exemption be claimed under such conditions in Japan, the claim must rest on exceptional grounds, namely, that Japan has conventionally surrendered a portion of her jurisdiction to certain foreign Powers; in other words, the claim must be based on our old friend, extraterritoriality. By treaty Great Britain has

acquired the privilege of exercising criminal jurisdiction over her subjects in Japan. Everybody is familiar with that fact. The words of the Treaty are "British subjects who may commit any crime, &c., shall be tried and punished by the Consul, &c." So, then, the question narrows itself to this:—Were these six Chinamen "British subjects" in the sense contemplated by the Treaty? In the Orders in Council we have definitions of what is meant by "British subject" for the purposes of Consular jurisdiction. The China and Japan Order of 1881, says:—

In this Order, "British subject" means a subject of Her Majesty whether by birth or naturalization. "Foreigner" means a subject of the Emperor of China or of the Mikado of Japan, or a subject or citizen of any other state in amity with Her Majesty.

There is nothing here that can possibly be construed as conferring the title of British subject on the Chinamen arrested in Hakodate. On the contrary, the language of the Order is explicitly fatal to any such title. Turning, however, to a later Order—that of 1884—we find an amplification of the definition.

The expression "British subject" shall include a British protected person in so far as by Treaty, capitulation, grant, usage, sufferance or other lawful means, Her Majesty has jurisdiction in relation to such person in China, Japan and Korea respectively.

Can the six Chinamen be regarded as "protected persons" in the sense of this Order? They have not acquired any such status by treaty; they have not acquired it by capitulation; they have not acquired it by grant; and they have not acquired it by sufferance, since Japan, being now brought face to face with the problem for the first time, declines to "suffer" the procedure. So, then, we are reduced to "usage." But it has been shown above that no usage of the kind exists in Europe or America. The officers or crew of a foreign man-of-war are judiciable by the civil authority of every Occidental country in respect of crimes committed by them after landing in that country. Where, then, is the usage? Last year, if we remember aright, a quotable case occurred in China. The cook of H.M.S. *Essex*, a Chinese, shot a fellow-countryman by accident, and having been arrested by the Chinese police, was afterwards surrendered to the Consular Authorities. But what China permits by "sufferance" has no concern for Japan. China, proverbially supine about matters of jurisdiction, might surrender all her judicial authority, were she so minded, without establishing any precedent that would have the least binding effect upon Japan. The Japanese are jealous about such matters. Where the Treaty can not be invoked against them, they claim to follow the usage observed by Occidental notions in their intercourse with one another, and we think they have a right to make that claim. The usage of Occidental nations offers no precedent for the protest lodged by Her

Majesty's Representative, so far as we can perceive.

Our readers will at once observe that the whole argument in favour of the protest travels in a vicious circle. If these Chinamen would have been exempt from the jurisdiction of the civil authority in a European country, then no reason exists to invoke extraterritorial privileges as a plea for their exemption in Japan. If no usage of the kind is recognised in Europe, then it can not be invoked to establish in Japan a privilege independent of those secured by the extraterritorial clauses of the Treaties.

It is unfortunate that such complications should arise—especially unfortunate in the present case seeing that the Consular Authorities have no competence to inflict a penalty for the special crime of which the Chinese were guilty, namely, gambling, even supposing that the men were handed over to them. Thus Great Britain stands in the position of advancing a claim which, if recognised, would enable the Chinese to escape the first penalty of their offence. How curious and interesting are the problems that present themselves in connexion with that perplexing make-shift, extra-territorial jurisdiction!

DEATH OF MR. C. ABENHEIM.

Death has claimed a foreign victim to dysentery in the person of Mr. Carl Abenheim. Of rather frail physique, Mr. Abenheim has not been in the best of health for the past two years, but when he left Yokohama a fortnight ago for a short trip to Ikao, it was thought that his condition was more favourable than it had been for some time. But at Ikao the first symptoms of what proved his fatal illness presented themselves. He immediately left for Yokohama and undoubtedly the long rough jinrikisha journey to Shibukawa, the tram-ride from there to Mayebashi, then the train to Yokohama proved too much for his debilitated frame. Gradually he grew worse, sinking into the last sleep of death on Monday afternoon. The sudden cutting short of so young a life—he was but 24—is particularly sad, and much sympathy is extended to sorrowing sister, father and brothers.

The funeral took place on Tuesday afternoon, the cortege leaving the late residence of the deceased on the Bluff at 5.30 p.m. There was a large attendance of friends at the Cemetery, where the funeral service according to Hebrew rites was performed. The floral offerings of sympathy and respect were very beautiful and included wreaths and chaplets from the following:—Messrs. H. Goldman, H. A. Dare, G. Bramhall, J. H. Rosenthal, E. Andreis, A. B. Brown, Mr. and Mrs. Grath, Mr. Rose, Mr. and Mrs. H. Moss, Mr. and Mrs. Simon, Messrs. Tanner, Tuska, Russell, Joseph Schedel, Mr. and Mrs. Isaacs, Mr. Oscar Pollak, Dr. Muoro, Messrs. P. J. Hellendaal, J. Wikowski, Mr. and Mrs. Gibbs, Messrs. Schwab (Kobe), F. Solomon, Abbey, E. Mendelson, Mrs. J. Mendelson, Mrs. Wheeler, Messrs. Cohen, Blad, Mr. and Mrs. Campbell, Mr. Stern, Mr. and Mrs. Geo. Colton, Mr. and Mrs. H. Pollack, Mr. P. Blum, Mr. and Mrs. H. Blum, Messrs. N. Kawagita, Y. Yoda, M. Kanamori, T. Hashimoto, T. Tonokura, K. Hattori, T. Miyata, Onishi Shoten, K. Egawa, G. Shiraiishi, K. Ohara, Mutsamiya, S. Takano, D. Takagi, G. Onishi, Ishi, and Ueda.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

According to the *Shinri*, the Rev. C. Munzinger has lately published in German his views on the Missionary methods that it is best to adopt in Japan. It is stated that Mr. Munzinger's opinions on this subject have been discussed by various German journals. An epitome of his essay is given in the *Shinri*, from which we extract the following. The first thing that it is important for a Missionary to do on reaching the scene of his labours is to study the peculiarities of the native mind. This can only be done by his identifying himself with the people among whom he resides to a large extent. In Greece he must become a Greek. To the Jews he must be a Jew. This is specially the case in Japan. No amount of piety or Christian zeal in the Missionary will make up for ignorance of the mental characteristics of the Japanese. The experience of the present writer, extended over a number of years, has forced upon him the conviction that in missionary affairs Japan is a country of surprises. One never knows what is going to happen next. The Japanese may be compared to a volcanic mountain which bursts into flame at a time when it looks as though it would remain quiet for ever and whose abnormal activity subsides as quickly as it commenced. The progress of the Japanese resembles that of a serpent. It is not straight in one direction, but consists of a series of convolutions. This fact is abundantly illustrated by the history of Christian missions during the past thirty years. In Japan it is not safe to predict anything.

With the above sentiments the Rev. R. Minami expresses his disagreement in the following terms:—Mr. Munzinger's estimate of Japanese character is based on observation of mere surface feeling and leaves unnoticed the depths of the Japanese mind. Unlike foreigners, the Japanese consider that it is not the proper thing to allow their feelings to find expression in change of countenance. Whether pleased or displeased they aim at presenting a calm front. The greater the issue at stake the more unperturbed do they study to remain. So that when at last a feeling makes itself known, a casual observer is apt to think that its existence and its open expression are contemporaneous; which is not the case. The use of the volcano and the serpent as illustrations of the working of the Japanese mind shows that Mr. Munzinger has not rightly understood it. When that mind is quiet it is not idle; it is assimilating material to strengthen it for future efforts. Mr. Munzinger says that in Japan there are few *kofiki-shinta* (beggar converts), but that there are numbers of persons whose chief object in coming to the Missionary is to improve their knowledge of some foreign tongue. To me this latter class appear as no other than "beggar converts," since their aim is to get worldly profit out of connection with the Missionary. It is undeniable that such persons are blameworthy, but so also are the Missionaries who receive them. Mr. Munzinger says that party spirit being highly developed in Japan in missionary work, there is a strong tendency among the Japanese to split up into a number of parties, resulting in the accomplishment of only a small portion of the work that could be done by one strong body. Mr. Munzinger also observes that Christianity in Japan is too much mixed up with politics. Church questions are all more or less affected by politics. The American missionaries who include politics in their divinity courses at theological seminaries are to a large extent responsible for this state of things. With these opinions in the main, I agree, observes Mr. Minami, but I think that the American Missionaries acted wisely in teaching politics to theological students, as a knowledge of this subject is indispensable to a Christian minister if he is to preach intelligently on the questions of the day.

To the term and to the thing signified by "Japanese Christianity" Mr. Munzinger objects as it implies that Christianity is capable of being

changed to suit Japanese taste. The aim of Missionaries must be to teach a Christianity that shall assert its dominion over the whole of the Japanese mind and mould it into its own shape, instead of a Christianity that can be modified to suit national peculiarities.

* * *

From the *Fukuin Shimpō* we extract the following particulars bearing on the progress of Christian work in the Methodist Mission during the year ending June 30th, 1897. *Literature*:—Thirty books have been issued during the year, the total number of copies printed being 35,200. Under the head of miscellaneous publications there were 27 different works printed, the total number of copies being 151,000. For use in Sunday schools 10,000 copies of various small works have been issued. Seven small English books; no. of copies printed, 8,160. Sum realised by sale of books, yen 12,699. The total number of full members is 3,524, showing an increase of 155 over last year. Catechisms number 1,197. There have been 518 baptisms during the year, being an increase of 53 over last year. The proportion of infant baptisms is not given. The sum of 8,055 yen has been expended in the salaries of pastors, being an increase of 1,745 yen over last year.

* * *

Statistics are furnished by the same organ on Mr. Hara's work among released prisoners. From January 1st to June 30th, no less than 262 received assistance of various kinds, some being helped to find places, and sheltered and fed while idle; others being sent to their native provinces or placed out in the metropolis. The sum of 881 yen has been subscribed towards the erection of a Refuge for discharged prisoners, 517 yen of which has already been spent.

* * *

In the pages of the *Seikyō Shimpō* it is contended that the civilisation which Japan has adopted from the West is founded on Christianity and hence that Japan has adopted Christianity unawares. The manner in which Japan treated her prisoners and wounded Chinese in the late war, supplying the latter with Red Cross Society nurses, is cited as an instance of the manner in which Christian influences have so mixed themselves up with the Western system of civilisation adopted as to be inseparable from it. Neither Buddhism nor Confucianism ever exercised such a beneficent influence on the actions of men in time of war. The writer goes as far as to say that Japan's whole success in the war is to be traced to her having borrowed from the West a Christian form of civilisation, and that her new codes are based on Christianity and hence the assertion that she is indifferent to Christianity is not correct, she, in an indirect manner, having accepted Christianity. Even Buddhism has in many respects been transformed by Christian influences, and among modern Japanese scholars it has, in the case of men like the late Mr. Nakamura Keiu, and the active and enterprising proprietor of the *Yiji Shimpō*, made itself distinctly felt.

* * *

The organ we have just quoted from furnishes the following statistics bearing on the growth of the Greek Church: At the Annual Church Meeting held in Tōkyō, July 12th, it was announced that the baptisms during the year have been 954, an increase of 11 over last year's record. The total number of converts is 23,514, and of ordained pastors and other workers 189. Ten young men have graduated at the school of Divinity during the year.

* * *

Dr. Itō Keisuke, the well-known Botanist, has reached the age of 95. According to a correspondent of the *Zaiyō* who has interviewed the old gentleman, Dr. Itō has for many years past lived a most exemplary life, imparting daily instruction to the members of his household, the purport of which is the fear of God, respect for loyalty, integrity of life, kindness and forbearance to each other, moderation in eating and drinking, early hours and diligence in the

business of life. "My eyes are so dim that I can hardly see, my ears so deaf that I can hardly hear; and my hand shakes so much that I can hardly hold a pen," says the aged scholar, "but there is one thing that I can do, which is to take care that nothing that I say or do shall be a stumbling block to my fellow-men."

* * *

The *Nihonjin* argues that it is inconsistent of Mr. Fukuzawa to open a raid against religion on the score of its ineffectiveness in the business world. In the opinion of the *Nihonjin*, Mr. Fukuzawa himself is to a large extent responsible for the materialism and money-loving spirit of the age, he having persistently advocated industrial and commercial development and all-absorbing attention to the business of money-making. He more than any other man has ridiculed the uselessness of the ancient *samurai*. This type of manhood has now become a thing of the past, but so has the moral code which the ancient *samurai* practised, the superiority to worldly maxims and the total absence of sordidness that he displayed. Mr. Fukuzawa does not like the change and appeals to teachers of religion in his distress. Apart altogether from the consistency or inconsistency of Mr. Fukuzawa, it is quite true that Japan has never needed religion so much as she does now. Life has become grovelling; money is becoming the standard of all things. The Government is corrupt, the Law is without efficacy, the Constitution has little merit, members of the Diet have bartered away what virtue they had; Courts of justice wield little influence. The nation is in a bad state and calls for help to any and every form of faith. May not religion be made to do here what it has done in the great business circles of the West? May it not act as a deterrent to check the progress of the corruption that has already set in?

* * *

The *Kyōrin* (Shintō) advocates the erection of shrines and temples in various parts of Formosa, the distribution of charms, trinkets, &c., among the natives and other efforts designed to render the inhabitants loyal subjects of the Emperor of Japan. In the opinion of the *Kyōrin* the Government should lend its assistance in pushing Shinto in the newly acquired territory, this being the only sure way of securing the permanent allegiance of Formosans to Japan.

Mr. Naitō Chisō, a rank conservative in all Shintō matters, objects altogether to the new Shintoists represented by the *Nihon Shugi*. In a letter addressed to the *Kyōrin* he contends that there can be no such thing as "New Shintō." The way of the Gods is old and ever must be so regarded. The new movement is their attempt to pander to modern tastes and has no business to make use of the term Shintō. The boasted independence of the new party exists only on paper. When the representatives of this party state that their chief object is to adopt Shintō to the modern spirit, they at once confess that they are no longer independent. They bow to that transient and unstable thing, the spirit of the age. Alarmed by the proximity of mixed residence and the inevitable contact with foreigners, they abandon the creed which we have received from our ancestors and attempt to construct a fabric more in harmony with foreign models. As for me, nothing would induce me to give up a creed that has stood the test of ages for a set of doctrines that are nothing more than an accommodation to passing sentiment. Those who say that ancient Shintō is not suitable to the present age are too ignorant of its teaching to be entitled to express an opinion on the matter.

* * *

Shintoists are, we observe, advocating the purging of the Shintō Pantheon of foreign elements. In many cases Buddhist divinities and gods of Hindoo origin have been worshipped at Shintō temples and not a few priests combine Shintō and Buddhist rites in a most improper manner, says the Shintō organ from which we quote. It is a disgrace to find in the temples of Hachiman, Kasuga, and other gods persons worshipping Brahmanic divinities.

The Shintoists have held a meeting of priests

from all parts of Japan, at which it was decided to petition the Diet next session for the revived of the office 神祇官 Jingi-kan, and to take other steps for furthering the interests of the sect.

The *Bukkyō* publishes a well-written and spirited article on the present condition of Buddhism throughout the country, the tone of which is pessimistic from beginning to end. The writer contends that Buddhism is dead. He sees no object in hiding the real facts. The attempts of numerous organs to make things appear better than they are may be traced to self-interest, to the desire to retain as long as possible the worldly advantages incidental to the position occupied by leading priests. In our opinion, says the *Bukkyō*, the only way to cure evils is to expose them, and this is what we have to say about modern Buddhism. Though the 13 sects and 30 branches all have their temples, their literary organs, and their priests, there is no life in the whole affair. The machinery is there, but it does not work. The relations of main temples to branch temples, of priests to their parishioners, of priests to the divinities they profess to worship, of sects to each other, of teachers to scholars, of preachers to hearers, of Buddhists as a body to society, are all alike characterised by perfunctoriness, artificiality and formality. Between the faith professed and the works accomplished there is no correspondence. Faith that hath no works is dead. There is no feeling of responsibility for parishioners with priests and no real respect for priests among parishioners. The class of priests known as *Sekkyō-sō* (Teaching Priests) consists for the most part of unlearned men who have never penetrated beneath the surface of things, and whose performances have, therefore, been well described as resembling those of stage-actors. The state of mind of the junior priests who in the natural course of events will be called upon to become rectors is most unsatisfactory. The majority of them take no interest in their religion and are looking with longing eyes on lucrative professions. Wherever there is the slightest inducement, they are ready to renounce their orders and devote themselves to money-making. The connection of branch temples to main temples is purely a financial affair. The main temple holds the purse strings and hence deference is shown to it. To act as centres of organisation and religious life is not a part that these temples aspire to play. The influence wielded by Chief-Abbots is all connected with money. A body without a living heart, a number of limbs with no living nerves to connect them with an all-controlling will—such is modern Buddhism.

The *Kokumin-no-tomo* thinks that sufficient attention is not paid to the religious education of children in Japan. In an article on this subject from the pen of Mr. Matsumoto Kōjiro it is maintained that it is possible to impart religious instruction of a purely scientific kind, so that the doctrines taught will suit equally well any form of faith that may be adopted in after years—a theory that looks well on paper.

The Nihon Fukuin-dōmei-kai held its ninth General Meeting in Tōkyō last month. Mr. Minami says that the Society has made remarkable progress in the past few years. In 1890 it objected to fraternise with members of the Jiyū Kirisutokyo and forbade Christians belonging to the "Friend's" mission from joining. At that time it used to spend hours in the discussion of knotty theological questions. Now all is changed. Nobody inquires as to what sect Christians belong. Theological questions are not introduced and the Society confines itself to the discussion of Christian work. Christians, concludes Mr. Minami, have a hard task before them and there is much that is unfavourable in the state of the world to-day, but they should not be discouraged, as all great causes have encountered and overcome similar difficulties.

The *Sekai-no-Nihon* reports an address de-

livered by the new President of the Dōshisha, Mr. Yokoi Tokiwo, in which the present condition and future prospects of the institution are discussed. The Dōshisha has now reached its low water mark, says Professor Yokoi. Formerly, under the management of Mr. Nijijima, it was attended by 800 or 900 students. Ten years ago among private schools there was none to compare with it. There are now not more than about 300 pupils in attendance. If the Dōshisha is to be considered an ordinary high class school, then its future existence and prosperity are by no means assured. It is essential to its success that it should be distinctly ethical in character, that it should wield Christian influences. There are three principles which need to be insisted on in Japan at the present time. (1) *Individualism*.—In Oriental ethical systems the place assigned to the individual is very inferior. (2) *Universal brotherhood*.—It was this idea that led Mr. Nijijima to set about founding the institution. There are those who maintain that this principle is opposed to nationalism, in fact, is subversive of patriotism. But to me no nationalism that is not blended with a deep regard for all members of the human race, as such, is of any value. I may go further and say that the nationalism that engenders hatred of foreigners is positively dangerous to the nation that it influences. It is impossible to observe the growth of this species of nationalism without anxiety. (3) *Ethical Nationality*.—The importance of the State as a means of insuring the welfare of mankind should be based in teaching on ethical principles. Our feeling towards our country should be that which is so well expressed by Wordsworth,

But dearly must we prize thee: we who find
In thee a bulwark for the cause of men.

If in the future Dōshisha these three principles are emphasized, the institution, like the Keiō gijuku and the Waseda Semmon Gakkō, will possess a distinct character of its own and hence its success will be assured.

In the *Shūkyō* Mr. Taguchi Ukichi is reported to have given utterance to the following sentiments when speaking on "Self-love" at the Commencement Exercises of the Senshingaku-in. The essence of self-love consists in making oneself independent of other people; as the world is now constituted, altruism has to be bestowed by one set of people and received by another. But this is an inferior state of existence. There is a higher ideal. Men ought to have sufficient self-respect and independence of spirit to be above becoming objects of charity. A state of society where there is a large call for charity is a hotbed of servility and dishonesty. As a principle, individualism is in every way superior to altruism, having for its object the rendering of each individual independent of others, while altruism implies the existence of a large class of people who either cannot or will not help themselves. Good and bad acts are all related to a state of society which it is most undesirable to perpetuate. Much of what is pronounced virtue at the present day, the help given by the fortunate to the unfortunate, the rich to the poor, would not exist were that higher stage of existence, universal self-respect and independence, reached. It is worthy of remark that Ikkyū referred to this higher plane of attainment when he wrote:—

Yo no naka ni jiji mo akuji mo senu hito wa,
Sasoya Yemmo mo komari-nuru ran.

The meaning of which is that Pluto would be puzzled what to do with men who have done no evil themselves and have not deemed it necessary to extend charity to others. To send them to Elysium or to Tartarus would be alike unreasonable. Thus did Ikkyū plainly perceive that between what is known as virtue and vice there is a state of existence in which the mind is independent of both. To reach that state is the aim of everyone who cultivates to the full the self-respect which is superior to receiving favours from others that can never be returned.*

* In reference to the evils attendant on the giving and receiving of charity, Mr. Leslie Stephen has expressed himself in similar terms to those used by Mr. Taguchi.

In the same number of the *Shūkyō* from which the above is taken is an Editorial entitled *Kokusui no kantei wa kaikaku sakkyō igo no koto*, "Judgment on nationalism must be postponed till after the opening of the country and mixed residence," of which we give the following epitome. The value of the characteristics which constitute the essence of Japanese nationality can only be tested by coming into contact with the national traits of foreigners. There is a great deal of loose, illogical sentiment afloat in reference to the subject of Japanese nationality. There are those who argue that Japan has no occasion to borrow anything from Occidentals: she is equipped with all she needs. There are others who contend that there is little that is native to the soil worth preserving: Japan needs Europeanising down to the very roots of her being. Both these theories are untenable. To retain what is valuable and to eradicate what is no longer of use must be the course adopted by all well-informed minds. People talk as though what is called nationality was some uncompounded chemical substance that never changed, instead of being a compound consisting of elements derived from a variety of sources, which is ever undergoing new modifications. The value of what we call our nationality will be well tested by the process to which it will be shortly subjected. On its superiority to that possessed by alien races it is too early to pronounce an opinion. It is not until it is displayed in the great markets of the world side by side with foreign commodities that the real value of the produce of any one nation can be determined. We have Buddhists on the one hand and Shintoists on the other expressing great anxiety lest mixed residence should work great harm to their cause. They seem to shrink from subjecting their doctrines and practices to the only sure test of merit—the world's approval. The nationalism which can come into contact with Occidentalism without losing its identity, that and that only will be worthy of preservation. The term nationalism current to-day includes a number of diverse elements and is used in many senses; that combination which most accords with the career that Japan has mapped out for herself alone can become permanent.

The *Rikugō Zasshi* in commenting on an article from the pen of the Rev. Arthur Lloyd on "The Presentation of Christianity to Japan," published a few months ago in the "Far East," says that Mr. Lloyd shows a liberality of sentiment rare among Missionaries, who, in presenting Christianity to others, are swayed by their own prejudices and proclivities. But there is one question which it is pertinent to ask in connection with Mr. Lloyd's article. Are the evidences which he adduces confined to Christianity alone, or do they not equally suit other creeds? If Mr. Lloyd's design was to show that Christianity differs from all other religions in the possession of a perfection that is absolute, his arguments are inadequate. Judged by this criterion the attempt is a failure.

The opponents and the supporters of the Shintō Nationalistic movement are still causing no small stir in the religious world, and amid the variety of interpreters of the real significance of the new departure, it is not easy to reach any satisfactory conclusion. The most probable theory is that the projectors of the movement are not agreed among themselves as to details. They have a vague notion that the interests of nationalism are to be pushed by a revival of Shintō. In the copy of the *Nihon Shugi* before us, Dr. Motora takes pains to show that principles such as nationalism, individualism, and the like have no real connection with religion, and that the cause espoused by the *Nihon Shugi* only has one object, namely, the deepening of patriotic feeling.

The *Nihon Shūkyō* argues that the only way to determine the nature of the new movement is to examine closely the general views of its chief promoters, who are all well-known men. On this subject it furnishes the following particulars,

(1) Dr. Motora Yūjirō:—Dr. Motora was formerly a Christian of considerable reputation, who studied at a Theological College abroad. Having given up Christianity, on his return to Japan, he prepared a work called *Kōka Rinri* (State Ethics), founded on advanced German treatises on the same subject, which was never published. Some 7 or 8 years ago, Dr. Motora commenced to collect opinions on the ethical notions entertained in the various provinces of Japan, and subsequently published a work on Ethics. Dr. Motora is a quiet, plodding, scholarly man and not one to be carried away by a sudden emotion. He has joined the present movement deliberately and from conviction and is to be regarded as second to none among its supporters.

Dr. Inoue Tetsujirō:—Dr. Inoue is considered by some to be a great admirer of, if not a believer in, Buddhism. His *Shūkyō Kyōiku Shōtotsu-ron* (Conflict between Religion and Education), seemed to indicate this in addition to revealing his antipathy to Christianity. But the truth is that Dr. Inoue rejects both Christianity and Buddhism. His work on "Mixed Residence" published a short time ago had a strong leaning towards the views championed by the *Nihon Shugi*.

Mr. Kimura Takatarō:—A literary graduate of the Imperial University, an earnest student and admirer of Shinō and Zoroastrianism, and the author of the *Hai-Bukkyō* (Abolition of Buddhism). Mr. Kimura has for some years past been moving in the direction of nationalism.

Mr. Yumoto Takehiko:—The son of a Shinō priest, sent to Germany to study, Mr. Yumoto became enamoured of German views on State ethics, and returned to Japan with the resolve to combine German and Shinō principles in the elaboration of a system of nationalism.

Mr. Takenouchi Manzō:—Mr. Takenouchi is very well known in religious circles. Originally a Shintoist, some years ago he joined the Methodist mission and studied at Aoyama. Subsequently he became a member of the Kirisuto Kyōkai and carried on evangelistic work in connection with that body. His next step was to join the Unitarians and to study at the Senshōgaku-in, where he spent three years. For about a year he wrote for the *Shūkyō* and now he has turned into an earnest advocate of nationalism, preaches the necessity of purging morality of religious elements. He represents Christianity as destructive of patriotism. By the foregoing it will be perceived that Mr. Takenouchi is a man of remarkable mental capacity. The only thing that surprises us is the length of time it has taken him to attain the knowledge he now possesses.

Mr. Takayama Rinjiro:—Among young writers a man of considerable promise, Mr. Takayama in the summer of last year, published an article in the *Sekai no Nihon* on "Religion and Art" in which religion received high praise. The next thing we hear of him is that he is in favour of the abandonment of all forms of religion and the adoption in lieu of them of the principles of nationalism. The rapidity with which his convictions change is a cause for wonder.

Mr. Kurabara Ikaku:—Formerly a Christian, in late years an earnest advocate of evolution, Mr. Kurabara seems to have acted deliberately in identifying himself with the new movement.

The gist of the *Nihon Shūkyō*'s contention is that, whatever may be thought as to the permanent success of the new scheme, its chief promoters are undoubtedly earnest men who regard with alarm the extent to which certain sections of the community are adopting Western notions *en masse*, and whose chief object it is to stir up those conservative instincts which lie dormant in Japanese breasts, and thus erect some kind of a bulwark against the inroads of the still more powerful Occidentalism which new Treaties and Mixed Residence will introduce. But to not a few keen observers the movement appears to be nothing but an attempt to stop the sea with a mop.

MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for July, showing the foreign trade of the Empire for the month:—

	1896.	1897.
Exports	7,347,198.520	10,636,311.670
Imports	14,653,927.710	17,540,099.350

DEATH OF MR. G. C. B. DUNLOP.

It is with regret that we announce this morning the death of Mr. G. C. Buchanan Dunlop, which occurred at Ikao on Thursday afternoon. Brief particulars of Mr. Dunlop's demise were contained in a Japanese telegram that reached Messrs. Findlay, Richardson & Co.'s offices in Yokohama between five and six o'clock yesterday afternoon, but the hour of his passing away was not given. Mr. Dunlop and his family were spending a holiday, avoiding the heat of Yokohama, at Kindayu's hotel, Ikao, the pretty health resort that straggles up one of the flanks of Mount Haruna, and a couple of weeks ago was attacked with dysentery. At first the malady was not considered serious, but gradually the sufferer grew worse and Dr. Wheeler was telegraphed for. The good doctor at once left for Ikao and stayed there with the patient for a few days. Meanwhile one of Mr. Dunlop's little girls contracted the malady, as did also the European nursemaid. An improvement taking place in the condition of

all, Dr. Wheeler returned to Yokohama. But on Thursday he was again telegraphed for, but before he could reach Ikao, Mr. Dunlop must have succumbed. The deceased was the local resident partner of one of the oldest firms in the Far East, Messrs. Findlay, Richardson & Co., who have houses in Manila, Kobe, and Yokohama, with head offices in Glasgow. Many years of his life were spent in Manila, and the effects of its trying climate were undoubtedly present in Mr. Dunlop's system to the end. Ever since coming to Yokohama Mr. Dunlop has been a familiar figure among the horsemen of Yokohama, for he took a keen interest in all that related to equestrianism and the welfare of the Nippon Race Club. Much sympathy is extended to the widow and family in their sad bereavement.

THE LATEST MESSAGERIES MARITIMES STEAMER.

The courteous and enterprising agent of the Messageries Maritimes sent out invitations to a reception on board the Company's new steamer *Laos*, for Wednesday afternoon, and some two or three hundred ladies and gentlemen of Yokohama, of divers nationalities, availed themselves of the opportunity of inspecting one of the finest vessels that has ever entered Yokohama port, and of partaking of the lavish hospitality of M. Conil, the Company's local agent, and Captain Flandin, of the *Laos*. The four long tables in the first class saloon were spread with delicacies sufficient to tempt the appetite of the most abstemious epicure, while sparkling champagne cup and other liquid refreshments were served out to the guests *ad lib* by a well trained and obliging staff of stewards. From two till half-past five p.m. the *Laos* was thronged with visitors, most of whom we doubt not, with ourselves, left the good ship with a longing desire to make a lengthened trip in her. The *Laos* is the newest vessel built for the great company which owns her and needless to say she embodies all the latest improvements in construction and fittings known to the shipbuilding art. She was built at La Ciotat at the Messageries Maritimes' own works and left Marseilles on her maiden trip on the 17th July, making, as has already been reported, a splendid, if not a record, run out to the Far East. She is a twin screw steamer of 6,357 tons gross, 2,331 tons English register, and is 474 feet long, 52 feet beam and 37 feet deep. She is fitted with Belleville boilers of 7,200 horse-power and can steam a little over 19 knots an hour. The *Laos* is constructed with a view to being utilised as a cruiser if necessary and is fitted with abutments for guns on the main and promenade deck. Her accommodation for passengers is exceptionally large and well arranged, and in the furnishing and decoration of the saloons, music room, smoking room, and first class state rooms no expense has been spared, and in this respect probably she is the finest vessel that has ever been owned by the Company. The first class saloon is on the main deck, with ceiling open to the roof of the promenade deck above, a gallery, attached to the music room, running round the sides. The fittings and decoration are superb and culminate in the fine art work displayed in the music room on the promenade deck, the walls and ceiling of which are frescoed with paintings by leading artists and beautiful gilt mouldings in the Louis Fourteenth style. The wood carving and panelling in the saloon is also exquisite in its design and finish, and with the fine plate glass at the end of the saloon, the effect produced is that of a saloon or drawing room in a hotel of the very first class. The second saloon, though not so ornate, is a fine airy apartment running athwart ship the full breadth of the vessel. The cabins are more commodious than is usual, light and cheerful and are fitted up in pitch pine, mostly with from two to four comfortable beds in each. Under every bed or bunk is a cork life buoy. The ship is fitted throughout with the electric light, as well

as every other convenience of latest invention, the bathrooms and lavatories in particular showing a vast improvement on the old order of things. In addition to the comforts of a first class hotel, provided by the *Laos*, the vessel, moreover, has proved herself a first class sea boat.

KOREA IN THE HOUSE OF COMMONS.

We have already learned, through the medium of a brief Reuter's telegram, that the question of Russia in Korea came upon the *tapis* in the House of Commons on July 19th. The full report of the debate is now before us. Sir Charles Dilke said:—

Turning to our position in the further East, I do not see there, any more than in connexion with Crete and Greece, any sign of what the hon. and gallant member for the Wirral Division of Cheshire called the "strong and resolute will of Lord Salisbury." What had happened in Korea was a sort of test case as regards our influence in northern China. The Russians had landed a force of marines in Korea, and we landed British marines at the same time, thus showing our continued interest in Korea. After that came another curious development of our policy—the fuss we made over Li Hung-chang, certainly a case now admitted to be one which on another occasion Lord Salisbury had described as putting our money on the wrong horse. Since that time the policy so well expressed by the Under-Secretary for Foreign Affairs in his remarkable book, "Problems of the Far East," seemed to have been abandoned, and Korea, left to its fate, came under Russian influence together with the whole of Northern China. There was a Blue-book which contained assurances which had been received from Russia with regard to the future of Korea. Russia practically pledged herself not to occupy or to interfere with the Korean territory. But there was a very large Russian staff at the present time drilling the Korean troops and the palace guard. Russia had obtained concessions in Korea for the working of timber and the mining of gold; she had made over the railway to be constructed to a French company, and she had received a special frontier tariff. He thus failed to see any sign of that strong and resolute will in the conduct of foreign affairs which the hon. member for Wirral described.

To these remarks the Honourable Mr. Curzon replied as follows:—

The right hon. baronet has asked some questions about Korea, and I do not in the least deprecate his allusion to British policy in regard to this part of the world. I am always very glad when I find members taking a great interest in that which I think myself a most important subject of Imperial politics.—(Hear, hear.) With regard to the views I have myself ventured to express I do not know that they very substantially differ from those which have been entertained and acted upon by the present Government. The right hon. gentleman asks us to state what are our interests in Korea. Well, I imagine that the independence of Korea is of international interest, but the right hon. gentleman knows enough of the history of the Far East to know that Korea is feeble and has never been able to stand alone. For years, and for centuries, she leaned upon China, and now, since the war is over, she, by virtue of a sort of common agreement, leans on Russia and Japan. The right hon. baronet seemed to think that Korea had been abandoned to her fate and that she was to be left to share the fate of Northern China, but I must say I do not agree with his account of the incidents. British interests in Korea are, of course, not identical in character or in moment with the interests of the other Powers I have mentioned. We have not a contiguous frontier, as have Russia and China, and, in the second place, we do not gaze at her across the seas, as does Japan. We have, of course, commercial interest in Korea—interests which I should be the last to minimize, but interests not assessable at a very high figure, and they have never yet persuaded any British firm to embark on mercantile enterprise there. Our interests in Korea are commercial, and first, to see that the independence of Korea is maintained, that it is not territorially or administratively absorbed into the Empire of Russia; secondly, that Korean territory and Korean harbours are not made the base of schemes for territorial aggrandizement, so as to disturb the balance of power in the Far East and give to one Power a maritime supremacy in the Eastern seas. Commercial expansion is a thing we must expect, and which we must endeavour

with the means at our disposal to meet, but any such attempts as I have been describing by one Power would find us ready to protect our own interests there.—(Hear, hear.)

FLOATING CAPITAL OF JAPAN.

According to the *Shogyo Shimpō* the amount of reserves as well as paid-up capitals of the various banks throughout the Empire for the past five years are as follow:—

Year.	Capital. Yen.	Reserves. Yen.
1892	85,681,777	26,040,111
1893	94,572,848	27,104,047
1894	101,409,881	30,231,153
1895	127,807,715	34,623,518
1896	245,134,544	(uncertain.)

The temporary and fixed deposits of these banks were as follow:—

Year.	Temporary deposits. Yen.	Fixed deposits. Yen.	Other deposits. Yen.	Totals. Yen.
1892	34,950,705	20,939,057	14,963,370	61,164,032
1893	46,796,621	27,960,817	10,078,274	85,735,712
1894	62,174,911	27,049,607	15,027,727	104,752,245
1895	89,220,665	58,440,993	21,069,071	148,730,729

The figures for Savings banks and deposits in post offices are:—

Year.	Banks. Yen.	Post Offices. Yen.
1892	7,205,423	21,341,492
1893	6,088,976	24,052,182
1894	6,871,327	23,289,346
1895	12,178,268	26,373,961

It may therefore be perceived that the amount of reserves and paid-up capital of the various banks, deposits, and savings and the amount paid into post offices throughout the Empire, all of which may be represented under the head of floating capital, has, since the 25th year of *Meiji* (1892), increased as follows:—

Year.	Totals. Yen.	Rate of increase per cent.
1892	209,834,835	—
1893	237,493,805	13
1894	267,553,991	28
1895	349,826,191	67
1896	(uncertain)	—

THE LOST "CHENG HYE TENG."

The *China Mail* publishes the following telegram:—

Shanghai, August 25th, 5 p.m.
Mr. Collins, third engineer of the Penang-owned steamer *Cheng Hye Teng*, and ten Japanese and Malay members of the crew, have arrived at Ningpo.

The steamer, which was on a voyage from Moji to Hongkong with coal, was caught in a typhoon, and foundered on the 10th inst.

Captain Scott, who was in command, committed suicide by shooting.

Four European officers and engineers and the other members of the mixed crew—making a total of twenty-one—were drowned.

The survivors had been drifting about for four and a-half days in an open boat, without food or water, when they were picked up by a Chinese junk and rescued. The boat was towed into Ningpo.

THE SCIENTIFIC COOK OF TO-DAY.

Give me a spoon of oleo, ma,
And the sodium alkali,
For I'm going to bake a pie, mamma,
I'm going to bake a pie.
For John will be hungry and tired, ma,
And his tissues will decompose;
So give me a gramme of phosphate,
And the carbon and cellulose.
Now give me a chunk of caseine, ma,
To shorten the thermic fat;
And hand me the oxygen bottle, ma,
And look at the thermostat;
And if the electric oven's cold,
Just turn it on half a ohm,
For I want to have supper ready
As soon as John comes home.

The penny-in-the-slot business is likely to go out of favour. London lads have conceived the device of cutting penny-sized discs out of the zinc advertisement placards placed in railway carriages. One firm which has automatic machines for supplying packets of sweetmeats to persons dropping in pennies, has received from 800 to 900 zinc discs.

NEWS OF THE WEEK.

The death is announced at Shanghai, in his 65th year, of Mr. Barnes Dallas.

Owing to a Chinaman being missing from the steamer *Airlie* when she was leaving Sydney, the agents had to pay £100 poli tax.

Among the collections bequeathed by Sir A. W. Franks to the British Museum there is a large group of Japanese *netsuke* and another of sword-guards.

The autobiography of Admiral of the Fleet the Hon. Sir Henry Keppel, from 1800 to the present time, is in the press and will be published by R. Bentley and Sons.

It is stated that the house built by the late Mr. Barney Barnato in Park-lane has been purchased by Sir Edward Sassoon (heir of the late Sir Albert Sassoon, of Brighton), for the sum of £100,000.

Mr. G. L. Jessop, the Cambridge University cricketer, playing for Gloucestershire against Warwickshire, on July 20th and 21st, scored 126 runs in 90 minutes. He made his first 50 in half an hour, and his 100 in 70 minutes. He hit 19 fours, three threes and ten twos.

"Lad's Love," the title of Mr. Crockett's latest book, was the old name for scented worm-wood, a sprig of which woovers used to wear when they went courting, and our grandmothers were wont to carry with them in their Bibles to church.

The *Powerful*, cruiser, Captain the Hon. H. Lambton, was taken into Portsmouth Dockyard on 17th July to be completed for service on the China Station. The following appointment has been made at the Admiralty:—Fleet Paymaster W. H. F. Kay to the *Powerful*.

A corner building site measuring 3,210 square feet and fronting Piccadilly and Old Bond-street, in London, was recently sold for £115,000; that is to say, nearly £36 per square foot. It will be a long time before a city lot in Tokyo fetches thirteen thousand yen per *tsubo*.

Investigations made by the Agricultural and Commercial Department, as published in the *Tokio Asahi*, show the area of mulberry plantations throughout the empire to have reached 288,937 *cho* (about 722,342 acres). Fukushima *Ken* ranks foremost with an area of 29,422 *cho*; Gunma comes next with 28,740 *cho*, and is followed by Nagano with 25,348 *cho*.

The Philippines seem to be still greatly disturbed, according to papers just received from Manila. The *China Mail* says that the fighting is confined to central Luzon, and official accounts all give out that the insurgents receive defeat after defeat. Manila newspapers are full of advertisements of estates and property for sale by people evidently desirous of getting out of the country.

On the way from Hongkong to Singapore Capt. Christiansen, of the Kingslin-liner *Della*, picked up at sea, about 500 miles from shore, a Chinaman in a sampan. So far as could be learnt the unfortunate Celestial set out from Pulau Siantan with copra, and had been five days at sea when he was picked up. He was brought on to Singapore, and now seems half deranged as the result of his sufferings.

We learn that the new U.S. Tariff Law, while allowing the import of Japanese tea duty free, so far as the schedule of duties imposed is concerned, at the same time empowers the President to impose a duty of 10 cents per pound on tea, coffee, chicory, etc., in cases where the country from which such articles are imported shall be considered to have unfairly taxed American products.

On the evening of the 15th August, a severe shock of earthquake, accompanied in many places by subterranean noises, was generally felt in Manila and throughout Luzon. In Vigan many houses were thrown down, including

that of the Captain of the Port. No lives appear to have been lost. The greatest angle of movement was 6.52.12, and the direction from north-west to south-east. The duration was 49 seconds.

An estimate has been prepared and laid on the table of the House of Commons of the expenses incurred by the Jubilee Celebration. The sum, the *Pall Mall Gazette* says, amounts to eighty thousand pounds, and a large part of it is divided between the Departments of the Lord Chamberlain, the Master of the Horse, and Lord Steward. The vote also includes the cost of entertaining the Colonial Prime Ministers.

It appears that the now celebrated despatch of Mr. Sherman about the Behring Sea Question, was an isolated paper of old date (May 10th) which had been answered in due course. Its publication did not retard the progress of the negotiations in London. Nothing, therefore, could be more erroneous than to contend, as some American journals have contended, that Great Britain's consent to a conference was caused by the despatch.

On Tuesday a gallant rescue from drowning took place in the vicinity of the Creek. Master Clarence Watson was there engaged fishing with a younger, and even smaller, companion when the latter fell into the water. Master Clarence at once plunged into the stream calling out to the little fellow that he would save him. This he managed to do before other help arrived, though it looked a difficult task at first, the tide being high.

The import of raw silk in New York and San Francisco during July was as follows:—New York, 430 bales, 93,848 lbs., \$284,545; San Francisco, 686 bales, 83,801 lbs., \$227,923; total 1,116 bales, 177,649 lbs., \$512,468. The import of waste silk in the same period was:—New York, 330 bales, 67,160 lbs., \$38,499. The import of Japan-see piece goods and handkerchiefs for January to June 26th were:—silk piece goods, 155,851 pcs.; silk handkerchiefs, 344,035 doz.

Lord George Hamilton, in the course of a debate on Indian affairs in the House of Commons, said murders had been deliberately committed in India for political purposes, and the natives who had been arrested were notorious men, and without doubt their arrest would give clues enabling the authorities to unravel the conspiracy. He believed that Mr. Rand, the Plague Commissioner at Poona, had been murdered because he drew no distinction between poor and rich.

Statistics of damages caused by the late inundations in Niigata prefecture, as published in the *Tokyo Asahi*, are as follows:—

	From drowning	From landslips	From flood	From landslips	Totals
Deaths	94	81	57	42	175
Injuries	57	42	102	288	99
Houses entirely demolished	102	288	783	431	390
Houses partly demolished	783	431	284		1,215
Houses washed away			284		284
Houses inundated above the floor					31,996

The *Record* says that the Deficit Fund of the Church Missionary Society has now fulfilled its purpose. An anonymous and quite unexpected contribution towards it of £3,000 finally wiped out the deficiency. The gross income for the financial year ending March 31st was £341,305, and it was not until the end of April that it was known that there was a deficit of £23,000. At first this seemed to chill the ardour of some, but recourse to funds available for the purpose realised £14,000; and now, within three months of the need being announced, the contributions of generous friends have supplied the remaining £9,000.

Cotton yarns from Japan and India have suffered considerably, remarks the *Yiji*, in consequence of the serious fluctuations in the rates of exchange on Hongkong. The trade is almost at a standstill, buyers supplying only their immediate requirements. Of Japanese yarns, 20's in particular have suddenly

fallen in value from \$5.50 to \$4.75 while there is scarcely any demand for 16's. As for Indian yarns, sales have to a certain extent been effected for both 16's and 20's, of ordinary and choice qualities. The export from Japan and India during two weeks ending the 12th instant was 1,060 and 14,800 bales respectively, actual sales aggregating 405 bales for the former country and 8,624 bales for the latter. Prices varied from \$106.50 to \$110 for 16's, and from \$111 to \$112 for 20's.

Over eighty per cent. of the greatest musicians, artists, poets, and scientists, according to Professor Halleck, became famous before the age of thirty. "In the case of the vast majority," said the Professor in a recent lecture in Philadelphia, "the brain attains its maximum weight by the age of fifteen. Examination of sections of the spinal cord have shown that between the time of birth and the age of fifteen there has been one hundred per cent. increase in the number of developed nerve-cells, while an increase of only four and six-tenths has been shown after fifteen."

The death was announced in England on Aug. 10th of the Bishop of Wakefield, Dr. Walsham How was in the 75th year of his age. He was educated at Shrewsbury and Wadham College, Oxford. In 1868 he was one of the Select Preachers at Oxford and in 1879 was appointed Suffragan Bishop of Bedford, being translated to Wakefield in 1888. He was the author of many theological works, and some well-known hymns are from his pen, among them being the beautiful lyric, "O, Jesu, Thou art standing outside the fast-closed door," which the Rev. E. C. Irvine, in his "Hymns of Old England," states was written in 1867.

From the *Shogyo Shimpō* we learn that the Japan and Tsuganai Straits Railway Company, which was organised in February this year, is now preparing to call up payments on its shares. Its object is, in the first place, to construct a pier in the Straits of Shimonoseki and Moji, in order that a railway may be laid there for the transportation of goods and passengers to the Sanyo and Kiushin lines. In the second place, steps are to be taken to construct a railway between Ominato and Oma, in Aomori Prefecture, for a distance of twenty miles, which will be connected with the Hakodate railway by a similar scheme.

On Monday, according to the *Hiogo News*, an alarm of fire was raised shortly after mid-day. It came from Messrs. Lucas & Co.'s Camphor Refinery at Ono. One of the retorts became over-heated, the cover was fractured, and certain vapours escaped in a burst of flame. The Fire Brigades were promptly on the scene, but the appliances within the building proved sufficient to deal with and suppress the outbreak. Three of the employes were injured, and damage was done to the plant to the extent, probably, of some 3,000 yen. This is covered by insurance; over 2,000 yen's worth of crude camphor was in the still at the time; this was fortunately saved.

The *Mainichi Shimbun* publishes a table of figures showing the annual increase in the amounts collected from the *saké* tax and from Customs duties during seven years from the 24th to the 30th fiscal years of Meiji inclusive. From these we note that in the 24th year, the *saké* tax amounted to 14,686,919 yen and the Customs duties to 4,539,686 yen. In the 30th year, the *saké* tax brought in 29,823,852 yen and the Customs duties 6,626,829 yen. The yearly increase was irregular, one year in fact, the 27th, showing a falling off of 507,182 yen in the *saké* tax, and another year, the 29th, a decrease of 618,912 in Customs duties. In all other years there was a substantial increase in both sources of revenue.

How Formosa should be dealt with when the revised treaties come into operation is a question which has evoked much discussion in the vernacular press. Some are inclined to assert that Formosa should be regarded as a special territory outside treaty limits. But so long as there are no provisions in the

treaties providing for such a step being taken, it is impossible, the *Shogyo* argues, to deal with the island in such a manner. The operation of the treaties ought to be strictly enforced there as in Japan itself. But this, our contemporary points out, will be very difficult while the island has not yet been brought under full control of the law, and the matter is one requiring full investigation.

From the *Mainichi* we learn that Formosa was visited by a severe gale and heavy rain on the 7th and 8th August. The river Tamsui rose exceedingly high and overflowed its banks, inundating more than five hundred houses to a height of six feet above the ground, and doing other serious damage. Steps were promptly taken by the Bunka Police to distribute rice among the sufferers, of whom about four hundred are reported to have been thus saved from starvation. In Twatuatia more than 527 houses were flooded, the fine building appropriated to the Tax Office presenting only its roof above water. The Governor of Taipei, accompanied by the Inspector-General of Police, proceeded to the scene of calamity for inspection, in order to adopt necessary measures for relief.

The United States Consul at Odessa reports that Russia is having some trouble in changing the standard of her currency from silver to gold. An imperial edict announced that a five ruble gold-piece would, until further notice, be equal to seven rubles and fifty copecks of paper money. When, says Consul Heenan, the people were "offered a five-ruble gold piece in payment of a debt due them for seven rubles and fifty copecks, they refused to accept it, and pointed out that stamped on the gold piece in plain Russian characters were the words five rubles, and they furthermore demanded to know why it was that they were expected to believe that twice two and a half made seven rubles and fifty copecks in money or anything else. The government officials were equal to the emergency, however, and recoined the same five-ruble gold pieces, stamping on them seven rubles and fifty copecks"—a somewhat unique example of currency inflation.

Commenting upon the paper industry in Japan, the *Osaka Asahi* says that the manufacture of paper has not yet been placed on a footing enabling it to keep pace with the demand, which is naturally increasing in consequence of the development of printing enterprise. The import of paper, on the other hand, shows an enormous increase during the past few years. The following is the total manufacture in Japan for the year ending 30th June last:—

Manufacturers	Catties
Oji Joint Stock Paper Mill Co. ...	12,095,794
Yukosha ...	845,692
Kobe Joint Stock Paper Manufactur-	
ing Company ...	6,749,328
Yokkaichi ...	3,130,355
Fuji ...	12,168,256
Senju ...	6,208,604
Abe Paper Mill ...	2,009,699
Isono ...	119,989
Shimizu ...	794,343
Total ...	44,129,061

The *Yomiuri* states that the Nagasaki Chamber of Commerce, which, in accordance with a decision of a meeting held at Hiroshima of all the Chambers of Commerce throughout the empire, has been making investigations through a special committee with the object of submitting a memorial to the Government for the revision of the provisions of the Commercial Code touching the establishment of joint stock companies, lately completed all its examinations and forwarded the memorial to the Ministers of Finance, Colonization, and Agriculture and Commerce. The following points form the gist of the document:—1. Abolition of the provisions for granting charters for the institution of companies. 2. Every company must be legally registered within fourteen days after its initiatory general meeting. 3. Every company shall call up the payment of at least one-tenth of its shares within six months of its registration. 4. Permission

shall not be granted to issues share certificates until one-tenth of the face value thereof is paid up. 5. The cession or transfer of shares prior to the payment of one-tenth of their face value shall be invalid.

Early on Saturday morning, July 24th, four privates of the Royal Marines were discovered in the lamp-room of the cruiser *Minerva* (now lying in Chatham Dockyard) in a state of insensibility, and one of them, John Harold Delton, was quite dead. It is surmised, says the *Scotsman*, that the men had been drinking, and that the death and insensibility were due to alcoholic poisoning. There was a bottle of kerosene in the room, and it is believed they had been drinking the contents.

The *Hongkong Telegraph* reports the death of Surgeon R. J. Fyffe, R.N., who was killed by a fall from his bicycle at Bratton, in Wiltshire, on the 17th July. Dr. Fyffe was 30 years of age and came out to the China Station in the *Gibraltar* in December, 1894, and shortly afterwards joined the *Rattler*. He left the station in the *Minerva* after the *Rattler* paid off on 31st March last. His many friends in Hongkong and the coast ports, where he was very popular, will sincerely mourn his sad and early death.

About half-past five on Wednesday morning, says the *Kobe Chronicle*, the godown of Messrs. Witkowski & Co., No. 118, Settlement, was discovered to be on fire, huge volumes of smoke at that time issuing from the roof. Though most of the firemen had gone to their daily work, the Settlement Brigades were soon upon the scene and did some splendid work. The situation of the godown was such that a much more extensive fire than has fortunately resulted seemed probable, for on one side of the godown stands the bowling alley of the German Club, and on the other the offices of Messrs. Witkowski & Co. It appears that the fire originated in the upper story of the godown, and in all probability had been smouldering all night, the godown having been locked up at five o'clock the day before. There appeared to be a large quantity of bamboo ware, curios and other goods in the godown, and the loss is considerable.

Mr. F. W. Hewes contributes to *The Outlook* a study of the missionary contributions of fourteen denominations in the United States. He shows that, with the exception of four years during the Civil War, five years during the panic of 1872-79, and the period following the panic of 1893, there has been a steady increase. From 1815 to 1824 the average annual contribution was \$40,600 a year. From this time the ten-year averages show a steady and remarkable progress, culminating in the 1890 period, with an average annual increase over the 1880 period of more than \$6,000,000; or, starting with the Civil War period (1860) a total increase in thirty years of almost 460 per cent. On the basis of the entire population of the country, the contributions for the period 1820 were four-tenths of a cent per annum for each man, woman, and child in the United States. For the period 1890 this had risen to twenty-two and two-tenths cents per inhabitant.

The extraordinary interest taken by Englishmen in cricket and in the great public schools is well illustrated by the correspondence appearing in the columns of *The Times* with reference to the Eton and Harrow match. Year after year the match has resulted in a draw, two days not proving sufficient to finish it, and the question is whether three days should in future be devoted to the purpose. One would imagine from the bulk and earnestness of the correspondence that some great national problem were under consideration. Lord Granby seems to have hit the general idea when he pleads that the main purpose of any change should be to get rid of "carriages, corsets and chatter," and leave the field open for cricket pure and simple. At present the match is evidently a kind of jolly picnic, not a genuine trial of skill. But truly the volume of talk evoked by

the business is wonderful to contemplate. It may seem a trivial trait of character, but the fact is that this keen interest in athletics is one of the factors that have made the British empire. Englishmen would be a very different race were it not for cricket, rackets, boating, foot-ball, and the hunting field. And now that ladies have taken to bicycling and lawn tennis, we may expect the children of the next generation to be the finest physical specimens yet produced.

In no district, remarks the *Yiji*, have preventive measures against dysentery been so effectually enforced as in Kanagawa prefecture. To such districts in particular as Tsukui, Aiko, and Naka-gori, commissioners as well as medical advisers were specially despatched to take necessary measures for the suppression of the malady. Yet the epidemic still continues, the total number of patients since the first outbreak reaching 2,513, and new cases on the 26th instant amounted to 128. The following are the figures:—

Districts.	Since outbreak.	Deaths.	Cases.	Under treatment.
Tsukui	981	111	95	775
Takazu	419	62	83	273
Aiko	342	39	32	281
Naka	198	36	67	95
Tsuzuki	174	39	36	53
Yokohama	123	11	39	53
Total	2,513	332	427	1,754

The *Shogyo* states that the number of Joint Stock Companies (Railways and Banks excepted) throughout the empire at the end of July was 2,015, and the amount of their capitals 294,853,867 yen. These figures show an increase of 56 companies and of 322,295 yen in capital compared with the previous month. The following comparative table gives the figures for June and July this year:—

Commercial—	July.	June.
Companies	966	939
Capital	131,359,115 yen.	130,351,815 yen.
Industrial—		
Companies	961	932
Capital	161,317,936 yen.	159,102,286 yen.
Agricultural—		
Companies	88	88
Capital	2,176,815 yen.	2,176,815 yen.
Totals—		
Companies	2,015	1,959
Capital	294,853,867 yen.	291,630,916 yen.

According to investigations made by the Central Tobacco Guild, published in the *Mainichi*, the raw material and tobacco manufactures, together with the stamps used for the same, throughout the empire during the 28th year of *Meiji* (1895) were as follow:—

FROM JANUARY TO JUNE.	
Raw Material	8,044,804 <i>kwamme</i> .
Manufactured Tobacco	2,793,423 "
Stamps	1,024,253 yen.
Raw Material	128,549 <i>kwamme</i> .
Cigarettes	688,869,000 pieces.
Stamps	155,385 yen.
Raw Material	1,738 <i>kwamme</i> .
Cigars	3,210,000 pieces.
Stamps	1,645 yen.
FROM JULY TO DECEMBER.	
Raw Material	3,938,946 <i>kwamme</i> .
Tobacco manufactured	2,738,955 "
Stamps	1,083,308 yen.
Raw Material	146,438 <i>kwamme</i> .
Cigarettes	65,514,600 pieces.
Stamps	160,141 yen.
Raw Material	2,203 <i>kwamme</i> .
Cigars	3,562,000 pieces.
Stamps	1,981 yen.

Mr. Henry George Outram Bax Ironside, who has been appointed Second Secretary to Her Majesty's Legation at Peking, was educated at Eton, and Exeter College, Oxford, being nominated an Attaché to the Diplomatic Service in May, 1883, and passing a competitive examination in August of the same year. He was appointed to Constantinople in 1884, and promoted to be Third Secretary on August, 1885. He passed an examination in Public Law on Dec. 9, 1885, and received an allowance for knowledge of Turkish, and was Private Secretary to the late Sir William White. In March,

1887, he was transferred to Copenhagen, to Teheran in November, 1888, and promoted to be Second Secretary November, 1889. A further allowance for knowledge of Persian was granted December, 1889, to be followed, four years later, by an allowance for knowledge of Arabic, after he had served in Vienna and Cairo. He was transferred to Washington on July 30, 1894. Judging by Mr. Bax Ironside's linguistic attainments we may learn in a year or two's time that an allowance has been granted for a knowledge of Chinese.

The price of coal, remarks the *Tokyo Asahi*, is rapidly increasing on account of the scarcity of supplies. Yubari coal (lump) is quoted at 54 yen, dust at 43 or 44 yen per 10 tons, while Iwaki coal fetches from 35 to 36 yen. These figures show an increase of two yen over the prices paid in July last, and of ten yen over those in July or August of last year. Considerable inconvenience and expense are consequently experienced by steamship, manufacturing and railway companies, and other industries in which coal is extensively consumed. The demand for coal has increased chiefly on account of the steady development of industries and the unusual increase in the number of vessels. The production of coal in Japan seems to be far behind the demand. It takes a week or two to supply a vessel of one or two thousand tons with a sufficient quantity, while exports to Shanghai, Hongkong, and Singapore are increasing day by day. It is believed that the upward tendency of coal will not be checked unless new veins are discovered and worked.

The reception now given to Mr. Labouchere's speeches in the House of Commons is significant. He is laughed at all through. Let him be ever so violent, ever so serious, laughter always punctuates his periods. Speaking in Committee of Supply on August 19th, he said that he had "the lowest and worst opinion of Her Majesty's Government in regard to its foreign policy." (Laughter.) He said that "Hon. gentlemen opposite liked to swagger about the might and majesty of the British Empire, but the Government which they supported had cringed to Russia and to the Concert." (Laughter.) He said, "he would only ask one question, when were we going to leave Egypt?" (Laughter.) He said, "the fact was, we had a greedy desire to lay hold of all parts of the world, and we did not care more than a magpie whether what we grabbed was useful or useless." (Laughter.) He said "the Opposition would do themselves, their party and their country good by constantly calling attention to the wickedness, the iniquities, and the follies of the present Government." (Laughter.) In fact, he moved the House to mirth only, which is probably a wholesome mood under the circumstances.

Herr Andrié, says the *London and China Express* started on his perilous journey across the Polar regions in his balloon, the *Eagle*, on 11th July. By now he should have reached terra firma again unless he has unhappily been stranded on that terrible waste of ice that we all know so well from Dr. Nansen's graphic descriptions. In the latter case we greatly fear that there is but little chance of his returning alive. He cannot be equipped like Nansen, with a pack of dogs for a long journey across the ice, although he has, we understand, taken a sledge with him. The preparations for the ascent were made much earlier this year than last. By the end of June all was ready, but during the first week of this month (July) the winds were northerly, and on the 2nd a storm threatened to carry away the house in which the balloon stood ready inflated. On 11th—the wind being from the right quarter, the south, and not too strong—the final preparations were carried out, and the *Eagle*, at half-past two in the afternoon, soared into the Polar air and sailed away at the rate of twenty-two miles an hour. At that speed, supposing the wind were to hold in the same quarter long enough, the balloon should have reached the neighbourhood of the Pole in twenty-eight hours. But then should the same direction be maintained

there is about double the distance to be covered before the inhospitable shores of Eastern Siberia or Alaska are reached.

One thing effected by the publication of Mr. Sherman's extraordinary despatch is that a full and clear statement of the facts of the Behring Sea affair has been published. From the tone of the despatch and from the comments of American journals, the impression gathered was that England had for years been holding back from framing regulations which, by the award of the Paris Arbitration of 1893, she was bound to join in framing. We ourselves were under that impression. It is quite erroneous. The regulations in question refer to pelagic sealing, and the Paris Arbitrators decided that America had no right of protection or property in fur seals beyond the three-miles limit from the Pribiloff Islands. But England had agreed, prior to the Arbitration, that if the award were in her favour, the Arbitrators should be asked to determine what concurrent regulations outside the jurisdictional limits of the respective Governments were necessary. The Arbitrators did actually draw up the necessary regulations, adding a provision that they should be submitted every five years to an examination, so as to enable both of the interested Governments to consider whether in the light of past experience there was occasion for any modification. The conclusion of the first five-year period is not reached until August 1898. What on earth, therefore, Mr. Sherman's bluster is about, there is difficulty in discovering. America thinks that pelagic sealing, even as practised under the Regulations, is so destructive to seal life that immediate action is necessary if the herd is to be saved from annihilation. Therefore she wants England to anticipate the conclusion of the five-year period fixed by the Regulations. In short, she is asking for something which she has no right to ask for except as a matter of neighbourly courtesy, and we have seen what Mr. Sherman's manner of asking is. The English expert does not consider the case by any means so urgent, but nevertheless England has obeyed the dictates of neighbourly courtesy in the face of Mr. Sherman's despatch.

September is usually regarded, remarks the *Fiji*, as the month in which the demand for capital considerably relaxes. But as the purchase of stock for winter commences in this month, it may reasonably be expected that there will be a pressing demand for loans on a small scale. Moreover, some seventeen or eighteen million yen is needed for the payment of taxes and calls on shares in various companies, so that there is little reason to hope for the immediate relaxation of the money market. Among others the following calls have to be paid on shares:—

Company.	Per share.	Total payment.
	Yen.	Yen.
Japan Railway (new shares).....	15.00	3,000,000
Yokohama Fire Insurance.....	11.50	230,000
Tokyo Hydrostatic Electric	2.00	120,000
Iga Railway (4th installment) ...	4.00	96,000
Tokushima Railway.....	7.50	120,000
Kwansei Railway (new shares)....	8.00	612,000
Kwansei Bank	11.50	115,000
Funakoshi Railway (1st installment)	4.00	242,000
Shiga Public Works Loan (1st term)	10.00	25,490
Kibi Railway (3rd call)	3.00	—
Total		4,560,490

GERMAN TOPICS.

The Emperor, after receiving the injury to his eye, decided to return to Kiel for the purpose of consulting the Royal oculist, Duke Karl Theodor of Bavaria, but His Majesty's wound improved so rapidly that he resolved to adhere to his original programme and continue his tour along the Norwegian coast. Duke Karl subsequently followed the Emperor to Stavanger and, after examining the eye, pronounced that the sight was quite uninjured, and that only a slight irritation existed.

The Agrarians have petitioned the Imperial Chancellor to prohibit the importation of foreign

corn, at first for a period of six months, with a proviso that the prohibition would cease to have binding force so soon as the price of inland corn reached a certain figure. They say that Germany produces corn sufficient for her population, but that 54 millions of hundred-weights are nevertheless imported, with the result of needlessly depressing the market. The Government has replied that the proposed prohibition would be contrary to existing treaties.

The reports from the German colony in south-west Africa are not good. There has been much suffering from rinderpest, and the want of railways is said to be fatally checking development. The German Government has resolved to commence the building of railways on which trains will be drawn by mules.

According to the report of Professor Koch's Commission, which recently concluded its investigations into the plague in India, rats were found to be highly susceptible, and to be most injurious in spreading the germs and communicating them to human beings.

The German Emperor is to make Hamburg his headquarters during the Autumn Manœuvres which are now about to commence in Germany. His Majesty has invited the King and Queen of Italy, and Grumbkoff Pasha, amongst others, to attend the manœuvres.

According to an ancient law of the city of Hamburg, it was no easy matter for outsiders to become burghesses of that city. With the beginning of this year a revised law came into force, and during the first six months 5,326 new citizens were admitted to the "*Bürgerthum*."

A considerable sensation has been caused in Germany by a speech delivered by Professor Reinhold, recently appointed to the chair of Political Economy in the University of Berlin. The Professor, referring to the political situation in Germany under the present Government, said that almost the whole country was in opposition. In South Germany there existed an almost incredible antagonism against Prussia. Concerning Social Democracy and the terror it inspires, the Professor declared that to leave it severely alone was the true remedy: it had no popular mandate and existed on the unwise opposition it created. He pointed to London in support of his theory, and said that it had always been to him one of the most remarkable phenomena of political life that the English capital, "with its five million inhabitants, with its night of proletarian misery, with its volcano of suppressed emotion, the caricature of a healthy place of habitation, theoretically a hot-bed of revolution," returns a conservative majority.

The clondbursts and inundations which devastated the eastern part of Germany in the first week of August were the worst which have occurred since 1870. According to local statistics 105 persons were killed in Silesia alone, and in Saxony the casualties will not fall short of 180. The financial losses foot up over 150,000,000 marks. At Pillnitz, the country residence of the Queen of Saxony, the River Elbe rose so fast that it flooded the lower floor of the royal castle, forcing the King and Queen to hurriedly leave the place and seek refuge at Dresden. Through a landslide of the highest summit of the Silesian mountains the Hotel Schneekopfe was carried down and buried, with all its occupants. Large sums of public money have been granted for the relief of the sufferers.

The first week in August also witnessed a number of fatal accidents on German racecourses. Count von Visch, a wealthy gentleman rider and at one time the friend of the notorious Barrison sisters, and Lieutenant Bartells, also a gentleman rider, were killed during a race at Kruzenha. At the Neuss races the most successful gentleman rider in Germany, Lieutenant von Keyser, was killed, and Captain von Sutternoadt was seriously injured. Two professional jockeys also met accidental deaths.

HAWAII IN THE HOUSE OF COMMONS.

In the House of Commons on July 19th, the following references to the annexation of Hawaii were made:—

Mr. Beckett (York, N.R., Whitby) called attention to the revolution at Hawaii in the Sandwich Islands and related the circumstances leading up to what he described as the wrongful seizure of power by the missionaries, and the subsequent intervention of the United States. The proposed annexation of Hawaii by the United States concerned ourselves, and must be looked upon from our point of view as well as from that of Hawaii. Hawaii was the most important coaling station in the Pacific. We had subsidized a line of steamers between Vancouver and Australia and were anxious to promote trade between Canada and Australia, and all the steamers must coal at Hawaii. It was not only the rights of British subjects in Hawaii, but the rights of the British people which must be maintained, and considering the importance of Hawaii as a coaling station it would be unfortunate if America took possession of it and established herself there. If we could look on America as an absolutely friendly Power it would not matter so much, but in view of recent occurrences which had agitated the public mind it was difficult to assume that America was, and always would remain, a friendly Power. The basis of good relations between countries was reciprocity of good feeling, and that good feeling was likely to be disturbed if one used provocative and insulting language towards the other. When we had so recently exhibited our great strength to the world, it became us to be slow to wrath, but in shaping our policy in the future the persistent unfriendliness of America should be taken into account.

Mr. Bryce (Aberdeen, S.) said he was acquainted with Hawaii and took an interest in its affairs. He regretted what the hon. member had said. The hon. member must have been misinformed when he said the revolution in Hawaii was brought about by the missionaries. It was not at all the case, and the hon. member must have been imposed upon by statements as to the puritanical character of the rule that the missionaries sought to establish.

Mr. Beckett said he derived his information from people on the spot.

Mr. Bryce said that even people on the spot were apt to exaggerate. He regretted to hear the hon. member suggest that America should be regarded by us as an unfriendly Power. Such a suggestion should not be allowed to pass without emphatic protest. (Hear, hear.) He denied that there was an unfriendly attitude towards England on the part of the bulk of the American people. But nothing would be more likely than a debate deprecating the annexation of Hawaii to arouse the party of annexation in the United States. He believed the annexation of Hawaii would be injurious to America, and he approved of the policy the Government had followed in Hawaiian affairs as one of judicious reserve.

Mr. Davitt referred to the speech of the hon. member for Whitby (Mr. Beckett) on the annexation of Hawaii by the United States, remarking that he wished to give an emphatic contradiction to almost every statement he had made. He had been to the Sandwich Islands, and from investigation he was certain that the missionaries had not fomented the revolution, and, with the exception of a small pro-English faction, all the white population were in favour of the annexation. As to the comparison between this revolution and Dr. Jameson's raid, he would ask hon. members whether the raid would have been condemned had it been as successful as the revolution? The hon. member talked about good feeling between Great Britain and America, and assumed that all the good feeling was on the side of England. When a London newspaper talked about "blood-letting" the Yankees in order to "bring them down to a sensible international policy," he should advise them to begin at home if they wanted the American Press and American statesmen to reciprocate good feeling. —(Hear, hear.)

CORRESPONDENCE.

THE COOLIE AGAIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As one of your correspondents upon the subject of Japanese coolies, recently discussed in your columns, I venture to supplement my observations and experiences then related by the addition of another incident which occurred this day in Yokohama. I am not inimical to the coolie fraternity in general, nor to the jinrikimen in particular. I recognise the advantages which exist in Japan everywhere as compared with any of the European countries in regard to the facilities of travel. The jinrikisha man is ubiquitous, and, generally speaking, he is certainly a very obliging and pacific man. It seems to be only in the open ports where one meets with any frictional difficulty, so far as I have observed. What I contend for is that some definite and unmistakable code of

charges should be officially decided upon and clearly printed in English and Japanese, so that none need be subjected to the insolent and pugilistic attitude so frequently assumed by the coolie when dealing with a new arrival, or a lady. No one objects to pay a fair and proper fare, and most people would rather pay a trifle more than less than a legal fare, but when a man takes a fare from the station to the Grand Hotel, and being asked "How much," replies "Dollar," as in one instance I can mention, domestic economy suggests further inquiry from one more versed in coolie methods and charges than strangers usually are.

Three lady guests from my house engaged jinrikishas to-day from the stand near the police box at Kami-no-bashi. Two of the ladies could speak Japanese well, the other was a stranger. A bargain was made for 10 sen per hour, one lady acting as spokesman. They went shopping and returned within two hours: how much within I do not know. The men were discharged at the stand where they had been engaged. One was satisfied with his fare, but the other two insisted upon 15 cents more. The lady said she was prepared to pay more, but without giving her time to say a word to her two companions one of the coolies seized her roughly by the wrist and endeavored to drag her to the police box, the other two men putting themselves into an attitude to intercept the other ladies. While the coolie was dragging the lady a gentleman happened to pass and interposed, asking if they were strangers. He suggested that the money should be put into the jinrikishas and left for the coolies to accept or decline, as they felt disposed. This was done, and there the matter ended. But had not this gentleman kindly interposed the lady might have had rougher usage. As it was, she returned home exhausted and very much upset. My contention is this friction is unnecessary, that it can be avoided, and that it is the duty of those who issue licenses, and control the actions of these men, to promulgate such a code of charges, and make them so plain, that a wayfaring man, though a fool, shall not err therein, and that it is their bounden duty to put a stop to these shameful methods of extortion by assault and to stop it now.

I am, Sir, yours very truly,

F. STANILAND.

Yokohama, 27th. August.

THE LATE MR. HAWES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On Saturday morning, the 7th of August, this community was sadly affected by the news of the death of Captain A. G. S. Hawes, Her Britannic Majesty's Commissioner and Consul-General. The sad event took place at Hilo, Island of Hawaii, at 12.30 o'clock a.m. of the 6th inst., and the intelligence was brought here by the coasting steamer *Mikahala*. Although it was known that Captain Hawes had been seriously ill, the last previous accounts had been that his condition was improving.

The last illness of Captain Hawes was caused directly from carbuncle in the neck, but it is believed he might have rallied were it not for the prior shock of an accident. While he was travelling from Honolulu to Hilo in the steamer *Kinau* a few weeks previously, the sea being unusually rough, he was violently thrown to the floor of the Captain's cabin, sustaining a severe injury in the back of his neck, together with bruises about the body. It was while chivalrously springing to the assistance of a friend, who he feared was about to be thrown down, that he met with the accident.

Within a few days after landing at Hilo, he was confined to bed. As he grew worse, Dr. Williams, who was in attendance, called Drs. Wetmore and Moore in consultation. Yet the utmost skill of the physicians was availing only to give him temporary relief, although he did not fall into a sinking condition until the day before his death. Among the friends who were by his bedside in the last few trying days to the end were Miss Gay, with whom he was to be married in a few weeks had he lived, and Mr. Thomas Rain Walker, the British Vice-Consul.

With the news of the Commissioner's death came the information that the body was being brought to Honolulu in the steamer *Kinau*, which had been recalled for the purpose by telephone from her last port of call on the islands. This vessel arrived in Honolulu at 1 o'clock p.m. the same day. In the meantime all the preparations possible for the reception of the body were being made by Captain Field, commanding H.B.M.'s ship *Penguin*, and the gentlemen of the British Vice-Consulate. They received offers of assistance and tenders of sympathy from both the Hawaiian Government and the American and Japanese naval vessels in port. Captain Kuro-

oka, commanding H.I.J.M.'s cruiser *Naniwa Kan*, was deeply affected by the sad intelligence. He had been on terms of warm friendship with the late Commissioner, from the time, many years ago, when Mr. Hawes was instructor to the Japanese Navy, and it had given him intense pleasure, on the occasion of the present stay of his ship at this port, to have their mutual intimacy revived. When an officer sent by Captain Field brought him formal notice of the death and of the expected arrival of the body for burial in Honolulu, Captain Kurooka, while conveying his deep sympathy to the British commander, offered to land detachments from the two Japanese ships—the *Naniwa Kan* and the *Hiyei Kan*—for the funeral escort. Ascertaining also, in answer to his enquiry, that the *Penguin* had no gun carriage—she being engaged in surveying and without the ordinary armaments—Captain Kurooka proffered the use of such a vehicle for carrying the coffin at the obsequies. These offers were greatly appreciated by the British authorities, although from a desire not to make the military display overshadowing, they decided to employ a hearse instead of a gun carriage.

The funeral took place on the morning of Tuesday the 10th instant, under combined military and State auspices. An escort consisting of the marines and bluejackets of the *Penguin*, about 60 strong, and a company of the Hawaiian National Guard, both detachments being under arms, attended the removal of the body from the British Legation to St. Andrew's Anglican Cathedral. The streets on the approach to the edifice were lined with American and Japanese battalions, each about 250 strong and without arms, from the U. S. ships *Philadelphia* and *Marion* and the Japanese vessels already named. Business in the European quarter of the city was suspended, and the streets were crowded with people of all nationalities. The Cathedral was crowded to overflowing, but seats had been reserved for members of the Hawaiian Government, the diplomatic and consular corps, and the foreign naval officers. Religious services having been impressively conducted by the Rev. Messrs. Mackintosh and Kicat—beautiful special hymns being sung by two choirs—the coffin was borne to the hearse by eight sailors of the *Penguin*, and the procession was formed in the following order:—

Mounted Police.
Hawaiian Band.
First Battalion, First Regiment, National Guard of Hawaii.
H. M. S. *Penguin's* Firing Party of Sixty Men.
Clergy.
Hearse. Pall-bearers.
Eight *Penguin* Men, Coffin-bearers,
CHIEF MOURNERS.
Captain Field, Royal Navy, and British Vice-Consul
T. R. Walker.
Commissioner of France Vession.
Japanese Minister Shimamura and Attaché.
United States Minister Sewell and Secretary.
Minister of Foreign Affairs Cooper and Secretary.
Band of U. S. S. *Philadelphia*.
Two Hundred and Fifty Unarmed Men of *Naniwa*
and *Hiyei*.
Two Hundred and Fifty Unarmed Men of *Philadelphia*
and *Marion*.
Officers of *Penguin*.
Officers of *Naniwa* and *Hiyei*.
Officers of *Philadelphia* and *Marion*.
Admiral Beardslee and Staff.
Consular Corps.
Chief Justice and Judges of Supreme Court.
Ministers of Interior and Finance.
Attorney-General.
President Dole and Staff.
Members of National Band.
Aloha Aina Society.
Sons of St. George.
Mounted Police.

As the procession started, a Hawaiian battery fired eleven minute guns appropriate to the rank of the dead Commissioner. When the burial services at the grave had been concluded, and three volleys in the air fired by the British escort, the American and Japanese senior vessels each fired a parting salute of eleven guns. Interment took place in the British Navy plot in the beautiful Nuanu cemetery. Contributions of flowers to the burial were in endless number and the emblematic compositions of exceeding beauty. Among the offerings were a wreath, chiefly of purple flowers, from Minister Shimamura of Japan, and an anchor of carnations from the Japanese men-of-war.

The following is from an interview with Captain Kurooka had by the editor of the *Honolulu Bulletin*:—

"Captain Kurooka says that many of the officers on board both the *Naniwa* and *Hiyei* of the Japanese Navy, new in port, had the benefit of Lieutenant Hawes' instruction. Lieutenant Hawes was attached to the Japanese

flagship *Riujo* as gunnery instructor, and afterwards organized the infantry corps of marines. He was later instructor at the Imperial Naval College in infantry tactics and fortifications, as well as in the English language. Lieutenant Hawes was altogether fourteen years in the service of His Imperial Japanese Majesty. He taught discipline and routine to the Japanese navy, according to British modes at that time. In appreciation of his services the Emperor of Japan decorated Lieutenant Hawes with the 3rd Class of the Sacred Treasure and the 4th Class of the Rising Sun."

Captain Hawes arrived at Honolulu from Tahiti to assume the office of British Commissioner and Consul-General, on the 5th August, 1894. He won the affection of people of all nationalities by his frank and genial manners and almost unexampled hospitality, his entertainments at the British Legation having been of a princely character. At the same time there is reason to believe that he was held in the greatest esteem by the Hawaiian Government, for the considerate and conciliatory way in which he exercised his diplomatic functions. Indeed, Captain Hawes is sincerely mourned in both official and private circles of Honolulu as if he had been a born member of the community.

Your obedient servant,

K.

Honolulu, August 12th, 1897.

"CIVIL GOVERNMENT AND ROMAN CATHOLICISM."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is with the greatest reluctance and after much hesitation that I have decided upon answering, as briefly as possible, the odious charges brought against Catholics by Mr. or the Rev. Snodgrass. That there are difficulties in religion, and that Protestants may in very good faith differ from Catholics, I readily admit. If preachers would confine themselves to a fair explanation of Catholic doctrine and to the defence of their own tenets, no one would have any right to object to their course. But long experience has shown that a conception of their rights is to slander Catholics and attribute to them doctrines entirely opposed to their faith. Hence we have forgery and misrepresentation and calumny. Hence we have suspicion and evil feeling. Hence we have bigotry and insult.

To contend with an honest adversary may be a pleasant duty, but to refute all the diatribes spread broadcast throughout the world becomes a task very nearly above human strength; better sometimes to leave them unheeded.

But now to come to Rev. Snodgrass. We have been accused of giving too much to civil authority. Here we have the reverend gentleman's assertions that we give too little or rather nothing at all, the Pope taking it all to himself.

Where has he seen that? Certainly not in a book of Catholic doctrine. Yet, fairness no less than common sense teaches that a man should study and examine a question from its proper sources. No man ought to attack doctrines if he has not made himself acquainted with them. Nor is it fair to form a judgment from misrepresentations made by ill-informed, interested, or prejudiced persons.

Now it appears evident to me that Mr. Snodgrass, misled by his prejudices, with his mind haunted by the bugbear of what he calls *Romanism*, has never taken the trouble of assuring himself of the true doctrine of the Catholic Church, or, if he be at all honest, he would never have written his brochure. May be he is a busy man and had no time to go to the proper sources (it is so much more simple to repeat what others have said). I will then come a little to his assistance and tell him what we, Catholics, do really believe on the subject in question. Perhaps he will be kind enough to admit that I am qualified to say that much.

1. A child 10 years old knowing his Catechism would tell him that he learned therein that he must be respectful and obedient to his superiors both spiritual and temporal.

2. All Catholic theologians teach, from Holy Scriptures, that "all power is from God," and that consequently dutiful obedience is in conscience due to Civil rulers. *Give to Caesar what is Caesar's*. The Catholic Church has always maintained that doctrine, just as Christ and the Apostles had done before her, and this even in times of persecution when her children preferred death to rebelling against cruel and unjust, yet lawful, rulers.

3. And what does the *ambitious, all-power seeking (!)* Pope say on the question? Leo XIII, in one of his late encyclical letters, writes as follows:—"Civil power is born from nature and consequently comes from God himself, the author of

nature. In other words, natural law, undoubtedly a divine one and according to which every human society must be governed, requires in that society a ruling power which, by the very fact of its existence, has a right to command and to be obeyed in conscience."

This is enough to prove that Mr. Snodgrass has misrepresented the Catholic doctrine and, when he charges Catholics with acknowledging no other authority but the Pope's and refusing all allegiance to civil power, he utters a monstrous falsehood. If the Rev. gentleman wanted us to suppose that his system is so shaky that, in order to give it an appearance of steadiness, he must have recourse to such means, he could hardly have succeeded better.

As to the gratuitous insult thrown at millions of his fellow citizens and millions of others by a member of an insignificant sect, calling them bad citizens and wolves in sheep's clothing, it is ridiculous in the extreme. The most charitable excuse I can find is that, when he wrote the above, the Rev. gentleman must have been out of his senses. There is no need to bring in here authorities far more valuable than Mr. Snodgrass's to show that, for self-devotion and patriotism, Catholics have nothing to learn from him.

Apologizing to you Mr. Editor and to the readers of the *Mail* for the length of this letter, written in such poor English,

I remain, with thanks, yours faithfully,

A. PETTIER,
Vic. Apost.

Yokohama, Aug. 27th, 1897.

A REPLY TO THE REV. E. SNODGRASS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am a Catholic and an American. Mr. Snodgrass is, I believe, a Protestant Missionary and an American. We both are Christians and Americans. We may have differences of opinion, but united by the bonds of Religion and Citizenship there does not seem to exist any great reason why we should call each other ugly names.

Mr. Snodgrass, in his letter published in the *Japan Mail* of the 24th inst., calls me a *wolf in sheep's clothing*; he says that all Catholics are "wolves in sheep's clothing." I might retaliate by calling him an *ass in man's clothing*, but I won't be so rude. I hate to be called names, however, and I like Mr. Snodgrass to know it. I accidentally saw Mr. Snodgrass' letter in the *Japan Mail* and I naturally looked around to see what it was all about. I then found the short and adverse criticism of the Editor on the Reverend gentleman's tract entitled "Civil Government and Roman Catholicism," wherein the Editor of the *Japan Mail* says that the object of Mr. Snodgrass in writing this tract is "to show that the declared principles of Roman Catholicism are against submission to any Civil Authority and that, in effect, the spread of Roman Catholicism in any country means the *alienation of its converts from allegiance to the Government of that country*." Mr. Snodgrass emphasises this by writing his letter to the Editor dated 21st inst. saying:—"One of my principal contentions is to show that Romanism has not changed its attitude towards civil Government. It is only in States where the Hierarchy is in the minority that a change in the attitude seems to have taken place. In such positions she is still the wolf, only in sheep's clothing." In other words: all Catholics, whether of the past or present, have been and are disloyal and unpatriotic citizens, revolutionists, rebels in disguise and anything else you like to call them, and this because of the *declared principle* of their church. Now the first question that presents itself to me is, why should Mr. Snodgrass, who is here, I presume, for the purpose of teaching and preaching to the natives of this country his own particular form of religion, or rather the religion of his particular Sect of the so-called Protestant Church, why, instead of employing his time attempting to demonstrate the superiority and advantages of his Belief to the Natives, the object for which he draws a fat salary, should he revile and belittle the creed of others? What is his object? I am sure no Catholic, (man, woman or child), has ever done Mr. Snodgrass any harm or interfered with his business; why then should he make a cowardly attack on the whole Catholic world? There can be only one reason and that is that the teachings of his sect are insufficiently clear and not convincing to the people he is trying to convert, and not being able, in consequence thereof, to make any progress himself, and jealous of the progress made by others, who have a clearer and more convincing teaching, he tries to retard their progress. This is not a very high motive; it smacks very much of meanness! It is bad enough when Pagan hunters after the filthy-lucres resort to such means; when

one firm of cigarette-sellers in Tokyo, jealous of their competitors who are outdoing them in business, incite a mob to wreck the opposition shop and thus clear the field for a larger business and larger profits to themselves; but what are we to think of a so-called Christian Missionary who is supposed to preach and practise the Gospel of peace and good-will, adopting the same tactics of trying to entice by false and scandalous misrepresentations all other sects, and the Government of this country, against the Roman Catholic Church, because the quiet, unassuming, hard-working and conscientious Catholic Missionary makes a hundred converts to Mr. Snodgrass' one?

If this is Mr. Snodgrass' ideal of Christian Missionary work, if this is the spirit of Mr. Snodgrass' religion, then the sooner he leaves this country the better for the country. This country is in need of Missionaries who will raise the character of the Japanese, not men to lower it. Men like Mr. Snodgrass are utter failures as Missionaries and the reason is not far to seek. They are the direct opposite to what a Missionary ought to be, to what the word implies, to what the Catholic Missionary really is. They have not been trained to their religion, they have merely adopted the business of a Missionary because they have to do something for a living and the life of a Missionary in Japan with a good fat salary, a very commodious residence in the foreign Concession of Tokio, no work of any kind and, above all, those delightful summer-holidays at Kanizawa or some other cool and comfortable place in the mountains, seemed even so much preferable to working for a living in their own country. The prospects are too inviting; were I a Protestant I should most decidedly do the same as Mr. Snodgrass has done—become a missionary in Japan. There are many others who have given this business the preference to hard work at home. There are some who have left the plough, some the carpenter's bench, some the shoe-maker's last, and some nothing at all,—learned a score of Scriptural verses by heart, whether correctly or up-side down does not matter, and then with the prefix "Reverend" to their names launched out as Missionaries to foreign countries. In due course they have amassed a certain amount of wealth and have returned to their native lands, happy in the knowledge of the good they might have done, but happier by far in the possession of a sufficiency laid by for the proverbial rainy day.

The Catholic Missionary is constituted somewhat differently. First and foremost he is, not only an educated, but a learned man,—learned in the fullest sense of the word. He has not a smattering of Scripture only but a *thorough knowledge* of all that constitutes a learned man. Secondly, he is trained to his work from an early age and, thirdly, he practises all he preaches and preaches nothing which he himself does not practise, in fact he preaches more by his actions and his daily life than he does in sermons. He has no wife or family of growing daughters to provide with dresses according to the latest fashion at every change of season; he has no worry as to the best investments for his accumulated surplus salary, whether to invest it in bonds or in curios; he lives solely and entirely for the object of his life, i.e. to spread the knowledge of Christ's teachings and to make others happy by teaching them the secret of true happiness. His life is one of work, patience, privation and abnegation, he is happy in the knowledge that he is doing good and he looks for no reward here on earth, no filled coffers to take home with him, because he takes no holiday-home-tips, the only trip home he looks forward to is the one at the end of his earthly labours, when in the consciousness of having done his duty his soul returns to God.

This may be new to Mr. Snodgrass: it is so nevertheless; it is no fable or fairy-tale, it is plain truth, and Mr. Snodgrass can see it every day right here in this country,—not perhaps from the window of his cosy dwelling in Tsukiji, but in the heart of the country, in out-of-the-way villages, in fact wherever there is a human being to be enlightened, a soul to be saved, not only in Japan, but all the world over. But I have wandered somewhat from the subject. I summarized Mr. Snodgrass' assertions above in the following sentence:—"All Catholics whether of the past or present have been and are disloyal and unpatriotic citizens, revolutionists, rebels in disguise, and all manner of undesirable characters and this because of the declared principle of their Church." With this assertion Mr. Snodgrass enters the arena and on this I will meet him.

To begin with, will Mr. Snodgrass kindly quote his authority for this assertion and say where, if anywhere, this "declared principle" is laid down? An evasive or ambiguous answer will not do, he must give chapter and verse. Lest Mr. Snod-

grass should think that what I say has been got up for the occasion, I shall quote Authorities for all I say; let Mr. Snodgrass do the same.

As far as I know, and I flatter myself that I know as much about Catholicism as Mr. Snodgrass does, the declared principles of the Catholic Church are summarized in a little book called the Catechism, a standard book in all Catholic schools and families. Butler's Catechism, Vol. 2 page 59, contains the following question and answer and explanation of the answer:—

What are the chief duties of subjects to the temporal powers? Answer:—To be subject to them, and to honour and obey them, not only for wrath, but also for conscience sake: for so is the will of God. (1 Peter: Rom. XIII). Explanation: Submission, honour and obedience should be paid to the temporal powers, not only for wrath that is not only through fear of the punishment that may be inflicted on those who are wanting in those duties to their Sovereign, but also for conscience sake, that is from motives of religion, so as to avoid incurring the guilt of sin before God, whose ministers our temporal rulers are. For such is the will of God, because it is God who governs the world, and who gives kings to nations, and who invests them with his own authority, for as the Apostle says, there is no power but from God.

Besides this, on page 62 of the same book, we are admonished to pray for the spiritual and temporal happiness of our rulers and for the prosperity of our country, also for subordinate occupants of power "who are in high station." I quote from the instruction in the Catechism as follows:—

That we may lead a quiet and peaceful life, and enjoy happiness here below, we should unceasingly pour forth our prayers to heaven, that our rulers may govern their subjects, of all classes and creeds, with justice and humanity, consult for their welfare and happiness, by the enactment of just and impartial laws, and adjust their foreign and domestic relations in such a spirit and manner, as to ward off the miseries and calamities of war and civil commotions.

And in the Catholic Prayer-book before me, published in New York and bearing the Imprimatur of the Archbishop of New York, I read the following prayer, headed "To be said before Mass":—

We pray thee, O God of might, wisdom and justice, through whom authority is rightly administered, laws are enacted and judgment decreed, assist, with thy Holy Spirit of counsel and fortitude, the President of these United States; that his administration may be conducted in righteousness, and be eminently useful to thy people over whom he presides, by encouraging due respect for virtue and religion; by a faithful execution of the laws in justice and mercy; and by restraining vice and immorality. Let the light of thy divine wisdom direct the deliberations of Congress, and shine forth in all their proceedings and laws framed for our rule and government; so that they may tend to the preservation of peace, the promotion of national happiness, the increase of industry, sobriety and useful knowledge, and may perpetuate to us the blessings of equal liberty.

We pray for his excellency, the Governor of this State for the members of the Assembly, for all Judges, Magistrates and other Officers who are appointed to guard our political welfare: that they may be enabled, by thy powerful protection, to discharge the duties of their respect, five stations with honesty and ability.

We recommend, likewise, to thy unbounded mercy, all our brethren and fellow-citizens, throughout the United States, etc. etc.

Again, on page 64 of the Catechism I read:—

Question:—Is it sinful to resist or combine against the established authorities, or to speak with contempt or disrespect of those who rule over us?

Answer:—Yes: St. Paul says:—"Let every soul be subject to the higher powers. He that resisteth the power resisteth the ordinance of God; and they that resist purchase to themselves damnation."

Explanation:—From these words of St. Paul it clearly follows that every man, without exception, who is a subject, owes allegiance and fidelity to "the higher powers," that is, persons vested with political power for governing or ruling others, such as princes, judges and magistrates. As there is no power but from God, obedience is due to its possessor, as the vicar of God—obedience, voluntary, hearty, and interior, out of respect for God whom he represents. And the Apostle adds, "he that resisteth the power resisteth the ordinance of God," that is contravenes the order which God has established: and subjects by resisting or contravening that order, "purchase to themselves damnation," that is temporal punishment here for resisting civil legitimate authority, legitimately exercising its function, and by such resistance deserve for themselves eternal damnation hereafter. Therefore it is plain that to resist or combine against the established authorities is sinful even though their sentiments and feelings towards us should be most unfriendly, and their hostility towards our religion open and avowed; for personal enmity and hostility do not afford a just cause to release us from the duty of submission to their person and authority.

This is the teaching of the Catholic Church, taught at the beginning by the Apostles when they and their followers were persecuted because of their faith, taught during the succeeding centuries of persecution and taught to day in every part of the globe where a Catholic Priest instructs his flock. Mr. Snodgrass is quite right when he says "the Church has not changed its attitude towards civil government." He may safely complete the sentence by adding "and she never will." There is no occasion for her to do so, she has always taught submission to Civil Government, she

teaches so now and always will teach the same. That this teaching has born fruit and is practised by Catholics, history bears witness. Let Mr. Snodgrass read the history of his own country, Bancroft's History of the United States, written, not by a Catholic, but by a New England Protestant Clergyman. Can he show from history one single instance of the Catholics of America being anything but what their Church teaches: "submissive to the Civil Authorities." Can he show me that the patriotism of the Catholics of America has ever been anything but the highest and their love for their country anything but the purest? If he can I want him to do it. Here is what Cardinal Gibbons says of American Catholics:—"What shall I say of the prominent part that was taken by distinguished representatives of the Catholic Church in the cause of our American Independence? What shall I say of Charles Carroll of Carrollton, who at the risk of sacrificing his rich estates, signed the Declaration of Independence; of Rev. John Carroll, afterwards the first Archbishop of Baltimore, who, with his cousin Charles Carroll and Benjamin Franklin, was sent by Congress to Canada to secure the co-operation of the people of that province in the struggle for liberty; of Kosciusko, Lafayette, Pulaski and Barry, and a host of other Catholic heroes who laboured so effectually in the same glorious cause? American patriots without number the Church has nursed; a traitor, never."

Let us go a little further and look at the achievements of the Catholic Church in the cause of civil liberty, not to speak of religious liberty. To the Catholic Church this present generation owes its civil liberty and upon this same liberty is based our national prosperity. Look at those grand principles underlying the Constitution of the United States: Liberty, Equality and Fraternity. Are they the outcome of Mr. Snodgrass's sect or are they the result of a long struggle on the part of the Church which he reviles?

I quote again from Cardinal Gibbons, "The greatest bulwark of civil liberty is the famous Magna Charta. It is the foundation not only of British but also of American constitutional freedom. Among other blessings contained in this instrument, it establishes trial by jury, and the rights of Habeas Corpus, and provides that there shall be no taxation without representation. Who were the framers of this memorable charter? Archbishop Langton of Canterbury and the Catholic Barons of England. On the plain of Runnymede in 1215 they compelled King John to sign that paper which was the death-blow to his arbitrary power and the corner-stone of constitutional government." Does this prove that the Catholics, whether in the minority or majority, are a stumbling-block in the way of progress? Does this prove them to be the undesirable citizens Mr. Snodgrass tries to make out, or does it prove that the Catholic Church is first in the line of advance towards good and liberal Government.

I think that I have made out my case; I have said enough at least to convince any fair-minded person that Mr. Snodgrass's charge against Catholics is unfounded and malicious.

Let us now take a good square look at the teachings of Mr. Snodgrass's sect.—Let us see what the "declared Principles of his religion are. I have not the pleasure of knowing the reverend gentleman personally, but in the "Japan Directory" I find him described as a member, or possibly the head, of the "Churches of Christ Mission." Presumably this is one of the 300 and odd sects of the Protestant Church in America. Possibly the "declared principles" of this particular sect are reduced to writing or printed in some form or other, possibly they are, like secret passwords, transmitted only by word of mouth, anyway we are fairly sure to get a correct idea of them by drawing our conclusion from the every-day action of the reverend ministers and teachers of the "Churches of Christ." Mr. Snodgrass and the other reverend gentlemen and ladies of his mission are in Japan presumably to teach their particular creed. Ordinary charity causes me to take it for granted that the said reverend gentlemen and ladies, one and all, act up to their own teachings. If therefore we take any one of the number, we can safely judge of the sect's "declared principles" by the "declared principles" of that one. It so happens that one of Mr. Snodgrass's colleagues, the Reverend J. M. McCaleb, a member of the same "Church of Christ" Mission, has recently given himself the trouble to lay before the world his "declared principles" in a letter to the "Shepherd's Voice," the official Organ of the Churches of Christ Mission, edited by the Rev. E. Snodgrass. Mr. McCaleb, being an American by nationality, was invited to attend and subscribe to the celebration of the American National Holiday (4th of July). His reply, printed in the "Shepherd's Voice" was as follows:—"My kingdom is not of

this world." Take no stock in it. Can't encourage mere sectional patriotism or glory in an independence established in blood and the cruelties of savage and merciless war. Be not conformed to this world, but be ye transformed, by the renewing of your minds, that ye may prove what is that good and acceptable and perfect will of God. "Our citizenship is in heaven."

Here Mr. McCaleb, the "Church of Christ" Missionary, disclaims on religious grounds that citizenship of which every American Catholic is proud. He, the "Church of Christ" Missionary slanders his own country, where I, a Catholic, consider nothing more praiseworthy than to honour my country and the brave and loyal men of all creeds, who purchased with their blood its independence. Mr. McCaleb's letter clearly shows that the teaching of the "Churches of Christ" Missionaries, in as much as they disclaim all earthly citizenship, is distinctly against submission to any civil Government, and that being so, the conversion to the teachings of this sect means entire alienation from one's country, and if from country, as a matter of course also from the Government of the country to whom the convert happens to owe allegiance.

I began by quoting Mr. Snodgrass's assertion as to the spread of Catholicism alienating its converts from allegiance due to the civil Government, I will conclude this letter by repeating the same assertion only in its altered form, substituting "Snodgrassism or McCalebism" for "Roman Catholicism." We have it then "that the 'declared principles' of Snodgrassism or McCalebism are against submission to any civil authority, and the spread of such *ism* in any country means the alienation of its converts from allegiance to the Government of that country." If Mr. Snodgrass and Mr. McCaleb have made any converts in Japan, I hope those converts will go back to paganism and be loyal to their Sovereign rather than follow the example of their teachers disclaiming their citizenship on the 3rd of November next (their National Holiday) by saying "Our kingdom is not of this world. Take no stock in it, etc. Our citizenship is in heaven."

Your obedient servant,

A WOLF IN SHEEP'S CLOTHING.

ACCESSIBILITY OF THE CODES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On the 21st August you wrote:—"Mr. Lowder appears not to have made any examination of the Japanese Codes before coming forward to proclaim their deficiencies. * * * He and those sharing his apprehensions have, in fact, been labouring under one of the drawbacks that vitiate so many of the criticisms uttered by the opponents of Treaty Revision, namely, want of knowledge. The law from which we have quoted was promulgated on the 7th of October, 1890. The anti-Revision Meeting was held on September 11th of that year. It was well known by the promoters of the Meeting that under no circumstances was there any idea of bringing foreigners under Japanese jurisdiction pending the operation of the new Civil Code. The Code had then been compiled, revised, and was awaiting promulgation. * * * The fact that before organizing opposition to treaty revision they did not inform themselves about the provisions of the Code—information easily accessible—cannot, we think, be regarded as a proof that they were actuated by any serious sense of the responsibilities they were incurring. That they still remain without that information, though the Law has been in the hands of the public nearly seven years, does not, we think, suggest that the desire to make themselves acquainted with the nature of the jurisdiction which they so greatly distrust, is very active. At all events, if Mr. Lowder's ignorance that those provisions of law existed, justifies, in his opinion, some of the fears he entertained, he will doubtless admit that persons more conversant with the Code were equally justified in their freedom from such fears."

The accusation is that the opposition to treaty revision originated in ignorance of the Code; that that ignorance was and remains inexcusable, because it might have been remedied at any time during the last seven years by referring to the Code which has been and is easily accessible to the public; and that inexcusable ignorance is culpable ignorance.

Upon reading that reflection upon the conduct of myself and others, I wrote you a letter explaining the unsuccessful efforts I had made to obtain this easily accessible information, and asking where the Code could be procured; to which you thought it sufficient to reply, on the 21st August, that certain parts of it in your possession, were obtained, several years ago, from the Hakubunsha

in Tokyo; but that you were unable to say whether the volumes were now procurable.

Thereupon I caused a letter to be written to the Hakubunsha, and was informed, in reply, that the successors to that institution were unable to obtain for me what I wanted; and I also ascertained that the Hakubunsha had been merely the printer, not the publisher of the books.

What then becomes of the very serious charges you have formulated against me and against other members of this community, in the past, and have so recently repeated? Speaking for myself, I have been for the past seven years, and am still extremely anxious to have the opportunity of informing my mind as to the provisions of the new Civil Code of Japan, or of such portion of it as have been promulgated. You tell me my ignorance is due to supineness, inasmuch as the knowledge I am seeking is and always has been of easy access,—wherein you do me an injustice.

Very faithfully, J. F. LOWDER.
Yokohama, August 30th, 1897.

[The portions of the Code catalogued in our recent note were purchased by us several years ago at the Hakubunsha. At that time there was certainly no difficulty in procuring the books. Still, if Mr. Lowder has found himself unable to obtain them, our suggestion of supineness on his part must be withdrawn.—Ed. J.M.]

"CIVIL GOVERNMENT AND ROMAN CATHOLICISM."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I note Mr. Pettier's effusion in to-day's Mail. A man, a Vic. Apost., who can't see the difference between a discussion of principles and a discussion of men, merits pity and not censure. I am familiar with the Romish contention about others not knowing the doctrines of the Hierarchy. The principles which I have shown up in my tract are in quotations from the highest Roman authorities. Did not Mr. Pettier see this? I have discussed principles and not slandered men.

Mr. Pettier says I charge "Catholics with acknowledging no other authority but the Pope's and refusing all allegiance to civil power." Now, the next time he talks about my falsehood, he would do well to correct his own. I have made no such charge. This is a characteristic false issue he raises to hide the true inwardness of the Romish system. My contention, made as clear as it can well be made, is that the Hierarchy, while recognising civil authority, claims that its own authority is superior and that the civil authority is subject to it. Not a single thing in Mr. Pettier's diatribe against me contradicts this, though he wishes to make it appear that Romish doctrine makes no such claim.

HERE IS THE DEADLY PARALLEL.

Cardinal Manning, speaking for the Pope at Kensington, 1896.	Pope Leo XIII., as quoted by Mr. Pettier, Vic. Apost. (In which Papal letter is this found?)
I acknowledge no civil power; I am the subject of no civil power; I am the subject of no prince, and I claim to be more than this. I claim to be the supreme judge and director of the consciences of men, of the peasants that till the fields, and of the prince that sits upon the throne; of the household that sits in the shade of privacy, and the legislature that makes laws for kingdoms. I am sole, last, supreme judge of what is right and wrong. Moreover, we declare, affirm, define, and pronounce it to be necessary to salvation to every human creature to be subject to the Roman Pontiff.	Civil power is born from nature and consequently comes from God himself, the author of nature. In other words, natural law, undoubtedly a divine one and according to which every human society must be governed, requires in that society a ruling power which by the very fact of its existence, has a right to command and to be obeyed in conscience. Yes, and this ruling power is the sublime Pope, supreme, and the civil rulers under him. He says, "I am the subject of no civil power;" and "I claim to be the supreme judge" etc.]

Close scrutiny of the wording of the Pope's language as quoted by Mr. Pettier, will make out no contradiction. The Pope is still supreme.

The Hierarchy, now, in this day, stamps the following as heresy. What does Mr. Pettier say?

"In the case of conflicting laws between the two powers [State and Hierarchy], the civil law ought to prevail."

Finally, he speaks of "his [my] system," and assumes that I am a "member of an insignificant sect." I would beg to be excused from either having a "system" or membership in a sect. I am entirely without any sect, and have never put forth any system of doctrine. I am simply a member of the church you read of in the New Testament. The Roman Hierarchy is a true sect with unscriptural doctrines, and if Mr. Pettier is bold enough to face the issue, I am ready to undertake the task of proving my affirmation.

Thanks, Mr. Editor, for the kindness in permitting a reply to so ugly a phase of the matter.

Very truly,
R. SNODGRASS.
14, Tsukiji, Tokyo, Aug. 31st, 1897.

[It is our duty to point out that when Mr. Pettier undertook to rebut the charge that "Catholics acknowledge no other authority but the Pope's and refuse all allegiance to civil power," he merely quoted the words in which we had described the gist of Mr. Snodgrass' brochure. If, then, "falsehood" is to be charged against any one, it must be charged against us, not against Mr. Pettier. Our reply to the charge is that, in reviewing Mr. Snodgrass' book, we epitomized his general contention in terms that seemed consistent with the logical conclusion to which his premises pointed. Had we written "Catholics acknowledge no supreme authority but the Pope's and refuse ultimate allegiance to civil power," we should have accurately defined the position taken by Mr. Snodgrass. But it appears to us that whether the qualifiers "supreme" and "ultimate" be inserted or omitted, the practical result is the same. We must also ask that personalities and discourteas be excluded from any letters intended for insertion with reference to such a subject as this. It is unnecessary, we trust, to be more explicit.—Ed. J.M.]

REPLY TO

"A WOLF IN SHEEP'S CLOTHING."

TO THE EDITOR OF THE "JAPAN MAIL."

DEAR SIR,—This gentleman in a bombast of hatred in to-day's *Mail* complains that I have called him a hard name. Well, that is not my fault. I usually call people by the name they call themselves. Mr. "Wolf in Sheep's Clothing" ought to change his name. If I had such a name as that I'd never give a priest another cent to get him to pray for the soul of the person who named me when I was an infant. If the God-father could not have found a better name he ought at least to have done like the old negro who called his infant son Proteus John Smith, saying that the boy might wish to name himself when he got old enough. I would suggest that "Proteus Wolf in Sheep's Clothing" would leave a hope for a better name. To save time and space I shall on the present occasion write only the initials of the gentleman's name.

Before I come to Mr. W. I. S. C.'s (or Wisc's) chief issue, I must lay the axe at the root of his preliminary brush. I have had some experience with Romans in discussion. Unfortunately, I have never seen one attempt to answer his religious opponent without first trying to besmear him with mud. Mr. Wisc pictures me out in his vain, corrupted imagination as the head of a sect in this country, fat, living on a fat salary, in a luxurious house in Tokyo, no work of any kind, off to a delightful summer resort, &c. Now Mr. Wisc has, just here, to speak plain Anglo-Saxon, uttered five willful falsehoods. The ever recurring Romish lament that they are the only misrepresented ones becomes nauseating. It was simply criminal neglect in Mr. Wisc not to inform himself about me before he poured out the gall of inherited hate and slander. Far be it from me to boast, but I must inform Mr. Wisc that I am the head of no sect, that I belong to no sect, that I am not fat (rather lean), draw no kind of salary from any sect (but work with my own hands for what I live on), and that during 9 years of residence in Japan I have never spent any time at a summer resort. We live in a moderately good house in which we keep boarders for our living besides my teaching in a Japanese school, and preaching the gospel. And almost entirely out of the labours of my own hands I have built a chapel last year, conduct a school for destitute children in which two native teachers are employed; besides other Christian work, all together amounting to over 1,200 yen. Show me the Romish priest that has done more. I hope the readers will pardon these personal references, since they are given to stop the blatant mouth of this champion of Mother Rome. However, it is hardly necessary to tear away the thin gauze of Papal fallacy. It shines through too plainly.

Mr. Wisc betrays considerable ignorance of his own sect when he institutes an educational comparison between Romans and Protestants. Yes, Romans are trained, learned in Papal dogma. Priests are trained in the Papal interpretation of scripture. And does not Mr. Wisc know that none dare look at God's word other than through the eye-glasses of Papish interpretation.

"It is permitted to no one to interpret the sacred Scriptures contrary to this sense [Mother Church's sense], nor, likewise, contrary to the unanimous consent of the Father."—Vatican Council, 1870.

Moreover, every great modern thinker from Locke to Emerson has been without the Papal sect. There have been a few great scholars within the Roman pale,—Galileo for instance. And yet Papal intolerance, which has ever put a check on free investigation of truth, would have taken his head off had he not recanted.

And in further inflating his laudations of the Romish priesthood he holds up their celibacy as a virtue. He must surely think that Rome is

not *semper eadem* in the moral fortitude of her priesthood, that he boasts of their unscriptural celibacy; for in medieval times they were permitted to keep concubines. If this is questioned the proof will be forthcoming.

I should not have jostled this decayed mummy of the Hierarchy had not Mr. Wisc been so liberally gratuitous in his complimentary epithets. I feel perfectly safe in answering him according to his folly, since in enlightened communities the Papal fogot has been quenched.

Another shift Mr. Wisc seeks to make is in his reference to McCaleb. Mr. McCaleb and myself are entirely independent. We are members of no kind of missionary body. He answers for himself, I do the same. But when Mr. Wisc talks about the relation of our respective beliefs to the Japanese Government, we are willing for the matter to be tested by the facts of history.

Before I come to what I affirm, I wish to call attention to Mr. Wisc's quotations from the Catechism. These passages do not contradict a single statement I have made in my tract. If they can be shown to contradict me, I will show that they also contradict the Pope. Romans may and can be subject to civil powers. Mr. Wisc, as Papal custom is, scrapes together what he wants me to say, then launches forth a Romish bull at it. Mr. Wisc is like the priest and belle looking at the moon. He sees in my tract just what he wants to see.

I have said, and have shown in my tract, from the highest Papal authority, that the doctrines of the Papacy are antagonistic to the civil power, that they claim to be supreme. It will be noted in both Mr. Wisc's and Mr. Pettier's tirades that not a single fact of my tract has been challenged. They have skimmed around in true Hierarchical fashion, made a feeble bluster of generalities, quoted a little; but not a single statement of mine has been given in my own words and denied.

The issue lies right here. The Pope, as representative of the Hierarchy, is supreme, superior to the civil power. Just as he approves any civil power so may Romish subjects render also obedience to that civil power. Since the Pope has lost his power to dictate to civil governments what they must do, in obedience rendered under such circumstances mental reservation or equivocation is permitted by the Pope. Here it is:—

"To swear with equivocation, where there is a good reason, and equivocation itself is lawful, is not wrong. And if a person swears without a good reason, it is not to be considered a perjury; since, in one sense of the word, and according to mental restriction, he swears what is true."—Ligari, Lib. III. N. 151.

No one will question the loyalty of a Papist to a civil power approved by the Pope. But when the Pope has power and disapproves of a temporal Prince he can call his subjects to rebel against the civil authority. Does not Mr. Wisc know this. Pope Pius IX., of infallibility fame, said, July 21st, 1873:—

"There are many errors regarding infallibility; but the most malicious of all is that which includes, in that dogma, the right of deposing sovereigns, and declaring the people no longer bound by the obligation of fidelity. This *Right* has now and again in critical circumstances been exercised by the pontiffs. Its origin was not in the infallibility, but in the *Authority* of the Pope."

Is Mr. Wisc ignorant of this doctrine of his church? Is he so blind as to declare all others blind? Does he not know that the Pope claims temporal power,—two swords? and that this power is not granted to him by civil authority which can at its pleasure deprive him of that temporal power? Here it is in the Papal Syllabus of Errors, 1864:—

"In addition to the authority inherent in the Episcopate, a further and temporal power is granted to it by the civil authority, either expressly or tacitly, which power is on that account also revocable by the civil authority whenever it pleases."

Let Mr. Wisc answer me. Is the following heresy? I have put the same question to Mr. Pettier. Come, thou redoubtable Wisc: is this heresy?

"In case of conflicting laws between the two powers [State and Hierarchy], the civil law ought to prevail."

Does not Mr. Wisc know that in a State where the Hierarchy gains the ascendancy the civil law is subject to the Papal see? Is he ignorant of these historical facts? I cite him an instance in the South American State of Ecuador.

It is simply darkening facts to soar in generalities about what Romans have done in nations like the United States, where Papists are so vastly in the minority, and where the government is acceptable to Romans in the present circumstances. Even Papists there and elsewhere

are enjoined by the Pope to work in political affairs so that the constitutions of States may be modelled according to the principles of the Hierarchy.

"All Catholics must make themselves felt as active elements in daily political life in countries where they live. All Catholics should exert their power to cause the constitutions of State to be modelled on the principles of the true Church."—Leo; 1885.

Finally, since Mr. Wisc has declared his courage to meet the issue of his sect against any opponents, I might as well tell him that I am ready to deny that his sect has any scriptural authority for its existence or for its dogma. I desire chiefly to pay my respects to doctrines and principles, and attribute the errors into which my fellow men fall to the weakness of human flesh. The hierarchical dogmas are much like what a Republican said of the Democratic Party,—"Rotten through and through." But most Democrats are better than their principles; and so it is with many Papists. With thanks to the Editor,

Very truly,
E. SNODGRASS.

14, Tsukiji, Tokyo, Sept. 1, 1897.

THE "ADEN" DISASTER.

MR. GILLET TELLS OF THE RESCUE.

We have already reproduced from the columns of *The Times* Mr. Frank Gillett's account of the *Aden* disaster. Our readers doubtless remember that the account was abbreviated, *The Times* not finding space for his description of the rescue by the Royal Indian Marine steamer *Mayo*. We now give this concluding portion in Mr. Gillett's words:—

"During the last three days the weather distinctly moderated, the spells of comparative quiet were more frequent and lasted longer, and this, you may be sure, was welcomed by us, as with fewer seas actually breaking over the good ship our chances of rescue were far brighter, and although the waves were still exceedingly high all round, we felt that it was just possible that a boat well manned might have a chance of getting near us, which certainly during most of the time we had been there would have been impossible. And now we came to the 25th, when, late in the afternoon, we saw to our great joy the masts of first one ship and then another appearing over the long spit of land which forms the S.E. end of Socotra Island. The first kept on her course and steamed away in the direction of Colombo, but the second was apparently anchoring just on the north side of the spit of land. We of course kept our usual signals going and soon noticed a string of signals flying from the stationary vessel, which we thought were intended for us, although having no Code Book, we could not have read them, but afterwards we found that these were intended for the vessel which steamed away, a P. & O. ship, bound for Colombo. Darkness soon set in, but we kept candles burning all that night in three of the port holes on the side nearest the island, although with but faint hopes that the light could be seen from the other ship, as the land intervened. We were very glad afterwards that we had done this, as we heard later from our rescuers that, although they had sighted the wreck before finding it necessary to anchor for the night on the lee side of the island, they had failed from the bridge to discern any signs of life on board, and that it was not until after dusk, when it occurred to one of them to mount the rigging for a last look at us before actual darkness set in, that from our candle-lights, which they could then plainly see, they knew for certain there were fellow creatures there to be saved, and, as they said, it made them all feel good to think they had come in time to do something any way. As for ourselves, I need scarcely say how thankfully and peacefully we went to rest that last night, and were all up and about at daybreak to look for the earliest signs of the vessel's movements. Soon we saw her move to pick up her anchor and then steam slowly forward to beyond the spit of land, and it was with keen delight that we noticed the white hull and yellow funnel which proved her to be a Naval boat. We had many times, in discussing the possibilities of rescue, agreed that if we were ever to be saved, our best and in fact almost only chance, was if a man-of-war came along, and now it all seemed to be coming true just as we had hoped!

She steamed along for about a mile or so to clear the land and give the reefs a wide berth, and then we saw her heading in towards us, proceeding of course very cautiously and sounding on both sides, and eventually anchoring within about three-quarters of a mile of us, we meanwhile keeping up

an endless round of cheering, waving of flags, torn sails, etc., which went more wildly and with greater excitement as we saw with glistening eyes preparations being made for a boat to be lowered from her lee side. Here, to do full justice to the truly heroic rescue, I must give the details as I afterwards learnt them from those on board. Commander de Berry, having steamed in as close to us as he dared for the safety of his own ship, in view of the high and dangerous seas running, declined on his own responsibility to order out a boat to try and get near us, but told his 1st Officer, Lieut. H. C. E. Dobbin, that if he could get volunteers to go, he might get the boat down and away. This noble fellow, who I may remind your readers was on the *Warren Hastings* when she was wrecked, and was very highly commended in despatches then for notably praiseworthy conduct, did not lose any time in acting on the permission given, and being joined at once by Sub-Lieut. O. Goldsmith, a strapping young Irishman, the crew were marshalled on deck and volunteers called for. I may here mention that outside of the Officers, Engineers, etc., the entire crew of the *Mayo*, which is used as a despatch boat, and is generally stationed at Aden, consists only of natives of our Indian provinces, and it was on these men that the call was made. The boat selected, a rather light cutter, chosen because of its being lighter and more easily handled against the heavy seas than the others, required a crew of 12 men, but at the call no less than 43 stood forward volunteering to go! Lieut. Dobbin picked out 13 of the strongest of them, and having got the boat quickly lowered, and all hands fitted with their life belts, they started to pull towards the wreck, he being at the tiller and Lieut. Goldsmith up in front in the bows. Pulling hard against the strong wind and heavy seas running, which, however, were fortunately not breaking, it took them fully 45 minutes to reach us, and they ventured right up under our lee, bringing up alongside us just aft of the amidships portion, where a big piece of the iron bulwarks had been torn away by the seas rushing over us.

With what delicious joy we from the wreck had watched their approach, I leave your readers to imagine, and when, fearing that at any moment a big sea might break over the wreck, and swamp the boat, Lieut. Dobbin shouted, "Lose no time, come at once," we did not stop to think of anything but getting off, just as we were, and as the boat rose and fell on the big waves rolling under us, we did our best to choose the highest point reached by the boat and jump for it, and although, I think, we hardly knew how we got there, in a very short space of time, we all found ourselves without serious mishap in the boat and were quickly followed there by about 10 or 12 of the native crew of the *Aden* who had patiently waited until all our party had dropped in. Then seeing that she had enough to carry, Lieut. Dobbin, shouting some words in Hindostani to the remainder of our native survivors, promising that the boat would return for them and bidding them all get together and be ready, ordered his crew to pull away, and with wind and sea in their favour, and elated by what they had already done, the good fellows bent their backs to it and in very quick time had us under the lee of the *Mayo*, where kind hands were waiting to help us aboard and kind hearts to cheer and welcome us!

Clinging together with mingled smiles and tears at the happy ending of our awful suspense, we must, I think, have presented a piteous and pathetic sight to our brave rescuers, and the good fellows, not leaving us time to pour out our heartfelt thanks to them, hurried us into a small deck cabin, where hot soups and nourishing food was ready prepared for us. Meanwhile, preparations were being made outside for the second journey to the wreck, and it was considered advisable that, seeing the arduous work they had gone through, the former crew should be taken out, and a fresh crew selected for the last battle against the elements, particularly as both wind and sea were momentarily increasing in violence, but when it was put to them these 13 brave fellows, after a short consultation together, asked, through their head man, if the same officers were going for the second time, and on being told "Yes," their immediate reply was, "Then we would like to remain and go too," and as the 1st officer told me, even if they might be tired, and running perhaps some extra risk in acceding to their request, he could not find it in his heart to shift them then, so after giving them a short rest, and some good hot coffee to refresh them, the boat and its gallant crew were ordered away to the wreck again, and after a hard pull, this time of over an hour, they succeeded again without mishap in getting alongside and taking off all the remainder of the native survivors. Then came the final return to the *Mayo*, and as, pulling with a will, they brought up under the lee, I can tell you the cheers were deafening which on all sides saluted

this brave band, who had thus, in that early grey morning, been the means of saving the lives of 45 of their fellow creatures.

Now, Sir, I have often heard these Indian natives derided, spoken of contemptuously as "only niggers," and such like, but I should like to record my humble testimony from what I have seen of them, when well disciplined, well officered, and well led by those in whom they have confidence, that these men are capable of work that would be creditable to any flag and any country, and I put it to your readers whether anything finer or nobler in conduct could have been expected from a picked lot of our own justly praised blue-jackets than was shown by these native sailors on that memorable 26th June, and let them bear in mind that there was no rush of excitement to carry them on, and induce to heroic deeds. The rescue was effected in what may be termed cold blood!

Feeling quite revived by the hot soup, &c., the first warm food that had passed our lips for 17 days, and after having had our wounds attended to by the Doctor, we hastened out again on deck in time to see the good boat hauled up, and the anchor weighed, and as the *Mayo* swung around to start on her return journey, we said our last "good-bye" to the good ship *Aden* as she lay now deserted on that fearful reef! Yes, she had indeed been a good ship to us, holding us together bravely during those long 17 days despite the awful boiling seas which almost incessantly raged over and around her, and it was with at least some shade of regret mingled with the joys of rescue that we parted from the now, alas! sadly battered hull which for so long had been to us a home and haven of refuge. . . . Good, noble ship! she must indeed have been splendidly put together to stand out for so long against the forces arrayed against her; and I wonder how many ships there are now extant which could have equally well withstood so awful a trial! My narrative has, I fear, already run to undue length, so I must shorten what I could wish to say about the untiring generosity, kindness and attention pressed upon us by all on board the *Mayo*. Returning, we reached Aden on the afternoon of June 28th, and spent there, waiting on board for the incoming P. & O. steamer from Bombay, two of the happiest days we ever remember. Many of the residents on shore sent gifts of clothing for our immediate wants, and as no children's clothes could be procured, two of the ladies, our good Captain's charming wife, Mrs. de Berry, and Mrs. Hayes-Sadler, the wife of the Assistant Resident, purchased material, and made with their own hands some clothing for the little ones, Bobbie Pearce, and our own little Evelyn. A very touching scene took place on the morning of June 29th when, in the presence of the entire ship's company on the deck of the *Mayo*, the crew of 13 who had volunteered for the dangerous work of the rescue were called out separately from the rest and the thanks of the Commander, and of myself as spokesman for the survivors, were interpreted to them. On June 30th, amidst cheers of the crew in the rigging, we left on the P. & O. steaming to join the mail steamer *India* lying outside Aden harbour, and there waved our last "good-byes" to those dear kind fellows who had shewn us such sincere and warm-hearted friendship—and never, while the lives they saved are spared to us, shall we forget *Aden*, the good ship *Mayo*, and its happy united band of officers and crew. On the *India*, homeward bound, we were treated with the greatest kindness and consideration by Capt. Briscoe, R.N.R., and all his officers and crew, including also all the very numerous ranks of stewards, stewardesses and servants needed for so large a ship, our wounds were carefully attended to and everything done to make us happy and comfortable, many of the passengers too showing us the greatest kindness, tendering gifts of clothing to eke out our rather scanty wardrobes, and doing all in their power to make our homeward journey happy and pleasant.

It was with a deep sense of her ever thoughtful kindness and sympathy that we listened, on the morning of July 4th, to the reading by Capt. Briscoe of the telegram sent by our gracious Queen-Empress to catch us at Suez. "The Queen is deeply concerned at the sad disaster of the loss of the *Aden*, and asks you to express her sincere sympathy and condolence with the bereaved, and with the survivors, for the terrible sufferings they must have undergone," and to which the same morning we, through the kind assistance of the Captain, telegraphed the following reply:—"The survivors of *Aden* shipwreck beg to thank H. M. the Queen-Empress for her most gracious message and solicitude for them. Are deeply touched by her sympathy. They are getting every care and attention from the Captain and officers of the *India*. All are doing well."

And now, landed in safety on the shores of our dear old country once more, with, we trust, peace

and rest before us, we cannot but feel that our long trials have brought us already one great good, and that is, the bringing home to our hearts and minds how much of true loving-kindness and sympathy there still is in this busy world of ours for those who are suffering or distressed. Thank God for it, and for the noble hearts which are always ready to feel and show it!

THE "ADEN" ENQUIRY.

We take the following telegrams from Indian papers:—

London, 10th August.

The Board of Trade judgment on the loss of the steamer *Aden* states that the speed was slightly reduced, whereby the current altered the course; but that the evidence is insufficient to show whether this was enough to account for the casualty. It expresses high opinion of the conduct of the officers and passengers.

Later.

The judgment of the Board of Trade in the Court of Enquiry into the loss of the steamer *Aden* further states the steamer was well provided in every respect, but it was impossible to arrive at a definite conclusion as to the cause of the casualty, there being no evidence from the officers, all being lost. There is some ground for supposing that the Captain anticipated a stronger north easterly current than was actually experienced, the current being probably abnormally less than usual at the beginning of the monsoon and being possibly affected by the cyclonic disturbance. The Court found that every necessary measure was promptly taken by the Peninsular and Oriental Company to cause assistance to be sent to the survivors and to despatch a land expedition to search the island of Socotra and steamers to search for the missing boat. The Court desires to speak most highly of the discipline on board and the entire absence of panic amongst the crew and the passengers under severely trying circumstances. It also commends highly the conduct of the officers, and mentions with special approbation the conduct of the surviving lascars and the other Indian crew.

THE GOLD FIELDS OF ALASKA.

Mr. Harry de Windt, writing to *The Times* says:—"The discovery in Alaska within the past few months of gold in large quantities has attracted considerable attention, not only throughout the United States, but also in Canada and British Columbia. The auriferous deposits are of extraordinary richness, 40 pounds to the pan has been obtained on Bonanza Creek, which is equal to the best records of California or Cariboo; and although the output of gold throughout the Yukon district in 1895 amounted to only \$3,000,000, these figures show an increase in 1896 of \$1,670,000, while further important discoveries have been made since the publication of these statistics. It is possible that the very favourable report of Inspector Constantine (published in the *Standard* a few weeks ago) may attract capital and labour from this country, but although the inspector very rightly dwells upon the possibilities offered by this new Eldorado he does not mention the difficulties that at present attend the journey to the goldfields—difficulties which should not be overlooked by intending prospectors. The report concludes, "A route from the South to the headwaters of the Yukon is required," but this scarcely conveys a correct impression of the hardships, and even perils, that at present encompass the voyage into the interior of Alaska from the sea.

There are two ways of entering Alaska—one by sea from San Francisco, Vancouver, Victoria, and other southern ports to St. Michael's in Behring Sea; the other, which I chose, and which is taken by fully 90 per cent. of the gold-seekers, by crossing the mountains further south and descending a chain of lakes and rapids to the headwaters of the Yukon River. The distance saved by adopting the overland journey is no less than 2,500 miles. The difficulties of this voyage are only realized at Dyea, 100 miles from Juneau, where the land journey commences and where a bad anchorage frequently compels the traveller to wade knee-deep for a considerable distance before landing. Dyea consists of a rude log store and a movable town of tents occupied by diggers bound for the goldfields. A delay of several days occurs here while Indians are procured to carry tents and baggage to the lakes 24 miles distant, over the Chilkoot Pass, nearly 4,000 feet high. Provisions must be brought from Juneau, for there is nothing to be had here, or indeed anywhere this side of Forty Mile City, 600 miles away.

The Chilkoot Pass is difficult, even dangerous, to those not possessed of steady nerves. Toward the summit there is a sheer ascent of 1,000 feet where a slip would certainly be fatal. At this point a dense mist overtook us, but we reached Lake Lindeman—the first of a series of five lakes—in safety after a fatiguing tramp of 14 consecutive hours through half-melted snow. Here we had to build our own boat, first felling the timber for the purpose. The journey down the lakes occupied 10 days, four of which were passed in camp on Lake Bennett during a violent storm which raised a heavy sea. The rapids followed. One of these latter, the "Grand Cañon, is a mile long, and dashes through walls of rock from 50 to 100 feet high, six miles below are the "White Horse Rapids," a name which many fatal accidents have converted into the "Miner's Grave." But snags and rocks are everywhere a fruitful source of danger on this river, and from this rapid, downward, scarcely a day passed that one did not see some cairn or wooden cross marking the last resting-place of some drowned pilgrim to the land of gold.

The above is a brief sketch of the troubles that beset the Alaskan gold prospector—troubles that, although unknown in the Eastern States and Canada, have for many years past associated the name of "Yukon" with an ugly sound in Western America.

The journey to the Alaskan goldfields is a hard one for the well-equipped explorer, who travels in light marching order. The gold prospector, on the other hand, must carry a winter's provisions, dearly purchased at Juneau, to be transported at ruinous prices over the Chilkoot Pass. He must construct his own boat (often single-handed) on Lake Lindemann, and, assuming that he arrives at his destination, must secure lodgings at a price that would startle a West-end landlord. And all this on, perhaps, a capital of \$1,000, not including a ticket to Juneau from the Golden Gate or elsewhere. No wonder that the annals of the Alaska Commercial Company bear witness to the fact that, within the past five years, hundreds of starving miners have been sent out of the country at the company's expense, and these, as I can testify, are but a percentage of those who have perished from actual starvation in the dreary purlieus of Circle City and Forty Mile Creek.

There is, however, a brighter side to this gloomy picture, for there are fortunately other approaches to the Yukon Valley besides the dreaded Chilkoot. The chain of mountains of which the latter forms a part is cut by three other passes—the Takin, the Chilkat, and the White Pass. Of these the two former may be dismissed as being, on account of their length and other difficulties, almost as impracticable as the Chilkoot, over which it would be impossible to lay a bridle path; but the White Pass offers no serious obstacles to the construction of a railway. The White Pass is at least 1,000 feet lower than the Chilkoot, and, unlike the latter, is timbered the entire length. The water terminus of this pass is in Skagway Bay, 85 miles from Juneau. Here ocean steamers can run up at all times to a wharf which has been constructed in a sheltered position, and there is an excellent town site with protection from storms. The pass lies through a box canon surrounded by high granite peaks and is comparatively easy. It has already been used by miners who report very favourably upon the trial, and when it is considered that the adoption of this route obviates the dangers and expenses of the Chilkoot, avoids Lakes Lindemann and Bennett (the stormiest and most perilous of the whole chain), shortens and greatly diminishes the expense of the journey to the Yukon Valley, and, above all, can be used throughout the year (the interior of Alaska is now completely cut off from the world for nine months in the year), there can be little reasonable doubt that the White Pass is the best and most practicable route to the Yukon goldfields.

It is said that a scheme is now in progress to open up the White Pass and facilitate the transport of miners and stores to the mining settlements, and this is earnestly to be wished. An English company, the British Columbia Development Association (Limited), has already established a landing wharf, and are erecting a store and sawmills at Skagway, whence it is proposed (as soon as may be feasible) to lay down a line of rail some 35 miles long, striking the Yukon river at a branch of the Teslin Lake, about 100 miles from Lake Lindemann, which is the débouchure of the Chilkoot Pass. By this means the tedious and difficult navigation between these two points will be avoided, and the only dangerous parts of the river below—viz., the Grand Cañon and White Horse Rapids—will be circumvented by a road or rail portage. Light draught steamers will be put on from Teslin Lake to the canon, and from the foot of the latter to all the towns and camps on the

river. Arrangements will also be made for direct communication with Skagway by the existing lines of steamers, which now only call at Juneau, whence transshipment is necessary.

It is stated that this route will be open for use and traffic in a few months' time, when the cost of transporting freight and passengers will be very considerably reduced and the difficulties of the transit practically eliminated. Much, however, depends upon the Canadian Government, which, in view of the increasing rush of miners to the Yukon Valley (many of whom must, under existing conditions, inevitably starve during the coming winter), should lose no time in constructing a wagon road over the White Pass.

When the above scheme has been carried out the prospector (even of limited means) may reasonably hope to reach his claim in safety and at a comparatively moderate outlay. At present I should certainly recommend all those intending to try their luck in Alaska to defer their journey until a less hazardous route than that *via* the Chilkoot Pass is open to them. It is with the object of warning Englishmen, who may be deceived by the alluring advertisements of unscrupulous agents, that I have addressed you this letter. That there is gold in large quantities on the Yukon has been conclusively proved, but the wealth of the Indies would not compensate the risks now attendant on the journey. As an old Yukon miner remarked to me at Juneau, "\$1,000 a day would not fetch me over the Chilkoot again, but open up the 'White Pass' and we will soon have another Johannesburg at Forty Mile Creek."

NAGASAKI ROLLER FLOUR MILLS COMPANY, LIMITED.

From the Nagasaki journal we learn that at the half-yearly general meeting of the shareholders of this company, held on Thursday August 26th, Mr. F. Ringer, speaking as Chairman, said that since the report had been written, the American wheat market had gone up, and flour had advanced 40 cents per bag, so that the value of the Company's stocks had much increased. Since 1892, 60 per cent. had been paid in dividends, an average of 10 per cent. per annum. The property was now worth double the book value, which was still the same as in 1892. The land alone cost \$2,500 and it was now worth \$17,000, an increase of nearly \$15,000. There was also a gain of \$9,600 in the value of the machinery by reason of the difference in the rate of exchange. The buildings cost \$18,000 and at the increased cost of labour and bricks were worth double that amount at the present time. \$5,000 worth of spare gear had been laid down. Since 1892 additions of machinery to the extent of \$7,000 had been made, although only \$4,000 appears in the accounts. The total valuation of the property and plant was fully \$120,000, and in view of that fact it was worth while considering the expediency of increasing the capital to \$120,000, giving shareholders ten shares of \$100 each for every \$500 share held by them at present. The reduction in the face value of shares would render them more easy of sale. The stock of flour at Vladivostok was still heavy, but if the present position continued it would no doubt be possible to obtain better prices than were provided for in estimating the value of stocks there. A claim for shortage of wheat had just been settled with the Nippon Yusen Kaisha for \$2,500.

The report and accounts having been passed and the retiring directors re-elected, Mr. Robertson moved—"That on account of the increased value of the property, the Directors be requested to consider the advisability of calling an Extraordinary General Meeting for the purpose of increasing the capital of the Company to \$120,000, to be divided into 1,200 shares of \$100, each shareholder to receive ten shares of \$100 each for every \$500 share held at present." Mr. Glover having seconded, the motion was agreed to.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

TURKEY AND GREECE.

London, August 25. Germany has declined to join the other Powers in approaching the Greek Government regarding the method of raising the indemnity money until after the peace preliminaries are signed. France and Russia seem disposed to adopt Lord Salisbury's plan, but Austria sides with Germany.

London, August 29.

The position of the Eastern Question is very complex, and changes its aspect daily. Lord Salisbury has made a fresh proposal that Great Britain, France, and Russia guarantee the indemnity loan, and undertake the control of certain Greek revenues. Greece has replied that she is unable to state what revenues she can assign to guarantee the loan, as the amount of the indemnity is not yet fixed. Meanwhile, the Cretan Assembly has adopted a resolution in favour of the immediate establishment of autonomy.

London, August 31.

The Powers have again addressed a communication to the Greek Government on the subject of the indemnity loan.

London, Sept. 1.

In reply to the Powers, the Greek Government offers to assign the stamp revenue of eleven million drachmas as security for the indemnity loan.

London, September 2.

The Greek reply satisfies all the Powers except Germany, whose views are unknown.

THE INDIAN FRONTIER RISING.

London, August 25.

The Afridis have captured and burnt Ali Mu-jid.

[Ali Mu-jid is between Peshawar and the Afghan frontier, about twenty miles from each.]

London, September 2.

The delay in sending the big expedition into the Afridi country is owing to the fact that the necessary sanction has not yet been received from the Secretary of State. This is said to be in consequence of considerable unrest in Beluchistan where troubles are feared.

The Afridis still hold the Khyber Pass, while the Waziris threaten Kohat, Tochi, and Malakand.

THE TRANSVAAL AND GREAT BRITAIN.

President Kruger, speaking in the Volksraad, declared that British suzerainty over the Transvaal had ceased to exist, but that the Transvaal desired to uphold the Convention entirely, and to preserve friendly relations with Britain and the whole world.

London, August 26.

The English papers accept President Kruger's statement [that British supremacy in the Transvaal has ceased] quite calmly, and declare that as long as the Convention is maintained there is no need to quarrel about mere words.

THE FRENCH PRESIDENT IN RUSSIA.

The Russians are indulging in the most extravagant outburst of Francophile enthusiasm, the French sailor being embraced by the Russians in the streets, and the French officers covered with flowers. The prevalent display of sentiment is described as a delirious frenzy.

The Tzar yesterday conferred with M. Hanotaux and M. Mouravieff for an hour.

London, Aug. 27.

President Faure has left St. Petersburg.

THE KING OF SIAM.

The King of Siam has arrived at Potsdam, and was accorded a hearty reception by the German Emperor.

THE SOUDAN EXPEDITION.

One of the Nile gunboats has reached Abu Hamed, and five others have passed the worst part of the (Fourth) cataract.

The waters of the Nile are rising steadily.

London, Aug. 31.

The gunboats on the Nile have passed all the cataracts below Berber, and found that the garrison of that place had been withdrawn to Metemes.*

(* Probably Matammeh, a town lying on the Nile in the province of the same name about midway between Berber and Khartoum.)

THE WHEAT PROSPECT.

London, August 29th.

There is an agitation in France against the corn duties, owing to the rise in the price of bread.

The Hungarian official estimate calculates that there will be a shortage of fifty million metric hundred-weights in the world's wheat harvest of 1897-98.

BRITISH ARMY APPOINTMENTS.

Sir Evelyn Wood, V.C., G.C.B., G.C.M.G., has been appointed Adjutant-General, and Sir George Stewart White, V.C., G.C.I.E., K.C.B. (Commander-in-Chief, India), succeeds him as Quarter-master-General.

A FRANCO-RUSSIAN ALLIANCE.

London, Sept. 1.

The German Press has received the Czar's announcement of an alliance with France calmly, being convinced that Russia would not support France in a war of revenge.

M. Faure had a most enthusiastic reception on his return to Paris, where addresses and speeches all dwelt on the peaceful nature of the Franco-Russian alliance. Just after M. Faure passed the Madeleine, however, a bomb exploded but did no harm.

The English Press is not disposed to cavil at the Franco-Russian alliance, believing that it strengthens the peace of the world.

MORE ISOLATION!

Some German papers believe that Russia will bring France and Germany closer together to the detriment of Great Britain! "THE TIMES" ON THE JAPANESE.

The *Times*, in a leading article commenting on the progress of Japan, asks how soon the commercial supremacy of Great Britain will be shaken in the East by the sharp-eyed, intelligent Japanese.

THE DUKE OF YORK IN IRELAND.

The Duke and Duchess of York have been accorded a hearty reception in Ireland.

A CHINESE RAILWAY.

The first sod of the Chinese Eastern Railway has been turned at Stanitz.

COLLISION NEAR GIBRALTAR.

London, Aug. 27.

The steamship *Glengyle* collided with another vessel near Gibraltar and had to be beached, as she was badly damaged. The passengers and crew were all saved.

A later report state that the *Glengyle* has been refloated and towed into Gibraltar.

London, September 2.

The *Times* publishes a letter from Mr. Cooke, Secretary of the British Chamber of Shipping, vehemently denouncing the conduct of the commanders of fifteen British men-of-war at Gibraltar who ignored the danger to the *Glengyle* on the occasion of that vessel's recent accident.

COUNCIL BILLS.

London, Sept. 2.

The Secretary of State announces that the biddings for Council Bills will be suspended for not less than six weeks.

(FROM TONKIN PAPERS.)

FRANCE AND ITALY.

Paris, August 7.

The Italian General San Martino arrived at Modane yesterday to present the compliments of King Humbert to President Faure. There was a most cordial interview. The General afterwards dined with the President.

DISASTROUS EXPLOSION.

By the explosion of a cartridge factory at Roustchoux, forty-six persons were killed and sixty injured.

OBITUARY.

Paris, August 8.

M. Boelle, President of the Tribunal at Haiphong, has died in Paris.

THE GERMAN EMPEROR IN RUSSIA.

The German sovereigns have arrived at St. Petersburg. At a gala dinner, the Czar said that this visit was a precious guarantee of the maintenance of peace, his constant effort and his most fervent wish. Emperor William, in reply, said that he and his people would assist in maintaining peace. They and he would take a firm stand against anyone who sought to destroy the peace of Europe.

THE DEATH OF CANOVAS.

Paris, August 8.

An official despatch from Milan announces that Sen. Canovas was wounded three times by the revolver of an anarchist at Santa Aguela. Canovas died an hour later, crying "Vive l'Espagne!"

Paris, August 11.

The assassin of Canovas was arrested immediately. He is a Neapolitan anarchist named José Manto (Santo?). He had declared his intention of avenging the anarchists tortured at Monunich. There is much indignation throughout Europe over the assassination.

The body of the deceased statesman will be taken to Madrid where the most solemn obsequies will be observed.

PRESIDENT FAURE.

M. Félix Faure has concluded his travels in Savoy and has returned to Havre.

M. FAURE'S VISIT TO RUSSIA.

Paris, August 18.

President Faure, accompanied by M. Hanotaux, Foreign Minister, and Admiral Gervais, embarked to-day at Dunkirk for Cronstadt on board the *Pothuan*, which will be escorted by the *Surcouf* and the *Brueys*.

Paris, August 19.

The *Brueys*, having sustained some damages, has returned to Dunkirk. Her place has been taken by the *Dupuy de Lôme*.

TRIBAL REVOLT IN AFGHANISTAN.

The Afridis and Orakzais, on the frontier of Afghanistan, have revolted against the English. These tribes, as well as the Mazarais, are advancing on the English outposts.

(FROM THE "MANILA COMERCIO.")

THE ATTACK ON PRESIDENT FAURE.

Madrid, August 18th.

An anarchist threw a bomb at the President of the French Republic, M. Felix Faure, who was unhurt. One of the President's suite was injured.

INCREASE IN CUSTOMS DUTIES IN THE PHILIPPINES.

Madrid, August 15.

The royal decree imposing a new Customs tax in the Philippines has been signed. The new tax consists of six per cent. *ad valorem* on all national merchandise and the same on foreign merchandise. The new tax will apply to all goods leaving their port of origin after the publication of the decree.

(THE "SHANGHAI MERCURY.")

DEATH OF A BRITISH CONSUL.

Hongkong, August 21.

Mr. Charles Sinclair, formerly H.B.M.'s Consul at Foochow, is dead. He was 79 years of age.

DIPLOMATIC.

Mr. H. Ironside has been transferred from the British Legation at Washington to be Secretary to the Peking Legation.

THE CHINA SQUADRON.

H.M.S. *Powerful* has been ordered by the Admiralty to join the China Squadron in Sept.

(FROM THE JAPANESE PAPERS.)

THE RUSSIAN MINISTER TO KOREA.

Söul, August 29.

Mr. Waeber, ex-Russian Minister, will leave here for home about the 11th of September.

Nagasaki, August 29.

M. de Speyer, Russian Minister to Korea, left here for Chemulpo to-day at 5 p.m.

THE "TOYOHASHI MARU."

Yokosuka, August 30.

The steamer *Toyohashi Maru*, which arrived here on the 28th inst., will be requisitioned for service by the Naval Authorities.

THE HAKODATE GAMBLING CASE.

Hakodate, August 30.

The trial of Chinese belonging to a British man-of-war, who are charged with gambling, is to take place to-morrow.

TROOPS FOR SIBERIA.

Nagasaki, August 31.

A Russian steamer conveying soldiers from Odessa called here *en route* to Vladivostok.

THE HOKURIKU RAILWAY.

Kanagawa, August 31.

The opening of the line between Fukui and Komatsu on the Hokuriku Railway, which was to have taken place to-morrow, has been postponed till the 15th of September owing to delay in the work.

FIRE AT WAKAMATSU.

Wakamatsu, August 31.

Fire has broken out at Hange-cho, Kawamura-gun and is still burning.

AGRICULTURAL AND COMMERCIAL BANK.

Kagoshima, August 30th.

A meeting of the organizing committee of the proposed Agricultural and Commercial Bank was held to-day and it was arranged to start the Bank with a capital of yen 500,000.

EARTHQUAKE.

Miyake, Tango, August 31.

This morning a severe earthquake was felt here.

Maizuru, Tango, August 31.

This morning at a little past 1 a sharp earthquake was felt here.

RELIEF FOR WEI-HAI-WEI.

Bakan, August 31.

Over 530 soldiers for the Wei-hai-wei garrison are to leave here to-morrow.

YOKKAICHI ELECTRIC LIGHT.

Yokkaichi, Sept. 1.

The Yokkaichi Electric Light Company commenced to furnish light to-day.

BANK AMALGAMATION.

Osaka, Sept. 1.

The 34th Bank and the 121st Bank have made an arrangement to amalgamate. The former Bank has a capital of yen 1,500,000 and the later of yen 600,000.

KOREAN AMBASSADORS.

Söul, Sept. 1.

Bin Eiyoku has been appointed Ambassador to the six Powers.

THE MARINE EXHIBITION.

Kobe, Sept. 1.

H.I.H. Prince Komatsu left Kobe Station this morning for the Marine Produce Exhibition at Wadamisaki in a special train of the Sanyo Railway Company. He was accompanied by Mr. Oishi and the Governors of Hyogo and Okinawa.

THE KOREAN MINISTER.

Nagasaki, Sept. 1.

Mr. Li Kaei, Korean Minister to Japan, arrived here from Chemulpo this morning and left for Kobe towards evening.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokyo Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

2—Q to K 3	2—P moves
3—Q takes P, mate	

Correct solution received from W.H.S. and D.D.

PROBLEM NO. 336.
By J. M. K. LUFTON.

White to play and mate in two moves.

This Tourney was in danger of a sudden collapse a few days ago, one of the combatants having to leave Yokohama for a garrison town so far removed from here that it would have been impossible for him to carry on the games in accordance with the rules of the Tourney—48 hours being the time limit. To avert the catastrophe, however, we arranged a meeting between him and two of his adversaries at which Games 7 and 9 were played off *vis-à-vis*, the result being a draw in game 7, and a win for "Fardel" in Game No. 9. The score therefore stands:—"Fardel" 1½; "Olymp" ½; "Shepherd" 0.

Game No. 4, "Fardel" v. "Pakeha," and Game No. 10, "Nemo" v. "Fardel" will be continued by telegraph and we feel sure they will prove of interest, for all three combatants are good fighters and the games—one a King's gambit and the other a Danish gambit—promise to become rather lively. Below we give the scores to date. The other six games are proceeding in the ordinary way.

GAME NO. 4.

KING'S BISHOP'S GAMBIT.			
White—Fardel.		Black—Pakeha.

OVER THE CHESS BOARD.

This is an age of "young men," like Lasker and Pillsbury. Above forty a player gets shifted into the "veteran class," and above sixty he becomes "an old veteran." Curiously enough, the oldest of the English Chess veterans has recently pitted himself in a small match against a much younger opponent in a home-side encounter, to which we have made previous reference. Fortune has, however, declared itself in favour of the older player, and the match at present stands:—Bud 3, Lee 2.

The Berlin tourney, at which all the leading lights in the chess world will gather, has been fixed to take place on Sept. 12th. Entries closed on August 26th. Four prizes, respectively 2,000, 1,500, 1,000 and 600 marks, are offered.

The *British Chess Magazine* reports that an extraordinary exhibition of chess with living pieces took place at St. Petersburg on June 5th, which drew an immense crowd to the velodrome of the St. Petersburg Cycling Club. The game selected to be played was the 13th of the match, in which, as we have already shown, Tschigorin at his 23rd move had a beautiful mate on in five moves. It was intended to illustrate the episode in the Hungarian uprising of 1849, when the dictator Georgey, after his unfortunate battle at Vilagos, was taken prisoner, and surrendered to the Russians, and more or less the costumes adopted called to mind the nationalists of both sides. The large open space in the velodrome was laid out as a gigantic chess board whose squares were clearly distinguished by sprinkled white sand and dark material. Its size was about 5,000 square metres, and each piece was represented by from three to eight persons. Thus the King and Queen were on horseback, surrounded by servants, pages, and warriors. Each Knight was represented by three armed riders; the Bishops (as we so absurdly call them) consisted of six young ladies clothed in tasteful and dark red dresses; the Castles were nearly ten feet high, and on their ramparts were cannons and troops; finally, each Pawn was embodied in five foot soldiers. This combination of persons for each piece must have been somewhat confusing, but all seems to have gone off well. The conductors were Tschigorin and Schiffer, the former commanding the Russian and the latter the Hungarian army. Each move was heralded by a horn signal, which set the respective division of forces in motion.

The midsummer meeting of the New York State Chess Association took place at the Murray Hill Hotel, Thousand Islands. Steinitz, against whom a protest had been lodged, was permitted to compete in the contest for the *Staats Zeitung* challenge cup, and was pitted against Lipschultz and Napier, the boy champion of the Brooklyn Club. Play in the cup tournament was of a high order, and, although Steinitz defeated Napier somewhat easily in the initial game, the tables were turned when the sixteen-year-old boy created a mild sensation by "tuning down" his formidable opponent. This defeat makes it necessary for Steinitz to beat Lipschultz in the final struggle in order to tie, the score of the contest being:—Lipschultz, won 2½, lost ½; Napier, won 1, lost 2; Steinitz, won 1½, lost 1½. As Pillsbury was under obligations to play for New York in the inter-state team match with Pennsylvania, he could not find the time necessary to participate in the cup contest. This caused the young champion no little chagrin, as he was of the opinion that he had a splendid opportunity for carrying off the trophy. The special feature of the meeting was the problem solving open to all competitors. The problem was by M. Lissner, a three-mover, and the contestants were required to write out at least five variations in black's play, after the initial "key" move of white. It fell to Pillsbury after only six minutes' work. Next came Steinitz, followed by Lipschultz, the others being much later with their solutions.

The second game in the Kobe-Nagasaki correspondence game has been won by Kobe, Mr. Jordan, the *Herold* says, having wired his resignation on Thursday.

PASSENGERS.

ARRIVED.

Per British steamer *Tacoma*, from Hongkong via ports.—Mr. R. M. Haider, and Mr. R. Higaki, in cabin. For Tacoma, Wash.:—Miss F.

Parsons, Miss H. Ennis, Mr. and Mrs. G. Kearton, Mr. Fred B. B-r-y, Mr. and Mrs. L. Rosen-thal and infant, and Mr. Leon N. Ford, in cabin; 11 Japanese and 63 Chinese in steerage.

Per Japanese steamer *Nagato Maru*, from Shanghai via ports:—Viscount Hayashi, Capt. H. Yamada, Mr. H. Nakano, Mr. and Mrs. Hiji-kata, Mr. J. B. Robinson, Manager Haruta, Mr. Agohara, Mr. E. Wagner, Mr. J. Bless, Mr. F. Watanabe, Mr. and two Masters Shoda, Mrs. H. Sakao, and Mrs. M. Shimamura, in cabin; Mr. B. Ninomiya, Mr. Burns, Mr. Shogimoto, Mr. K. Kusuna, Mrs. Sugimoto, Mrs. T. Kusuna, Mr. N. Matsumoto, Mr. Mison, Mr. T. Murai, and Mr. White, in 2nd class; 8 Chinese, 2 Europeans, and 48 Japanese in steerage.

Per British steamer *Belgic*, from San Francisco:—Mr. M. F. Neimeyer, Mr. and Mrs. Portman, Mr. S. Mitsushashi, Mr. J. Ohara, Mr. O. Pollak, Eug. J. F. Marshall, U.S.N., Surgeon F. Anderson, U.S.N., Mr. G. Maisui, Mrs. C. F. McWilliams, daughter and amah, and Mr. Jno. H. Jennings, in cabin. For Kobe:—Mr. Milton Har-ley, in cabin. For Shanghai:—Mr. Jno. Gooduow, U.S. Consul-General, Mr. A. H. White, Mr. G. H. Echelberger, Mrs. J. P. Campbell, and Mr. Shang Hsi Iseng, in cabin. For Hongkong:—Mr. G. C. Holberton, Mr. Chan Pao Tung, Mr. Wang Ta Chun, Miss B. Brown, Misses M. S., and J. Burrows, and Miss E. Jackson, in cabin.

Per German steamer *Hohenzollern*, from Hong-kong:—Viscount Aoki, Viscountess Aoki, The Hon. Miss Aoki, Mr. St. C. Michaelson and children, Miss S. Habelhorst, Mr. G. H. Rollinson, Mr. P. C. Hansen, Mr. Kosiwo Kami-yama, Mr. C. Reimann, Mr. C. Holstein, Mr. E. Vogel, Mr. G. Wild, Mr. S. Saunders, Mr. Lhauser, Dr. Asakura, Miss Taku Koyano, Mr. V. Ray, Miss Anne Sinke, and Dr. S. Otani.

Per British steamer *Olympia*, from Tacoma, Wash., and Victoria, B.C.:—Rev. K. Ihuka, Mrs. Uhler and child, in cabin. For Kobe:—Mr. and Mrs. Boyer and family, and Rev. A. Segawa, in cabin. For Shanghai:—Miss Ella J. Newton, Mr. and Mrs. Shearer and family, Miss Taylor, and Mr. John Northey, in cabin; 25 Chinese in steerage.

Per American steamer *City of Peking*, from Hongkong via ports:—Mr. T. Chisholm, Mr. Joseph Leonard, Mr. E. R. Budden, Mr. W. Tomenjo, Mr. Chas. H. Schroth, Mrs. M. M. Kuhn, Miss W. Atkinson, Mr. M. Raspe, Miss B. Kuhn, Mr. J. H. Rogers, Mr. P. Piry, Mr. J. Anglada, Lieut. G. Papa Federoff, Mr. A. W. Crombie, Mrs. J. L. Atkinson, Mr. Max Samuel, Miss Kuhn, and Mr. A. H. Butler, in cabin; Mr. Tong Cheek Ping, and Mr. Ah Yon, in steerage. For Honolulu:—288 natives in steerage. For San Francisco:—Mr. A. A. Rassadin, Mrs. A. C. Nichols, Master Nichols, Miss S. B. Reynolds, Miss Nichols, Miss Vesta A'kinson and maid, and Mr. P. Hennessey, in cabin; 95 natives in steerage.

Per Japanese steamer *Saikio Maru*, from Shanghai via ports:—Mr. James, Mrs. James, Mr. Y. Ishii, Mr. Copmann, Miss Braess, Mr. Braess, Mr. G. Matsumoto, Mr. C. Eymard, Mr. K. Kioka, Mr. and Mrs. W. C. Dollarme, Mr. and Mrs. Matlock, and Mrs. Grand, in cabin; Mr. and Mrs. J. Kato and children, Mr. T. Takagi, Mr. K. Uyemura, Mr. Y. Sakai, and Mr. G. Brook, in 2nd class.

DEPARTED.

Per Hawaiian steamer *China*, for Hongkong via ports:—Mr. C. McCashin, Mr. J. Ambrose, Col. and Mrs. C. F. A. Turnbull, Mr. Albert S. mon, Rev. S. R. Hope, Miss M. B. Ingold, Mr. V. Marsh, Mr. H. J. Neville, Mr. L. L. Little, Mr. and Mrs. M. March, Rev. and Mrs. J. M. Bain, Mr. Robert H. Moorehead, Mr. J. Rief, Mr. C. Thiel, Mr. John A. Morris, Mr. H. C. Du Rose, Mr. & Mrs. A. H. Mancell, Mr. Ernest Helling, and Mr. G. S. Northote, in cabin.

Per British steamer *Verona*, for Hongkong via ports:—Mr. Tomonaru Koyama, Surg. John E. Page, Mr. M. Blumer, Mr. Richard Hecker, Mr. E. Keilmann, Lieut.-Col. Nutt, Mr. Ioki Chekora, Mr. T. Kronenberg, Mr. A. Walte, Mr. and Mrs. Louis Cunningham, Mrs. Chue Fai Foon and child, and Mr. F. Taylor Gause, in cabin; 10 Chinese and 2 Europeans in steerage.

Per Japanese steamer *Nagato Maru*, for Shang-hai via ports:—Hon. N. Ro-poppoff, Hon. Ed. D. von Waerber, Rev. and Mrs. Haden, Mrs. McGinnis, Miss Shinya, Rev. Bishop P. M. Osoul, Rev. J. M. Lemarche, Capt. M. Yagi, Mr. and Mrs. R. B. Pury, Mrs. Kuwabara, Mr. and Mrs. Faidel, Miss Haygood, and Mr. Nakahara, in cabin; Mr. M. Seray, Miss J. Ichiki, Mr. N. Kunbara, Mr. R. Yoshida, Mr. K. Miye, Mr. Y. Tanaka, Mr. K. Nakamura, Mr. K. Kudo, Misses Shima, and Mr. J. Harvie in 2nd class; 61 Japanese in steerage.

Per British steamer *Shanghai*, for London via ports:—Messrs. John Browning, Ed. Eddy, Alfred Penfold, Wm. Somerville, Edgar Bray, Arthur Randall, Ernest Rayment, A. Snell, S. Bebbings, J. W. S. Neeson, A. Nirenheim, C. A. Fraser, J. Northey, M. L. Ellis, and Dr. H. C. Whiting, in cabin.

Per German steamer *Hohenzollern*, for Shang-hai:—Mr. A. Reichard, Capt. Stopani, Dr. and Mrs. G. H. Bateson Wright, Mr. G. Thomas, Mr. F. Tiansky, Mr. W. T. Andrews, and Rev. L. F. Ryde, in cabin; 4 Europeans in steerage, and 1 Chinese on deck.

CARGOES.

Per British steamer *Verona*, for Hongkong via ports:—Silk, 847 bales; Waste Silk, 65 bales.

Per British steamer *Tacoma*, for Victoria, B.C., and Tacoma, Wash.:

SUGAR.

Prices for Brown have dropped from ten to fifteen cents a picul and a fair business has been done. Arrivals include 77,000 piculs Manila and 12,400 piculs China, and sales 93,000 piculs in all, including 35,000 piculs Formosa. Stocks amount to 65,000 piculs. Very little has been done in White refined, at former rates.

	PER PICUL.
Brown Takao	\$3.90 to 4.00
Brown Manila	4.00 to 4.50
Brown Dailong	3.90 to 3.95
Brown Canton	3.30 to 4.20
White Java and Penang	6.50 to 6.60
White Refined	7.30 to 8.90

EXPORTS.

RAW SILK.

The market during the past week has been quiet, with a turn in favour of buyers, dealers having discovered that they could not have it altogether their own way. Quotations for filatures remain the same, but some concession could doubtless be obtained if buyers showed a desire to do business. In Kakedas a large transaction has taken place at \$20 below the maximum rates of last month. Settlements from Aug. 18th to Sept. 1st amount in all to 4,300 piculs; stock 4,825 piculs. Shipments have been 669 bales per *Gaelic* and 371 bales per *Tacoma* for America, and 847 bales per *Verona* for Europe.

TEA.

Business has continued brisk during the past week, sales in Yokohama having amounted to about 433,000 catties, and in Kobe to about half that amount. Teas costing from \$23 to \$29 per picul have met with the readiest sale. Prices are well maintained, especially for the lower grades, which are dear at present quotations. Supplies have arrived freely hitherto, but it is said by dealers that the picking of the third crop will be discontinued after the 10th inst. in most districts. Shipments have been 335,353 lbs. per *Tacoma* and 182,676 lbs. per *Braemar*, on the 29th ult., for Victoria, B.C. and Tacoma.

QUOTATIONS.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World
May 1st, 1897.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, SEPT. 11TH, 1897.

MARRIAGE.

On Dec. 14th, 1896, at St. John's Church, by the Rev. Alex. Williams, JOHN LEWIS DAY, M.A., M.D., late sessional lecturer in classics McGill University, Montreal, to GERTRUDE ELIZABETH, daughter of J. Troughton Thompson, Esq., Toronto, and niece of A. G. Caton-Thompson, Tokyo.

DEATHS.

At Kobe, on the 5th instant, HENRY ST. JOHN BROWNE, At No. 24-B, Bluff, on Sunday, 5th September, 1897. ELLEN ALICE WALKER, aged 15 years. At Ikao, on the 10th inst., PHYLLIS EVELYN BUCHANAN DUNLOP.

SUMMARY OF NEWS.

VISCOUNT Aoki is to be appointed a Privy Councillor.

THE Railway Bureau has ordered 20 locomotives from America.

THE Japanese battle-ship *Fashima* has finished her gun trials in England.

H.I.H. THE PRINCE IMPERIAL, who has been staying at Hayama for some time, left Zushi

Station for Kamakura on the morning of the 6th instant.

MARQUIS ITO returned home by the *Empress of Japan* on the 5th instant.

A Japanese Legation was opened at Rio de Janeiro, Brazil, on the 30th ult.

OSAKA will celebrate the formal commencement of work on the new harbour on the 20th instant.

MR. MAKINO, the new Minister of Japan to Italy, left for Europe by the *Zaors* on the 5th inst.

MOUNT KIRISHIMA, in Kiushiu, commenced rumbling and showed signs of eruption on the 4th inst.

SPECULATIONS are rife as to possible changes in the Cabinet now that Marquis Ito has returned home.

It is reported that arrangements have been made for Korea to join the International Telegraph Convention in January 1899.

THE new Korean Minister to Japan, Ei Kaei (Ye Ha yong) and suite arrived in the capital on the afternoon of the 7th instant.

THE Hawaiian Authorities have acceded to the proposal of Japan, to ask Belgium to act as arbitrator in settling the emigration affair.

THE cable service to the Chishima (Kurile) group, which was completed the other day, will be opened to the public on the 16th inst.

A NUMBER of persons in Gifu Prefecture have been arrested on suspicion of being concerned in the forgery and circulation of forged 5 yen bank notes.

ON Monday night a man of about 28 years was found run over by a train on the railway line near Takanawa, Shiba. It is believed that it was a case of suicide.

THE question of raising the passenger fares on all private railways is to be considered at a friendly meeting of the united railway companies to be held in October next.

THE Education Department has under consideration the establishment of a University to be called the Kyushu Imperial University, in the town of Kumamoto, Kyushu.

YOKOHAMA, Tokyo and neighbouring districts were visited on the morning of the 9th inst. by a severe typhoon. Much damage was done on land and sea, and many lives were lost.

THE Japan Red Cross Society has ordered two steamers from England for use as hospital ships in time of war, and to be chartered to the Nippon Yusen Kaisha in time of peace.

VISC NT AOKI, Japanese Minister to Germany, who returned home the other day, proceeded to the Palace on the morning of the 6th instant and was received by the Emperor and Empress.

EARTHQUAKES were reported on the 4th inst. from Kure at 12.30 p.m.; Kochi at 12.31 p.m.; Tadotsu at 12.31 p.m.; Nemuro at 1.43 p.m.; Oshima Island at 6.01 a.m.; Matsuyama at 12.35 p.m.; Yaksuka at 2.09 a.m. respectively.

MARQUIS ITO, ex Premier, who returned home on the 5th instant, proceeded to the Palace on Tuesday morning and was received in audience by the Emperor, to whom he submitted minute reports regarding the Diamond Jubilee celebration.

REAR-ADMIRAL VON DIEDERICH, Commander-

in-Chief of the German Eastern Squadron, and other officers of the squadron, accompanied by Mr. Von Treutler, German *Chargé d'Affaires*, had audience with His Majesty the Emperor on the 6th inst.

ON Tuesday morning, with the exception of Marquis Saigo, all the Ministers of State, and Count Kuroda, President of the Privy Council, assembled at the Cabinet Office and held a conference with regard to the amendment of administrative affairs.

ON Tuesday a jinrikisha man was killed by collision with a race pony which had bolted and become unmanageable, at the corner of Awacho and Main Street, Yokohama. The rider of the pony, a jockey named Kobayashi, had his shoulder dislocated.

AN expenditure of 35,000 yen from the Treasury has been sanctioned for the establishment of temporary sanitary inspection stations in Niigata, Miye, Gifu, Nagano, Tottori, Shimane, Hiroshima, Yamaguchi, Tokushima, Kagawa, Ehime, Fukuoka and Kumamoto prefectures.

IT is stated that the London Chamber of Commerce having found that the Raw Silk Direct Export Encouragement Law of Japan is opposed to the spirit of the treaty between Great Britain and Japan, has presented a petition to the British Authorities to protest to the Japanese Authorities to that effect.

ON the 7th inst. (at about 2.40 a.m.) fire broke out in the work shed at the western corner of the compound of the Akasaka Detached Palace, and all the contents were destroyed, the flames being subdued at 3.50 a.m. by the Court police and the fire brigades. The Palace itself and other adjoining buildings were untouched by the flames.

THERE were ninety three warships under construction in the United Kingdom at the end of the quarter closing June 30th last; and of this number seventy-nine, or 214,175 tons displacement, were in private yards, while only fourteen, of 133,020 tons displacement, were being built in Royal dockyards. It should be stated that of the seventy-nine ships building in private yards, thirty-three, of 84,800 tons displacement, were for foreign orders.

BUSINESS is taking a long time to revive in Yokohama this year, though no doubt a good deal of the apathy is due to fears regarding the probable effect of the change in the currency that comes into force at the beginning of next month. During the past week only hand-to-mouth transactions took place in the piece goods market, fancies and fine yarns being enquired for. Prices are nominally unchanged in consequence. Kerosene should soon be looking up now that the hot weather is passing, and no doubt buyers will appear next week. Stocks both ashore and afloat are ample but not excessive. Nothing is doing in metals, and pig iron stock gradually increases. A fair business was done in brown sugars from Manila, at slightly hardening rates, while white refined continues steady. Raw silk is quiet at late rates, though buyers are having a slight turn in their favour, hardening exchange working against holders. Dealers in waste silk are preventing business, being too-anxious to bring prices to a parity with those prevailing in the raw silk market, but to this buyers will not accede. Tea has been fairly brisk, though the market is being gradually denuded of suitable leaf. Quotations are unchanged. Exchange, thank goodness, is again on the rise.

SPRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The question of gold monometallism is discussed in a lucid article by the *Nichi Nichi Shimbun*. Japan's great hope, according to our contemporary, is to become a manufacturing country, and until the Government abandoned silver in favour of gold, there was every prospect that she would achieve success. It is unnecessary to quote statistics bearing on the growth of her industrial enterprises: they are familiar to everybody. But it is in the East that she must seek her principal markets for many years to come, and the effect of her reversion to gold monometallism will be to shut the markets of the East to her. In former years her great competitor in the cotton-spinning enterprise was India. But India closed her mints to silver and from that time Japan acquired a marked advantage in competing for Chinese custom. Then came the currency system now on the verge of inauguration. Its consequences are already before the country's eyes. All imports from Japan to gold-using countries now sell for considerably less in the currency of Japan than they would have fetched had no change of the financial system been effected. Meanwhile India has again opened her mints to silver, so that she secures for herself the advantage which Japan formerly enjoyed but has now deliberately sacrificed. On the other hand, foreign projectors of spinning mills in China, who had hesitated to inaugurate their enterprises in view of the possible contingency that China might impose a heavy tax on goods as they left the mill, see that China is not disposed to impose any such tax, and are pushing forward their undertakings with vigour. These enterprising men now receive substantial encouragement owing to Japan's suicidal action in the matter of gold, and it will be strange if they do not secure the whole custom of China. Another source of regret is that the Japanese silver *yen* had virtually become the coin of the Orient when the new scheme was introduced. It circulated everywhere east of India. But it is now reduced to the rank of mere bullion. The notion that it will not come back to Japan for exchange against gold because it is wanted for currency purposes, is absurd. The confidence it enjoys is primarily due to its being legal tender in the country where it is minted. Deprived of that quality, it will certainly be presented for exchange, especially as the operation shows a large profit. The *Nichi Nichi* finds no redeeming feature in the new currency.

The *Fiji Shimo* has one of its characteristically sensible articles, the subject being "the origin of industrial progress in Japan." Our contemporary's conclusion is that the nation's sole need is experience. It recalls the days when industrial machinery was first imported from the West. The machines were neither worse nor better than those imported now, but the people could not get them to work. Many failures and great losses resulted. But now the same machines and multitudes of others subsequently procured are working successfully under Japanese management. It is the same with railways and telegraphs. At the outset, foreign experts had to be employed to build the line from Yokohama to Tokyo, and when it was finished, foreign experts had to be employed to run the trains. But now the Japanese build and work their own lines without any recourse whatever to foreign aid. So also with navigation and the management of steamers. Even in the matter of shipbuilding, there are plain indications of the development of independent ability. It is all a question of experience. Just as the top-spinner Gensai makes a top traverse his back, run along his arm or around his fan, whereas the same top in the hands of a tyro can scarcely be induced to spin at all, so a machine which at first will not even move for an inexperienced workman, by and by becomes almost sentient. Japan need not be concerned about the future. She has proved her capacity for manufacturing enterprise, and

has only to walk steadily forward on her way. Every railway she builds, every line of telegraphs she erects, every factory she establishes, every manufacture that she learns how to conduct, is so much added to the capital of the nation. The *Fiji* concludes by suggesting that she should build her own iron-clads. It would be a more expensive business than procuring them from abroad, but in the end it would pay, for the extra outlay would have bought precious experience.

The currency question affords a subject for discussion in several consecutive issues of the *Tokyo Shimbun* (Liberal organ), the articles being signed by Mr. Morimoto Shun. No new arguments are adduced. The writer's conclusion is that if the present programme of gold monometallism be insisted on, Japan will find herself once more in the throes of a fiat currency. To prove his prediction, he recapitulates the figures already published more than once in these columns with reference to the gold reserves of the Treasury, but in estimating the amount of silver *yen* likely to come from abroad for exchange, he assumes that Count Matsukata's total is vitiated by a telegraphic error. Count Matsukata, it will be remembered, basing his estimate an intelligence received originally by wire from Singapore, anticipates that some eight millions of *yen* are circulating there. Mr. Morimoto thinks that a cipher has dropped out, and that the true figure is eighty millions, but, of course, that is pure conjecture. He arrives at the conclusion that the Treasury's gold reserves will be speedily exhausted, for he entertains no hope of silver's recovering its sterling value to any appreciable extent. With regard to its collapse, he finds the chief reason in American sales of the great stores of the white metal lying in her vaults, and he has no hesitation in foretelling that silver will go from bad to worse. We need not follow these arguments and figures in detail, especially as the articles obviously derive much of their colour from political considerations. It will be remembered that when Count Matsukata was about to introduce the gold monometallic Bill, he was said to have consulted Marquis Ito and to have secured the latter's endorsement. The *Tokyo Shimbun* now alleges that it was a very qualified endorsement; that Marquis Ito did not discuss the merits of the measure, but merely told Count Matsukata that if he, the Count, was convinced of the advantages of such a step, and was prepared to accept the responsibility, he might proceed with the Bill. Our contemporary's conclusion is that an Imperial Urgency Ordinance should be issued postponing the operation of the new system, and that Count Matsukata ought to resign at once.

The *Yomiuri Shimbun* steadily continues to combat all pessimistic forecasts about the currency. It declares that no one who has taken the trouble to examine the figures relating to the reserves in the Treasury and the maximum quantity of silver *yen* likely to be presented for exchange, can attach the slightest importance to the *Tokyo Shimbun's* prediction that the Government's stock of gold will be exhausted, and that recourse to a fiat currency will become necessary. There is not the faintest basis for any such apprehension. As for the general question, nothing could be shallower than the arguments of folks who contend that a country receives larger prices for its exports simply because the tokens in which payments are made to it increase in number. The intrinsic value of the tokens must be included in the reckoning. If their purchasing power falls in a ratio even greater than the increased number of them received, it is folly to talk of any advantages accruing to their recipient. The plain fact is that silver, owing to the sharp and frequent fluctuations to which its gold price is liable, has become totally unfitted for a standard of value. One might as well use gum. Foreign purchasers of Japanese products and manufactures are, of course, able to pay a larger quantity of silver in proportion as that metal depreciates in terms of the gold for which they expect to sell the commodities. But against

that fact has to be set the caution dictated by the perils of a fluctuating exchange—perils which compel them to work with a wide margin. It is far more conducive to the interests of sound trade that buyers and sellers alike should conduct their transactions with a currency guaranteed against fluctuations. They know, then, exactly what they are doing, and can extend their business without dread of disasters against which no precautions can be taken. The *Yomiuri's* arguments are simply a well digested repetition of those advanced by the advocates of gold the world over. It maintains that the adoption of gold monometallism must tend to reduce the general level of prices in Japan, which will be followed by an increased volume of exports, and it contends that for purposes of competition with gold-using countries of the West or South in Eastern markets, Japan can not be said to have placed herself at any disadvantage by adopting their system of currency, while on the other hand, she retains all the advantages of her proximity to those markets, and of cheap labour.

The *Osaka Asahi* writes in support of increasing the Land Tax. It anticipates that the administrative expenditures of the State are likely to diminish rather than to grow larger, and that the burdens connected with military and naval expansion will also become less after next year. But the country must not shrink from productive enterprises without which its resources can not be developed, and the nation must consequently be prepared to put its hand in its pocket freely. The Government, therefore, should not shrink from imposing new or increased taxes, and the Land Tax offers itself as the simplest and justest means of obtaining additional revenue. The *Osaka* journal's presentation of the case should be already quite familiar to our readers. Briefly stated it amounts to this—that whereas the price of rice did not exceed 4 *yen* per *koku* when the tax was fixed at 3 per cent. in 1873, the price is now 13 *yen* a *koku* and the tax only 2½ per cent.; and that whereas the income derived from land in 1873 was about 6 per cent., it must be now at least three times that amount. The *Asahi* recommends the adoption of a progressive scale (*ruishin-ho*). In other words, it would make the increase of tax proportionate to the size of the holding. That recommendation is influenced by the fact that small holdings have been growing fewer of late years. Our contemporary gives these tables:—

LAND TAX PAYERS.		
	Persons paying from 5 to 20 <i>yen</i> annually.	Persons paying from 20 to 200 <i>yen</i> annually.
1886	1,653,621	900,192
1887	1,581,726	882,517
1888	1,602,000	884,754
1889	1,544,146	884,043
1890	1,485,056	815,504
1891	1,237,349	672,776
1892	1,185,454	642,181
1893	1,181,114	636,772
1894	1,146,146	620,545
1895	1,142,790	621,554

From some points of view it may be advantageous that the size of farms should increase, but, in the *Asahi's* opinion, the above table shows that the small farmers are gradually losing their hold of the land, and being reduced to the position of mere tenants. Hence one reason of its suggestion that the large landowners should be taxed more heavily than the small. It thinks that the Government should not hesitate to raise the general rate from 2½ to 4 per cent., by which means an additional income of some 23 million *yen* would be obtained.

Prince Max of Saxony, after a year's missionary work in Whitechapel, has returned to Dresden and says he awaits the decision of his Bishop as to whether he will return to Whitechapel, though the members of the Royal family at Dresden are exerting their influence to withdraw him from such work and install him in some court religious position. The Prince, however, is disinclined to accept such an office.

JAPANESE TOPICS.

Reports from all parts of Japan indicate that the rice crop this year will be exceptionally good. It is predicted, indeed, that the yield will exceed anything seen during the past seventy years. The *Miyako Shimbun*, speaking of the districts in the neighbourhood of Tokyo, says that whereas the average yield is 6.3 bags per *tan* (one-fourth of an acre), the crop this year is expected to be 8.3 bags. As to the Tokaido districts, from Suruga, Totomi and Mikawa, an increase of 15 per cent. above the average is reported; and from Mino and Ise, an increase of as much as 30 or 40 per cent. In the Chiugoku region, there has been some slight damage from insects, but it is insignificant. Tottori reports splendid weather and fine prospects, and that the market has fallen to from 3 *yen* to 3.50 *yen* per bag (*i.e.* 4*to*, or $\frac{2}{3}$ of a *koku*), which means from 7.50 *yen* to 8.75 *yen* per *koku*. In Kiushu the weather was too dry at first, but since the *Doyo* there has been an abundance of rain, and a fine crop is now in sight. Altogether, if no heavy storms come during the next two months, there will be a magnificent crop.

The *Nichi Nichi* publishes a strange report from Fukuoka and Kumamoto to the effect that quite a large number of Koreans have come to those places with the intention of wreaking vengeance upon the Japanese who were implicated in the Söul disturbance of last year when the Queen of Korea was killed. One Japanese in Fukuoka is said to have barely escaped from them with his life. Our contemporary does not say whether it attaches any credit to this singular rumour.

It has been stated of late that Mr. Kaneko Kentaro was likely to proceed abroad in the capacity of a Minister Plenipotentiary. A representative of the *Nichi Nichi Shimbun* waited on him to learn the truth of the allegation, and was informed that, on the occasion of his retirement from the post of Vice-Minister of Agriculture and Commerce, Mr. Kaneko had been asked by the Minister President whether he had any desire to go abroad, but had replied that he did not wish to leave his mother, who is now very aged.

The *Official Gazette* says that, according to returns furnished by the Cotton Spinners Union, the number of spindles at work in the 63 mills forming the Union during June last was 764,369, and the weight of the yarns produced aggregated 2,159,401 *kwan* (1 *kwan*=8½ lbs), the cotton consumed being 2,472,027 *kwan*. The average price per bale was 96.23 *yen*.

It has always been anticipated that when Japan had time to think carefully about her programme of military and naval expansion, she would discover some omissions. Considering, indeed, the rapidity with which the plan was drafted, we have, for our own part, been prepared to hear that many additions were required. Not in the naval part of the scheme, perhaps. So far as that is concerned, we believe it to be remarkably thorough. A fully competent foreign expert who has had an opportunity of examining it in every detail, has pronounced it wonderfully complete, and declared that it does the highest credit to its Japanese compilers, the adjustment of the various items and the general balance of the whole

evinced remarkable competence. Very likely the same may be said of the military programme, though as a certain secrecy is observed with regard to its details, no foreigner is in a position to pronounce a definite opinion. But there are many other directions into which the drafters of the scheme had to direct their prevision, and it seems that their fallibility is now becoming known. The *Yomiuri Shimbun* indicates the following points, on the authority of an anonymous General officer:—

- 1.—The establishment of an admiralty station at Ominato.
- 2.—The establishment of naval ports at Oshima in Satsuma, Sayeki in Bungo, Toba in Shima, Megawa in Rokuchu, Nanao in Noto, Seigan in Kitami, Atsukishi and Hamanaga in Kushiro, and Itsukashio in Oki.
- 3.—The establishment of an admiralty station and naval ports in Formosa.
- 4.—Reform of the Hokkaido military organization.

That is a formidable list. The establishment of an admiralty station means the construction of docks, the building and armament of forts, the provision of torpedoes, of coal-stores, of barracks and so on, the whole costing some five or six million *yen*, and running up to 10 millions under unfavourable topographical circumstances. A naval port, also, requires torpedoes, coal deposits and barracks. If the whole list were adopted as a practical programme, a pretty large addition would have to be made to the expenditures set down in the Expansion Bill of 1895. Happily several of the items can be deferred.

To judge from the writings of the *Fiji Shimpō* the days of the present Cabinet are numbered. That it is divided against itself is the principal reason given. A very sufficient reason, certainly, if it were founded on fact, but difficult to endorse without some fuller information. Reviewing the course of events during the past ten months, we are bound to say that some of the journals generally supposed to be supporters of the present Ministry, have, wittingly or unwittingly, made genuine working union very difficult for the members of the Cabinet. The epithet of "Knife-and-fork Ministers" that they applied to a section of the Cabinet, and their generally insulting tone towards the Minister of Education, the Minister of Communications and the Minister of Justice, while not of great importance, perhaps, as mere newspaper utterances, must have wounded the susceptibilities of men who knew that they might easily have been spared such onslaughts. All that is past, however, and we are at a loss to understand where the "rift within the lute" is situated at present, more especially as the *Fiji* formulates three charges quite sufficient in themselves to account for Ministerial instability, without any supplement of internal discussion. They are failure in the field of finance, failure in the control of Formosa, and failure in foreign affairs. Whatever be the true explanation of the crisis, however,—supposing that there is a crisis—the *Fiji* says that there is a party in favour of asking Marquis Ito to accept the presidency of the Cabinet, leaving the remaining portfolios pretty much as they are; but that the National Unionists and the Liberals are very much opposed to anything of the kind. Naturally they are, but it seems to us that their opposition is at least premature. Why should Marquis Ito assume the direction of the administration at present? Is

it not much more likely that, if he is to form a Cabinet or to take charge of one already formed, he will wait until the end of the Diet's next session? Of course, if he could see his way clearly to a coalition Ministry enjoying the support of all, or nearly all, the political parties, the case would be different. But that is a very large hypothesis.

A correspondent writes from Formosa:—"I notice that the *Japan Mail* speaks of every rebellion in Formosa as the work of the *Hakkas*." (We are not aware of having done so. Certainly we have not supposed the *Hakkas* to be the invariable delinquents). "Many Japanese think that *Hakka* is the word for rebel, and use it accordingly. But the *Hakkas* are only a section of the Chinese, just as are the Fokienese or Cantonese. They rebelled once, two years ago, but have remained quiet since. It is also an error to say that there is no English man-of-war at Tamsui. There is and has been one ever since the Twatutia attack of last May. At present, a large gun-boat, the *Phoenix*, I think, is anchored up the river. The German Consul also asked for a man-of-war, and were the British ship withdrawn, a German would doubtless replace her. It is to be regretted that a foreign man-of-war should be needed, but she is. The Japanese Government is not disposed, apparently, to send a force of troops sufficient to garrison the north effectively. The small body now here is expected to guard both foreigners and Japanese, and is quite inadequate to do so. On the 23rd of August, a party of rebels came within two hours' march of Twatutia. As for the Chinese in the interior, they are almost completely without protection. The necessary presence of a foreign man-of-war should be known. It indicates that the Japanese do not grasp the situation. We have confidence in General Nogai if he were given a free hand. So far as the treatment of the Chinese in the cities is concerned, there has been a great improvement of late."

It is stated, we observe, as an item of novel intelligence, that Viscount Aoki is likely to be succeeded at Berlin by Viscount Okabe, but the fact has been known for some time, and was published weeks ago. Another statement now advanced is that Mr. Hoshi Toru has resigned, and that Mr. Komura will be appointed Minister to Washington, Mr. Ozaki Yukio succeeding him as Vice-Minister of Foreign Affairs. Mr. Hoshi has not resigned, so far as we know. He has applied for leave to return to Japan, and his application has been granted provided that he first concludes the proposed treaty with Chile. In order to expedite the task, the details of the treaty have been telegraphed to him, we believe.

It is stated that Count Okuma intends to give up his extra portfolio of Agriculture and Commerce at an early date, and that, although Messrs. Mayejima Mitsu and Oishi Masami are candidates for the post, it will probably be given to Mr. Tomita Tetsunosuke.

In the *Official Gazette* we read that, at the end of August, the number of banks in Japan was 1,511, with a total capital of 298,267,514 *yen*, which figures show increases of 24 and 3,382,000 *yen*, respectively, compared with the figures at the

end of July. The following is a list of the banks:—

Name.	Number.	Capital. Yen.
Bank of Japan	1.....	30,000,000
Specie Bank	1.....	12,000,000
Industrial Bank	1.....	10,000,000
National Banks	72.....	16,965,000
Savings Banks	204.....	17,380,000
Joint Stock Banks	1,035.....	193,299,920
Partnership Banks	28.....	5,593,990
Limited Partnership Banks..	97.....	8,304,674
Private Banks	72.....	4,754,020

The *Nichi Nichi Shimbun* says that Marquis Ito, in his hurried journey through America en route for Japan, did not grant an interview to even one journalist, and that whatever alleged interviews are published by United States newspapers must be regarded as fabrications.

Charters have been granted to the following railway companies:—

The Nara Railway Company; a line from Nara to Sakurai *via* Talkai, Ichii, Namba, Yanaimoto and Miwa.

The Kyushu Railway Company; a line from Usui to Kumata in Chikuzen.

The Tobu Railway Company; a line from Senfu on the Nippon Tetsudo to Kuki, *via* Sogo-machi and Hasho-machi.

Some temporary charters have also been granted, but they need not be enumerated yet.

It is generally said that the Japanese are a law-abiding people. If the expression means that they are easily controlled by duly constituted authority on ordinary occasions, it is doubtless correct. But they are certainly a people that set the law altogether at defiance on extraordinary occasions. Consider the case just reported from Omori, which, as our readers doubtless know, is a sea-side village a few miles from Tokyo, where special facilities exist for gathering edible seaweed. The fishermen have a dispute of old standing with reference to the boundaries of the various areas from which this crop is collected. A settlement is effected by mutual consultation, but it fails to stand the test of practice. What do the fishermen do next? Proceed to carry the case before a tribunal of law, will be the natural supposition. Not at all. They get into their boats—300 boats—and deliberately row out to sea for a pitched battle. If that kind of thing were quite out of the common; if only an isolated instance of it occurred in a dozen years, we should be justified in attributing it to the influence of some altogether abnormal phrensy. But it is not a bit uncommon. Scarcely a year passes without one or more happenings of the kind, the difference being that the men generally succeed in coming to blows, whereas at Omori on the recent occasion the police were able to keep the peace in spite of frequent efforts to break it. There is something grimly ferocious in the notion of some fifteen hundred fishermen getting into their boats and rowing off to a convenient place for the purpose of engaging in a pitched battle. Fatal casualties seldom occur at these combats, but broken heads and disabled limbs are plentiful. It is not the physical consequences, however, that seem so deserving of comment. It is the mood that leads to such doings.

There is a persistent rumour that the purpose of the Japanese Admiralty in sending the *Itsukushima*, the *Matsushima*, the *Chinyen* and other vessels to Hakodate, is to organise naval manoeuvres, in which Japanese and German vessels are to act as assailants and defenders, respectively, and

Russians are to discharge the functions of umpire. If such a programme be really contemplated, it will be a novel departure. We find it difficult to credit, but the authority for the statement seems good.

A twenty-five-years-old story may fairly be called a chesnut. The *Japan Gazette* has collected and compiled with apparent zest a tale about the editor of this journal; how he shot a crow in his garden within the precincts of Tokyo; how the police complained about such a violation of the law; how the editor applied for a passport and, not receiving it promptly, started for Hakone without it, leaving directions to have the passport sent after him; how it was not sent after him because of the shooting trouble, and how he had to return ignominiously, having violated the law a second time. The story has some grains of truth, but the incidents happened in 1872 not 1897. It is very agreeable to have these pages of early life re-opened so considerably. If the *Gazette* has any more records of our pre-historical and pre-editorial career, we shall be so pleased to have our memories refreshed. It is like getting a timely look at one's own biography.

The Foreign Concession of Tsukiji, writes a correspondent, suffered severely from the fierce typhoon of Thursday morning. Scarcely a house escaped without more or less injury to roof, fences, trees, windows, etc. The most serious damage was done to the Presbyterian property, Nos. 42 and 43, against which the wind had full sweep. The Baptist Academy, No. 42, was unroofed; and the flying pieces of zinc were for a time very dangerous; several junks were blown ashore on the Bund. It is said to be the worst storm that has visited Tsukiji for many years.

We have more than once commented on the placid method in which Japanese defenders of gold monometallism look forward to a general fall in prices as a consequence of the measure, and tell the nation to derive comfort from that outlook. The *Yomiuri Shimbun*, for example, which has always been a staunch advocate of gold and is now the ablest journalistic exponent of the financial actualities of the situation, traverses the theory that to increase the Land Tax would be a fair measure, for, says our contemporary, the supporters of such a measure base their argument on the present high price of rice, forgetting that the staple will certainly depreciate after October 1st, and will probably fall as low as 8.50 *yen* by the end of November. We are of opinion that these predictions of a rapid fall in the market prices of commodities immediately after the adoption of gold standard, will prove very fallacious. That the change will ultimately have the effect of producing general depreciation, we can not doubt, first, because the world's stock of gold is insufficient for the functions that it has to perform, and secondly, because the competition of silver-using countries in foreign markets, as well as the diminution of the purchasing power of their currency in terms of sterling, must help to depress gold prices. But the fall will be slow, and probably inappreciable at the outset. Be that as it may, however, the curious thing is that the Japanese nation is invited by the goldites to regard a general and continued fall in the prices of commodities as a blessing. A general fall in

the prices of commodities means general stagnation of business, a general feeling of discontent, and a general paralysis of enterprise. If those be agreeable projects to the Japanese, Japan is a very unaccountable kind of country. Another strange thing is that European and American gold-men decline peremptorily to attribute to the demonetization of silver the depreciation of prices from which the Occident has suffered so acutely during the past thirty years, whereas Japanese gold men confidently anticipate that depreciation will speedily follow upon the introduction of gold monometallism into this country.

Tokyo presented a most dilapidated appearance on Thursday morning. The storm was of brief duration. It can scarcely be said to have made itself felt before 2 a.m. and four hours later the sun was shining. Yet during that short interval damage was done such as has not been wrought by a gale for the past twelve or fifteen years. The rivers all rose, not, however, to such a height as to produce dangerous inundations, though a stream of water 1½ feet deep was at one time flowing through Hamacho. In the Shiba district, one man was crushed to death and one wounded; 56 houses were blown down, and the number of trees uprooted or smashed was immense. In the Nihon-bashi district, two persons were killed and two wounded, and everywhere trees, shrubs, and fences suffered extensively. The acacia trees along the edges of the moats were blown down, sometimes in whole rows, and many large willows were snapped across. The Ejiri-Shizuoka section of the Tokaido Railway became impassable, and with the exception of Chiba Prefecture, every district about the capital reports broken telegraphs. The Echigo region and the districts along the Tokaido seem to have suffered severely, and doubtless the damage done to the rice crop is very great. As to the origin of the storm, it is alleged that the typhoon reported from the south of Kiushu on the 5th instant, began to travel northward from the forenoon of the 7th, and then divided, one portion going towards Hokuriku and through the central province, until it reached Uzen on the morning of the 8th; while the other, which at one time appeared likely not to develop any considerable dimensions, ultimately travelled towards Tokyo. But it must be confessed that the statement leaves much to be desired in point of clearness.

THE JAPANESE "DESCENT UPON HAWAII."

We published in our correspondence columns on the morning of the 4th inst., a letter signed "An American," the writer of which quoted a statement from a Minnesota journal to the effect that, in June last, Japan contemplated a descent upon Honolulu, which operation would be greatly facilitated by the presence of some eighteen thousand Japanese emigrants in Hawaii, since these men having already received military training under the conscription regulations of their country, needed only weapons to become an efficient army. The American journal, in publishing this statement, attributed it to the *Japan Herald*, which it described as "the Government organ." Our correspondent asked whether the *Japan*

Herald had made any such statement, and added that, if it had, it deserved to be denounced as a slanderer and a stirrer up of international strife. By way of reply the *Japan Herald* now shields itself behind the fact that the statement had its origin in a letter addressed to it by a correspondent, and pleads that a newspaper is not responsible for matter appearing in that form. It is quite true that every journal disavows responsibility for "the sentiments or opinions" of its correspondents. But there is a limit to such irresponsibility. There is the very plain limit that no newspaper is justified in lending any part of its columns for the purpose of ventilating matter injurious to good morals, public peace, or international amity. The *Japan Herald* does not recognise any limit of the kind. We should be surprised if it did.

But, in point of fact, the *Japan Herald's* attempt to escape responsibility by laying the *onus* on the shoulders of its anonymous correspondent is of a piece with the whole miserable falsehood. When a newspaper gives space to an anonymous letter and refrains from any comment of its own, it can claim that its opinion has been reserved. It can not, indeed, divest itself of all responsibility that depends upon the nature of the matter contained in the latter. But it can say that it has maintained a non-committal attitude. When, however, it comments editorially on the letter, endorsing some of the writer's views and not contradicting any of them, then, it unquestionably identifies itself with him. That is what the *Japan Herald* did. Its words were:—

Under the caption of "Coming Events casting their Shadows before,"—a correspondent, who claims to be particularly well informed about a matter going on, that is for the present enveloped in secrecy, which is, that at this time there exists a deliberate intention on the part of the Japanese in the event of an insufficient satisfaction being had of the Dole Administration, to occupy the Hawaiian Islands, either temporarily until justice is obtained, or permanently if not, which in that case would be added to the Japanese empire.

The Hawaiian Government is practically quite powerless to resist a blockade by way of a preliminary to an actual invasion, and the only question which then suggests itself, is would the United States be likely to interfere by force of arms. As our correspondent points out there is practically a Japanese army already there, and all that the contract labourers from this country require, are the weapons which they have been trained in the use of when serving as conscripts at home, and these arms could be readily furnished from here, and when supplemented by a few regiments and ships of war, so far as the feeble Dole Government is concerned, no resistance could possibly be made. Further, it is held by those who affect to know, that at sea the Japanese navy, with the addition of the few very powerful ships of war which are now completed, would be fully a match for the navy of the United States, and very considerably in excess of the ships it has available on the Pacific station.

But even if it may be assumed that the information conveyed by our correspondent is mainly correct, &c.

The article then goes on to discuss what Hawaii might be expected to do and what the United States might be expected to do in the given premises. It is an unmistakable endorsement of the correspondent's views. There is not from first to last as much as one word that contradicts those views. We recur to the question because the public is certainly interested in knowing that the ventilators and endorsers of treacherous falsehood calculated to impair the friendship of two nations, are not allowed to escape the consequences of their malevolence by fresh falsehoods.

THE TAXATION AFFAIR.

The *Nippon* continues to take a keen interest in the Sendai taxation affair, and continues to publish misleading information about it. It says that the Councillor of the Prefecture has called on Mr. Dening at the instance of the Governor and urged him to pay the tax without further query instead of raising objections which would necessitate reference to the Central Government. We can not believe that the Governor has taken any such action, for the matter has already been referred to Tokyo. Doubtless the Central Government's view is that every resident in a locality ought to contribute his due quota to the fund required for local administrative purposes, and that the collectors of taxes look to the fact of a house's occupation not to the nationality of its occupant. But that condition does not appear to have as much validity in the case of an income tax, which the proposed impost appears to be, as in the case of a house tax. In point of fact, every foreigner residing outside the Settlements pays whatever taxes are leviable in respect of the house in which he resides or the land on which it stands. For the Japanese owner of the house and land has to defray the local taxes, and naturally he includes them in the rent charged to the foreign occupant. That is the simple and easy course, and to such taxes foreigners appear to be justly liable. But taxes levied on the individual belong to a different category. The Japanese Authorities have no competence to enforce their payment in the case of a foreigner, and that fact constitutes, in our opinion, a conclusive proof that they are without any right to impose them. One of the Sendai papers takes that line. It recently published several articles, contending that the local officials have fallen into an error, and that if they have no power to distraint the property of a foreign defaulter, it follows of necessity that they have no authority to tax him. The local journal pushes its arguments to their logical conclusion: it recommends the responsible officials to apologise to the foreigner and resign. We understand that there is not by any means a consensus of opinion among the local officials themselves, and that other leading authorities in Sendai also regard the tax as illegal. The whole thing is extremely petty, but if it be suffered to remain unsettled, a disagreeable agitation may grow about it. We do not see how Her Majesty's Legation can possibly consent to the levy of the tax. The mere fact that all foreign nationals have not been invited to pay it, compels the British Representative to withhold his concurrence. He cannot agree that Her Majesty's subjects should be discriminated against. We are bound to say that we consider it radically bad policy on the part of the Japanese to raise such an issue. In a very short time there will no longer be room for questions of the kind, and since they have been allowed to sleep for thirty years, to wake them up now on the very eve of the abolition of the Settlements, seems vexatious and ill-judged. The unfortunate objects of the demand are also placed in an invidious, and possibly injurious, position. The amount of the tax is nothing to them, but the principle is a great deal. With every desire to show becoming deference towards the Japanese Authorities, and with entire willingness to bear their

share of public burdens, they are nevertheless compelled by a sense of plain duty to hesitate before they subscribe to an innovation which presents an illegal as well as an arbitrary aspect, and which, moreover, concerns others besides themselves. The result is that, to the roughly judging public, they assume the character of obstructionists, and a black mark is set against their names. As a matter of fact, the foreigners directly concerned in this case have offered, we understand, to pay the tax if the educational authorities to whom they are directly responsible instruct them to do so; but the educational authorities appear to entertain views not consonant with those of the local officials. For our own part, we strongly advise the foreigners to pay, under protest. If they are not legally liable for the tax, there is no manner of doubt that their money will be restored to them. If they are liable, their prompt compliance with the demand will have been a right step. There is no reason why they should suffer in reputation as well as in pocket.

THE FOREIGN REPRESENTATIVE'S BLACK-MAILED.

It is amusing to learn that the Foreign Representatives at the Court of the Emperor of Japan are systematically black-mailed by a newspaper published in Yokohama, and still more amusing to find that the newspaper is, at once, so confident in the efficacy of its system, and so conveniently devoid of all moral sensibilities, as to openly blazon forth the fact. "Upwards of thirty years ago," says the *Japan Herald*, "this journal was appointed the medium for the publication of all official announcements without exception, and this in the main has been honourably observed, though there have been some exceptions to the pursuit of the correct course, when either from spite or ignorance, some few advertisements in derogation of our right, have been diverted elsewhere, but this deprivation in fraud of what was due to us, has been mostly of a temporary character, for we took care to make this injustice expensive to the luckless perpetrators, who no doubt wished afterwards they had not so foolishly committed themselves to the violation of an agreement. Their successors have restored to us what it is but right and proper we should possess."

The most conspicuous examples of Representatives whose failure to patronize the *Japan Herald* was made "expensive to the luckless perpetrators," were the British Representative, the late Mr. Hugh Fraser, and the last American Representative, Mr. E. Dun. There were other cases, but these were the most prominent. Readers of the *Japan Herald* know what showers of mud were thrown at both of those gentlemen, but did not, perhaps, recognise at the time the cause of the journalistic fury. They know it now, however. They have it on the authority of the *Herald* itself that Mr. Fraser and Mr. Dun having ceased to advertise in the *Herald*, that journal "took care to make the injustice expensive to the luckless perpetrators." It was for that that Mr. Fraser was insulted as probably no English gentleman was ever before insulted by an English newspaper. It was for that that even while his body lay awaiting burial, words were written which would have augmented the grief of

his bereaved widow had they not been indignantly rebuked by the leading residents of Yokohama. It was for that that Mr. Dun was called an incompetent; was taunted with having been in the service of Japan before he became an American official; was flogged over the back of one of America's most respected and venerable statesmen. All for an advertisement! But the successors of these "luckless perpetrators" have profited by the stern object lesson of their predecessors' sufferings. They have restored their advertisements to the *Japan Herald*, and may reckon on its support. They have kissed the rod, and black-mailing has triumphed.

JAPANESE CRUISERS.

A rumour was circulated some time ago to the effect that the Japanese Government contemplated purchasing two cruisers from Chile, but inasmuch as the list of the latter's navy did not contain any vessels that would have been adapted to the standard laid down in the Japanese programme of armament expansion, little attention was paid to the report. It has now been revived, however, and an explanation which sounds reasonable is furnished by the *Miyako Shimbun*. The original scheme of naval expansion, as our readers doubtless remember, included four line-of-battle ships and 4 unarmoured first-class cruisers of 7,000 tons each. Subsequently, however, a modification was effected, in the sense that the number of cruisers should be increased to 6, that their tonnage should be 9,000, and that they should be armoured. As to these ships, the idea was to have one built at the Vulcan Works in Germany, one in France, one at Kure, two in England, and concerning the sixth no definite plan was formulated. Now it appears that Lord Armstrong and Company—of whom, we may note in parenthesis, our contemporary speaks as a firm possessing Japan's "full confidence, since they are the builders of the *Chiyoda*, the *Yoshino*, and the fastest line-of-battle ship in the world, the *Yashima*—have had for some time upon the stocks two first-class nine-thousand-ton armoured cruisers, of the newest design and expected to develop a speed of 21 knots. These vessels were originally destined for Chili, but her financial circumstances do not allow her to implement the contract, and they are virtually left upon their builders' hands. It is, therefore, contemplated, or has been actually decided, by the Japanese Government to take over the two cruisers, and their construction will be immediately proceeded with. One of them will be ready for sea in eight months, the other within a year, so that not only will the strengthening of the Japanese navy be effected at an earlier date than was originally anticipated, but also, so far as two of the six first-class cruisers are concerned, a considerable saving of money will be made, the ships now on the stocks at Newcastle being much cheaper than the same class of vessel would be if newly ordered. We have no authority for this statement except that of the *Miyako Shimbun*, but it sounds credible, and for Japan's sake we hope that it is true, for anything that she gets from Armstrong is safe to be good.

SUBSIDIARY COINS.

The *Keisai Zasshi* thinks that not only the *yen* pieces but also the subsidiary silver coins of Japan now circulating abroad will come back here for exchange when the gold system goes into operation, and it gives figures to show that the amount of such coins is 8,474,560 *yen*. The result will be, of course, not only that gold to that extent will leave Japan, but also that the stock of subsidiary coins now circulating in the country will be correspondingly increased, thus depriving the Treasury, to some extent, of the outlet contemplated by it for the silver contained in *yen* pieces which may be presented for exchange. Such is the *Keisai's* forecast, and it is no doubt sound. In fact, the subsidiary silver coins are even more certain than the *yen* pieces to return to Japan, since they will be more easily procurable. A speculator desiring to collect *yen* pieces abroad will have to pay very nearly their sterling value for them, whereas the subsidiary coins are likely to remain beyond the range of any manipulators except the patient petty-gain loving Chinamen, who will take them over the counter of his exchange shop, and send them to Yokohama as soon as he has amassed a hundred *yens'* worth. It will be a tedious business, however. In connexion with this subject we note that discussion is now beginning to turn upon the expediency of shortening to six months the period for the circulation of the *yen* piece, and that some critics are condemning such a change, on the ground that it would certainly expose the Treasury to a heavy outflow of gold at the very inauguration of the new system, whereas by leaving the period at five years, as now fixed, a considerable portion of the *yen* pieces would probably continue to circulate at something very near their sterling value. There is, doubtless, a good deal to be said on both sides, but it appears to us that the sooner this disquieting element of the *yen* piece is eliminated the better for Japan's credit and for the success of her new system. So long as the *yen* remains to be dealt with, there will always be a feeling of uncertainty about a possible drain on the Treasury's reserves of gold, and a corresponding doubt of Japan's ability to carry out her monometallic programme. Once the *yen* phantom is finally exorcised, and the foreign public assured that Japan is determined and competent to drive the gold plough without looking back, her five per cent. securities will become marketable in Europe at a fine premium.

MILITARY TOPICS.

It was decided, last year, that a Railway Battalion should be organized, consisting of two railway companies and one telegraph company. In December last, the first of the railway companies was formed, and the second will be called into being next December, but the telegraph company is not to be organized until next year.

The formation of a body of native troops in Formosa seems to have now been definitely decided. Only one battalion of four companies is spoken of, but, so far as we can gather from the vernacular press, the companies are to be larger than those of the regular Japanese army. Each will consist of 275 of all ranks. The battalion will have independent head-

quarters, with a staff consisting of a Lieut.-Colonel or a Major, a Captain, a Lieutenant, and a second-class sergeant. Apparently the officers are all to be Japanese, namely, a Captain, four subalterns, a sergeant-major, and eighteen non-commissioned officers to each company. The organization is to be completed within three years.

MACAO.

It appears that the opening of the West River is likely to prove disastrous to Macao. The two great importing centres for foreign goods in China are Shanghai and Hongkong, whence the commodities are sent to secondary centres for distribution in the districts adjacent to the latter. Macao is one of those secondary centres. It supplies the wealthiest departments of Kwangtung. By the opening of the West River, however, a new distributing centre, namely, Samshiu, will be obtained, a port much nearer to the districts in question. Hongkong will not suffer. Instead of sending goods to Macao, it will send them to Canton and Samshiu, whither the buyers will go to fetch them in steam launches, leaving Macao out in the cold. We learn from the *Hongkong Daily Press* that the people of Macao are stirring in the matter, and that the coöperation of Hongkong is solicited to prevent any material change of the present system. There appears to be a feeling in Hongkong also that, irrespective of distances, a saving of duties would be effected by retaining the services of Macao. But it can scarcely be doubted that official interference in such a matter must prove abortive. The goods will ultimately take the quickest route whatever attempts be made to deflect them from it.

"AN AMERICAN."

Referring to the letter signed "An American," which appears in our correspondence column, the mischievous falsehoods in question were originally advanced by a correspondent of the *Japan Herald*, who signed himself "One not quite in the dark." He declared that preparations were secretly on foot for a Japanese descent upon Hawaii; that the Government in Tokyo had definitely made up its mind to annex the islands, and that the eighteen thousand Japanese immigrants in Hawaii practically constituted an army, requiring only weapons, "in the use of which they had been trained when serving as conscripts at home." We do not remember precisely how far these allegations were confirmed by the journal in which they appeared, but we pointed out at the time that since only 66 out of every thousand adult males in Japan serve as conscripts, there could not be more than 1,188 trained men among the 18,000 in Hawaii. It is now tolerably evident that "One not quite in the dark" wrote with the deliberate intention of creating a false impression about Japan's designs, and that he took care to secure the ventilation of his falsehoods in America by describing the *Japan Herald* as "the Government organ." This last statement is only a perversion of the truth; not an original lie. The *Japan Herald* is an official organ, though on a very limited scale. It used to proclaim the fact very conspicuously, but has ceased to do so since its official patrons were reduced to Germany and one or two other States of Continental Europe. The whole scheme of "One not quite in the dark" is about as disgraceful as they make them, but he chose an appropriate medium and by persistent lying achieved a modicum of success.

THE CAREW CASE AND THE PRIVY COUNCIL.

WE observe that the *Law Times* takes the same view as we did with regard to the decision of the Privy Council in the CAREW appeal case. In its issue of July 24th, it says:—

It is difficult to understand how the words of the section, which seem plain and simple enough, can be made to bear the meaning which the Judicial Committee has placed on them, for the section provides that the Queen may exercise any jurisdiction which she may have in a foreign country in the same and as ample a manner as if she had obtained that jurisdiction by cession or conquest of territory, and it does not purport to extend or enlarge in any way such jurisdiction.

In the case of Japan, therefore, the Act would, if it were not for the decision of the Privy Council, appear to enable Her Majesty to exercise in the most ample manner the jurisdiction which she has under the treaty of 1858—namely, the jurisdiction to try and to punish British subjects according to the laws of Great Britain. The Judicial Committee, however, have decided, and their decision is final, that section I. of the Foreign Jurisdiction Act confers on the Queen powers to try and punish her subjects in Japan according to any laws which she may be pleased, by Order in Council, to ordain.

It is curious to note that the construction which the Judicial Committee have, without hesitation, placed on the statute is a construction which the late Mr. W. E. Hall, who was, no doubt, a very eminent authority on the subject, considered clearly impossible. At page 11 of his *Treatise on the Foreign Jurisdiction of the British Crown*, referring to the language of sect. I. of the Foreign Jurisdiction Act 1890, he says:—"It is unnecessary to say that this language does not assimilate the jurisdiction exercised in a foreign country, either in nature or degree, to that which belongs to the Crown in a conquered territory." But that is precisely the effect which the Judicial Committee have given to the section. They decided that the jurisdiction exercised in a foreign country is similar in all respect to that exercised in a conquered territory. It is certainly remarkable that a construction which Mr. Hall rejected as obviously impossible should have been accepted by the Judicial Committee as so clearly correct that it would not be proper even to give leave for the question to be argued.

We are of opinion—and any one carefully reading the proceedings before the Judicial Committee of the Privy Council will, we think, agree with us—that the Lord CHANCELLOR and his colleagues paid less attention to the legal aspects of the question than to the practical results of the decision they were invited to give by the counsel for the appellant. "Here is a system," their Lordships said in effect, "that has been in operation for thirty years, and has, on the whole, worked fairly well. To pronounce it an illegal system, at this late epoch, would be to raise issues possibly of immense magnitude, to create confusion appalling to contemplate, and to invalidate a great part of the acts of British tribunals in every country where Great Britain possesses extraterritorial jurisdiction." That their Lordships would shrink from creating such a situation might have been anticipated. Every close observer of England's conduct in Oriental countries must see that the first object which she proposes to herself is to secure the ends of justice, and that she relegates to a rank of minor considerations the methods adopted to achieve that object. If an obligation devolves on her, she discharges it rigorously. It will be admitted, we think, that among all the Western Powers enjoying the privilege of Consular jurisdic-

tion in Japan, she alone has organized and equipped courts of law such as the competent exercise of that jurisdiction demands. On the other hand, being without—and rightly without—much faith in the quality of the justice administered by eastern tribunals, she has not shrunk from placing the largest possible construction on the jurisdictional powers delegated to her own tribunals by treaty. As an example we may cite a case already referred to in these columns—the case of the Chinese cook on board H.M.S. *Essex*. The man was apprehended by the Chinese police for a crime committed on shore, yet Great Britain claimed and obtained jurisdiction over him. It is not possible, so far as we can see, to construct out of Occidental precedents or Occidental usages any theory justifying such a claim. Yet there was excellent warrant to believe that had the man been left in Chinese hands, the measures adopted against him would have been of a most prejudiced and harsh nature. Hence the course adopted by the British authorities served the ends of true justice and promoted the cause of humanity. Everyone, we think, must admire and applaud the sound practical instincts that guide England's action in such matters, though, as the Hakodate affair now actually on the *tapis* shows, she sometimes places herself in an embarrassing situation by indiscriminate adherence to precedents which she has herself established. The same instinct forbade the Judicial Committee of the Privy Council to pronounce a decision which, while redressing one hypothetical wrong, would have invalidated a moiety of the judgments delivered by British Consular tribunals during the past thirty years. But that their Lordships really denied the truth of the contention advanced by the Counsel for the appellant, it is impossible to believe. No thinking man can imagine that when the QUEEN acquired by Treaty the explicit right of trying and punishing her subjects in Japan "according to the laws of Great Britain," she also acquired the right of trying and punishing them according to laws which are not the laws of Great Britain. No thinking man can imagine that because the QUEEN obtained for her subjects the privilege of access to Japan, she became invested with the power of ignoring in their case all the constitutional machinery provided for legislative purposes in England, and with the power of enacting any laws she pleased for the control of such of her subjects as might take advantage of that privilege. Yet the circumstances were such that unless arbitrary power were assumed, justice could not have been administered at all. There it was that the sound, practical British instinct came in. The ends of justice were secured: the method of securing them was not too closely scrutinized. It is not justice pre-

cisely after the approved British pattern, but it is good enough justice for all everyday purposes. To approach the Privy Council with a proposal that the whole system should be declared illegal at this eleventh hour may have been an interesting experiment from an academical point of view, but certainly was not likely to achieve much in Mrs. CAREW'S interests.

BRITISH JURISDICTION IN JAPAN.

THE point made by Mr. LOWDER in his letter, which we publish elsewhere, is very interesting, and, of course, derives much force from his endorsement. But although his interpretation of the Judicial Committee's judgment looks reasonable at first sight, we find considerable difficulty in accepting it. He suggests, if we understand him aright, that whatever legislative methods be adopted by Her Majesty's Government for the purposes of the jurisdiction possessed by Great Britain in Japan, British subjects are not warranted in objecting so long as Japan makes no protest. That becomes a difficult doctrine when it is thought out. The fact that criminal jurisdiction is in question must not be lost sight of. As to civil jurisdiction, Japan certainly has an interest in the nature of the laws administered by British tribunals at the open ports, since it is to those tribunals that her own nationals must have recourse if they deem themselves wronged by a British subject. Yet, even in the case of civil laws, it appears to us that Japan would be plainly exceeding her competence did she venture to base any international protest on their legislative validity or general quality. It is enough for her, and should be enough, that they are laws having the apparent sanction of due authority and that they are applied by duly qualified tribunals. One of her great difficulties in negotiating the revision of the Treaties was that some Western Powers wanted to insist on scrutinizing her Civil Code before submitting their nationals to its operation, and wanted also to provide that all amendments of it should receive the same scrutiny. Japan stoutly objected to any such condition, maintaining that it would constitute an infraction of her Sovereign right of legislation. Would she not be equally infringing Great Britain's Sovereign right if she asserted a title to scrutinize the laws administered by British tribunals at the open ports? Did those laws discriminate in any way against Japanese subjects, or were their nature so inconsistent with the generally recognised principles of justice as to render legal remedy inaccessible, there would be proper ground for international remonstrance. But that is a question apart. On the other hand, when we turn to consider the criminal laws administered by British tribunals in the foreign Settlements, we are unable to discover any ground whatever

for Japanese interference. Those laws have nothing to do with Japanese subjects; they are not applicable to the latter under any circumstances. What conceivable right has Japan then, to scrutinize them? They are the laws that Great Britain, represented by the British Government, chooses to apply for the control of British subjects in Japan, and beyond that fact Japan has apparently no business to go. She is, indeed, entitled to protest, we think, if British criminal tribunals decline to enforce against their nationals Japanese law which, though not included among British statutes, are necessary for the preservation of good order in Japan. But that, also, is a question apart. It does not at all help us to conceive the propriety of a Japanese protest against the general quality of British criminal law or against the validity of the machinery employed in enacting it.

There is another phase of the problem. Japan might certainly take exception to the language of the Order in Council where she is described as a conquered or ceded country for purposes of extraterritorial jurisdiction. She might say to Great Britain:—"The jurisdiction you exercise within my borders has been voluntarily delegated by me to you, and has not been acquired by you as a right of conquest. If the laws that your tribunals administer in the Settlements are laws of such a character as to be incapable of administration without the hypothesis of conquest, then I most emphatically object to their being administered in my realms." Such an objection would seem to be valid, but, on the other hand, it could be met. What concerns us now, however, is not the manner of meeting it, but the question whether, even on the assumption of conquest or cession, the legislative methods adopted by Great Britain for the purposes of her criminal jurisdiction in Japan, are legal. It would be very interesting to hear Mr. LOWDER'S opinion on that point. As the case presents itself to us, the legislative rights accruing to a conqueror in respect of conquered territory are valid against the inhabitants of that territory, whereas it is against British subjects themselves that the arbitrary power of legislation is exercised in this instance. Japanese subjects, the hypothetically conquered people, stand entirely outside the pale of the disputed laws. We are aware, of course, that the theory lends itself to a less perplexing form of statement. It may be referred to the case of uninhabited territory acquired by conquest. We may be told that for the control of British subjects visiting such territory, Her Majesty has competence to enact any laws she pleases without recourse to Parliament, and that, since the laws in question have no validity against Japanese subjects, the territory represented by the Settlements may be regarded as uninhabited so far as Japanese subjects are concerned. That is a conceivable but an exceedingly subtle rendering of the problem. Is it the right rendering?

THE "YEN" PIECE.

WE should think that our readers are getting pretty weary of predictions about the exchange of the silver yen piece and the working of gold monometallism in Japan. To Japanese journals these topics are naturally of perennial interest, but they have been pretty well thrashed out by this time. From Korea, however, there comes a curious item of news. It is that the Japanese merchants there are very anxious to keep the silver yen in circulation, since without it their only available currency would be Korean copper cash. The Fusan Chamber of Commerce is said to have made a representation to the Government in that sense, and other merchants are reported to have sought the views of Mr. MCLEAVY BROWN, Financial Adviser to the Korean Government. If is, of course, out of the question that the Japanese Authorities should make any exception in the case of silver coins circulating in Korea. They have no power to control such a matter, even if they desired to do so, for it is plain that any European or American importer of foreign goods into Korea who received payment in silver yen, and who wished to make a remittance Westward, would at once send the coins to Tokyo to be exchanged for gold. Such, at any rate, is the opinion of vernacular newspapers. But it is founded on the hypothesis that the silver yen, after its nominal demonetization, will circulate at its bullion value only. Does that follow? Does it not seem certain, on the contrary, that the 1-yen piece, so long as it remains exchangeable at the Bank of Japan or its agencies for a fixed weight of gold, will circulate at that value approximately in the open market? Take the case of a Korean merchant purchasing British commodities for which he is prepared to pay with silver yen coins. He knows that simply by sending the coins to Japan he can sell them for 24½d. each. Will he not insist on reckoning them at very nearly that figure for the purposes of his transactions? The silver yen is worth fully 24 pence in Japan at present, though its bullion value is only 22 pence. It is practically worth 24 pence in China, Hongkong and Singapore also, for though not specially quoted for exchange purposes at those places, speculative transactions have raised it considerably above its bullion price. In short, its sterling value being guaranteed by the Japanese Government, it has ceased to be purchasable at any appreciably cheaper rate. The meaning of that is that it will not find its way to Japan for exchange against gold as quickly as some people imagine. Banks that have stocks of yen in their vaults will of course present them at the Treasury in Tokyo without loss of time. But speculators desiring to collect the coins and ship them to Japan, will have to buy them

at sterling prices leaving no considerable margin of profit. As for Korea, where the yen is practically without a competitor, we see no reason why it should not remain in circulation until very nearly the end of the period fixed by the Japanese Government for its redemption. It will pass as a token representing its sterling value less the cost involved in transmitting it to Japan and getting it changed there. The shroff's work will become more onerous, of course, since any defacement means loss of exchangeable qualification, but, for the rest, the coin may continue to do its old duty as a measure of value. The *Shogyo Shimpō* says that Mr. MCLEAVY BROWN has advised stamping the coins as the only certain way of keeping them in circulation in Korea, but it is difficult to attribute such an unpractical suggestion to MR. BROWN. No holder of a yen would be at all likely to submit it readily to a process reducing its sterling value by from 10 to 12 per cent.

Formosa presents a problem of some difficulty. The Chinese and the natives there will have nothing to do with gold, it is said. They want silver and silver only. Hence if gold be put into circulation, any one carrying clean dollars from Amoy or elsewhere, will find no difficulty in purchasing a 5-yen gold piece with five Mexicans: in other words, 122½ pence worth of Japanese gold will be procurable for 112 pence worth of Mexican silver. Formosa would thus become an avenue for the constant outflow of the yellow metal. In view of such eventualities, the Japanese Government, according to the *Yomiuri Shimbun*, has decided not to send gold to Formosa, but to supply a good store of silver subsidiary coins and silver ingots. We do not exactly understand how such a device could be employed with entire success. The complication furnishes another illustration of the difficulties that beset Japan's attempt to dissociate herself from the currency system of her neighbours.

THE NAGANO RIOTS.

The *Yiji Shimpō* publishes the following details of the recent serious riots in Nagano Prefecture:—"On the nights of the 1st and 2nd inst., serious disturbances occurred in Iida-machi, Nagano Prefecture, in which about 2,000 men, mostly coolies, took part, several of whom were killed or wounded by the police and gendarmes who were obliged to resort to the use of arms in repressing the riot. The cause of the trouble seems to have been that since January last the Oji Paper Mill near Asukayama dispatched about 300 coolies to the woods of Toyama, over ten miles from Iida-machi, Nagano Prefecture, to obtain material for the Company's works, and since that time the rice for these coolies has been supplied from the Kawano rice cleaning mill. The price of the rice was raised at the mill day after day, till at last the coolies could bear it no longer, and attacked the rice mill, believing that the increased charge was the result of avarice on the part of the managers of the Mill, Messrs. Kono and Kuroda. Just prior to the disturbance, towards the end of last month, some of the ring-leaders

plotted to destroy the buildings of the mill, and for that purpose over 100 men were at once enrolled. The 1st inst. being the festival of the Atago Shrine, they all drank their fill of *sake* on the evening of that day, and then descending Atago hill in a body, about 8 p.m., proceeded to the mill for the purpose of an attack on it. During their march, they were joined by other coolies, till the crowd numbered over 1,000 men. Just as the mob were going to attack the buildings a member of the mill staff named Yazawa, unconscious of the danger, came out of the buildings, whereupon the mob at once caught him and, after administering a severe beating, threw him into the river. They were about to break down the buildings when a number of police came upon the scene and after a short skirmish succeeded in dispersing the rioters. The mob, however, again assembled on the night of the 2nd inst. on Atago hill, and about 11 p.m., when over 2,000 strong, pressed up to the mill and within a short time succeeded in completely wrecking the buildings. The police and gendarmes were at once called up to suppress the tumult, but the night being pitch dark they could effect nothing against the mob, who greeted them with volleys of stones. As no moderate measures were effectual, the gendarmes began to fire their pistols and the police drew swords and used them on the mob, thus eventually succeeding in dispersing the rioters. During the excitement several of those who opposed the police were killed or wounded, while seven were arrested. On the following night, the 3rd inst., the mob, considering the action of the police to be unjust and cruel, attacked Iida Police Station, but were all dispersed by the police who used their swords freely and wounded several. During the combat the Chief of the Gendarmes, who came to the assistance of the police with his men, received a wound, though not severe. The district was the scene of great disturbances during the three successive nights.

FATAL STREET ACCIDENT.

On Tuesday morning, a little before 8 o'clock, a jockey named Kobayashi Otokichi, in the employ of Messrs. Durand & Co., mounted on a racing pony, came galloping along Awacho, from the direction of Mayeda-bashi, and on reaching the corner of Main Street opposite Clausen's Hotel, ran right into a jinrikisha—conveying a foreigner—which was coming up Main Street. The vehicle was broken to pieces, but the foreign occupant got off with a few bruises. The unfortunate ricksha coolie, however, appears to have encountered the full force of the charge and was kicked by the frightened horse with such violence that he was quite unable to rise. Some time elapsed before anything was done to aid him, but after a while a policeman, at the close of a leisurely verbal examination of the sufferer, obtained further assistance and the man was conveyed to the Settlement Police Station, where it was found that he had one leg broken besides serious wounds on the head. Sanuki, the injured man, was afterwards taken to the Yokohama hospital, where he died from the injuries received during the course of the day. We understand that Kobayashi will be handed over to the Saibansho for examination.

Kobayashi is a well-known jockey, and reputed for his careful behaviour at all times. It seems that while riding along Awacho, three dogs, apparently, homeless curs—the curse of Yokohama—sprang across his path and the race-pony he was riding bolted. Kobayashi himself is suffering from a dislocated shoulder.

From letters just received from Professor John Milne, we gather that soon after reaching Canada—where he was to speak before the British Association—"honest John" caught the Clondyke gold-fever very badly and had to lay violent hands upon himself to keep his feet from wandering off to the new El Dorado.

SEVERE TYPHOON IN YOKOHAMA

The severest storm which has visited Yokohama for several years past occurred during Wednesday night and the early hours of Thursday morning. All through Wednesday the weather was threatening in the extreme, and the lowering skies, persistent rain, and sultry atmosphere presaged a typhoon. Between 11 and 12 p.m. a thunderstorm broke over the town with a violence seldom experienced outside the tropics, accompanied and followed by deluges of rain. This, however, failed to clear the air, as might have been expected, and through the night the barometer continued falling, until it eventually registered 29.10—typhoon mark in these latitudes. In the meanwhile the wind gradually increased in violence, coming from the south and south-west, and from about 4 a.m. till 6 o'clock, blew in fierce gusts and with typhoon force. The strength of the gale reached its maximum between 5.30 and 6, when it gradually decreased, and, with a rising glass, had vented all its fury by 6.30 a.m. The damage done by the storm will take a long time to repair. Fences, roofs, compounds, and gardens on the Bluff on Thursday morning presented an indescribable scene of wreck and ruin. On the Bluff main road, from No. 1 to Camp Hill fences are down all the way, and in many places tiles from roofs, branches of trees, etc., were scattered over the roadway. At the General Hospital, and Dr. Mécere's opposite, where the open brick wall partially collapsed, the British Naval Hospital, and the General Cemetery, the fences are all lying in the road, and in some parts, notably at Dr. Meacham's house, 62 Bluff, trees fell across the thoroughfare. In the gardens of the French Consular villa on Camp Hill numbers of trees were broken down. The same scene of havoc and destruction met the eye on the other side of the Bluff leading to Honmoku and in many of the intervening compounds. In the Settlement the damage done appears to have been less, but we hear of one godown on the Creek having been partially unroofed; and plaster walls and tiles on many buildings were torn away. In the native town the damage was very considerable. At Takashima-cho, near Kanagawa railway station, the tall iron chimney of a glass factory was blown down into the street and two men, who were passing, were killed on the spot by the falling material. At the Custom House, by the fall of some tiles, one man was severely injured. So far these are the only casualties to life or limb on shore of which we have heard, but the damage to property has been large indeed. A fire tower at Noge and a number of houses on the outskirts of the town were utterly demolished, and the number of outhouses, fences, and other light constructions destroyed will foot up to a total of enormous proportions.

When the havoc caused by the gale ashore was so very great, it could scarcely be expected that the vessels and small craft in harbour could escape without accident; and the list of casualties there is not light. The only loss of life afloat of which we have been able to definite obtain information, occurred by the wreck of one of two lighters on the Kanagawa side, by which five or six *sendo* are said to have been drowned. During the height of the gale the German cruiser *Irene* dragged her anchors and drifted on to the spit to the north of the Spit Red Bouy, where she grounded fore and aft, and remained till late in the afternoon, when, having been lightened, she came off with assistance from the *Princess Wilhelm*. The Blue-funnel steamer *Patroclus*, caught in one of the fierce squalls, carried away the P. & O. moorings, to which she was anchored, and drifted alongside the German flagship *Kaiser*, from which she took a long time to clear. What damage she has received we have not yet been able to ascertain. The sailing ships *Carmarthenshire* and *Selkirkshire* also dragged their moorings and drifted up against one another. The boats of the yacht squadron suffered severely. The flag-boat of the Mosquitos, the *Aborigine*, broke adrift and was carried away by the wind and tide to the other side of the harbour. She struck the Break-

water and went to pieces. Several of the other yachts met with mishaps. Some broke their moorings but were recovered, while three of the small craft, 12 or 17-raters, capsized at their moorings, and showed their keels till late on Thursday. Altogether, independent of the sad fatalities, the bill of damages will be a big one.

In the height of the gale a large water boat drifted out from the creek into the harbour with five *sendo* on board. Finding the boat utterly unmanageable when in the harbour, the men jumped into the water to try and swim ashore. Four of them succeeded and were assisted up on to the Bund by several persons who had seen the accident, but the other poor fellow, who could not swim, made a jump at the Bathing-barge as he floated by. He succeeded in crawling on to it and was afterwards brought ashore. A coolie named Tsuji Saikichi, was employed with others in clearing away an obstruction caused by a number of logs of timber that had got jammed in and about the piers of one of the railway bridges near Yokohama. A train from Tokyo came along, apparently unnoticed by Saikichi, who was on the bridge at the time. Whether the engine knocked the poor fellow off the bridge, or whether he jumped from the bridge in order to avoid being run over seems uncertain, but the unfortunate man received a nasty cut behind the left ear. The body sank and was recovered about a half mile away, close to the embankment along which run the pipes leading to the oil tanks. Telegrams from various parts of the country have been received reporting damage by the storm of Thursday morning. It struck Chiba at 5 a.m. and did much damage. An engine house on the Boso Railway was demolished and many houses wrecked. Several persons were injured. At Urawa the jail buildings were partially demolished. At Mayebashi, Naoyedzu, and Toyama much damage was done and the rivers overflowed their banks and flooded large districts.

The typhoon caused great damage to telegraphic and telephone wires between Yokohama and Tokyo, and communications are partially suspended. The railway line between Tokyo and Yokohama as well as lines east of Shizuoka are in working order. The buildings in the rear of the Teikoku Seito Kaisha (Imperial Sugar Factory) at Tenjin-yama, were entirely wrecked. The small steamer *Fudo Maru* sank near Benten Bridge, but all her crew escaped with their lives. Near Kanagawa port a Japanese junk is reported to have been lost, together with the occupants. At Suruga-cho, Yokohama, a boy (5 years) and a girl (8 years) were crushed to death by the falling of a chimney of a bath-house. Tsuji Benkichi (36 years), of Ichome, Koto-buki-cho, while walking along the river bank near Tsukimi Bridge was blown into the river and his body has not yet been found. The large work-sheds of the Yokohama Dock Company were totally destroyed, as were also the buildings of the Christian School: the temple of Narita-Fudo met with a similar fate. Two women, a mother and her daughter, are reported to have been drowned in a boat near Nagaragawa. All the small craft along the shores of Kanagawa were dashed upon the beach and received more or less damage.

In regard to the telegram from Chiba that tells of the wreck of an American sailing ship down the bay, we learn that the *Vigilant*, an oil-ship, is about due, as well as a lumber-vessel from Portland, but no news of either can be obtained, the U. S. Consulate as well as the agents being without information.

The N.Y.K. steamer *Yamaguchi Maru*, Capt. A. E. Moses, which arrived yesterday morning from Seattle, experienced Thursday's storm off Cape Inuboye. She reports:—Left Seattle at 8.00 p.m. on Monday Aug. 23rd. Experienced light to moderate winds and occasional fogs to Kinkasan, which was passed at 2.40 p.m. on the 8th. From thence to Inuboye Saki, increasing breeze and sea from S.S.E. with threatening appearance. Off Inuboye wind had increased to a terrific gale, with very high sea, damaging two life-boats. The gale continued to noon on the 9th, with the wind gradually work-

ing into the westward. From noon the gale and sea abated and at 4.00 p.m. had fine clear weather and moderate sea. Thence to port fine weather, arriving at 2.40 a.m. yesterday morning.

THE LOST "ABORIGINE."

The loss of the Mosquito Yacht Club flagship *Aborigine* is causing profound regret among the members, for the little cutter had been the means of bringing together many good fellows blessed with sympathetic temperaments and imbued with a true love of sailing and cruising. As far as can be gathered, the *Aborigine*, in the height of the gale, broke adrift and struck some of the shipping on her way to the harbour entrance. In doing so she must have carried away her mast and split open her deck; then she struck the break-water head on, cleared the obstacle, and sank almost immediately. Mr. W. W. Campbell, the indefatigable Commodore of the Club, in company with Mr. F. J. Hall and some *sendo* went out in search early on Thursday. They found the mast and spar on one side of the break-water with half of the deck, the fore-part, on the other: Mr. Campbell dived down to see what might be left of the hull, but could find only a small portion of the port side. The amateur diver found a most curious and unpleasant collection of *débris* at the bottom of the harbour, the flotsam and jetsam of the typhoon—casks of soy, tubs of saké, boxes of soap, bales of rice, dead fish, etc.—and he was glad to come up. The mast, sails, rigging and piece of the deck were brought ashore as relics. The ice-chest and log-book—most essential equipments of the good ship, were they—are still missing.

SUSPECTED MURDER.

On the night of the 5th inst., Miyaji Hidemasa, aged 43, a silk-handkerchief embroiderer of Ichome, Matsukage-cho, Yokohama, sent a messenger to Dr. Hiramatsu Kenosuke of Rokuchome, Honcho, requesting his prompt attendance on his old step-mother. The doctor, however, being pressed with work did not visit Miyaji's house till the following morning, when he found the poor woman dead in an upstairs room. Upon examination he found nine wounds, or bruises, on the side and chest down to the waist, and other suspicious appearances. The doctor at once informed the Kotobuki-cho Police, who notified the Yokohama Local Court, and some Public Procurators accompanied by police proceeded to the house and examined the body, which, on the morning of the 7th inst., was conveyed to Kotobuki-cho Police Station, where a *post mortem* examination was made. Miyaji Hidemasa and his wife were at once arrested and have been handed over to the Local Court for examination on a charge of having caused the death of the woman.

THE FORMOSA RAILWAY.

With regard to the proposal that the remaining unsubscribed portion of the Formosa Railway shares should be taken up by the Government, Baron Yasuba and other members of the Railway Committee have, according to the *Yomiuri*, made earnest representations to the Ministers of State. The request, however, can not be complied with in full owing to present financial conditions, but the Government has managed to take up 200,000 shares out of 300,000 and have persuaded Formosans to subscribe for the balance, in order that the Company may be enabled to hold its initiatory meeting at once. With these liberal arrangements of the Government the Company is highly gratified, and so soon as the existing railway between Kelung and Hsinchu is handed over to its charge, and the locomotives and passenger cars arrive from America steps are to be taken to complete the work slowly but steadily. The agitation that arose over Adjutant Yamamoto's speech on the Formosan Railway may now be said to have subsided.

THE STOPPAGE OF THE YOKOHAMA WATER SUPPLY.

From enquiries made at the office of the Yokohama Water Works, we understand that little or nothing is known regarding the cause of the cessation of the water supply. Early on Thursday morning, the supply of water by the main from the Noge Reservoir ceased, but the cause of the stoppage was not known up to Thursday evening, as the telegraph and telephone wires in the neighbourhood had all been thrown down by the storm of Thursday morning. It was, however, believed at the office that the main pipe, west of Isukui-gun, (beyond Kanagawa) must have been broken by a landslip caused by the heavy rainfall. As the supply of water is now very limited and nothing definite is known as to how long it will take to repair damages, it was decided yesterday to turn off the water at all the hydrants except for one hour, from 5 to 6 p.m. on the 9th, and for two hours—from 6 to 7 a.m., and from 5 to 6 p.m. on the 10th instant. This will, it is needless to say, cause very serious inconvenience to the inhabitants of Yokohama, as it is practically a water famine, but it is to be hoped the injury to the supply main will promptly be discovered and repaired, and that the full supply will be restored as quickly as possible.

DEATH OF MR. H. ST. JOHN BROWNE.

The *Kobe Chronicle* in announcing the death of Mr. H. St. John Browne, said it occurred at Rokkusan on Sunday morning, where Mr. Browne had been staying since his return from Europe in June. "The news comes as a painful surprise, the fatal illness having been of very brief duration. The sad event removes from Kobe another link with the past, as Mr. Browne came to Kobe from Yokohama two or three days before the port was opened, in 1868, and started the business of Browne & Co. During the past twenty-nine years he has taken a keen interest in the public affairs of the port; serving the community for many years as a member of the Municipal Council, as Chairman of the Chamber of Commerce, and in many other capacities. His life had been a very active one, and his trip home last year was not taken before it was needed. When he returned a few months ago, Mr. Browne was looking well, and his friends even up to Saturday had no reason to think his end was so near. Mr. Browne is believed to be about 63 years of age."

The *Hyogo News* says:—Of late years of Mr. Browne's health has weakened, and he has been much less seen than formerly. His departure for home some eighteen months since was probably his good-bye to quite a large proportion of his friends in Japan. Nor would he have returned so soon as he did save for the untimely death of his partner, Mr. Macpherson, in Yokohama. Since his arrival he has spent nearly all his time on Rokkusan, where his house was one of the first built. The life suited him, and he has kept generally well and always quietly happy.

On Friday, we are informed, Mr. Browne was stung by some insect, with unusually bad effects. Medical means were resorted to on Saturday to afford relief. Later on fever supervened, the patient's temperature rose ominously, a critical state of exhaustion became apparent, and death occurred at 11 a.m. yesterday.

The funeral of the late Mr. St. John Browne took place on Monday evening, being attended, says the *Kobe Herald*, by a large and representative body of Japanese and foreigners. Mr. E. H. Gill and Mr. Ozawa followed the hearses as chief mourners, while Messrs. A. H. Groom, J. Carey Hall, H. L. Baggally, A. Milne, Ryle Holme and James Green bore the pall. The solemn and impressive burial service of the Church of England was read at the grave-side by the Rev. H. J. Foss. The grave was literally hidden amid the profusion of floral tributes.

ARTISANS WAGES.

The rise in the prices of commodities has naturally tended, says the *Yiji*, to enhance the rate of wages. Investigations made by the *Yiji's* representatives in the capital show that the wages of operatives have risen thirty per cent. on the average as compared with 1895. The following is a comparative table showing the average rate of pay per diem for labour:—

Occupation.	Aug., '97.	Aug., '95.	Increase.

THE NIKKO AFFAIR.

The *Hogo News*, reproducing the account of the Nikko affair recently sent to the *Yasan Gazette*, asks its readers to contrast it with the account previously published in these columns, and in doing so suggest that the epithet "shady" was applied by us to Mr. Twinning's conduct. That is a complete misapprehension. We made no comment of any kind on Mr. Twinning's conduct. For the rest, no substantial difference exists between the account published by us and the account sent to the *Japan Gazette*, so far as the apparently inexcusable conduct of the policeman was concerned. From the letter in the *Gazette* we learn, however, that an apology for the detective's rudeness was tendered by the police to Mr. Twinning, a fact that should not be omitted.

FOREIGN TRADE OF NAGASAKI.

According to the *Yomiuri*, the import and export trade of Nagasaki for the first half of this year totalled respectively 7,263,935 yen and 2,612,726 yen in value, making an aggregate of 9,876,661 yen, and showing an increase of 2,587,543 yen in imports and 525,321 yen in exports, on the corresponding period of last year. Upon making investigations as to the articles of export and import, it is found that of the staple exports flour has made considerable progress, having increased by sixty per cent. over the amount exported last year, while coal, paper, *awabi*, and dried sea-slug (*iriko*) show an increase of from ten to thirty per cent. Rice, however, decreased thirty per cent. and a slight reduction is also noticeable in dried mushrooms, charcoal, timber, earthenware, porcelain, and dried cuttlefish:

COTTON SPINNING IN JAPAN.

The spinning industry, remarks the *Yiji*, has developed considerably of late, the total number of spindles now reaching 830,000 and the annual output of yarn 23 million *kwamme*. As old fashioned spinning wheels are still used in many of the rural districts of the empire, it is impossible to obtain precise statistics of the consumption in the interior. Nevertheless, it may easily be conjectured that the spindles fitted to these wheels do not exceed 500,000,—the number calculated by experts on the basis of experience. The annual demand for cotton yarns may be ascertained by taking the average total manufacture, as well as the import and export of cotton for the past five years, as follows:

Year.	Import.	Export.	Excess of Domestic	Excess of Domestic	Totals.
	Catties.	Catties.	Import.	Production.	Catties.
1892	14,460,271	34,664	84,497,517	83,310,006	107,737,598
1893	19,534,713	315,093	19,226,222	18,380,530	10,815,658
1894	16,066,404	3,338,868	12,327,536	122,000,000	134,327,536
1895	14,591,083	3,534,893	11,056,190	153,178,090	164,237,180
1896	10,211,948	12,974,713	7,837,225	19,610,030	203,340,165
Totals.	94,881,821	80,995,221	74,865,500	64,348,516	717,968,116
Average.	18,976,364	4,079,044	14,897,310	12,866,503	143,593,693

Thus the average domestic production, together with the excess of imports over exports amounts to 143,593,623 catties. Taking this figure as the annual average home demand for yarns, the domestic production must have exceeded the demand in 1896 by 52,509,307 catties. If, again, from the latter figures the imports from abroad are deducted, there appears to be a decrease of over eighteen million catties on the total manufacture. But as the imports are chiefly fine yarns which the Japanese spinning factories are not able to produce, or which, even if they could be produced, would hardly pay, the amount referred to will, for the present, continue to be imported and can not therefore be excluded from the account. Again, comparing the number of spindles with the amount of yarn manufactured, it will be perceived that each spindle produces about 236 catties annually. If the excess of production, amounting to 52,500,000 catties, is divided by this figure, the figures 264,822 are obtained, representing the number of spindles in excess of domestic requirements. It follows, therefore, that the manufacturers of cotton yarns must sell abroad the amount of yarn produced by 268,822 spindles. This year, over twenty million catties were exported up to June last, and another twenty millions are to be sent abroad during the latter half of the year, with a view to clearing off the total excess of domestic production. Unfortunately, however, the sudden and severe fall in the rates of exchange on Shanghai has seriously affected this important branch of trade, and now threatens to hinder the progress of the spinning industry in Japan. Nevertheless, the embarrassment may only be temporary, and manufacturers ought not to feel serious anxiety.

THE "YIJI" ON MARQUIS ITO

The following conversation is reported by the *Yiji* to have passed between Baron Suyematsu, who has intimate relations with Marquis Ito, and a *Yiji*'s representative who called on the Baron on the 6th instant with a view to ascertain what is to be the Marquis' procedure after his return from Europe:—

Representative.—Several theories have been advanced by the public as to the cause of Marquis Ito's hasty return to Japan. Some are inclined to suppose that his return is the result of a special message from the Imperial Household; others imagine that it is based on the request of political colleagues; still others assert that in the course of his tour in Europe the Marquis was deeply struck with certain diplomatic questions which seemed to him of great import to Japan, and therefore resolved to return. Which of these suppositions, or assertions, is the true explanation of the situation?

Baron.—As to the first of those conjectures, it is impossible to ascertain the truth. I have never heard of any Imperial message having been transmitted to the Marquis. So far as the present state of affairs is concerned, it is hardly possible to suppose that the political friends of the Marquis should have refrained from writing to him during his sojourn in Europe. Yet

I do not think their communication was the principal cause of his return. The suggestion of a diplomatic crisis also seems to have no relation to the Marquis' homeward journey, though the public appear apt to think that it might have been the cause. It is beyond question, however, that he has obtained the views of foreign politicians with regard to the policy pursued by the present Cabinet. With respect to the late Hawaiian affair in particular, Americans who appear to have become apprehensive of Japan's expansion of power after the war with China were seriously offended by the despatch of a war vessel to the little Republic. The Marquis seems to have devoted some pains to explaining to Americans the absence of any aggressive spirit on the part of Japan. I have not yet ascertained the Marquis' opinion, yet I believe he will not proceed, as the public had imagined, so far as to lay all the problems before the Emperor by way of furnishing materials for adverse criticism of the present Cabinet, although he is on the whole opposed to the policy carried on at present.

Rep.—Rumour has it that the Marquis' sudden return is only preparatory to the restoration of the old Cabinet, to which men of the highest merit only are to be admitted. What do you say to that?

Bar.—The Marquis will certainly not be so ill-advised as to coöperate and share political responsibility with the existing Cabinet, which has committed, and is still committing, blunder upon blunder, and bungling upon bungling. Do you not see that the single attempt to transfer Mr. Arai to the post of Superintendent of the Formosan Affairs Bureau is sufficient proof of the corruption of official organisation. The pernicious results arising from the adoption of gold monometallism, the strange system of selecting men of talent, the lack of unity among the members of the Cabinet,—these are things unworthy to be commented upon owing to the anomalies they involve. To coöperate with such a Cabinet is impossible. The present Cabinet is something like an over-ripened persimmon, on the point of decay, destined to fall to the ground in the course of time without being plucked. The Marquis is fully sensible of these facts, and will not allow himself to be plunged into the vortex of corruption.

Rep.—Mr. Hoshi, Minister to America, is also preparing for his homeward journey. Is that the result of the Marquis' communication, as is supposed by the public?

Bar.—I cannot make a definite reply as I have not any accurate information on the subject. Yet I suppose he may be unable to do anything satisfactory under Count Okuma's diplomatic instructions. His determination to return is quite reasonable.

COAL SUPPLY.

The *Mainichi Shimbun* states that the number of specially chartered coal mines in Chikuzen and Buzen reaches 437, covering an area of 76,823,881 *tsubo*. These figures indicate a decrease of 15 mines, but an increase of 616,137 *tsubo* as compared with last year. A slow but steady development of the enterprise is shown while the annual output is also increasing. In the 28th year of *Meiji* (1895) the output of coal amounted to 5,150,000,000 catties, showing an increase of over 350 millions as compared with the figures for the previous year. There are sixty-seven mines producing more than fifty million catties each. The Miike mine is the most important, with an annual output of over one hundred million catties. Next come Namagata, Akaike, Takao, Katsuno, Oshiro, Otsuji, and a few other districts, each yielding one hundred millions. The statistics for three years are as follow:—

Year.	Mines.	Area.	Catties.
		<i>Tsubo</i> .	
1893	208	66,131,735	3,554,140,844
1894	452	70,662,884	4,807,258,086
1895	437	76,823,881	5,257,578,739

The figures for last year are said to have decreased a little as compared with the previous year, the total output not exceeding five hundred millions.

Senior Lisboa, the new Brazilian Minister to Japan, arrived here on Sunday last, with his wife, son and two daughters, by the *Empress of Japan*, and proceeded on to Tokyo, where the Minister and his family have taken up their quarters temporarily at the Imperial Hotel.

DIPLOMATIC AND CONSULAR REGULATIONS.

The following regulations were promulgated on the 1st instant with regard to the special appointment of Diplomatic Agents, Consuls, and Commercial Commissioners:—

IMPERIAL ORDINANCE No. 290.

Art. I.—Student Secretaries of the Foreign Department who have served more than five years in a Legation, Consulate, or Commercial Commissioner's Office, and have received in remuneration a salary of the third class, may, within three years after the enforcement of these Regulations, be appointed Diplomatic Agents, after passing the examination set by the Committee established for the examination of Diplomatic and Consular Agents.

Art. II.—First and Second Interpreters in Legations who have continued in office for more than two years, within three years after the enforcement of these Regulations, and after passing the examination set by the Committee for Diplomatic and Consular Agents, may be appointed Consuls or Diplomatic Agents or Commercial Commissioners to countries other than those in which they have previously discharged duties.

Art. III.—Secretary-Translators of the Foreign Department who have rendered services for more than three years may also, within the term and process above specified, be appointed Diplomatic or Consular Agents or Commercial Commissioners.

Art. IV.—Any Diplomatic Agent or Consul who has served in a Legation or Consulate more than two years previously to the promulgation of Imperial Ordinance No. 187 of the 26th year of *Meiji*, respecting the appointment of Diplomatic and Consular Agents, and Student Secretaries, may, with the approval of the Examination Committee, be promoted to the rank of Diplomatic Agent, Consul, or Commercial Commissioner.

Art. V.—Any Diplomatic Agent, Consul, or Commercial Commissioner who has been appointed to a post in accordance with Imperial Ordinance No. 188 of the 26th year of *Meiji*, providing for the special appointment of Consular Agents, or in accordance with Imperial Ordinance No. 182 of the 29th year of *Meiji*, or in accordance with these Regulations, may be transferred from one post to another within the three offices above mentioned.

MARQUIS ITO'S RETURN.

Marquis Ito and suite arrived at Yokohama on Sunday afternoon at 3 o'clock by the P. C. steamer *Empress of India*. The Marquis landed very soon after the steamer came to anchor and left Yokohama Station at 4.55 p.m. for Shinagawa, where he and suite alighted and proceeded to his residence at Isarago, Shiba. Among those who received and welcomed the Marquis at the hatoba were Count Okuma, Count Inouye, Viscount Yoshikawa, Mr. Komura, Vice-Minister of the Foreign Office, Lieut.-General Kodama, Vice-Minister of War, Baron Suyematsu, Baron Ito and many others. The Marquis appeared to be in excellent health and spirits.

VARIOUS TOPICS.

The Report of the Agricultural Commission shows that it is a mistake to attribute the agricultural depression in Great Britain to bad seasons. The seasons, with few exceptions, have been good since 1882. The real cause is the progressive and serious decline in the prices of farm produce. The general conclusions arrived at are:—

1. That as regards grain the price of the three staple cereals during the last 20 years has fallen over 40 per cent., in the case of wheat alone 50 per cent. 2. That the price of beef in the same period has fallen from 24 to 40 per cent., according to quality, and that of mutton since 1882 84 from 20 to 30 per cent. 3. That wool has fallen in price upwards of 50 per cent. since 1882-84. 4. That, as regards dairy produce, the fall in the prices of milk, butter, and cheese has approached 30 per cent. 5. That potatoes have declined at least 20 to 30 per cent. in price. 6. That fluctuating as are the prices of hops, they have nevertheless tended to fall to an unprofitable level. "One of the gravest features," the Commissioners say, "of the depreciation which has been so manifest in the course of prices of agricultural produce

during the period under review has been its persistency."

For this depreciation the Commissioners appear to think that foreign competition is chiefly responsible, and although they are of opinion that the United States, owing to its rapidly growing population, may soon have less produce to export, they see in Argentina, "with her immense area of virgin soil, her climatic and other natural conditions, cheap labour, and artificial stimulus arising from monetary causes," a serious source of menace. In fact they can perceive "no near prospect of any permanent abatement in the pressure of foreign competition."

With reference to the denunciation of England's commercial treaty with Germany, *The Times* says:—

Canada, as our readers will remember, did not offer anything specifically and exclusively to this country. What she offered was offered to all the world, but upon conditions which practically only this country, with one or two of her colonies or dependencies, is at all likely to satisfy. The offer is a reduction of the tariff, amounting to 12½ per cent. this year and 25 per cent. afterwards, upon the goods of all countries disposed to give equal advantages to Canadian goods. As we place no duties upon Canadian or any other goods, with the exception of a very few articles excepted from the Canadian conditions, it follows that the reduction will be enjoyed by our exporters without doubt or question. Canada resorted to this mode of operation in order to facilitate acceptance of the boon by this country without regard to existing treaties. But were other countries to aim at sharing in the discount off the Canadian tariff, it is possible that troublesome questions of degree would have to be dealt with under such an arrangement. It would not always be easy to compare different tariffs in such a manner as to decide when reciprocal advantages reach the equality which is the condition of Canadian relaxation. By terminating in due form the treaties which stand in the way, we relieve Canada of the necessity for the ingenious arrangement just described. As soon as these treaties expire Canada will be perfectly free to give to this country specifically and exclusively whatever tariff reductions she may find convenient. At the same time it will become far more easy than at present for any colony to follow her example without in the least committing itself to reduction of duties all round. Commercial treaties have never been satisfactorily reconciled with pure free trade theory, but abstract objections of that kind need not be allowed very much weight as against practical convenience. In view, however, of a commercial Imperial federation the balance of practical convenience falls the other way. By denouncing the German treaty we secure to our colonies a freedom of fiscal arrangement which has hitherto been under some restraint.

The annual meeting of the British Association was opened in Toronto on August 18th, Lord Aberdeen presided and welcomed the delegates. Mayor Shaw then made an eloquent address of welcome which was responded to by Lord Lister and Sir John Evans, who spoke of Canada's recent exhibition of loyalty to Britain. Lord Kelvin also spoke, as did Mr. Hardy in behalf of the Province, and Hon. Mr. Ross spoke in the evening, when Massey Hall had an audience of 1,200, despite the heavy rain. Lord and Lady Aberdeen and Sir Oliver Mowat were present. Lord Lister, as the retiring President, made a speech and surrendered the chair to Sir John Evans, who made an admirable address on the antiquity of man. Lord Aberdeen moved a vote of thanks, describing the members of the Association as the best immigration agents possible. The feature of the next day's proceedings was the delivery of addresses by the Presidents of Sections, and the Vice-regal reception in the evening. The Royal Canadian Yacht Club gave a garden party which was attended by nearly 1,000 guests, and the affair was one of the most brilliant ever held in this city. The Parliament buildings were brilliantly illuminated and handsomely decorated. The Vice-regal reception began at 9 o'clock p.m., and the Governor-General and his Countess were on their feet shaking hands till 11 o'clock p.m. On August 20th, Toronto University conferred the degree of LL.D. on Lord Kelvin and Lord Lister, Sir J. Evans and the Hon. A. S. Handy. At the meeting of the Association at night, Mr.

Roberts, Director of the Mint, lectured on "Canada's metals." He held that England will turn to Canada as the newest colony for the supply of metals on which the prosperity of the Empire depends. He described the gold mining industry in Canada, and noted as the reason for its slow progress that mining districts cannot be opened freely until proper railway facilities are obtained. He enlarged on the importance of iron and steel production and, by experiments showing the effect of nickel on steel, showed the immense importance of Canada's nickel deposits.

A representative of the *Neue Freie Presse* obtained an interview with Marquis Ito when the latter was in Vienna. "The Japanese statesman was asked, among other things, whether he believed that England's power in Asia was declining, as was so frequently asserted nowadays, and whether Russia, which thwarted victorious Japan at Shimonoeki, threatened to become preponderant in the Further East. In reply, the Marquis said that he had conversed with Lord Salisbury and other leading statesmen in London, but saw no sign of any apprehension on their part as to England's position in Asia. He himself was not at all disposed to think that Russia would soon get ahead of England. So far as Japan was concerned, the English flag floated in all their harbours and the trade of other nations was of secondary importance compared with that of England. In answer to the question whether Japan felt any anxiety as to the pressure which Russia was now bringing to bear upon China, the Marquis said that it would be a mistake to suppose that China could ever become a field for the exclusive exploitation of Russia. She would always have to reckon with English competition from Burma, as well as that of France from Tongking. He was convinced that the problem of the future would be the struggle of England and France against Russian influence in China. Referring to the enthusiastic reception accorded to Li Hung-chang in Berlin last summer and the comparative neglect of the Japanese Moliike, Marshal Yamagata, who visited the German capital at the same time, Marquis Ito said that it was believed in Berlin that China would, out of gratitude, open its markets to German industry. He did not believe that this would be the case. China would never voluntarily permit access to her markets. These could only be conquered by force. The day might come when the Powers would decide to apply that force without which China would never open her gates to civilization. His Excellency declared that the newspapers had exaggerated the differences between the United States and Japan, which, he said, need cause no uneasiness whatever. The conversation was carried on in the English language, which the ex-Premier had learnt in England as a student. He concluded his remarks by stating that he never regretted having recommended his country to follow the example of Europe, although he had been decried as a revolutionist for doing so. "But then I was born for revolution," exclaimed the Japanese statesman."

Lord Kelvin has written a letter to *The Times* on the subject of the recent death of a lady from fire caused by the explosion of inflammable hair-wash with which her hair was being treated by a London hair-dresser. The principal ingredient of the wash was petroleum, and it is a Paris concoction. Lord Kelvin says:—

As a warning that may possibly be useful in preventing the recurrence of any such terrible accident as that which recently happened through the ignition of an inflammable hair-wash, it ought to be generally known that the faintest electric spark suffices to ignite an inflammable mixture of a combustible gas with air. This is illustrated in elementary lectures on electricity by "Volta's cannon"—a little varnished brass gun, mounted on a glass pillar, and having a wide touch-hole plugged with sealing wax, in the centre of which is mounted a brass wire carrying a little brass knob outside and projecting inside to within 1-20th of an inch of the end of another brass wire fixed to the metal of the gun. The gun is filled with an explosive mixture of oxygen and hydrogen, and its muzzle is plugged with a cork. The

varnished outside is struck with a piece of cat-skin, and, thus electrified, the gun is left insulated on its glass pillar. To fire it, all that is necessary is to touch the projecting knob with the finger. This causes discharge of the electricity by two exceedingly faint sparks, one barely, if at all, perceptible by the finger before contact with the knob outside, the other in the 1-20th of an inch air space within the explosive mixture inside. A loud explosion is heard, and the cork is projected with sufficient violence to tear a canvas picture if it chanced to touch one.

Ignition of vapour of benzine by electric spark is well known to dyers in their process for cleaning silks and other fabrics by boiling in large cauldrons of liquid benzine. When the goods are taken out of the cauldron and spread out to dry on a table explosions have often taken place; and I believe it is quite certain that an electric spark, caused by some slight friction between dried or partially dried portions of the fabric, is the incendiary. We all know how readily electric sparks, visible in the dark, and perceptible to the ear by slight crackling sounds, are produced by drawing a hand over very dry hair or the teeth of a comb through it.

In the recent inquest it was stated that the merit of the hair-wash was that it dried so readily. The hairdresser said he felt the hair warm in his hand and immediately after that all was enveloped in flames. The fact that the hair seemed warm to the hand was due, not to the beginning of some kind of spontaneous combustion, as must, I believe, have been imagined by many readers of the report. It showed merely that the part of the hair touched had quickly become dry. Very slight friction of the hand on the dry hair would suffice to produce an electric spark; and the explosive atmosphere of air mixed with combustible vapour, from the portions of the hair not yet dry, was there. The conclusion of the inquest shows that no gas was burning in the neighbourhood, and that no lucifer matches were lying about on the floor which could have been ignited by being trodden on. A gas flame within a yard or two of the place would certainly have been dangerous, but far less apt to produce the disaster than an electric spark from the hair in the very place of greatest liability to the presence of an explosive mixture.

CHINESE TOPICS.

The inexorable indiscriminating law of China, which condemns a parricide to death by the slicing process, whether he be the perpetrator of a wilful crime or the victim of an accident, is terribly illustrated by a case now vexing the souls of humane folk in Shanghai. A little lad of eleven, swinging some article about his head in play, happened to strike his mother a blow, from the effects of which she died. The boy is to be sliced to death by the public executioner. A correspondent of the *N.-C. Daily News* asks whether something can not be done. It is probably now too late, but certainly any Foreign Representative who urged the Chinese Government to pause before permitting such a horror, would be acting a friendly part to China and doing his duty as a man. The Emperor's prerogative of pardon could not be exercised on a worthier occasion. The thing is shocking in its grim barbarity.

It appears that none of the materials for constructing the Shanghai-Woosung Railway are to be procured from England. The sleepers are to come from America; so are the locomotives, the American Trading Company having contracted to supply Brooks tank locomotives; Germany sends the iron bridges; the rails are to be furnished from the Iron and Steel Works at Hanyang; and the carriages will be built at the Government workshop in Tientsin. In connexion with this subject, we should like to learn from the *N.-C. Daily News* whence it obtained the information that "Brooks tank locomotives have been adopted by all the Japanese Government lines." That is a gross blunder. Ninety-nine per cent. of the engines on the Japanese State lines are English. We suggest to our Shanghai contemporary the advisability of correcting a misstatement calculated to mislead the Chinese, to the detriment of British manufacturers.

The silver mines said to exist in the Feng-hwa district of Ningpo, are to be opened despite

the opposition offered by the people. It has been discovered that the opposition was fomented by three licentiate, who probably wanted to be bought off. They have been cashiered. But this is surely a strange time for opening silver mines. Now that the Emperor of China has given permission for the opening of all mines within his realm, there seems to be an access of activity in that direction. A certain Mr. Sieh, who has spent 60 years travelling about his native country, is reported to have found a rich deposit of copper in Hunan, and to have obtained official aid for exploiting it. Attempts to mine for gold in Manchuria, however, have not been successful, but the failure appears to have been due chiefly to incompetence and dishonesty.

The splendid conservatism of the Chinese is illustrated by a recent decree of the Emperor. There is to be an eclipse of the sun on the 22nd of next January. The Board of Astronomy in Peking informed the Sovereign of the fact and could of course explain the exact cause and inevitable character of such events. But in the dark eras of ignorance it used to be imagined that an eclipse of the sun was heaven's method of warning the ruling prince that he lacked wisdom or morality. The Emperor accepts the warning. He declares that he is "filled with a great fear," and that he has "tried during his moments of leisure to inwardly question himself as to the errors he has committed." Accordingly, his Majesty commands that, "as a token of humility and submission to the will of heaven," the New-Year's-day ceremonies of congratulation paid to him are to be held in a hall the name of which signifies "clearing the political atmosphere." The other steps to be taken are these:—

The annual banquet given to the clansmen of the Imperial House on the day in question is also ordered to be discontinued for that year, while every one belonging to the Court is commanded to put on sober, every-day garments, while the eclipse is in evidence, instead of the gorgeous full dress Court robes demanded by etiquette on the first day of the year. The Court will then assemble in the Inner Palace where an altar to heaven will be erected, i.e. facing the open air, before which the Emperor and his full Court will prostrate themselves "to beseech the mercy of High Heaven to his chosen people." With regard, however, to the ceremonies to be observed when congratulating the Empress Dowager, the Emperor commands that the usual etiquette be observed at the Tzenging Palace, "for as they are to be paid to one senior to the Emperor, High Heaven will not be displeased at this display of Imperial pomp, being really an expression of his filial piety."

It is reported from Weihai that anti-foreign placards are once more posted in that district. The story told in these documents now takes the form that persons with hypnotic power go about drawing men, women and children to follow them, whose eyes and hearts they remove for sale to foreigners. The placard represents Tientsin as a centre of such iniquities.

GERMAN NEWS.

M. Rochefort certainly out-did himself in connexion with the prosecution of the *Mechverst*, the Paris organ of the Young Turkey party. Being cited as a witness, he excused himself by a telegram from the seaside, adding that the Ottoman Government had attempted a vast system of corruption, and that he had received a visit from a representative of the Sultan who had offered him money, assuring him that he would be in good company—namely, with diplomatists and with the Emperor William, who had received six millions.

The official statement of the Imperial German finances for the financial year 1896-97 was published on July 30th by the *Imperial Gazette*. The total expenditure amounts to 1,995,700 marks less than was anticipated in the Budget. This was effected in the main by a decrease of 4,372,000 marks in the estimated outlay for the army, and of 3,637,000 marks in the amount required for the Imperial Debt, while addition-

al sums over and above the estimates were only required to the extent of 454,000 marks for the navy, 1,973,000 marks for the Colonial Department of the Foreign Office—required for administration purposes in German South-West Africa—of 1,000,000 marks for the Ministry of the Interior, and 1,131,000 marks for the postal and telegraphic service, together with other smaller sums. The revenue receipts represent an increase of 76,471,145 marks over the estimated amount, the Customs and tobacco-tax having alone brought in 78,000,000 marks more than was provided for in the Budget. After deducting 50,000,000 marks, which, according to the Law of March 29 of this year, is the sum to be devoted for diminishing the Imperial Debt, the financial statement for the year 1896-97 shows a total surplus of 28,467,115 marks.

The Berlin correspondent of *The Times*, writing under date August 4th, says:—

"The trend of German policy has been for some time past to curtail favour more and more with Russia, and it has been noted with some degree of complacency that the former misunderstandings between the two Empires have been entirely removed since the accession of the Emperor Nicholas II. The cultivation of good relations between the two neighbouring States is prompted by reasons of cool and calculating diplomacy and by considerations of a unitarian policy. It is recognized in Germany, however, that the emotions and sentiment which gave rise to scenes such as were enacted of late in Cronstadt, Toulon, and Paris must ever be lacking in friendship between Russia and Germany. Whenever personal feelings are allowed to play a part in Russo-German relations they must invariably exercise an unfavourable tendency.

The short interval of time between the visit of the German Emperor to the Russian Court and that of President Faure is the subject of some discussion in the German Press. The comments, however, do not agree in endeavouring to ascertain the precise bearing of the facts. In the view of a somewhat sensitive journal, the *éclat* of the Emperor William's visit may possibly be overshadowed by the subsequent presence of M. Faure, in much the same way as the "Huchs" of the "Kaiser days" at Breslau were drowned by the Parisian hymns of triumph. But to the *Bismarckian Hamburger Nachrichten*, the rapidity with which the visit of the French President follows upon that of the German Emperor is a matter of importance. "A Franco-Russo-German co-operation," it says, "such as we have seen in the Far East, is not removed beyond the bounds of all possibility, in spite of the continuance of the old 'revenge relations' between Germany and France, especially as such a co-operation is rendered more possible by the antagonism between Russia and England in the East." The *Vossische Zeitung*, while understanding why the Russian Press is full of M. Faure's visit but practically ignores the immediate arrival of the Emperor William, considers that "President Faure's visit casts no shadows before and will be followed by no results. The friendship of centuries between Berlin and St. Petersburg may well be subject to passing clouds, but these cannot do away with the community of interest of the two neighbouring States. The present disturbances in the East, especially, have proved that the political interests of both countries move in the same direction—the maintenance of the peace of Europe."

The facts about the shooting of a prisoner by his escort in Danzig appear to be these:—"A young fellow, by trade a locksmith, but a recognized ne'er-do-well, was arrested for trespassing on the Imperial dockyards and trying to stab some workmen who attempted to remove him. As he was being escorted through the public streets on the way to the main guard-house he attempted to escape. The soldier in charge called upon him three times to stop, and then, at a distance estimated at 80 paces, shot him through the head. The ball passed clean through the skull, penetrated an iron notice board a short distance off, and finally buried itself some four inches in the stone wall of the guard-house. These facts can, apparently, be vouched for. According to supplementary versions, the street was fairly crowded at the time, and the soldier had to level his rifle twice before being sure of hitting his man and not someone else. In the present instance, though the occurrence has made no small stir, especially among

the inhabitants of Danzig, the comments in the Press are couched in perfectly sober terms. They are, therefore, the more likely to carry weight with them. The past history of the unfortunate young man precludes much personal sympathy, and it is recognized that the soldier acted strictly within the limits of his orders. But the facts of the case, it is argued, provide material for serious reflection. Not every soldier in the German Army could be relied upon to shoot as accurately as the hero of the present incident, and somebody else's head might well have been where the notice-board and the pillar were. A similar occurrence took place some years ago in Berlin which led to an interpellation in the Imperial Diet and a resolution condemning the use of firearms by soldiers for such purposes. The military authorities, however, would appear to have taken but little notice of the wishes of the country. It is, therefore, scarcely to be wondered that a feeling of bitterness is fostered against those who are responsible for the military regulations, when some simple precaution, such as the conveyance of prisoners through the public thoroughfares in closed vehicles, is omitted. The military spirit is strong in Germany, but on occasions like the present it cannot prevent outbursts of indignation that such a slight misdemeanour as that of which the young locksmith is guilty should be visited with the penalty of death." A joint military and civil commission was appointed to investigate the matter.

NEWS OF THE WEEK.

Sir Nicholas Hannen has joined his family at Hakone.

The Hongkong players have resigned both games in the cable chess match with Singapore. The victors must be congratulated upon their success.

A Japanese well-cleaner lost his life at Arima last week, being overcome by the gases that had accumulated at the bottom of a well. His companion had a narrow escape.

Capt. Kane, who commanded the British warship *Calliope* at Samoa in 1889, has been obliged through ill-health to give up his appointment at the Admiralty as director of Naval Ordnance.

We hear that Kobe's latest weekly paper—the *Kackling Kagmag*, *Kataphracted Kidney-bean*, or *Kalm Kritik*—has not survived the perils of extreme infancy, expiring last week without a struggle.

Kobe's sporting wit is proverbially keen and to the point. We note that the Canoe and Dinghy Club has just inaugurated another series of short distant races for members for a trophy that will be known as "The Growlers' Prize."

The last news from Malakand contained in Indian papers was that the Ranizari, from the Khar downwards, were sending in begging for peace. That was considered important as the tribe is one of the largest in the Lower Swat Valley.

In the race for the Mosquito fleet on Saturday *Nandeska* finished some minutes ahead of *Sodeska*, but as there was some error in the taking of the time, it was decided by the respective captains—subject to the approval of the officer of the day—to sail the race over again.

A correspondent writes to the *Singapore Free Press* suggesting the creation of a Gambling Farm for the Straits Settlements, urging that an annual saving to the Colony of \$150,000 would be effected. This sum would help to relieve the Colony from the burden of the Military Contribution.

The Austrian Government have placed a contract with Messrs. Yarrow & Co., of Poplar, for four first-class torpedo boats of the improved *Viper* type. As the result of exhaustive experiments, the Austrian Government have determined to fit the Yarrow boilers in the cruiser building at Pola. It will be of 8,000 horse-power. There

will be eight boilers in all, having 2,500 ft. of heating surface each.

It is reported, says the Korean *Independent*, that the new Prime Minister considers that it is necessary for the welfare of the country to have three Prime Ministers in the Government. Besides himself he proposes to have a Prime Minister for the Right and another for the Left, according to the customs of the happy old days.

The body of a sailor was picked up in Nagasaki harbour on the 3rd inst. and conveyed to the Water Police Station, where it was identified as William Montgomery, a seaman from the U.S.S. *Yorktown*. The deceased deserted his vessel on the night of the 1st inst. by jumping overboard, and it is supposed that he was drowned in endeavouring to reach the shore.

A pretty severe earthquake shock was experienced in Yokohama at about 11.50 a.m. on Wednesday. There appeared to be three distinct motions: first, a trembling or vibration of the earth, then a rather sharp perpendicular jerk upwards, followed by a horizontal shake from west to east of about a minute's duration. The shock was almost immediately followed by thunder.

Golden Hind won the "Maid Marion Cup" on Saturday; *Spray* being second, and *Mary* third. *Isabel* won the 17-raters race. The 12-raters had a rough time of it in the gusty weather, one, the *Botchan*, being capsized and precipitating the brothers Irwine into the water. She was towed on shore and righted. *Susume* had her sailed badly ripped. *Chocho* won the race.

Last Summer a foreign resident found a purse containing one yen and eighty five sen in small coins and as there was no clue to the owner he handed it to the Bluff Police station. The affair was forgotten until Tuesday, when a policeman called at his house with the purse and contents and a message from the Inspector saying that as they had failed to find the owner they returned the purse to the finder—and would he please sign a receipt.

The following items are taken from the Straits papers:—Over \$185,650 were spent on new barracks in Singapore last year.—Dissatisfaction is being expressed at Penang with the working of the Registration Department.—On silver coin the Straits Government, last year, made a profit of \$13,732; on copper coin \$85,443.—The total military expenditure for the Straits in 1896 was \$900,189.84—so exact are the accounts kept!

The author of "The Mikado's Empire" is fully sustaining his reputation as an ardent investigator, indefatigable worker, and prolific writer. At present he is putting the finishing touches to a student's edition of Motley's "Dutch Republic," reducing the original text by one-half, and adding a historical sketch of his own of the Dutch people from 1585 to 1897. He has also begun a little book to be entitled, "The Pilgrims in their Three Homes."

The sailing vessel *John Baisley* arrived at Shanghai on Sunday, the 22nd ult., after a fifteen days' trip from Nagasaki, says the *Daily Press*. When five days out and only about sixty miles from the Saddle, she met the full force of the recent typhoon and was driven out to sea again. During the gale the topgallantmast was blown off, the fore-top mast also split, after which it took her ten days to make port. The crew escaped without injuries and are all well.

Mr. Playfair held a Board of Trade Inquiry at the British Consulate, Kobe, on Wednesday touching the death of John Macgonigle, late Second Officer of the ship *Royledale*. Captain McCann produced his ship's log showing the circumstances, so far as he knew them. The accident happened on May 20th in stormy weather. A heavy sea was running in which no boat could live, and he last saw the deceased on top of the life-boat skids; when told that the man was overboard nothing could be done. Wallace Roach, A.B., described the shipping of three

heavy seas in succession; the deceased jumped on the rail, holding the main-shrouds, and from there to the skids to avoid the water. He did not see him washed overboard, but saw a cap in the water and rushed aft to give the alarm. Mr. Playfair entered a finding in accordance with the evidence.

The funeral of the late Mr. C. G. Buchanan Dunlop took place on Sunday afternoon, the remains having been cremated at Ikao, and the ashes sent down to Yokohama, on Saturday evening. The service at Christ Church, conducted by Rev. E. Champneys Irwine, was largely attended and many friends of the deceased followed the ashes to their last resting place, in spite of the inclemency of the weather.

Statistics compiled from reports presented by various cities and prefectures to the Temporary Epidemic Inspection Bureau, on the 1st instant, as published in the *Tokyo Asahi*, show the total number of cases of dysentery throughout the empire to have been 35,400 cases and 6,613 deaths. The districts where more than 40 new cases occurred on the 1st inst. were as follow:

	New cases.	Deaths.		New cases.	Deaths.
Tokyo	220	17	Gumma	207	24
Saitama	64	16	Hiogo	45	9
Niigata	74	3	Yamanashi ..	91	2
Yamaguchi ..	48	8			

We observe that Mrs. Ayrton read a paper on "Certain points connected with the Electric Arc," at the meeting of the British Association in Toronto; and that Professor Ayrton and Mr. J. Mather read one on "The use of a constant Total Current Shunt with Ballistic Galvanometers," and another on "Short versus Long Period Galvanometers for very sensitive Zero Tests." Professor J. Milne read a paper on "Submarine Earthquakes," and delivered one of the three public lectures, his subject being "Earthquakes and Volcanoes."

In the Half-mile Amateur Swimming Championship, which was contested at Southport, on July 31st, Percy Cavill, the Sydney swimmer, and eight others competed. Derbyshire, the English champion, and Cavill took the lead at the start, and at the half-distance Derbyshire, led by twelve yards, the time being 6min. 35sec. Towards the finish Green swam stroke for stroke with Cavill, but the latter swerved, and Derbyshire won the race by fifteen yards. Time, 13min. 38sec. There was a fine race between Cavill and Green for second place, and the latter won by a clever touch at the post.

The *New York Times*, writing on August 12th said—Secretary Sherman's bad condition of health and mind is no longer concealed, even by his friends. Yesterday Mr. Sherman made an absolute denial of all interviews concerning Senator Canovas' assassination that appeared in the newspapers on Monday morning. He seems to remember none of the occurrences of Sunday night, when he brought his chair out on the front stoop, and newspaper men gathered around him, and he gave out a variety of interviews. The Secretary's condition is painful to his friends. A physical collapse at any time would create no surprise.

The *Osaka Asahi* says that 222 contract labourers raised by the Japan Immigration Co. were despatched to Hawaii by the *City of Peking*. A second party, also contracted for through the same Company, are to leave by the *Doric* on the 10th instant. The party will consist of 135 men and 133 women, making a total of 268. Other contract labourers, 900 in all, enlisted by the Hiroshima Transpacific Immigration Company, are to be sent to Hawaii in two parties by steamers sailing from Yokohama on the 5th and 10th October. Another party of 300 will also be despatched on the 2nd of next month.

The tea trade for the latter half of last month in Yokohama was somewhat stagnant, says the *Tokyo Shimbun*. Yet owing to the scarcity of stock and an insignificant amount of arrivals from the manufacturing districts, native dealers displayed great firmness, particularly as a favourable report from America naturally

raised values to a considerable extent. It is said that, on the average, prices this year are three dollars higher than ever before. Arrivals and sales for the period under notice amounted to 1,400,080 and 1,233,000 catties respectively, the remaining stock being 385,600 catties. The following comparative table gives the figures since the opening of the tea season till the 31st August in 1896 and 1897:—

	1897. Catties.	1896. Catties.
Arrivals.....	19,106,400	19,053,100
Sales	18,720,800	19,399,600
Stock	385,600	653,500

The *Temps* says:—"If the British union were to be carried out, France would find herself in a singularly humble position as regards trade, for France could not count on her colonies for many years, and meanwhile what would become of France's trade and agriculture? Such, according to the *Temps*, is the peril, and it talks of the grave problems which are arising over the threshold of the 20th century. It is simply a question of life or death for France." These remarks, it should be added, refer to the possibility that England's denunciation of her treaty with Germany precludes the adoption of a protective policy.

The industrial mania, remarks the *Shogyo*, seems to have subsided. Many of the unsubstantial companies recently formed have disappeared leaving no trace of their existence. Yet the newly organised companies and the capital invested in commercial, industrial, and agricultural undertakings since January this year have reached the following figures.—

	Companies.	Capitals. Yen.
January	85	12,509,270
February	65	11,763,100
March	142	13,808,700
April	99	11,222,200
May	116	25,513,300
June	136	23,735,800
July	151	16,664,550
Total.....	794	115,166,920

On Sunday morning an accident which unhappily resulted fatally, occurred on the U.S. flagship *Olympia*. An apprentice named Otto Youghman, 16 years of age, was engaged fixing a cover over a hatchway when he fell through the grating on to a platform, breaking one or more of his ribs and receiving some internal injuries. The sufferer was conveyed to the U.S. Naval Hospital, where he expired shortly after 1 p.m. Deceased was buried on Monday morning with naval honours, some fifty blue-jackets, a firing party and the ship's band, under Lieut. Upham, forming the funeral cortege. The burial service was conducted by the Chaplain of the *Olympia*.

A report of the transactions of the various banks throughout the empire for the first half of the 30th year of *Meiji*, as published in the *Shogyo*, shows a decrease of 27,366,100 yen in capital, 18,846,558 yen in profits, 16,524,470 yen in reserves, and 1,763,920 yen in dividends, as compared with the figures for the corresponding period of the previous year. Special reserves alone increased by 377,965 yen, while the rate of dividends decreased on the average 5.3 per cent. The following are the figures:—

	30th year. Yen.	29th year. Yen.
Capital.....	{ Original	21,490,000
	{ Increased	30,000
Profits.....	25,549,855	21,308,514
Loss.....	16,904	163
Reserves	657,788	800,959
Special reserves ..	618,069	271,693
Dividends.....	{ On original shares ..	1,844,818
	{ On increased shares ..	1,510
Average rate of dividend.....	3.395%	3.333%

In the year 1887, says the *Daily Press*, Hongkong contracted a gold loan of £200,000, which realised \$1,263,158. In 1893 another gold loan of £200,000 was contracted, which realised \$1,536,000. Altogether the colony has borrowed \$2,799,158, and after paying back £60,000, say \$370,000, it owes at the present time about \$3,800,000. The case is something like that of the Dock Company and its Admiralty loan: the Company goes on steadily paying off the loan year by year according to

agreement, but year by year the amount it owes continues to increase, and according to the statement of the Chairman of the Company at the meeting the other day, the Government declines to receive payment at once of the whole sum due in sterling and thus allow the Company to clear itself of further loss.

According to the *Shogyo*, arrivals of silk in Yokohama during the three months, from June 1st, the beginning of the silk season, to August 31st this year, amounted to 29,985 bales, showing a decrease of about forty per cent. as compared with the corresponding period of the year before last, but an increase of forty-six per cent. as compared with last year. The following are the figures:—

Classification.	1897 Bales.	1896 Bales.	Increase or decrease. Bales.
Flatures.....	21,412	15,743	+ 5,669
Zakuri.....	5,017	3,761	+ 1,256
Orikueshi.....	3,165	808	+ 2,357
Hanks.....	136	19	—6
Hamatsuki.....	362	85	+ 278
Miscellaneous..	16	16	—1
Total	29,985	22,540	+ 9,587

The *sake* tax, which, the *Nichi Nichi* remarks, was raised from four to seven *yen* per *koku* this year, is to be further increased to ten *yen* next year. The following is the amount produced by the tax during this and last year:—

Tax.	1897— <i>Yen</i> .	1896— <i>Yen</i> .
<i>Sake</i> brewing	28,603,840	17,158,239
Mixed <i>Sake</i>	40,939	26,085
<i>Sake</i> for domestic use	1,176,096	790,032
<i>Sake</i> brewing licenses in Okinawa	2,976	3,000
<i>Sake</i> brewing licenses.....	—	430,510

Total

29,823,852	18,407,867
------------	------------

If the tax on *sake* is really raised to ten *yen* per *koku*, the revenue may be increased by twelve million *yen*, but it must be noted, at the same time, that the brewing of *sake* for domestic use, amounting to some two million *koku* annually, must be prohibited, and that therefore a reduction of about one million *yen* will take place in the revenue from that source.

The increase or decrease of loans and discounts negotiated by the Bank of Japan indicates as a rule the general condition of the money market. The report of the 6th inst. published in the *Hochi*, places the amount of loans issued at 116,663,337 *yen* and of discounted bills at 36,214,202 *yen*. The Bank of Japan has published twenty reports since the 1st May, but none except that for the 1st showed a falling off in loans below 116 million *yen*. Since under the head of loans are also included the Government drafts with which the Bank is entrusted, the true condition of the money market can not always be ascertained from the amount of the transactions of the Bank. The discounts, however, represent capital absolutely thrown into circulation among the people, and yet these too appear to have fallen to 36,170,000 *yen* on the 31st July. Such a phenomenon was not known before, says our contemporary, and may be regarded as a result of the utter stagnation in the economic world.

Mr. N. W. McIvor, late Consul-General for the United States at this port, accompanied by Mrs. McIvor and family, left for home by the P.M. steamer *City of Peking* on Saturday morning. The large number of friends of all nationalities who assembled on the *batoba* to bid farewell and tender their best wishes for a pleasant voyage and future health and prosperity to Mr. and Mrs. McIvor, was a slight evidence of the esteem and affection in which the departing couple are held by all who have had the pleasure of their acquaintance. Among those present were a considerable number of ladies, nearly all the American community of Yokohama, including the whole Consular staff, the U.S. Consulate having been closed for the day; Mr. Nakano, Governor of Kanagawa, and Mrs. Nakano; representatives of the foreign Consulates, heads of the principal firms in the port, and members the Y.U. Club, etc. Mr.

and Mrs. McIvor with their charming little family arrived on the *batoba* shortly after 11 a.m., and after a cordial hand-shake with numerous friends and acquaintances, were conveyed in Admiral McNair's steam-launch on board the *City of Peking*, where other friends had also assembled to bid them good-bye. The launch put off from the *batoba* about 11.15, much to the disappointment of many friends who were expecting that the ex-Consul-General would not embark before 11.30. If good wishes can ensure happiness and prosperity, Mr. McIvor has a bright and happy future before him.

The *Sekai-no-Nippon* publishes statistics compiled by the Board of Police in Niigata prefecture showing the result of investigations in sixteen districts devastated by the inundations that occurred on the 13th July and on the 5th to the 8th August this year. According to these reports, the calamity seems to have extended over 676 villages, washing away more than 177 bridges, and causing 126 others to give way. Damages to rice and other fields are calculated to have extended over 37,220 *cho* and 11,691 *cho* respectively, irrespective of fields which were entirely inundated. The length of embankments damaged is enormous, being 112,177 *ken* in all, while roads were destroyed to the extent of 17,562 *ken*.

The *Chuo* states that the Municipal Council of Tokyo proposes to raise a loan of two million *yen*, in addition to ten millions previously contemplated, to be appropriated, together with three and a half millions set apart for the construction of roads and bridges, to the expenditure for the repairs to be made after the laying of iron water pipes, and for the alteration of public thoroughfares and municipal divisions. The completion of the Water Works being at hand, arrangements are now being made to levy a certain rate of fees for the supply of water. The scheme is expected to be a new source of revenue, part of which is of course to be appropriated for the redemption of the loans.

A monument to Daguerre, one of the fathers of photography, was recently unveiled at By-sur-Marne, where he died in 1851. Corneille-en-Parisis, where he was born in 1787, is not very far from the place of his death. He was a decorative painter, who, in default of work, took up with the panorama, and founded the diorama. In 1826 he joined with Niepce Saint-Victor to find a means of taking heliographs or pictures by sunlight, and in 1839 was shown the first photograph taken on a silver plate by Niepce Saint-Victor, a son of the former. The process was afterwards called Daguerreotype, after Daguerre, but although Daguerre supplied the means, and also assisted with his knowledge of chemistry, the discovery must be regarded as a joint one.

Concerning the success of the negotiations between England and the United States for a conference in October to regulate seal fishing in Behring Sea, *The Times* says:—

The only obstacle to the success of the negotiations has been the despatch of May 10, signed by Mr. Sherman, Secretary of State, which was inspired, it is believed, by Mr. Foster. We published a summary of that singular State paper in our issue of July 15th. The United States Government have, however, so far modified their views as to be content with the conference above described. Nothing beyond that has been proposed by the American Ambassador, and the negotiations have followed the course fore-shadowed in *The Times* of July 19th. Apart from the tone of Mr. Sherman's despatch there never was any real difficulty in the matter, both Governments being desirous to protect, so far as possible, a legitimate industry, and differing only as to the facts and the methods to be pursued. By next October the facts will have been more completely ascertained, and, when the conference shall have done its work, each Government will be in a position to decide whether further negotiations are necessary.

Some particulars of the accident that happened to No. 13 tunnel on the Itaya section of the O-u railway on the 31st ult. are now to hand. They are to the effect that while 21 labourers, including

several women, were engaged in piling up some bricks in the tunnel on the afternoon of the 31st, a large portion of the tunnel caved in suddenly, and the 21 workpeople were blocked within the tunnel, though not crushed to death. Upon information of the accident reaching the inspection bureau, a party of men was despatched and the work of digging out the sufferers commenced. One man and three women were extricated alive during the course of that afternoon. The following morning, about 4 o'clock, another man was dug out safely, and on further excavation two corpses were found. While the diggers were engaged excavating for the other buried persons cries for help reached the diggers' ears from far below, but the rescuers could not reach them for a long time, and it is believed that the remaining 14 must have perished underground.

The regulations for the re-inspection of leaf tobacco have been established as follows:—

Art. I.—Any person desirous of having the quality and classification of his leaf tobacco re-examined in accordance with the second clause of Art. IV. of the Leaf Tobacco Monopoly Law, shall present to the Leaf Tobacco Monopoly Office a written application stating the reasons for raising an objection to the result of the original inspection.

Art. II.—Whenever the Leaf Tobacco Monopoly Office has received an application for re-inspection, as mentioned in the foregoing Article, steps shall be taken to undertake the examination by more than two experts.

In the foregoing case at least one-half of the experts shall be chosen from among those other than members of the Leaf Tobacco Monopoly Office.

Art. III.—On the completion of the examination a statement containing the decision shall be delivered to the applicant.

According to the *Shogyo*, the stock of rice in Osaka at the end of August this year, compared with the amount on the 15th, was as follows:—

Rice.	End of August. <i>Koku</i> .	15th August. <i>Koku</i> .	Decrease. <i>Koku</i> .
Native.....	185,794	218,900	33,106
Foreign	45,779	46,197	418
Total	231,573	265,097	33,524

The figures for the corresponding period of each of the past three years are:—

Rice.	1897. <i>Koku</i> .	1896. <i>Koku</i> .	1895. <i>Koku</i> .
Native.....	185,794	587,341	193,443
Foreign	45,779	23,675	17,244
Total	231,573	611,016	210,687

The principal officials of the Tokyo Tramway Company held a meeting on the 7th inst. and decided to carry out the following:—1. A special general meeting of shareholders shall be convened on the 15th inst. at the Company's Office. 2. The following subjects of debate shall be submitted for the approval of the meeting:—

(a) A new programme specially prepared for altering the tramway into an electric railway shall be presented to the proper authorities.

(b) When permission has been obtained for the construction of an electric railway, the capital shall be increased by two million *yen* to meet the expenses of the work.

(c) With regard to the sum of 250,000 *yen* which still remains unpaid out of the capital of the company, the council of officials of the company shall be granted the right of fixing the date of payment.

(d) The period of settling accounts, now fixed for June and December, shall be altered to May and November.

The *Kobe Chronicle* on Thursday reported that in H.I.G.M.'s Court, before Mr. von Krencki sitting as Judge, and Messrs. H. O. Delacamp, M. W. Kocnen, E. Becker and H. Clement as assessors, W. Wernstedt was tried on a charge of fraud. It appeared from the evidence of the witnesses called—Messrs. McGlew, Fuselle and K. Saito—that on the 21st June the accused borrowed \$1,600 from Mr. A. E. McGlew, ostensibly to buy shells for his button-making business, but when Mr. McGlew demanded the goods as security, the defendant declared they were in Messrs. Winckler & Co.'s godowns, and offered instead his button-making machinery and stock-in-trade, which he valued at \$6,000. As a matter of fact, defendant had already given a

bill of sale on his machines, &c., to Mr. W. Velling against a loan of some \$1,500, of which about \$300 had been repaid. Defendant acknowledged that he had omitted to inform Mr. McGlew of the prior bill of sale, but could not remember having stated the value of his machines and stock-in-trade at \$6,000. Conclusive evidence having been given, and the defendant being found guilty of fraud, he implored the leniency of the Court. The Judge sentenced defendant to two months' imprisonment, to date from the day of his arrest, the costs of the case to be borne by the defendant.

In "Bishops of the Day," Mr. F. S. Lowndes has compiled "a biographical dictionary of the Archbishops and Bishops of the Church of England, and of all the Churches in communion therewith throughout the world." Mr. Lowndes draws attention to the extent to which bishops have been drawn from other professions than the clerical. The Archbishop of York and the Bishops of Colchester and St. Helena have held commissions in the Army, and the Bishops of Hull, Melbourne, East Carolina, North Carolina, and others, have been trained for the law, if they have not all practised as lawyers. Six bishops, it seems, are qualified and authorised to act as doctors of medicine.

In the course of his speech at the Hardwicke Society, when he led the debate on "The growing pretensions of the daily Press," Mr. Birrell alluded to Cardinal Newman's brother-in-law, the Rev. Thomas Mozley, "whose long connection with *The Times* was one of the most astounding facts in the history of the Press." The *Globe* hopes that it may be permitted to supplement this allusion with the following anecdote. Late in life Mozley went to see a publisher with a view to the issue of a book. The publisher, who was unaware of his client's antecedents, asked him in a somewhat cavalier fashion if he had ever published anything before, whereupon Mozley gently replied, "Two volumes of sermons and about 7,000 leaders in *The Times*."

Writing on August 11th, the *Pioneer* of Allahabad, said:—Regarding the Mohmand raid, the extraordinary thing is that the civil authorities at Peshawar should have disbelieved the reports which were sent in regarding the Hadda Mullah's intentions. The Hindu bunnias of Shankargarh had had information at least a week before-hand of the impending trouble, and several of them took the precaution of moving to Peshawar itself, while those who remained took refuge in the fort even before the Mohmands appeared. We probably have not heard the last of the Hadda Mullah, though his prestige must have been shaken by the defeat of the Mohmands. His proclamation, summoning all the tribes along the border to join in a *jehad*, has been circulated broadcast through Bajaur, Swat, the Black Mountain, Indus, Kohistan, and Khyber districts and southwards among the Afridis, Orakzai and Zainiakht clans. The local Afghan officials are said to have passed them on, and the Government of India may well insist on the Amir's bringing these men to account, for their action unquestionably has given rise to a feeling among the tribes that any rising would be welcome to the ruler of Afghanistan, whose recent pamphlets have given the mullahs a good text on which to preach. The *Pioneer* adds:—The Amir is responsible indirectly at any rate for much of the trouble on the north west border and it is about time for the Government of India to make this clear to His Highness.

According to the *Mainichi*, a charter was granted by the Government on the 30th ultimo, for the organisation of a company to be called the "Japan Social Life Insurance Company." The corporation is the first ever organised in Japan with the object of insuring social life. The company proposes to call up payment on its shares from the 5th to the 20th of this month and to commence business on the 1st October. In spite of the tightness of the

market at present the payments are expected to be made without any serious hindrance. The business of insuring social life in part appertains to ordinary life insurance, in which is included the insurance of funds for education and for the support of old age. The latter classes of business are now to be conducted by the new company, which is founded on plans which seem to work in Germany. America, too, is reported to abound with companies as above described. The programme is divided into four parts, viz:—(1) Insurance of funds for education and marriage. (2) Funds for the attainment of occupation. (3) Funds for subsistence in advanced years. (4) Funds for longevity. The first of the above items is applicable to children above the age of one year and below fifteen; the second to persons from the age of one to thirty-five, the third to adults between sixteen and fifty-five, the fourth to those above thirty-six and below seventy-five. The main object of the Company therefore is to provide funds, not to be paid after one's death, but to the person insured, while living.

Article XVI. of the appendix to the Coinage Law provides that the period for the exchange of silver *yen* will be five years from the day immediately following the suspension of the coin's circulation. The term fixed, the *Hochi* considers, is too long. The gold reserve for exchange must lie idle in the Treasury vaults to the inconvenience of financial arrangements. The contraction of the term for exchange would not only have the effect of reducing the amount of silver to be exchanged, but also contribute to lighten the burdens of the Treasury. The future value of silver is involved in darkness, and it is not improbable that its price may fall below twenty-three pence. These considerations alone will justify the shortening of the period to three or six months. Such are the views now entertained by some of the officials in the Bank of Japan, and also of a few government officials. It is very likely that the question will be presented in the next session of the Diet. According to the plan now proposed an Imperial Ordinance is to be issued early in October for the suspension of the silver *yen* with the proviso that their circulation will be prohibited after the 31st of March next, and that the exchange of silver will cease at the end of three or six months after such prohibition. The white metal therefore is destined to be withdrawn from the market by June or Sept. next. Whatever remains after that period will be treated as bullion.

The supposed "recent occupation" of Palmyra island by Great Britain having been commented on by the Japanese press, we publish the following telegrams:—

New York, July 28th.

The *Herald* publishes a telegram from Washington stating that Mr. Sewall, the United States Minister at Honolulu, has reported by wire, via San Francisco, that the British have seized the island of Palmyra, situated 1,000 miles southwest of Hawaii. The journal adds that, according to the Hawaiian Government, Palmyra is one of the dependencies of Hawaii, and intimates that, if the rights of Hawaii to the island are strengthened by the United States inquiry, Mr. Dole, the Hawaiian President, will be urged to protest against its seizure.

Washington, July 28.

The State Department says that no new issue is presented in connexion with Palmyra Island, as Great Britain has not only maintained her claim to the island for the last nine years, but declared it to be actually occupied. Although Hawaii at one time claimed the island, the United States has not been strongly convinced of the validity of this claim, but, in view of the probable annexation of Hawaii, the Department will doubtless give closer attention to the matter in the future. It is not expected, however, that the matter will be difficult of adjustment, as Palmyra Island is nothing more than a barren rock.

Reuter's Agency learns that the uninhabited guano islet of Palmyra has been a British possession since 1888. The report that it had been annexed by Great Britain probably arose from the fact that her Majesty's sloop *Wild Swan*, in the course of one of her periodical visits to these distant islands, called there in May last.

CORRESPONDENCE.

A SCANDALOUS MATTER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I enclose a clipping taken from the *Austin* (Minnesota) *Daily Register* of July 13th. It is a syndicate dispatch published in several hundred daily papers.

Now did the *Japan Herald* make any such statement? If it did, the Editor may congratulate himself as being one of the principal instigators in creating discord between Japan and America. The Editor of the *Herald* has, since the days of the first Japanese Expedition to Formosa, which was despatched to punish the savages in the south of the island, made many attempts to place Japan in a false position and cause her every possible loss and humiliation. The last has been a master-stroke for him. Of course there is but little to be said for the Bostonian-Washington correspondent who states that the *Japan Herald* is the Government Organ. However, the statements of any foreign journal published in Japan on such a subject would be received with much confidence in America. It seems that the Japanese Government would not go amiss if some of the foreign journals of Japan were placed under the censorship of the Government. No statement that the most rabid Japanese journal ever made has quite equalled that of the *Herald's* in plain lying and the endangering of public peace.

Yours, truly,

AN AMERICAN.

[EXTRACT.]

FOREIGN COMPLICATIONS.

The Japanese Government has followed its protest to the United States by a protest filed with the Hawaiian government. The gravamen of this latter is that Japan demands that her claims against Hawaii be settled in full before the annexation takes place. The *Japan Herald*, the government organ, does not intimate but says boldly that the Japanese are preparing for a descent on the islands. It alludes with sinister meaning to the fact that Japan now has about twenty thousand men in Hawaii all of whom have served an enlistment in the army.—Special to *The Register*.

A PRACTICAL THANKS-OFFERING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In returning a couple of days ago from a month's summer-school work in Yamaguchi Ken, I found awaiting me the following letter. It was accompanied by a box supposed to contain six hundred dried *awabi*. As these are by some esteemed as special delicacies for the sick, I have sent them unopened to the *Fusen Byōin* where I trust they may be of service to the suffering inmates.

Respectfully yours,

ALBERT ARNOLD BENNETT.

[COPY OF LETTER.]

Kanagawa Kencho,
11th Aug., 1897.

Sir,—The Iwate Ken authorities inform us that on the occasion of the disastrous Tidal Wave which occurred last year in the same prefecture, you were good enough, as the agent for an association formed by a certain number of foreigners residing here at the time, to donate certain fishing boats, implements, etc., to the sufferers.

We are now requested by the same authorities to transmit to you a box containing dried sea-eels gathered by Hakoishi Nitara and 35 other sufferers of Komoto village, Hei-Gori, Iwate Ken, with the boats given to them by you, which box these Japanese are desirous to present to you as a token of their gratitude for the kindness thus shown to them.

The box in question is therefore forwarded to you together with this note, and I request that you will be good enough to send us a receipt for the same.

I am, Sir, your obedient servant,

(Signed)

C. SEINO,
Councillor of Kanagawa Ken.

Yokohama, Sept. 2nd, 1897.

THE LATE APPEAL CASE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A writer in the *Law Times*, who is in agreement with a view you had previously expressed with reference to the jurisdiction conferred on the Queen in Japan by sec. 1 of the Foreign Jurisdiction Act, quotes, as his authority, from Hall on the Foreign Jurisdiction of the British Crown, as follows:—"It is unnecessary to say

that this language [i.e. the language of sec. 1] does not assimilate the jurisdiction exercised in a foreign country, either in nature or degree, to that which belongs to the Crown in a conquered country." And the writer goes on to remark, "But that is precisely the effect which the Judicial Committee have given to the section. They decided that the jurisdiction exercised in a foreign country is similar in all respects to that exercised in a conquered country."

But did they so decide? I think not. What Mr. Hall really says (pp. 11-12) is as follows:—"It is unnecessary to say that this language does not assimilate the jurisdiction exercised in a foreign country, either in nature or degree, to that which belongs to the Crown in a conquered country. Its object is simply to provide that such jurisdiction as may have been acquired by express consent or sufferance of the foreign State shall be exercised by the Crown precisely as if it were exercised by sole virtue of the prerogative. The position of the Crown relatively both to parliament and to individuals is declared to be identical with that which it holds in a country which has been conquered or ceded."

I think that all the Judicial Committee of the Privy Council, in the case referred to, decided or intended to decide was that it is not within the competence of a subject to question the extent or nature of the jurisdiction which his Sovereign, believing herself to have acquired, has been allowed to exercise in a foreign State by sufferance or silence on the part of that State.

The decision of the *Carew* appeal case, tested by their opinion, may be shortly stated thus:—"So long as Japan chooses to suffer the exercise of jurisdiction by the Queen as interpreted by the Orders in Council, it is not for the appellant to question it."

Very faithfully,
Yokohama, 7th September, 1897.

FOREIGN JURISDICTION OF THE BRITISH CROWN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Whether Japan has the right to scrutinize the Criminal Laws administered by foreign tribunals at the open ports is a question the answer to which does not affect my proposition; but I may say parenthetically that under conceivable circumstances I think she might do so with propriety, and that that opinion is not weakened by your contention that the jurisdiction exercised by those tribunals is delegated by Japan. For instance, the treaty provides that British subjects in Japan shall be tried and punished according to the laws of Great Britain; to try and punish them otherwise would therefore constitute a breach of the treaty. Now suppose, as has been contended, that by those laws a British subject may not be lawfully condemned or put to death unless on the verdict of twelve of his countrymen; would not Japan be justified in interfering to prevent a breach of the treaty, and the pollution of her soil, by the judicial murder thereof of a person sentenced to death on the verdict of five jurymen? This by the way.

My proposition is that, whatever legislative methods are duly provided by Order in Council for the purposes of jurisdiction possessed by Great Britain in Japan, British subjects are not warranted in objecting, unless the particular provision of the Order in Council to which objection is taken is repugnant to the law of England as defined in Sec. 12 of the Foreign Jurisdiction Act, 1890.

I understand you to question that proposition on the ground that the legislative rights of Great Britain in Japan are the rights accruing to a conqueror in respect of conquered territory; that if so they ought to be valid against the inhabitants of that territory; but that as Japanese subjects, the hypothetically conquered people, stand entirely outside the pale of the disputed laws, therefore the power of legislation exercised by the Queen in Japan against British subjects is an arbitrary and unwarranted power.

If I have rightly appreciated your argument so far, I think its fallacy lies in the assumption that Japan is described in the Order in Council as a conquered or ceded country for purposes of extra-territorial jurisdiction—Japan is nowhere so described. What is described, or rather illustrated, by reference to powers possessed elsewhere, is the nature and extent of the powers exercisable by the Queen over her subjects in Japan. But I understand you to go further, and to suggest that the whole system is wrong; that when, to use your own words, the Queen obtained for her subjects the privilege of access to Japan, she did not become invested with the power of ignoring, in their case, all the constitutional machinery provided for legislative purposes in England, and with the power

of enacting any laws she pleased for the control of such of her subjects as might take advantage of that privilege; that when she acquired by treaty the explicit right of trying and punishing her subjects in Japan "according to the laws of Great Britain," she did not also acquire the right of trying and punishing them according to laws which are not the laws of Great Britain.

What is meant by the laws of Great Britain? I answer, by reference to Sec. 12 of the Foreign Jurisdiction Act of 1890, which is a Consolidating Act, that every Order of Council that has been, or shall or may be duly laid before both Houses of Parliament, and made in pursuance of the Foreign Jurisdiction Acts, as respects a foreign country, forms an integral part of the laws of England, unless it is repugnant to the provisions of some Act of Parliament extending to Her Majesty's subjects in that foreign country, or to some order or regulation made under the authority of such Act of Parliament. That being so, I have no hesitation in expressing it as my opinion, in answer to your question, that as between Sovereign and subject, or Sovereign and Parliament, the legislative methods adopted by Great Britain for the purposes of her criminal jurisdiction in Japan, are legal, in so far as they do not transgress the limitation above described.

That the jurisdiction of Her Majesty the Queen in a foreign country may be lawfully held, exercised, and enjoyed in the same and as ample a manner as if Her Majesty had acquired that jurisdiction by the cession or conquest of territory, and yet be restricted, as to its exercise, to Her Majesty's subjects for the time being resident in or resorting to that country, and to others who may be said to submit to the jurisdiction, will perhaps be more easily understood by reading the first and second Sections of the Foreign Jurisdiction Act, which are as follows:—

1. It is and shall be lawful for Her Majesty the Queen to hold, exercise, and enjoy any jurisdiction which Her Majesty now has or may at any time hereafter have within a foreign country in the same and as ample a manner as if Her Majesty had acquired that jurisdiction by the cession or conquest of territory.
2. When a foreign country is not subject to any Government from whom Her Majesty the Queen might obtain jurisdiction in the manner recited by this Act, Her Majesty shall by virtue of this Act have jurisdiction over Her Majesty's subjects for the time being resident in or resorting to that country, and that jurisdiction shall be jurisdiction of Her Majesty in a foreign country within the meaning of the other provisions of this Act.

I do not therefore think it necessary to resort to the fiction you suggest, viz.—that the Settlement may be regarded as uninhabited so far as Japanese subjects are concerned, for the solution of the problem you propound.

Very faithfully,
Yokohama, 9th Sept., 1897.

ROMAN CATHOLICISM IN ITS RELATION TO CIVIL GOVERNMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Could we not settle the controversy on "Civil Government and Roman Catholicism" by stating simply, in the words of an official document, not of a private catechism, the views of the infallible leader of the Roman Catholic Church? Unfortunately I belong to that wicked set of Protestant Missionaries who waste some of their time in "those delightful summer holidays at some cool and comfortable place in the mountains," and thus my material at hand is rather scanty. But the *Syllabus errorum prohibitorum*, edited by Pius IX. 1864, two years after the festival of the Japanese martyrs, will at any rate be considered authoritative, though it is 6 years older than the declaration of his infallibility. I shall translate a few of the sections not only from Latin into English—though I must ask pardon for the English, it being not my mother tongue—but also from the negative expressions used in the document, into positive declarations.

19. The Church is a Society, real, perfect and absolutely free, having its own divine right, given to it by its divine founder; and no worldly power is allowed to limit the exercise of these rights.

20. The Church may exercise its power without, or against, the permission of any secular Government.

24. The Church may use force [for the exercise of its rights], for the Church has worldly power indirect as well as direct.

30. The Church and its clergy are, by divine right, exempted from the secular law.

31. No clergyman, involved in a law suit, whether civil or criminal, can be summoned before a secular tribunal or judge.

32. No clergyman must be forced to serve as a soldier.

42. In case of a conflict between the Civil and the Church power it is the Civil power which has to yield.

45-47. The Church has the right to interfere in every public school, in discipline, arrangement of study, right of graduation, election of teachers.

54. Kings and princes are subjected to the jurisdiction of the Church.

57. Philosophy, Ethics and Civil law can not be independent from the authority of the Roman Catholic Church.

77. The Roman Catholic religion must be the only religion of every State, excluding all other forms of worship.

78. It is wrong to allow religious liberty and tolerance.

80. The Roman Pope can and must never be reconciled with progress, liberalism and modern culture.

I think these few passages will allow every impartial reader to form his judgment on the tone and essential position of the official Roman Catholic Church towards civil liberty. I may add that according to the good authority of the German *Hase*, this syllabus has been made in the *Gesetz*, i.e., the Jesuit College in Rome. There is a smack of the same origin about the saying of the "Wolf in Sheep's Clothing"—"To the Catholic Church this present generation owes its civil liberty." And that glorious statement in the declaration of Independence, that every legitimate power of a Government has its origin in the consent of those who are governed, did that also arise from the Catholic Church?

I send you my card, but though I usually sign such contributions with my full name, I should avoid it this time, for I would not like to be covered with so much mud as the "Wolf" has in store for poor Mr. Snodgrass, though I acknowledge that everybody naturally takes the weapon which lies next to his hand.

Your obedient servant,
A PROTESTANT MISSIONARY.
Nikko, September 2nd, 1897.

TO THE EDITOR OF THE "JAPAN MAIL."

Dear Sir,—It is very kind of you to shift the ground of Mr. Pettier's attack on to your own shoulders; but this seems premature since there appears some discrepancy between your statement of my views and his statement of the same when they are placed side by side. And, moreover, there is no reason why Mr. Pettier should not have gone to the original instead of following a second (a thing which Romans so much detest!), and, besides, there is nothing in his dynamic effusion to lead one to think that he has not read my tract, except the miserable misrepresentation of it.

EDITOR OF THE "MAIL."

MR. PETTIER.

The writer's object is to show that the declared principles of Roman Catholicism are against submission to any civil authority; that the Pope claims to be supreme in every sphere, and that, in effect, the spread of Roman Catholicism in any country means the alienation of its converts from allegiance to the Government of that country.

I had hoped that Mr. Pettier and his redoubtable "Wise" would return to the combat. But Romanism is gone-up-the-spoil when it begins to nibble at discussion. But will you note the personality and ingenuity of Mr. Pettier's statement above? "No other authority but the Pope's." We are talking about authority outside the realm of religion. Mr. Pettier, in the above language, clearly declares that in such matters the Pope has authority, whoever else also may have authority. We are still waiting for Mr. Pettier to tell us

which authority is supreme. It would not be politic in Japan, where the Papacy is so weak, for him to say the Pope's authority is supreme; therefore, you may expect no answer at all since he is forbidden to say the civil authority is supreme. Silence is the better part of valor.

I must pay my parting respect to the prolix yet repressible "Wisc." He has cited Catholics in the United States, their meek submission to the laws of the land, and has asked me to show that this is not so. Now, this I can easily do, and refer him to the Government Schools of the U.S. The Government has established free schools for her citizens and expects that they will patronize and support them by paying a suitable tax. The attendance upon the schools is not compulsory, but the payment of the tax is. Romans treat the schools with contempt, refuse to send their children to them; and to destroy them, make every effort to banish from them the simple reading of the Bible. This looks like meek accord and allegiance to the Government, indeed! And not only this, while they cannot avoid paying the school tax, they submit to it—well not meekly,—and turn and demand that it shall be returned to them, and in hundred of instances where Romans fill the civil offices, by intimidation and boycott, they have subjugated the non-Roman officials: this is done,—and often without the general public knowing it. Is this cheerful allegiance to the powers that be? Let Mr. "Wisc" answer, if his first effort has not exhausted his armory. But, what can be said of Canada, the Netherlands, and Ecuador, where the Hierarchy is stronger?

I do not expect that Romanism will ever return to its golden age. It can yet cause a great deal of trouble to civil society. The ratio of its increase in the U.S. is among the lowest of the sects as shown by the latest statistics. This is hard for Mr. "Wisc" to swallow; it is a wholesome sedative, however, and will do him good.

Again, Mr. "Wisc" has referred to the Magna Carta as a product of the Romish principles. This I emphatically deny. The Magna Carta was obtained in opposition to the tyranny of Romanism. The general newspaper reader is not always acquainted with the records of long-past history, and besides, does not generally have the disposition to investigate statements made concerning passed events. It happens, therefore, that Romish boasts and perversions of truth are allowed to pass unchallenged and so confirm ignorant Papists in their delusions and intimidate untought Protestants.

A brief reference to the facts of history will show how the Magna Carta originated,—not from the sterile soil of Romanism. Papists are loud, often, in their cry for freedom, but it is a freedom to oppress all that are not Romans. Witness the present condition of Ecuador.

The principles embodied in the Magna Carta were originally covered in the Charter of Liberties put forth previously by Henry I. to reconcile "all to his accession" over his brother Robert.

John was on the English throne and Innocent III. on the Papal throne, two very bad rulers, when the Barons extorted from John, and against the order of the Pope who personates the Romish principles, the Magna Carta. Previously John had embroiled himself with the Pope about the choosing of the Archbishop of Canterbury, John claiming that the Bishops at large should choose, the Pope deciding that the Canterbury monks should choose, and recommending Stephen Langton, whom the monks chose. John refusing to receive Langton, the Pope laid the Kingdom under an interdict. And mark this fact, the Papists obeyed the Pope rather than the King. Since Rome has not changed, would the case be different to-day should similar circumstances arise? I know not. The Pope went further. And just here do not forget that Mr. "Wisc" has asserted that the Hierarchy's attitude towards the civil law has not changed and will not change. The Pope declared John deposed from his throne and released the English subjects from their allegiance to the King, and committed to Philip of France the waging of war against John. So long as John was obedient to the Pope his subjects were required by the Pope to render allegiance to the King; but when a conflict between Pope and King arose the Pope instigated rebellion against the King. Under like circumstances would it be different to day? I know not.

John was forced to yield, and by charter gave his kingdom away to the Pope, and henceforth became only his vassal.

The Barons resolved to check the oppression of John. At a private meeting of the Barons in 1213, Langton brought forward the forgotten Charters of Henry I., upon which they proposed to base their demands. Two years later they took an oath to withdraw their allegiance from the king

if he should refuse their demands. I wonder if, under similar circumstances, Romish principles would work differently to-day? I know not. The Charter was submitted to the King; he refused; Barons marched upon London; the King submitted and sealed the Charter.

But what immediately followed shows the true animus of the Romish principles. John went about to devise means of revenge. He implored the help of his superior the Pope. The Pope annulled Magna Carta and commanded the Barons to submit, saying that he would see that they got their rights. But the Barons held firm even against the Romish principle of absolute submission to an infallible Pope. The Pope excommunicated them, and laid London under an interdict. In reply, it is said that the Barons applied to the Pope the words of Isaiah, "Woe unto them which justify the wicked." A bloody war arose between the King with the Pope on one side embodying the Romish principles and the Barons on the other side in defiance of the Pope and holding on to the principles of liberty.

The history of Magna Carta is rather a history of the development of principles of justice and freedom in spite of the surrounding circumstances of the dense darkness and oppression of Roman Catholicism. No one will hardly doubt that there are men in the Papal Church who rise far above the principles of the Hierarchy. They are bad Catholics, but good men.

It has occurred to me to add this note for the delectation of the ethical taste of Mr. "Wisc." Kentucky University, the oldest university west of the Alleghany mountains, recently changed presidents. The erudite *Catholic Review* immediately raised a hue and cry against a Protestant sectarian being appointed to preside over a government institution. If a Roman sectarian had been appointed would the ignorant *Review* have rebelled? But the force of the *Review's* petulance was in its not knowing that the Kentucky University is not a state or government institution!

Very truly,
E. SNODGRASS.
14, Tsukiji, Tokyo, Sept. 6th, 1897.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With no particular desire to take part in the discussion now being carried on in your columns between Mr. E. Snodgrass and the Roman Catholics, I only ask for space concerning the personal reference to myself found in your issue of September 1st. Before taking note directly of what Mr. "A Wolf in Sheep's Clothing" has said, I wish to add that no one save myself is to be held responsible for my public utterances, nor to be classed with me as holding a common view. Since Mr. "A Wolf," etc., is so accustomed to having a human head to sit in judgment over the faith and conscience of other, and to be the mouthpiece through which to express their convictions, the thought may be a little difficult for him to grasp that every Christian should speak for himself in religious matters, and should go directly to the Sacred Writings for his faith and not to any man or set of men.

In reference to a card that appeared in the last number of *The Shepherd's Voice*, Mr. "A Wolf," etc., says:—"Here Mr. McCaleb, the Church of Christ Missionary, disclaims on religious grounds that citizenship of which every American Catholic is proud."—"Inasmuch as they disclaim all earthly citizenship." I may inform my Roman Catholic friend that he is quite mistaken in saying I "disclaim all earthly citizenship." The occasion of my card upon which he erroneously bases his conclusion is this:—Some American citizens decided to have a Fourth of July celebration, a purely private affair. It was gotten up by no official authority. I was invited to contribute to it and to take part in it. I declined, saying I "take no stock in it." In what? In this Fourth of July carnival to buy fireworks, coffee and lemonade. Did I thereby "disclaim all earthly citizenship?" Fourth of July carnivals gotten up by a few private persons have no proper bearing whatever on one's citizenship. Where is it said in the Constitution or any law of the United States that all citizens thereof must take part in Fourth of July celebrations or be disfranchised? Yet this is what the gentleman would make believe. What then becomes of the citizenship of all the Americans living in Japan, since they have habitually neglected to celebrate the Fourth of July for thirty years? Wonder how it is with my critic? Honour bright, Mr. "Wolf,"—did you attend this Fourth of July carnival? If not, how about your boasted loyalty? Please be so good as to dismantle yourself and let us see you in your true colours.

But I spoke against sectional strife, quoted Jesus and Paul against war and fleshly lusts. St. Paul says "our citizenship is in heaven." There-

fore I have "disclaimed, on religious grounds, that citizenship of which every American Catholic is proud." Let's see. My friend asserts that he is an American citizen; therefore according to the logic he has applied to me, he has disclaimed all heavenly citizenship. Will he accept the force of his own logic? Is he prepared to deny Paul's statement that "our citizenship is in heaven?" He must either do this or there is no force whatever in his criticism.

Most respectfully,
J. M. MCCALED.
12, Tsukiji, Tokyo, September 7th, 1897.

INFORMATION WANTED.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—For about three years past I have contributed money to an orphanage in Yokohama. Recently I have learned from people who live in Yokohama that there is no orphanage there. As my own gifts were largely influenced by the long list of contributors, many of whom were well known missionaries, it seems high time that the above humbug be advertised.

Very truly Yours,
A. D. WOODWORTH.

Kanizawa, Sept. 4th, 1897.

BRETT & CO. LIMITED.

The tenth half-yearly general meeting of the shareholders of Brett & Co., Limited, was held on Saturday the 4th instant.

Mr. J. H. BOAG, Managing Director, presided, and there were also present Messrs. G. Blundell, J. Batchelor, L. Brower, H. McArthur and J. R. Best, Secretary, and F. W. Thomas, manager.

The minutes of the last general meeting were read and confirmed.

The CHAIRMAN proposed the adoption of the report and accounts—which were taken as read. He considered the results of the half year's working fairly satisfactory. With regard to the question of rent of the company's premises, which was before the last meeting, he had taken advice and found they would have to submit to an increase. The Company had not got possession of the lease in time to give the necessary six months' notice of renewal. This notice however Mr. Wylie had agreed to waive but held that the Company had never had a lease of the premises and were only monthly tenants. They would therefore have to pay \$150 per month instead of \$125.

Mr. BROWER seconded the adoption of the report and accounts and the resolution was carried unanimously.

The CHAIRMAN said the next question was as regards payment of a dividend, and he would rather like to hear what shareholders had to say on that subject.

Mr. MCARTHUR said it seemed to him that the Company was in a position to pay and the shareholders were entitled to a dividend on last year's work. It had been decided up to the present to work off some of the debentures before paying a dividend. But now that there was a reserve of some 10 per cent. on the capital of \$28,000, he thought that a dividend should be paid. The debenture holders were well secured and satisfied. He would move that a dividend of 7½ per cent. be declared.

Mr. BROWER thought it would be better to wipe out the debit balance first.

On the suggestion of the Chairman Mr. McArthur amended his motion to the effect that the dividend be 5 per cent.

Mr. BATCHELOR seconded the motion.

Mr. THOMAS thought it would be better to wait till December and pay off all liabilities and so enable themselves to pay 10 per cent. next year. As a matter of fact they had not money in the bank to pay 5 per cent. now.

Mr. MCARTHUR contended that the debenture holders were being paid interest all along, and the shareholders who had borne the brunt, had received nothing.

The CHAIRMAN expressed himself in favour of waiting until they were quite clear of any debit before paying a dividend. It was, he thought, better for the business. They had earned the dividend it was true, and if they paid it they would still be in a better position than last year, but it would be better to clear off the debit balance first.

Mr. MCARTHUR said the debit balance of \$2,000 was only a matter of account and was a matter between shareholders only.

Mr. THOMAS said that the business done in June and July last was the best done since they started.

After some further discussion Mr. McArthur's

motion was put to the meeting and carried by three to two, the shares represented by Messrs. McArthur, Batchelor and Blundel being 102.

On the motion of Mr. McArthur, seconded by Mr. Blundel, Mr. McVicar was reappointed auditor to the end of the year.

Mr. CHAIRMAN then read a special resolution to alter clause No. 49 of the Articles, so that instead of two half-yearly meetings one annual meeting should be held in August.

Mr. BLUNDEL proposed and Mr. BATCHELOR seconded the resolution and it was carried unanimously.

Mr. MCARTHUR proposed a vote of thanks to the Managing Director, Manager and Committee, which was carried *nem con*.

HONGKONG AND PRESENT DAY QUESTIONS.

Writing on August 30th, the *China Mail* said:—There has been considerable talk during the past few days of the tightness in the money market, owing to the withdrawal of the Japanese *yen* from Penang, Singapore, Hongkong and Shanghai. That the market has been affected in Penang and Singapore by the withdrawal of the *yen* is an undoubted fact, but it is maintained that Hongkong and Shanghai have not been affected to the same extent owing to the comparatively smaller amount of Japanese coin in circulation at these ports. We are assured that the outflow of specie in Hongkong dollars into Canton and the adjoining provinces has amounted to between thirty and forty lacs during the past six weeks. This has naturally affected Hongkong adversely, but, as usual, the current may turn as it has done on previous occasions and there will be an influx of British specie again. We are informed that there is sufficient silver in British dollars *en route* for the Far Eastern ports which will more than fill the vacuum temporarily created by the withdrawal of the currency to China. Asked his opinion on the financial condition of Hongkong at the present moment, a local expert says it was never on a sounder basis. Companies without exception are in a sounder condition at the present time than they have been for many years, and were never earning more substantial profits in the history of the Colony. Interest with the native banks up north last week was at the rate of 22 per cent per annum. To-day, it is down to 6 per cent, and we learn that the bulk of the gold settlements with the foreign banks have been arranged, so the further trouble up north need not be feared. With large arrivals of Mexican dollars from Mexico and California and large shipments of silver to the Indian mints for coinage into British dollars, the opinion is that the markets at Hongkong and Shanghai will be suffering soon from a plethora of money.

The question might reasonably be asked, what does the slump in silver not affect? But the result of the fall of the dollar has been very disastrous to the yarn and piece goods trade in the Colony. From inquiries made at different sources, we learn that the sequel has been a complete stoppage of business. The Chinese have taken delivery of the cheap contract goods, and left the dear-quoted article in the hands of the dealer. One merchant, doing an extensive business, stated that the Chinese, fortunately for themselves, had made extensive purchases at the former rate of exchange, and they will depend upon their stock to supply customers until a clearance has been nearly effected, when they will only move at the pinch of necessity, and purchase sparingly at the increased rate. There is a rise in the present selling price, from that previously offering, of from 5 to 7½ per cent. One good effect of this cessation in business will be that clearances will be made of stock more readily than used to be the case. The state of trade, of course, depends entirely on the necessity for the article. Sometimes prices went up in a way beyond all expectations, while at other times they remained at a low rate. The Indian market has responded more freely to the fall in the exchange than the English market. In the event of the further rise in the price of goods, the Chinese may be forced to fall back upon the native material.

Another merchant doing a large business in Indian yarns gives as gloomy a view of the situation. He states that they have now got to a point where the Chinese will be unable to pay any further advance for yarns, and a re-adjustment will have to take place either by a fall in value in India or a rise in exchange, before any business can be carried out. Excepting for one or two special parcels the Chinese will buy nothing until forced by the calls of necessity. The adjustment of currency prices is, however, a very difficult matter until silver is somewhat settled. As an instance of the rise in prices, Anglo Indian yarn No. 20's was selling in

October last year at \$95, and at the present time that article is offering at \$109. There is a uniform rise in all the other spinnings.

THE JAPANESE BUDGET.

A Foreign Office paper containing a report by Mr. Lowther on the Budget of Japan for the year 1897-98 has just been issued. Mr. Lowther says:—The Budget presents no special features of originality, but the proposals made are a continuation of the scheme inaugurated by the late Government under Marquis Ito. The total expenditure amounts to about £25,400,000, of which sum £24,000,000 belongs to the main budget, the remainder, £1,400,000, being made up by supplementary budgets introduced and passed in the latter part of the session. The Budget shows a very marked increase compared with that of the year before the war—namely, 150 per cent. This is accounted for by the extensive military and naval schemes undertaken by the Government. The institution of new diplomatic posts in Mexico and Brazil, and consulates at Chicago, Manila, and Newchwang; the improvement of educational institutions, and the colonial schemes for Formosa and Hokkaido require considerable sums, and the extension of the railway and telephone systems, and the institution of the tobacco monopoly absorb a certain amount, although these latter will very soon show a return on the outlay. In presenting the Budget to the Diet, the Prime Minister gave vent to the expression of a hope that, three years hence, the expenditure of the country would be again reduced to £15,000,000.

The items of increase in the ordinary revenue are derived from the business tax, the tobacco monopoly, which will be in force during the last three months of the present financial year, the saké tax, amended last year, additional receipts from customs duties, from income tax, from railways, Government forests, post and telegraph services, amounting to an increase of over £2,000,000. The increase in the extraordinary revenue is derived principally from the Public Undertakings Loan, which, though not strictly revenue, figures as such. Last year only about £800,000 of this loan was issued. This year it is intended, according to the budget, to issue over £6,000,000, although it is probable that this sum may be derived from other sources. The decrease in the extraordinary budget is explained by a smaller appropriation from the previous year's surplus, and from the extraordinary War Fund. The net increase, consequently, in the extraordinary revenue amounts to over £3,000,000.

On the expenditure side we find an increase in ordinary expenditure in all the departments with the exception of the Household Department, which remains stationary, and the Home Department. The Colonisation Department, moreover, which did not figure in the last budget now appears for the first time for a large sum for Formosa. There is a total increase of nearly £9,000,000 accounted for in the following manner:—£30,000 required for establishing new legations in Hawaii, Mexico, Brazil, and Siam, and consulates in Sydney, Antwerp, Chicago, Manila, and Newchwang, a sum of £80,000 spread over six years for reconstructing the harbour of Nagasaki, a sum of £52,000 for putting the tobacco monopoly into operation; several sums for building and arming new forts at Maidzuru, Nagasaki, Hakodate, and Tsuchima. Further, the sums required for the initial expenses of the second period programme for the expansion of the army and navy. Small sums are set down for establishing the Imperial Library, for founding a College of Medicine in Kyoto, for extending the telegraph system, for building railways in Hokkaido, and for constructing the harbour of Otaru.

A sum of £133,989 is allowed as an increase of capital to the Senju Woollen Factory, where the military uniforms are manufactured. The improvement of the Kobe wharves absorbs £8,412; out of the total of £1,289,250, which is the subsidy to be given to the Formosan Railway, this year £17,625 is required, and this is given in the form of a 6 per cent. guarantee on the paid-up capital. Sending a representative to the International Geological Congress takes £1,816. The bounty for the navigation of the Yangtze-kiang is fixed at £14,954 per annum till 1907. Adding the supplementary departmental budgets to the sums that appear as extraordinary expenditure in the main budget we find that the total expenditure amounts to £26,487,371.

The Army Estimates are divided into three parts, the ordinary, the extraordinary, and the continuing expenditure. Under the heading of ordinary the expenditure is set down at £2,912,937,

as against £1,631,365 spent last year, an increase of £1,281,572, or of 78 per cent. The estimate for the gendarmerie is sixfold, this force having been augmented for service in Formosa. The extraordinary expenditure amounts to £2,008,879, as against £1,926,118, or about 56 per cent. over that of last year. Before the expansion scheme was inaugurated the outlay required for the army amounted to about £1,520,000 per annum. Now the cost is set down at £2,460,000, an advance of over 61 per cent., but this sum will furnish Japan with an army of 145,000 men, and a reserve of 375,000.

The Navy Estimates are divided in the same manner as the army estimates. The ordinary expenditure of the navy for the year 1897-98 is set down at £981,304, as against £783,380 spent last year, an increase of £198,024, all of which is absorbed in the maintenance, salaries, &c., of the navy and naval department. The extraordinary expenditure shows £6,699,412, as against £2,963,183, an increase of £3,736,229, or considerably more than double the expenditure of last year. Before the inauguration of the expansion scheme,—that is, in 1895, the cost of the navy was set down at about £1,370,000. When the programme is completed Japan intends to have 65 ships, of 233,000 tons, and 126 torpedo boats.

These schemes are divided into two periods, the first period programme and the second period programme, beginning with April 1, 1896, and terminating March 31, 1906. The second period programme was omitted in the Budget proposals for last year, owing to the uncertainty of the payment of the war indemnity. We find that it is the intention of the Government to incur the following expenditure:—

Army, 1st period	£ 4,332,940	—
Army, 2nd period	3,835,066	£ 8,167,940
Navy, 1st period	11,608,640	—
Navy, 2nd period	14,461,877	26,070,517

Making a total of £34,238,457

Analysing the first period army programme, we find that it is divided into five headings—namely construction of forts, building and equipment of barracks, manufacture of arms, development of arsenals, and extraordinary constructions. In the second period programme, however, only the first three items appear. Provision is made for the building of forts, in the Straits of Naruto, at Kure, in the Aki-Iyo Strait, at Sasebo, at Tsuchima, Nagasaki, Maidzuru, and Hakodate.

To the above must be added for the extension of arsenals a sum of £360,446, which gives a grand total of £10,046,990.

Formosa.—The budget for Formosa has been kept distinct from the main budget, and shows revenue, ordinary £811,224; extraordinary, £642,957,181. Expenditure, ordinary, £1,052,401; extraordinary, £401,779; total, £1,454,180. In the Formosa budget of last year the expenses of occupation, gendarmerie, &c., were included, as well as all military expenses, not only for Formosa, but also for the occupation of Wei-hai-wei. These amounted to a total of £2,754,000; adding this sum to the estimated expenditure of the present year we arrive at a figure of £4,201,108, as against £3,841,350, showing an increase in the expenditure of the present year of over £366,000. Turning to revenue, we find it set down at £1,454,181, but as £642,033 of this is provided from the Supplementary Fund, probably the indemnity, we must take the real revenue as being about £812,148, as against a revenue set down last year as £668,000. It is not to be supposed that the island can be counted upon as a source of revenue for many years to come.

A considerable advance is taking place in the direction of granting Government aids to assist in developing various branches of commerce. The present budget provides for the payment of £792,595 this financial year, and the legislation of the past session will entail upon the Treasury further payments in the future. It may not be without interest to mention that in the budget of last year a sum of £295,820 only was set down for Government aids, thus showing an increase in the present budget of nearly £500,000. A Bill was also laid before the Diet with a view to grant a subsidy to the Nippon Yusen Kaisha line of about £300,000, in order to enable that company to maintain the newly-opened lines to Europe, Australia, and America, but the discussion of the Bill was postponed until next session, owing to opposition on the part of members interested in other companies. In some form or another this subsidy will probably be given to the Nippon Yusen Kaisha. Without some assistance the company could not afford to continue these

lines, and the dignity of the country will require that they should not be dropped so soon after being started.

The war indemnity received from China forms a very important feature in the Budget of the past and present fiscal years. If regularly paid in the future, it will no doubt be set aside for the army and navy expansion scheme. It makes a sum of £36,275,000 to be paid by China if she elects to let it run till 1902.

National Debt.—The following is a statement of the present indebtedness of Japan:—

Foreign loan	£ 23,375
Old loan	548,936
Hereditary pensions commutation loan, 5 per cent.....	2,982,332
Satsuma rebellion loan	4 0 000
Navy loan	1,500,600
Consolidated public loan	17,206,170
Redemption of paper money loan.....	2,200,000
Railway loan	1,000,000
War loan	12,172,400
Public undertakings loan.....	300,000
	38 333.513
Government paper money	904.508
Total	39 238.021

There are to be issued this year:—Public Undertakings Loan, £6,100,000; Consolidated Bonds, £500,000; so that at the end of the fiscal year 1898, the total debt of Japan will stand at £45,494,546.

The last session of the Imperial Diet was rendered remarkable by the passage, in an incredibly short space of time and without the adoption of any amendments, of a Currency Reform Bill introduced by the Government. The reasons given as having prompted the introduction of this measure were the fact that China had to pay Japan an indemnity of Tls. 230,000,000, which sums has to be paid in English gold. The depreciation of silver had, it was supposed, caused prices to rise 30 per cent. in Japan. It is hoped that the adoption of the gold standard will prevent fluctuations in prices and the disturbance of the relation between debtor and creditor, that exports will increase, and that it may remove difficulties in the conclusion of a foreign loan. The portion of the Public Undertakings Loan issued last year was not a success with the public, and it is more than probable that some other plan may be adopted for raising the sum which is required for the expenditure, but which may only be required towards the latter part of the fiscal year.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

GERMANY AND GREECE.

London, Sept. 3.

Germany has informed Greece that she still maintains opposition to the indemnity loan in its present form.

Germany has declined to discuss the offers made by Greece in regard to the indemnity loan until the Ambassadors of the Powers at Constantinople have settled the whole financial question.

The peace parleying is at a standstill. France and Russia are disinclined to join in the guarantee for the Greek indemnity loan, and Great Britain is not disposed to guarantee the loan single-handed.

London, Sept. 6.

The Porte has addressed a Note to the Ambassadors of the Powers at Constantinople requiring that the Governor of Crete shall be an Ottoman and the retention there of the Turkish Garrison.

London, Sept. 8.

General Muravieff, the Russian Ambassador to the Porte, having sent a Note implying that Great Britain is responsible for the evils resulting from the delay in the conclusion of peace between Turkey and Greece, the Marquis of Salisbury has now proposed the appointment of an international commission, to consist of six members, with power to control the Greek revenues sufficient to cover the services of the old and new loans, to be accompanied by a prompt evacuation of Thessaly.

ITALY AND GERMANY.

The King of Italy, attended by his Foreign Minister, will meet the Emperor William at Hamburg to-day.

THE SULTAN'S ACCESSION.

At a review of the Turkish troops at Canea, and a banquet in honour of the anniversary of the Sultan's accession, all the foreign Admirals were present except Admiral Harris, whose absence is much commented on.

THE MOHMAND REBELLION.

London, Sept. 4.

Two columns, consisting together of ten thousand men, one under General Sir B. Blood and the other under General Elles, are about to advance from Shabkadar and Khar respectively against the Mohmands.* The latter are being led by Kadda Mullah. The Afridis will be attacked after the Mohmands are disposed of.

[*General Elles has already had a brush with the Mohmands, when on the 9th ult while on a visit to Shabkadar he found the enemy about 6,000 strong in position on low hills, the British force there being under Colonel Woon. General Elles ordered the guns into action and ordered the Cavalry to charge the enemy's left flank. This was brilliantly carried out by two squadrons of the 13th Bengal Lancers. Major Atkinson's and Lieut. Cheyne's chargers were shot under them. The enemy suffered severely and retired into the high hills, where the British force was unable to follow with any advantage and so returned to Shabkadar. The British casualties were:—Capt Blacker, R. A., Major Lamb, of the Somerset, severely wounded; Lieut. Cheyne, 13th Bengal Lancers, two N.C.O. R. A., one officer and nine men of the Somerset and 14 men of the B.L., 25 of the 26th P. I., wounded; Second Lieut E. G. Drummond, Somerset, slightly wounded, four men of the Somerset, one of the 13th B.L., seven of the 26th P. I., killed. The enemy's loss was severe. Total of all ranks, twelve killed, 64 wounded. The column under General Elles has been strengthened by the 9th Bengal Lancers, 1st Gurkhas, and No. 1 Field Battery, which will bring it up to the number stated in the telegram.]

London, Sept. 6.

Lieut.-General Sir W. S. A. Lockhart, K.C.B., commanding the forces in the Punjab, recently on leave in England, who has been hastily summoned to return to India, left Brindisi yesterday to take command of the Afridi expedition.

The native rulers in India have offered the services of their troops in co-operation with the Imperial forces in the frontier trouble, which offer the Government has accepted.

The Ameer of Afghanistan has publicly repudiated the complicity of his officials with the frontier disturbances.

A RETURN FROM THE ARCTIC.

The *Windward* has returned from the Arctic with Mr. Jackson, who spent three winters there, having completely mapped Franz Josef Land.

INDIAN DRAFTS.

London, Sept. 6.

Lord George Hamilton, Secretary of State for the Indian Department, offers to buy ten days' drafts on Calcutta or Bombay to the value of one crore of rupees, tenders to be opened on the 7th instant.

London, Sept. 7.

Lord George Hamilton, Secretary of State for the Indian Department, asks for tenders receivable on the 14th September for India bills to the amount of two and a half millions sterling, payable in six or twelve months after date.

London, Sept. 8.

The tenders for Indian Council drafts opened yesterday amounted to 29,190,000 rupees, and a hundred lacs were accepted at an average of 1s. 4¹/₂d. Tenders at 1s. 4³/₄d. receive about eleven percentage lower.

THREATENED FAMINE IN IRELAND.

Continuous heavy rains in the West of Ireland have completely ruined the potato crop, and it is believed that the coming winter will be one of the worst seen since 1847.

THE BLOCKADE IN CRETE.

Owing to the acceptance by the Cretans of autonomy, the Admirals of the Powers will raise the blockade on the 10th inst.

A GERMAN GOVERNOR KILLED.

The Governor of Kaiser Wilhelmsland, a German Colony in New Guinea, has been killed by the natives.

RESIGNATION OF CHIN SANG-HUN.

Söul, Sept. 8.

Chhin Sang-hun, Minister of Finance and Acting Minister of War, who tendered his resignation some time before, has been relieved of the additional portfolio of War. The appointment of his successor has not yet been announced, but it is supposed that Min Chihong-menk or Nam Chông-chhöl will occupy the post. It is also reported that during the illness of the Minister of Finance, Chhin Sang-hun, Vice-Minister Kim will be appointed Minister *ad interim*.

Söul, Sept. 8.

The question of retaining Russian Military Officers in the Korean army will probably be decided at to-day's Cabinet meeting. The salaries are *yen* 150 for officers and *yen* 20 for non-commissioned officers, beside certain allowances for oil, fuel, etc. The term will be three years.

(FROM OUR OWN CORRESPONDENT.)

NAVAL MOVEMENTS.

*Hakodate, Sept. 9, 8 40 a.m.

H.M.S. *Centurion*, *Grafton*, *Immortalite*, *Narcissus*, *Pique*, *Archer*, *Rattler*, *Redpole*, *Hart* and *Handy* left here yesterday for Endermo. The *Rainbow*, with invalids, has gone to Yokohama; the *Humber* has left for Hongkong, and the *Daphne* for the Behring Sea. H.M.S. *Alacrity*, H.I.J.M.S. *Itsukushima*, *Fuso*, *Isumi*, and *Chinyen* are in harbour. H.M.S. *Linnet* has arrived from the Behring Sea.

*Delayed in transmission.

(FROM "LE COURRIER DE SAIGON.")

PRESIDENT FAURE IN RUSSIA.

Paris, August 24.

At a banquet last night, the Czar said that the President's visit and the sentiments that had been aroused would bind together the two countries of France and Russia. President Faure replied that he had come in the name of France to bind closer the ties which united the two countries.

(FROM THE JAPANESE PAPERS.)

THE "TAIHOKU'S" CARGO.

Osaka, Sept. 6.

The cargo on board the *Taihoku Maru* of the Osaka Shosen Kaisha, which sank some time ago after collision, consisted chiefly of iron pipes for the Tokyo Water Works. It is stated that a London Insurance Company which issued a policy on the lost vessel has made a claim against the steamer with which the *Taihoku* collided.

RICE EXCHANGE TROUBLES.

Hakodate, Sept. 6.

The members of the Rice and Grain Exchange here have all resigned owing to a great disturbance among them.

RINDERPEST.

Nagasaki, Sept. 8.

Rinderpest is rapidly spreading in this locality.

LOSS OF AN AMERICAN SHIP.

Chiba, Sept. 9.

Last night an American sailing vessel was wrecked by the storm off Boshu.

FORMOSAN DISTURBANCE.

Koshun, Formosa, Sept. 9.
A gendarme has been killed here by some Formosans.

RAILWAY TRAFFIC STOPPED.

Naoyedzu, Sept. 10.
The railway lines in this district are all suspended owing to the floods.

Nagano, Sept. 10.
The line between Nagano and Yashiro is interrupted by the floods.

CHASS

All Communications to be addressed to the Chess Room.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokyo Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

The following is the solution of Problem No. 335:—

WHITE.	BLACK.
1—B to B 5	1—P takes B
2—Kt to Kt 6, ch	2—K K 3
3—Q to Q 5, mate	
	1—B takes Kt
2—Q to B 3	2—P takes B
3—Q takes P (K 3), mate	
	1—P to B 5
2—Q to Q 4, ch	2—K takes Q
3—Kt to B 3, mate	
	1—B to B 5
2—Q to Q 3,	2—P takes B
3—Q to Q 5, mate	
	1—K to B 5
2—Q to B 3, ch	2—K to K 4
3—Q to K 4, mate	
	1—Moves Kt, or
	either advanced
2—Kt to Kt 6, ch	2—K takes B [P
3—Q to Q 3, mate	

Correct solution received from W.H.S., D.D., and P.E.F.S.

PROBLEM No. 337.
By M. EHRENSTEIN.

White to play and mate in three moves.

OVER THE CHESS-BOARD.

In the match between Bird and Lee—five games up—we learn that Bird won the fifth game, and Lee secured the sixth and seventh games, which gave him a lead of 4 to 3. Then Lee obtained the eighth game, and won the match with a score of 5 to 3.

Singapore won the Inter-Colonial Chess-match with Hongkong. It is hoped that the Cable Companies will allow of a return match being played between the colonies at an early date.

Chess is a subject which, from remote antiquity, has commanded the attention and compelled to a degree the admiration of the ablest thinkers. Incomprehensible to the layman, and full of difficulty even to the proficient, the complexities produced by the movements on a plane figure subdivided into 64 equal squares of a few bits of bone or wooden automata have excited in all ages the wonder of the savant, the enthusiasm of the artist, and the keen interest of the soldier.

Petroff, gazing at these little toys aligned upon the surface of the chessboard, discerned, with amazement equalled only by his delight, that what the uninitiated regarded as a game, or merely as an æsthetic and pleasing form of recreation, was in reality a great mathematical

proposition, ranking "not lower than the integral calculus."

Anderson, elaborating the idea of the famous Russian geometrician, detected in the demonstration, "intricacies beyond anything known in the most abstruse mathematics;" and Leibnitz, summing up the whole proposition, declared, "Chess is an exact science."

The genius of Vida caught from the evolutions of Knight, King and Pawn the theme of an epic poem; Franklin discovered that "many high principles of the moral order are to be learned from its practice;" and every great captain from Timour to Von Moltke has commended constant study of the problems of the chessboard to the student of military art and science.

But in these modern days of materialistic impulses and tendencies sentiment is at a discount; the panegyrics of the philosopher, the poet, and the historian are not current at their face value, and the parity of a thing with the times is maintained only by a satisfying answer to the query, "Is the thing of practical utility?"

"Chess," writes Buckle, "is the gymnasium of the mind; it does for the brain what athletics does for the body."—From an article by Mr. F. K. Young in the "Pall Mall Magazine" for March.

KOBE VERSUS NAGASAKI.

The second game in the Kobe-Nagasaki Correspondence Tourney, as announced earlier in the week, was won by the Kobe players, who conducted the game with admirable skill, working up a grand attack on the King's side which the Nagasaki champion only met by a rather weak counter attack on the opposite wing, where the Black King had sought refuge in casting. We give the score below as taken from the *Kobe Herald*:—

GAMR No. 338.

FRENCH DEFENCE.

White—Nagasaki.	Black—Kobe.
WHITE.	BLACK.

9	21	QxP ch		Resigns
10	10	P KR3	9	P-Q3

Have our readers noticed one singular feature in this Tourney, viz., that every one of the ten games played represents a "different" opening, and half of the number are gambits, and some of a very interesting type. There is a Zukertort opening, Four Knight's Game, Giuoco Piano, King's Bishop's Gambit, Vienna game, Queen's Gambit, Greco Counter Gambit, King's Gambit declined, Danish Gambit, and an opening that has yet to receive a name and for the present must be styled "Irregular."

We should have published games 7 and 9, which, our readers will remember, were finished last week, but neither present many interesting points. The former besides stretched out to the considerable length of 60 moves, whilst the latter is spoilt by some bad blunders. The end of this month should see the finish of the Tourney, the games being now well advanced. Only a few moves were made last week in the two telegraph games No. 4 and 10. The typhoon of Thursday morning has rather broken up the Telegraph Department, but we may look forward to chronicling some smart play next week.

Round and square 1/2 inch. and upward	4.15	to 4.60
Iron Plates, assorted	4.40	to 4.50
Sheet Iron	6.20	to 6.50
Galvanized iron sheets	10.00	to 10.50
Wire Nails, assorted	6.00	to 6.50
Pin Plates, per box	5.00	to 6.00
Pig Iron, No. 1	2.10	to 2.20
Hoop Iron (1 to 1 1/2 inch)	4.80	to 5.00

KEROSENE.

The market still continues dull in the extreme, with quotations unchanged. An improvement is looked for now that the hot weather is nearly over, when purchases for the early winter generally commence. Stocks here and afloat are ample but not excessive.

	PER PICK.	PER PICK.
American	\$2.60	to 2.66
Russian	2.00	to 2.06
Langkat	—	—

SUGAR.

A fair business has been done in Brown, principally Manila, and prices have a tendency to harden. Little has been done in White refined.

	PER PICK.	PER PICK.
Brown Takao	\$3.90	to 4.00
Brown Manila	4.20	to 4.80
Brown Daitong	3.20	to 3.25
Brown Canton	3.30	to 3.40
White Java and Penang	6.50	to 6.60
White Refined	7.30	to 8.90

EXPORTS.

RAW SILK.

Market quiet at late rates, with the turn in favour of buyers, but quotations are nominally unchanged. A hardening exchange also works against holders.

QUOTATIONS.

TEA.

The market continues fairly brisk for this season of the year, though the total sales of the past week only amount to a little more than half of those of the previous week, being 228,300 catties against 430,000 catties. Prices have been well maintained and there is little stock of the sorts wanted left on the market. Quotations are unchanged.

QUOTATIONS.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BARNES, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. GOURAS, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, SEPT. 18TH, 1897.

DEATH.

On 7th September, 1897, at No. 7, Bund, Tsukiji, Tokyo, CHO (KITIV), the beloved wife of Edmund P. Pallister.

SUMMARY OF NEWS.

A SUBMARINE cable from Hokkaido to the Kurile Islands has been laid.

H.I.H. THE CROWN PRINCE left Hayama for Kamakura on the 11th instant.

TRAINING has begun for the races at the Autumn meeting of the Nippon Race Club.

THE crack Russian cruiser *Rurik* arrived at Yokohama on Wednesday morning.

THE Japanese cruiser *Naniwa Kan* left Honolulu for home on the 7th instant.

A DYNAMITE explosion in a mine at Johannesburg has caused the death of several people.

MARQUIS ITO, now staying at Oiso, paid a visit on the Crown Prince at Hayama on the 9th

inst., and offered to His Highness some presents which he had brought from Europe.

FIFTY thousand troops are now assembled on the Indian frontier. The Afridis are still showing fight.

THE Government officially sanctioned the construction of the new harbour at Osaka on the 8th inst.

OFFICIAL permission has been granted for the establishment of a bullion exchange in Tokyo or Yokohama.

FIFTY houses were wrecked and a boy and horse killed by the storm of the 9th instant in Tochigi Prefecture.

THE telephone lines in the capital, which were broken in many places by the recent storm, have all been repaired.

LIEUT. COLONEL IGNACIO ALTAMIRA and Senor Rodrigo Azpiroz have joined the Mexican Legation in Tokyo as attachés.

THE number of cases of dysentery throughout the country this summer, up to the 11th inst., was over 47,000 and deaths over 9,300.

AN employé of the Boso Railway Company was killed at Chiba station on the 13th inst. by a collision between a locomotive and a stationary train.

THE peace negotiations at Constantinople are proceeding very slowly, though Germany has at last come into line with England regarding the indemnity.

The new Brazilian Minister to Japan, Senor Lisboa, was received in audience by the Emperor on the 15th inst. and presented his credentials.

ABOUT 316,000 silver *yen* pieces and 29 700 *yen* in Japanese bank notes were brought from Hongkong to Yokohama on the 10th inst. by the *Empress* boat.

DURING the gale of the 9th instant the Tanko Kaisha (Colliery Company) lost eight lighters and some 100 tons of coal. The loss will amount in all to about yen 10,000.

T.I.H. PRINCES FUSHIMI and KANIN, who went to Kyoto to attend the fifth anniversary of the death of the late Princess Fushimi Kageko, returned to the capital on the 12th inst.

ACCORDING to a London telegram received at the Yokohama Specie Bank on the 13th inst., Japanese Consolidated Loan Bonds were quoted at £98, showing an increase of £3.

The Tokyo Tramway Company being about to change its present system to that of an Electric Railway, proposes to increase its capital to yen 3,000,000, the present capital being yen 1,000,000.

THE Foreign Department will next year establish Legations in Belgium, Turkey and Spain and five Consulates at Marseilles (France), Hamburg (Germany), Odessa (Russia), Calcutta (India), and Kanko (China).

DURING the storm of Thursday, the 9th, the Nippon Yusen Kaisha lost three boats in the Bay of Shinagawa, together with much cargo. The Company's store houses at Etchu-jima, Okawabata, and other places were all inundated.

THE manoeuvres which are to take place between the 5th Army Division (Hiroshima) and the 6th Army Division (Kumamoto) in the northern part of Kyushu will commence on the second of November next. The centre of the manoeuvres will be in the vicinity of Dazaifu.

A CONSIDERABLE number of the more conservative members of the Administration Investigative

tion Committee have been removed and their places filled by new officials, the new appointments including several Vice-Ministers of Departments and a number of newly appointed Councillors.

As the port of Chinnampho in Daidoko Province, Korea, is opened to foreign trade on the 1st of October, one European, a Japanese, and two Koreans are reported to have left Chemulpo on the 5th inst. for the new port to open the Customs office there.

THE owners of the Austrian-Lloyd steamer *Melpomene* have attached the Blue-funnel steamer *Patroclus* and demand yen 30,000 for damages caused by the latter vessel to their ship during the typhoon of the 9th inst. The suit was commenced in H. B. M. Court on Wednesday before Mr. Justice Wilkinson.

THE following personages have been granted permission by the Board of Decorations to accept and wear the silver Jubilee Commemorative Medals conferred on them by Queen Victoria:—Mr. Saito Momotaro, Secretary of the Imperial Household Department; Captain Funnaki Rentaro, of the Navy; Marquis Kido Kosei; Lieut.-Colonel Murata Shun; and Lieutenant Kata Sadakichi of the Navy.

The most serious accident caused afloat by the typhoon of the 9th inst., was the total loss of the Norwegian barque *Alette*, with nine lives. The *Alette* was bound from Vancouver to Yokohama, with a cargo of lumber. She was caught in the typhoon in entering the gulf of Tokyo, all her sails were blown away and her steering gear broken. She was then dashed on the rocks at the entrance to Tateyama Bay, and smashed to pieces. The Captain, second mate, carpenter, steward and two seamen saved their lives by jumping on the rocks, but the rest of the crew, nine men, including the chief mate, were drowned.

THE Import market cannot be said to have improved much during the past week for it still remains dull and stagnant. In shirtings nothing is doing and in fancies and woollens next to nothing in spite of a slight weaving in prices. In yarns, a few transactions have taken place and the prospect for the immediate future looks a little brighter. In metals there have been considerable arrivals and dealers have taken delivery of goods to order, but very little new business has been done. The kerosene market is firm at improved rates, but transactions so far have been on a small scale; it is probable, however, that business will shortly improve, as the brisk season in the illuminant is approaching. Arrivals of sugar, China, Manila and Formosa brown, have been fairly large, and sales have been effected in the first two sorts. In white refined there has been a small business. Prices of brown have dropped 10 to 25 per picul, white remaining unchanged. The export business has been much brighter. Quite a small excitement occurred in the silk market and large purchases have been made at a material rise in quotations all round. The waste silk market has at last opened and a very fair business has been done for a start. Prospects are bright for the future in both raw and waste silk. A steady business has been put through in tea, though sales have dropped off during the last two weeks. Shipments of earlier purchases have been large. In rice nothing has been doing for export, and prices have gone up to such an extent that there is a semi-panic in the market and many of the rice exchanges have temporarily suspended business. Exchange is firm at slightly improved rates.

SPIRIT OF THE VERNACULAR PRESS.

Administrative reform has long been a formula to conjure with, writes the *Yiji Shimpō*, but its accomplishment remains as yet in the lap of the future. There is no question of reorganizing the Government *in toto*. What has to be done is simply to re-arrange the already existing components. That does not sound as though it should be a very difficult task, but it must be difficult or it would have been achieved ere now. Where, then, is the difficulty? It lies wholly in the fact that the so-called reformers do not work in unison. The conduct of an administration may be compared with the management of a household. It would be of little service that the domestics of an establishment were inspired by economical motives, if the master of the house wasted money on entertainments or the mistress on dress; neither could the affairs of the family be successfully managed if side by side with close scrutiny of accounts and curtailment of unnecessary expenses, the old and serviceable purveyors of the establishment were dismissed in favour of new and untried men. In a word, reform to be really complete must be undertaken by every one connected with the household, and the same is true of State administration. But it seems very plain that unanimity of purpose and action is precisely what is wanting on the part of Japanese officialdom. Futile attempts at reform are made here and there, but they do not extend to the whole body politic, and are not sustained. For example, an apparently sweeping scheme of reform was recently carried out in the Department of Agriculture and Commerce, to be followed by similar measures at the Departments of Home Affairs and Communications. But there the movement seems to have stopped. So, too, the much discussed appointment of *Chokunin* Councillors has been effected, in the case of four Departments, and has stopped there. If such officials are essential, they must be needed in all the Departments, not in four only. Looking at these things, it is impossible to hope that the administrative reforms now projected will be seriously and successfully carried out. We see, on the one hand, a Department abolished and we hear declarations that no additions are to be made to the ranks of officialdom under any pretext; yet, on the other, new and untried men are appointed and posts are created for them, under the pretext of *jinsai toyo*, or the utilization of talent. Unless the Government can secure the co-operation of all its members in carrying out its projected reforms, they will fare as all reforms have hitherto fared, and that will be bad for the Cabinet, which has not a particularly bright record to present to the Diet in the approaching session.

The same subject occupies the attention of the *Nichi Nichi Shimbun* at considerable length, and much the same conclusion is reached. The *Nichi Nichi* thinks that this talk of administrative reform is only talk. It is true that when Count Matsukata accepted the responsibility of forming a Cabinet last year, he pledged himself to a large scheme of administrative reform, and it is also true that a show of fulfilling the pledge was made by appointing a Commission of Administrative Inquiry. But the composition of the Commission did not inspire the public with much confidence in the success of its labours, nor has the recent action of the Cabinet tended to remove the unfavourable impression. The Commission has been allowed to fade quietly out of the vista of public observation, and the Cabinet has proceeded to create new offices and to fill them with men possessing no official experience. Observers are compelled to ask whether party politics rather than administrative reforms are not the mainsprings of the Cabinet's procedure. Administrative reform does not consist in merely re-grouping the officials that serve the State, re-distributing them among the various bureaux, and re-constructing the bureaux themselves. Such things are, for the most part, mere show. What is really wanted is genuine co-operation

on the part of all officials to secure the speedy and efficient discharge of public business, and from that wholesome improvement the Administration appears to be as far as ever removed, nor do the Cabinet's schemes of reform promise to shorten the interval materially.

This question of Administrative reform now occupies public attention almost to the exclusion of any other subject, and our readers will not be surprised to hear that the *Hochi Shimbun* also discusses it. The *Hochi*, however, confines itself to criticizing the composition of the Commission of Administrative Inquiry—a somewhat tardy criticism, seeing that the Commission was appointed nearly a year ago, and that its labours are now understood to have been completed. However, the *Hochi* taking note of the fact that the Commission is composed exclusively of prominent officials belonging to the organization which is supposed to need reform, compares the Government's action in appointing such a commission to that of a man who should set himself to build a new house with old timbers. In certain parts of the edifice old timbers may unquestionably be used to advantage, but to employ old timbers only is obviously a poor kind of proceeding. If the Government is really in earnest, it had better infuse some new blood into the Commission's veins, so as to convince the public that the promised reforms mean something more than the remodelling of official ranks without any change of official methods or official spirit.

The *Kokumin Shimbun* has a clever article with reference to Japan and Russia in Korea. It commences by noting that the new Russian Representative is now engaged in discussing with Count Okuma the arrangements necessary by way of supplement to the Yamagata-Lobanow convention. Exactly what these arrangements may be, the *Kokumin* does not know, but it apprehends that no very momentous question is on the tapis. Beyond doubt, the prime purpose of both sides is to secure the maintenance of Korean independence. The cause of the war between Japan and China, as the public is well aware, was that the latter Power, taking advantage of Korea's internal dissensions, sent troops to the Peninsula, and by attempting to convert into a practical reality the shadowy suzerainty previously claimed by her over the little Kingdom, threatened to disturb the balance of power in the Far East. That Japan yielded to the protest of the Three Powers with respect to the retrocession of the Liaotung Peninsula was because, although, in taking possession of the Peninsula, she had done what seemed advisable in the interests of oriental tranquillity, she saw that, by retaining it, she would endanger that tranquillity. The negotiations conducted by Marquis Yamagata on the occasion of his visit to Russia were equally actuated by the desire of reaching, with regard to certain important Korean affairs, such an understanding as would conduce to the preservation of the peace of the Far East. When we speak of the peace of the Far East, we include also the preservation of peace with Japan's Western neighbour, and, in brief, the preservation of the peace of the world. If we inquire what factor is most likely to prove immediately injurious to that peace, the answer is, internal complications in Korea. Thus, then, the best way to preserve the peace of the East, in other words, the peace of the world, is to maintain the independence of Korea, and to avoid complications calculated to produce friction there. These objects can evidently be best attained by a clear understanding between Japan and Russia. It is because such an understanding does not exist that Korea is, from time to time, shaken by internal disturbances. Now a pro-Russian party raises its head, now a pro-Japanese, and their rivalry and conflicts constitute grave menaces to general peace. If Japan and Russia were in thorough accord, if they had entered into an agreement without mutual reserve of any kind, there would be no *raison d'être* for a philo-Russian coterie in Korea, no *raison d'être* for a philo-Japanese, no

menace to the tranquillity of the Orient and no menace to the tranquillity of the world. A ravelled skein can not be straightened out by hasty fingers; the best way to clear muddy water is to suffer the sediment to subside. So it is with Korean affairs. Any open attempt to check complications must tend to promote them. To correct the situation without any overtly applied remedy, to exercise tranquillizing influence without any perceptible show of exercising them—that is the plan which Russia and Japan must devote themselves carefully to pursue. Instead of a positive policy of intervention, they must adopt a negative. Instead of direct supervision, they must continue to supervise without any evidence of doing so. Their great object must be absolute and honest co-operation. Anything like mutual rivalry for the sake of selfish advantage can not fail to induce complications in Korea, and to involve both Powers in grave troubles. Their only policy must be to prevent without any show of prevention; to administer without any show of administration; and thus to profit mutually without directly seeking to profit (*fusegasaru wo moite kore wo fusegi, osamesaru wo moite kore wo osame, shikashite tagai ni risearu no ri wo risuru ni aru nomi*). That is the true way to prevent domestic complications in Korea, to preserve the peace of the Orient and to turn to full advantage the understanding between Japan and Russia. Upon Russia and Japan devolves the responsibility of contriving that the tranquillity of the East may be secured by the three great steps taken in its interests, the war with China, the intervention of the Three Powers, and the Yamagata-Lobanow Convention.

The *Yomiuri Shimbun*, which has always been distinguished for its advocacy of maritime enterprise, writes at considerable length on the subject of the Formosa-Amoy steamship service, which, it contends, ought to be in Japanese hands. At present the route is monopolized by vessels belonging to the Douglas S. S. Company, a state of affairs which our contemporary finds even more anomalous than would be the monopolization of the Shimonoseki-Fusan line by foreign vessels. The *Yomiuri* adduces statistics to show not only the commercial importance of the line, but also the political advisability of getting it into Japanese hands. The idea is not new. Marquis Ito entertained it when he presided over the Cabinet, and he investigated the question on the occasion of his trip to Formosa. But the conclusion seems to have been reached that, however advantageous might be the performance of the service by Japanese steamers, little hope could be entertained of competing successfully with such a well established line as that of the Douglas Company. If, however, the Government, recognising the importance of the matter, sets aside a good round sum by way of subsidy, a Japanese company would have no difficulty in competing. The *Yomiuri* alleges that the annual passage of Chinese between Amoy and Formosa is over seventeen thousand, either way, and that Amoy is practical the port of import and export for Formosa.

The *Shogyo Shimpō* reverts to the subject of the gold currency, and adduces figures to show that the proposed system rests on an absolutely secure basis. We imagined that this matter had been pretty fully threshed out, but since doubts still seem to exist, an epitome of our contemporary's figures will not be out of place:—

Amount of silver yen exported from	YEN.
Japan up to July 31st, 1897	114,474,448.
Amount put into circulation at home	36,791,415

Among the silver coins sent abroad, there can be no question that a large quantity have gone to the melting pot, and that many have been either lost or defaced. It is estimated that, taking a liberal view of the matter, not more than from one-third to one-fourth of these coins will return to Japan for exchange, and that about two-thirds of the silver yen in circulation at home will be presented for the same purpose. Hence it appears that the Treasury may

look forward to being required to exchange from 53,146,222 yen to 62,685,759 yen. Now the gold reserves stand thus:—

	Yen.
Stock of gold in the Treasury	76,468,670
Do do in the Bank of Japan.....	39,530,173
Do do lying in London.....	43,000,000

Total 158,998,843

Hence, if from 53 to 63 million silver yen-pieces be presented for exchange, the stock of gold remaining after the transaction is completed will be from 106 to 96 million yen, and to this must be added 100 million taels, the amount of the Indemnity still to be received from China. It is plain, therefore, that the provision made by Government is abundant for the purpose, and that not the smallest anxiety need be entertained about Japan's competence to carry out the task to which she has put her hand. She will find herself, of course, in possession of a considerable stock of silver. For example:—

	Yen.
Silver now in the Treasury	29,680,000
Silver now in the Bank of Japan	27,000,000

Total..... 56,680,000

If to this we add from 53 to 63 millions of yen-pieces presented for exchange, it is seen that the stock of silver on hand will be from 109½ to 119½ million yen. Out of that total some 50 or 60 millions will be required for purposes of subsidiary coinage, so that there will remain from 59½ to 64½ million yen. Of course that amount will not be thrown upon the market at once. Opportunities to dispose of it quietly and gradually will not be wanting.

SOME REMARKABLE BAROMETRIC PHENOMENA.

A short essay of high importance was recently sent in to the Directorate of the Nippon Yusen Kaisha by Capt. J. F. Allen, late of the *Meiji Maru* and now the senior captain of the Company in so far as trans Pacific voyages are concerned. The observations of Captain Allen were made while in command of the *Wakanoura Maru*, *Yamaguchi Maru*, and *Matsuyama Maru*, all plying between Yokohama and Seattle; and give the result of investigations made during the course of six voyages, one being to Seattle via Honolulu, while all the others were directly across the Pacific, either going or coming. The course taken by the N.Y.K. boats between Yokohama and the Puget Sound port, is very similar to that followed by the Canadian Pacific liners, with the exception that the N. Y. K. steamers often run much nearer to the Aleutian islands than do the "Empress" ships. The southernmost islands of the Alexandrinov Group are occasionally approached within two miles, while these sturdy little freighters rarely go farther south of them than 10-15 miles. There is hereabouts, however, a most pertinacious fog-belt, probably consequent upon the warmer current of the Kuro Shiwo coming into contact, just south of the archipelago, with the arctic marine rivers. On the *Matsuyama's* last voyage across the Pacific, for instance (July 19th—August 6th), the steamer was unquestionably on one occasion within three miles of land, yet despite hundreds of puffins, divers and guillemots proving its close proximity, no terra firma was to be seen. The fog would at times lift, things within a radius of 1½ miles becoming faintly visible. From the monthly charts published by the U.S. Hydrographical Bureau, it is evident that a fog-belt, of a persistent nature, ranges in the months of May to September between N. latitude 43° 52' and from 155° of E. longitude to 170°-165° of W. longitude. The weather is of a very variable nature. Snow-squalls and white squalls are frequent above 48°; while circular storms with mountainous seas and heavy fog are as often encountered when the vessel begins steaming directly contrary to the direction of the Kuro Shiwo. As a rule, the winds range between W.N.W. and E.N.E., veering from E. to W. and W. to E. without any appreciable cause, and often shifting from one point to the

almost exactly opposite one, three or even four times within twenty-four hours.

On each of the six voyages above referred to, between, broadly speaking, E. long. 153 deg. and W. long. 165 deg. and the 27th to 52nd degrees of N. latitude, the barometer was observed to act in a manner absolutely independent of the weather and entirely irreconcilable with existent atmospheric conditions. This irregularity or phenomenal behaviour was most pronounced in the more northerly latitude, 45 deg. and above; observable, however, though in a much less degree, as far south as 27 deg. On a rough computation, the width of the area thus affected was about 1,500 nautical miles. Starting, say, from the 165th degree of W. longitude, the barometer falls steadily, wholly irrespective of the weather, until a minimum is reached generally a little W. of the meridian; thence the mercury rises as gradually, and the moment it regains its normal condition the weather clears up, as a rule, though on one occasion this meant that nothing more than the horizon was visible for a few hours. This steady fall followed by a steady rise is absolutely independent of the weather. The fall does not indicate either a change or a storm, while the glass on several occasions rose in the teeth of a coming squall or fresh gale. It is evident therefore that between the above mentioned degrees of latitude and longitude, the barometer is not a sure guide and rises or falls in sympathy with something besides the state of the atmosphere.

Most noticeable was this abnormal behaviour of the thermometer found to be in the very deep water between 5°-51° N. lat. and 165°-170° E. longitude. Now here or hereabouts lies the so-called Tuscarora Deep, and an average depth of 4,000 to 4,500 fathoms is found throughout. The suggestion lies at hand that the barometer is indicating a submarine rise; a steady upheaval of the bed of the ocean. In the great seismic wave of last year, it will be remembered, the theory that the submarine trouble originated in or near the Tuscarora Deep, found many believers. If there were seismic or seismo-volcanic agencies at work far down in these gloomy ocean-abysces, a sudden upheaval of the ocean-bed may very probably have sent the terrible wave on its journey of destruction.

The voyages during the course of which these observations were made covered very nearly if not quite a year. But no matter what the season, the phenomena were invariably recorded, the barometer always acting in this inexplicable fashion. If, however, it is true that this barometric rise and fall indicated a slow rise of the ocean-bed, and if the phenomena are much less strongly marked as one proceeds farther south, or below the 45th degree of N. latitude, it may not be wrong to conclude that the rise is going on more quickly between the 45th and 52nd parallels of N. latitude. It would be, all things considered, of prime interest to take fresh soundings in these great depths and to test just how far the ocean-bed has moved upwards. It may be—who can say?—that we are about to witness the gradual formation of another group of islands, or some mid Pacific continent. And if indeed the barometric disturbances really prove that the ocean-bed thereabouts is rising, it is quite possible that we may again have to witness great seismic disturbances. With this unpleasant probability in view, a thorough investigation of the indicated area is surely advisable, and one can but hope that some Government will take the matter in hand.

It is finally of importance that these data should be brought to the attention of mariners. Observing the steady fall, the master of a sailing vessel would perforce shorten sail in expectation of a blow—and thereby possibly lose favourable wind and much time; or again, deceived by the abnormal rise, the same master mariner might set all sails, to meet shortly with a fierce squall or small cyclone. The Nippon Yusen Kaisha is certainly to be congratulated upon observant commanders in its employ, for it is quite possible that these data collected by Capt. Allen will turn out eventually to be of great scientific interest.

EFFECTS OF THE STORM IN TOKYO.

A detailed list is now published of the damage done by the storm in Tokyo. These are the particulars:—

District.	Persons killed.	Persons injured.	Houses wrecked.	Houses 1' or more blown d'n.	Telegraph & Poles killed.	Oxen killed.
Nihon-bashi...	2	1	1	—	75	—
Shiba	1	2	12	—	—	—
Kyohashi	—	—	13	59	—	—
Honjo	—	—	10	406	—	—

Shitaya	—	—	6	—	—	2
Asakusa	1	4	8	—	—	—

It need scarcely be said that the arrangements of the Electric Light Company were dislocated. That result is easily achieved. But the company is not to be blamed in this instance, except for the initial mistake of running its wires over-head. No poles supporting heavy electric-light wires could have withstood the blow of Thursday morning.

On the Tokaido Railway the Ejiri Station was altogether demolished, not a single building being left erect. The line, too, was so much injured that the train due at Shimbashi at 9 a.m. did not get in until 1.40 p.m.

Two barges laden with ten thousand catties of coal for transmission by the Japan Railway, were moored near Azuma Bridge. They were blown over, and all the coal was lost.

The rivers in the neighbourhood of the city rose considerably, of course, but we do not learn that any serious inundations resulted. The figures given to show the heights by which these rivers rose are:—Ara-kawa, 8½ feet; Edogawa, 26 feet; Nakagawa, 8½ feet; and Sumidagawa, 12 feet.

From the *Tokyo Asahi*, which gives a detailed account of the inundations in Tokyo and adjoining districts, we gather the following:—The Yodogawa began to swell on the night of the 9th instant, and eventually rose to one foot higher than it did at the time of last year's inundation. The embankments of the river Tone being far from substantial in structure, were in imminent danger of being washed away. Steps were taken to prevent their destruction by the engagement of coolies at midnight to strengthen the embankments. The Nakagawa rose three feet higher than its ordinary level. Reports received by the *Tokyo Fucho* contain the following particulars:—The rivers in Minami Tama and Kita Tama rose seven and nine feet respectively, and still continued to rise. On the 10th instant, the embankments for a distance of 300 *ken* were overflowed and in danger of being destroyed. Fortunately, however, the Tama, which had attained the height of seven feet over its original level, began to subside, and only slight damage was done to the embankments now in course of repair. The Yedokawa continues to rise, having reached thirteen feet above the normal on the morning of the 10th. It seems to increase at the rate of six inches an hour. A telegram from the Governor of Saitama announces that many of the rivers have risen higher than last year and that telegraphic communication was suspended in the districts along the river Yedo. At 6 a.m. on the 10th Koiwamura was entirely inundated in consequence of the overflow of the river, which rose more than twelve feet. Traffic on the Tokaido railway has been restored but a portion of the O-U line is still impassable.

Mr. E. A. Morphy has shaken the dust of Kobe from off his feet. According to one authority he has left for work on the Afghan frontier, but a paragraph in the *Kobe Chronicle* leads one to suppose that he is accompanying Mr. Cowen to Hongkong, to share his work on the *Telegraph*.

CURRENT TOPICS.

Viscount Sugi Magoshichiro has been appointed a member of the Privy Council, and Mr. Yamada Kinoshige is gazetted Chief Secretary of the House of Representatives.

Viscount Aoki, with the Viscountess and Miss Aoki, are now staying at the Imperial Hotel. The general impression appears to be that the Viscount will be appointed a Privy Councillor, as a temporary measure. His Excellency has certainly won his laurels as Japanese Representative in Berlin, but after five years' service in that city, his return to Japan must be a welcome change.

Our readers have not forgotten the assault said to have been committed upon Mrs. Carver, wife of Captain Carver of the American ship *R. D. Rice*. It was alleged that a clerk in the store of Messrs J. Matsumoto and Company, in Moto-machi, Kobe, "set upon the lady and badly bruised and blackened her," without the least provocation. It is, indeed, difficult to conceive any provocation which could justify such brutality, but we merely state the facts as they were related by a Kobe newspaper. The case came up for trial before the Hyogo Local Court on the 4th instant, a criminal charge being laid against the alleged assailant, but the Court dismissed it, on what grounds we are not informed. An appeal has been lodged by the Public Procurator, and the Osaka Appeal Court will be invited to review the finding of the lower tribunal. The *Kobe Herald* shows some want of equanimity in writing about the affair. It alleges that we "saw fit to insinuate that it distorted things maliciously in giving publication to the details of the assault," and that we "subsequently swallowed the lie thus expressed." It further insinuates that justice is not likely to be done by the Osaka Court "in view of the influential standing of the Matsumoto's." We trust that the latter prediction is not well founded. Unfortunately Mrs. Carver has left Japan, and consequently the Court can not have the advantage of receiving her evidence in person. Moreover, the accusation seems to rest solely on her unsupported statement, and as the people of the shop doubtless tendered unanimous testimony in rebuttal, the failure of the prosecution is easily understood. It is a pity that the mystery can not be elucidated. We call it a mystery, because, despite the outcry of cheaply courageous folk who discover a fine patriotic satisfaction in denouncing every impartial disposition to judge a case on its merits and not simply in accordance with the promptings of racial prejudice, we decline to believe that a foreign lady was deliberately set upon by the inmates of a respectable Japanese shop, and so severely handled as to carry away palpable marks of ill-treatment. It will be agreed by all moderate persons that judgment must be suspended in the Matsumoto affair until fuller details are forthcoming. What seems to us very singular is that the *Kobe Herald*, which has conspicuously committed itself to a final verdict, does not endeavour to vindicate its sense of justice by direct reference to the Matsumoto store. We have had one side of the story. Why not the other also?

The plan that seems to be now in favour for making next year's income

equal to the contemplated expenditures, is to raise twelve million *yen* by increasing the rate of the *sake* tax and interdicting all brewing of *sake* for domestic use, but to refrain from any other addition to the present weight of taxation. There will still remain a deficiency of 11 million *yen* on the side of revenue—the excess of estimated outgoings over incomings being 23 millions. But it is claimed that the Treasury always puts the revenue at too low a figure when compiling the Budget, and that as a natural increment of income amounting to two million *yen* may reasonably be anticipated next year, there can be no objection to including that expectation in the estimates. In other words, an actual provision of twelve millions will be made by means of the *sake* tax, and the revenue will then be set down at such a figure as the expenditures dictate. Even if the sources of revenue now in sight do not yield the expected increase of ten or eleven millions, there is the new Tariff to fall back upon. Its operation can not be very much longer deferred, and, once in force, it will yield an additional revenue of some six millions. Such, according to the *Mainichi*, is the plan now on the tapis. But our contemporary is evidently uncertain of its ground. It mentions another plan, namely, recourse to the surplus revenue. There is no considerable sum of surplus revenue, in the true sense of the term, but there is a large sum—50 millions, it is said—of unexpended revenue; that is to say, revenue appointed by the Diet for certain works which it has not been found possible to carry out within the fixed period. That unexpended revenue might be temporarily employed—in the alleged opinion of some financiers—to tide over the deficiency in next year's income. But, of course, such a method of financing would be quite unsound.

An Imperial Ordinance has been issued dissolving the Fukui Prefectural Assembly which, as has already been stated in these columns, assumed a markedly contumelious attitude towards the Governor.

The *Yomiuri Shimbun* states, for the information of the public in general, that the exchangeable bank notes marked "one-*yen* silver" will circulate, after the 1st proximo, as one-*yen* gold notes. In other words, five of the old notes will be at all times equivalent to, and may be exchanged for, a five-*yen* gold note. Of course the silver notes will ultimately be withdrawn altogether from circulation, but until that can be accomplished, they will do duty as gold notes.

The Administrative Reform Commission, as now constituted, consists of six Vice-Ministers, four Councillors of Department, and two Directors of Bureau. It formerly included the Vice-Minister of the Navy, the Vice-Minister of the Army, and the Paymaster-General of the Army. From the elimination of these three officials, it may be assumed that the Military and Naval Departments are excluded from the scope of the contemplated reforms.

A sale of State Railways is again said to be under serious consideration. The Communications Department, we read in vernacular newspapers, asked for an appropriation of 10 million *yen* in next year's Budget, to be applied to the development of railways, telegraphs and telephones. Seven millions out of the ten were struck

out, however, by the financial authorities, and the Department is now casting about for some independent source whence the required funds can be raised. The sale of the Osaka-Kobe Railway to the Sanyo Company, and of the Aomori-Hiromaye line to the Nippon Railway Company is reported to be under discussion, as is also the sale of all spare land owned by the Government in the neighbourhood of railway stations. There is said to be a considerable area of such land, and it would now command a high price for the purpose of erecting tea-houses, hotels, and warehouses. It seems a great pity that Japan can not make up her mind to have recourse to foreign markets for capital.

RUSSIA AND JAPAN IN KOREA.

The views of a moderate, level-headed journal like the *Shogyo Shimpō* on a subject of such interest as the relations between Russia and Japan in Korea, are worth hearing. They are views put into the mouth of "a certain statesman" described as notably well versed in the matter but as they are published without any expression of dissent on the part of the *Shogyo*, they may be taken, we presume, as having that newspaper's endorsement. "Russia," the anonymous statesman is represented as saying, "has had her eyes fixed on the East for some time. If she had anticipated, at the commencement of the war between Japan and China, that victory would rest with Japan, her interference would not have been deferred until after the conclusion of a treaty of peace by the belligerents, but would have been exercised before the opening battle at Yashan. But her conviction at that time was that Japan would never be able to make head against the immense armies of China and that she had no chance of ultimate success. It would seem, too, that the disasters which overtook China at Pingyang and the Yalu were not very seriously regarded at St. Petersburg: they were considered to be merely temporary reverses. But the annihilation of the Peiyang Squadron, the capture of Port Arthur and Weihaiwei, and Japan's menace of moving on Peking itself, startled Russia, and induced her to form the triple alliance, by means of which she was able to control Japan, and to accomplish the first part of her own programme in the East. Her ambition is directed towards the Orient, and though she has a number of plans in view, it may be said that the step she is now engaged in taking towards the goal of her aims is to win the heart of the Korean nation. She is, moreover, spending large sums every year on the Siberian Railway. The steady march of her ambition is not to be checked, but, at the same time, it is probably a mere fiction to say that she intends to consummate her purpose before Japan's military, and naval expansion is complete. She does not labour under any apprehension as to the meaning of the Convention concluded between Prince Lobanow and Marquis Yamagata, but the plan pursued by the diplomatic officials of strong Powers in their foreign relations is to secure every possible advantage for their country, and the rule observed by their government is never to give up an advantage once it has been secured. That, indeed, may be called an unavoidable policy nowadays. If, as rumour alleges, an agree-

ment has been concluded between Russia and Korea for the employment of the former's drill instructors by the latter, it will be a very difficult matter indeed to prevent it from being implemented, especially since Korea's desire is to hold Japan at a distance and to get closer to Russia. Korea must be treated for the present as if she were eight parts Russian and two parts Japanese, so far as her feelings towards the two are concerned. Under the circumstances, it is evident that very little can be expected to result from the negotiations now proceeding between the Japanese Foreign Minister and the Russian Representative.

We take it that the above may be regarded as a tolerably accurate *exposé* of the ideas entertained by the average Japanese observer. The subject is not one that lends itself usefully to newspaper comment just at present. Japan's statesmen doubtless know very well what they are doing, and, for the rest, no one that has watched the progress of events carefully for the past twenty years, can have much doubt about the issue.

MARQUIS ITO IN BELGIUM.

One of the Brussels journals contains an account of the visit of Marquis Ito to Belgium. The Marquis was accompanied by quite a large party, namely, Baron d'Anethan, Belgian Minister to Japan, Mr. Kurino, Japanese Representative in Paris, Mr. Akabane, Japanese Representative in Holland, Mr. Nabeshima, Secretary of the Foreign Office in Tokyo, Mr. Nishi, Secretary of the Legation in Berlin, Mr. A. Halot, Consul for Japan in Brussels, Mr. Vander Elst, of the Belgian Foreign Office and others. The party were met at the station by Mr. Suzuki, Japanese Consul in Anvers, Mr. Masuda, and Mr. E. Liffe, Agent of the Nippon Yusen Kaisha. They proceeded to the N.Y.K.'s ship *Kanagawa Maru* and were entertained at a *déjeuner* given by the Company. Several speeches seem to have been made, but the reports given in the Brussels journal are too meagre to be worth reproducing. Marquis Ito proposed the health of the King of the Belgians, and Baron d'Anethan, in a speech said to have been much applauded, proposed that of the Emperor of Japan. Mr. Halot toasted Baron d'Anethan, and the latter, speaking in English, invited the company to drink to the success of "the great and powerful company" whose hospitality they were enjoying. The health of the Belgian Minister for Foreign Affairs was proposed by Marquis Ito. Subsequently a visit was made to the objects of interest in the city, and in the evening Marquis Ito dined at the Court, and received the Grand Cordon of the Order of Leopold. *Le Matin*, in concluding the account from which we extract these notes, says:—"The Belgians that had the honour of meeting Marquis Ito and his companions, were pleased to find that Japan possesses men so affable and so well-informed; and that, from that point of view, Japan can certainly hold her own with the great Powers of Europe."

The proposed Tosa Railway Company having received a charter the other day, some of the promoters held a meeting on the 12th inst. and consulted about the details of the construction of the line, which will run for a distance of 33 miles from Susaki to Yamada.

JAPANESE TOPICS.

With regard to the export trade of Kobe, the *Fiji* states that the market is almost at a standstill. The export of rice on the 8th instant amounted to 606 tons, valued at 53,275 *yen*. Of this figure 139 tons were native uncleaned rice, worth 12,243 *yen*, and 467 tons were cleaned rice valued at 41,032 *yen*. Since the last transaction was made with No. 12, copper has continued to rise in price. On the 11th instant, fifty tons were sold to the same firm at \$27.30 per picul. Prices are still rising. In imports, foreign beans and peas are stagnant and indicate no change whatever. The refuse of beans found a good sale, being quoted on the 9th inst. at 1.95 *yen* per bag. The beans imported on the 11th inst. were as follow:—White, 900,000 catties; green, 300,000 catties; red, 100,000 catties; refuse, 1,150,000 catties.

The recent storm is supposed to have devastated to a considerable extent tobacco plantations throughout the empire. The Finance Department has issued instructions to the various Tax Bureaux to investigate and report on the damage. Information from Kanagawa prefecture already brings an account of damage which is really beyond imagination. It announces that the tobacco plantations there have been entirely destroyed. If Hatano district, which is renowned for the production of excellent leaf, has been laid waste, there is every reason to suppose that other noted localities in Mito have met with a similar fate. The damage done to the tobacco farms in Kwanto is scarcely less considerable. The revenue of the Government from this source is expected to fall off this year by several millions of *yen*, but inasmuch as there is no such margin of possible loss, the estimate is plainly excessive.

The *Fiji Shimpō* states that at a meeting held in Nagasaki on the 2nd instant by representatives of the tea producers of Kiushiu, the following provisions were decided upon:—(1) Tea producers of Kiushiu shall, in addition to conforming with the general policy of the corporation, devote their energies to extending sales in Russia and the northern territories of China. (2) A scheme for opening a new market in Russia shall be carried on continuously for seven years from now, and steps shall be taken to obtain at once a sum of 20,000 *yen*, out of the 70,000 granted by the Treasury in aid of tea projects, so that arrangements may be made for carrying out this object. (3) In order to accomplish the above ends, three delegates shall be despatched to the proper Department in Tokyo to obtain a subsidy from the Treasury for the purpose of extending tea sales in Russia; and rules shall be framed to facilitate the work and to specify the duties of all tea dealers in Kiushiu.

The Hankwaku Railway Company proposes to hold its general meeting about the 20th inst. when the progress of the work will be reported, and a dividend declared. The work of repairing and constructing the Kanzaki Ikuse railway on the Company's line has, says the *Fiji*, steadily progressed and is expected to be completed by the end of this month, and new rails will be laid at the same time between Ikeda and Ikuse, and Tsukaguchi and Nagasu, the latter line being expected to be finished early in next month, at which time the Kanzaki-Ikuse railway will be opened for traffic. Three locomotive engines ordered in America and thirty-six goods trucks, as well as other cars ordered through the Mitsui Bussan Kaisha and other companies, having lately arrived, steps are now being taken to put them together in the Ikeda workshop, while eleven passenger cars building at Nagoya are to be completed by the end of the month. The paid-up capital of the Company amounts to two million *yen*, and the dividend to be declared is at the rate of 5.6 per cent.

The complication between Osaka *Fu* and certain influential citizens with regard to the harbour construction, has, according to the *Yoroku*, not only been amicably settled, but

furthermore a sum of 50,000 *yen*, which was paid to Mr. Shibukawa, one of the objectors to the scheme, by the Municipal Council for a piece of land, has since been contributed by him towards the work. The Home Department lately sanctioned the programme and also the scheme for raising a municipal loan, with the proviso that a subsidy of 468,000 *yen* will be granted by the Treasury in aid of the project for ten years from the 34th year of *Meiji* (1901). The principal instructions issued by the Minister of Home Affairs with regard to the harbour construction scheme are as follow:—(1.) The work of construction shall be commenced within three months from the date of issue of these instructions, and be completed within eight years from the commencement of the work. (2.) On the completion of the work of "filling in," an area of reclaimed land of 100,000 *tsubo*, specified by the Minister for Home Affairs, shall be transferred to the Government without charge, the rest of the land to become the property of the City. When the filling in is finished, reclaimed land to the extent of 380,000 *tsubo*, in the vicinity of the pier, as specified by the Minister for Home Affairs, shall, under no circumstances, be withdrawn from the ownership of the City.

The raw silk of Italy and France is more than a match for the Japanese production, remarks the *Tokyo Asahi*, and Japan has in the future to face a formidable rival in the European markets in the product from China, which is rapidly increasing in reputation. To these facts the silk producers in Japan ought to direct their serious attention. As to the cause of the development of sericulture in China, a gentleman who lately made a tour of inspection through the various districts in that country reports that the three provinces, Su, Kiang, and Chou, all renowned for the production of silk, recently contributed money towards payment of the indemnity to Japan. A certain amount of surplus was subscribed, and as it was found difficult to return the same to subscribers in due proportion, it was appropriated, with the consent of the people, to the establishment of a semi-official silk factory, where a plant on the Italian model was fitted up under the supervision of Italian experts. The project induced manufacturers to organise similar institutions in various localities. The process adopted by them bears no semblance to the temporising system of *sakuri*, which is universally resorted to in Japan, and enables the manufacturer to turn out his goods free from all imperfections for export to European markets.

What will be the excess of imports over exports for this year is a question, remarks the *Mainichi*, which the public are eager to have answered. The figures of the foreign trade of Japan for the first eight months of this year, compared with those for the corresponding period of last year, were as follow:—

	1896-Yen.	1897-Yen.
Exports	98,705,129	16,209,076
Imports	137,023,821	112,395,071
Excess of imports ...	38,318,692	43,186,895

Thus an increase of forty-three per cent. is noticeable in exports and of twenty two per cent. in imports over those of last year. The excess of imports this year has decreased by five million *yen* as compared with the amount for last year. The cause is due to the steady development of the export trade rather than to a decrease in the amount of imports. Yet it must be remarked that the export trade which seems to have attained unusual dimensions during the first eight months of this year, was doubtless stimulated by the American tariff question. Now that this problem has been settled exports must be expected to diminish gradually. Cotton yarns in particular and other staples of export have already shown signs of decrease, and it is not altogether improbable that the imports for the remaining four months will increase to such an extent as to exceed the fifty-four millions of last year.

Along the picturesque coast of Tagonoura, in Shizuoka Prefecture, stood many fancy villas, owned by famous Japanese actors such as Messrs. Ichikawa Danjaro, Fukusuke, Enno-

ake, Dampachi and others. These pretty houses were nearly all wrecked during the storm of the 9th inst., and in addition, we learn that the father of Mr. Dampachi, 82 years of age, was crushed to death during the gale by the fall of his house.

The amalgamation of joint-stock companies, the *Sekai no Nippon* asserts, involves the formality of their previous dissolution, in accordance with the provisions of the Commercial Code. The process is accompanied with great trouble and delay, and attempts at amalgamation are therefore rare. The officers of various banks and railway and spinning companies are consequently now preparing a petition to the Government urging the advisability of framing special regulations for the amalgamation of corporations.

Investigations made by the Finance Department and published in the *Yorodun* show that the total values of exports and imports during August this year amounted to 12,997,933 yen and 20,442,498 yen respectively, 7,445,565 yen being the balance in excess of imports. This, added to the amount of excess since January, gives an aggregate of 38,318,672 yen. Under these circumstances it may be expected that the total excess of imports by the end of this year will not be less than fifty millions. The import and export of gold and silver coins presents a different aspect, the excess of imports during this month being only 267,939 yen. A large proportion of the coins have been imported for exchange.

The reputation of the Chinese Silk in European markets seems to have been misunderstood by the Japanese, the *Tokyo Shimbun* remarks, for superiority in the eggs. This delusion has had the effect of inducing native sericulturists to import eggs of Chinese breeding for rearing. Nevertheless, according to investigations made by a certain gentleman who lately travelled through the various silk producing localities in China, it seems that sericulture in the "Middle Kingdom" is carried on without any regulations either for strict control or inspection, and that therefore the silk worms are not altogether free from a peculiar disease of virulent type. The import of these worms, it is feared, will quickly spread the virus to the original breed of Japan. Warning is thus rendered necessary to the silk producers of the country.

A report from Shizuoka, published in the *Tokyo Asahi*, places the total number of deaths there from the late storm and floods at 38, persons injured 42, houses collapsed 1,060, partially demolished 1,040, damaged 4,000. Damage done to rice crops in Hikisagan has extended over 4,000 cho, decreasing the crop by two per cent. Sugar plantations in various villages were damaged to the extent of twenty per cent. on an average.

A report of the Cotton Spinning Guild for the first half of this year published in the *Yiji* shows the number of allied companies to be 54, net profits 2,489,808 yen, reserves 757,100 yen, and dividends 1,388,678 yen. The average amount of net profit per company has thus exceeded 46,108 yen, with reserves of 14,202 yen and dividends of 25,716 yen, the rate of dividend being more than 10.13 per cent. per annum. This rate, however, is not the same with all the companies. The maximum dividend belongs to the Hirano Spinning Factory, being forty per cent. The Kashiwasaki, Konokizawa, Hiroshima, Azukijima, and Fukuushima Companies paid no dividend at all, while some companies even made a loss. The statistics on the whole, compared with those for last year, show an increase of 2 companies, of 21,300 yen in net profits, of 145,789 yen in reserve and of 113,003 yen paid in dividends.

According to the *Yiji* the amount of silver yen imported to Yokohama during last month was as follows:—From Singapore, 150,000 yen; from Amoy, 7,500 yen; from Shanghai, 2,750; from Hongkong, 124,000; and from Penang, 50,000; making a total of 334,250 yen. Of the

above 300,000 yen had already been received by the middle of last month, the amount decreasing towards the end. In the beginning of this month, however, a large increase was noticeable, the aggregate of the week reaching 500,000 yen. The number of yen brought from Hongkong and Shanghai by the Canadian Pacific and Japan Steam Navigation Companies' steamships during the past few days having reached the following figures, the total receipts for this month will probably exceed one million yen:—

	Amount.
Consignor: Ch'nd Bank's H'kong Branch	300,000
Consignee: Yokohama Chartered Bank	
Consignor: H'kong Chinese Merchant...	16,000
Consignee: Mianan, Yokohama	
Consignor: Ch'nd Bank's S'pore Branch	100,000
Consignee: Chartered Bank Yokohama	
Consignor: H'kong Commercial Bank...	25,000
Consignee: Jardine, Matheson & Co...	
Consignor: Sh'hai Chinese Merchant...	2,000
Consignee: Hung Ta, Yokohama	
Consignor: Jardine, Matheson's S'pore Branch	7,000
Consignee: Jardine, Matheson & Co...	
Total	531,000

In addition to the above figures the Chartered Bank of Yokohama is said to have imported convertible notes to the amount of 20,860 yen.

In an article on the subject of national finance and economy, the *Kokumin* says:—Some critics are inclined to think that despite the possibility of the outflow of specie from Japan abroad, in consequence of the excess of imports, no reduction in the amount of currency can be expected to take place so long as any portion of the indemnity remains to be appropriated for administrative expenditure. What amount of specie will ultimately be in circulation as a result of the appropriation of the indemnity? To what extent can the excess of imports continue without causing a reduction in the amount of currency? The following table shows the outlays to be made from the indemnity for payments to foreign countries for *post bellum* undertakings, and the balance which will remain in circulation in the interior:—

Year.	Outlays of indemnity.	Payments made abroad.	Balance for circulation in the country.
1896	40,000,000	30,750,537	9,249,463
1897	32,930,100	25,571,981	17,358,119
1898	34,934,122	48,288,560	13,994,440
1899	31,818,363	31,618,782	1,200,418
1900	23,751,738	22,012,758	1,738,980
1901	18,912,931	10,801,831	8,111,100
1902	6,773,702	5,890,014	883,688
1903	8,088,660	8,633,792	545,132
1904	53,198	718,180	664,982
1905	75,217	484,550	409,333
Total	227,099,813	224,390,548	2,709,265

From the above it may be perceived that payments to foreign countries on account of *post bellum* and other Government undertakings are greater than the amount to be appropriated from the indemnity. An exodus of specie must therefore be anticipated as the inevitable result.

H.I.H. Prince Akihito, President of the Military Art Society, is reported by the *Tokyo Asahi* to have summoned the directors to his temporary residence in Osaka and delivered to them a memorandum containing the following instructions:—In the administration of this society discretion must be exercised at the outset in order to attain our ends. The Society, in the course of its progress so far, has proved successful and has every prospect of growth. Despite the extreme heat of the season, officers were despatched to various parts of the empire for the purpose of enlisting new members, while vigorous steps were also taken to encourage youths in the training and development of their physical strength. Perseverance and assiduity will doubtless lead to speedy success. The Society takes upon itself the responsibility of a most important enterprise in relation to the development of the fundamental spirit of the nation and its members are warned against departing from the programme originally determined. The by-laws of the Society should be decided upon by discussion at a general meeting. Failure in any social enterprise originates in most cases from financial mismanagement,

and records and accounts must therefore be kept on a sound basis and with precision. Frequent changes of officials hinders the progress of the Society, and the fullest consideration must be paid to their selection at the outset. Steps must be taken to establish branches so that the military arts of the Society may be widely diffused. Shooting and horsemanship in particular should be encouraged. Kyoto being the seat of the *Buikuden* (the ancient court where military arts were taught) and the head-quarters of the Society, should be made a model for the empire. It is said that about ten thousand members are to be enlisted in Kyoto within this year.

According to the *Yiji*, the demand for kerosene oil in Shikoku, Kiusiu, Echizen, and Tamba has increased considerably of late, as it is extensively used in the destruction of locusts and other noxious insects. Kobe is reported to have lately sent about 200,000 cases to these districts. The market is now cleared of stock, and prices are rising day by day. The supply of "Chester" brand held by native dealers in Yokohama has also decreased, but they appear unwilling to offer the rest for sale fearing that, should they clear off their stock, they may soon find themselves obliged to buy from foreign merchants at disadvantageous prices. Some have resolved to hold their goods until the arrival of vessels that sailed at the end of April, when they may suddenly bring their stock into the market. Russian oil has risen, and is still rising. Quotations on the 14th inst. were as follows—"Chester," 2.08 yen; "Comet," 2.06; "Anchor," 2.10 yen; "Star," 2.04 yen; "Tank," 2 yen.

The amount of revenue to be paid into the Treasury within this month is reported by the *Mainichi* to exceed 13,550,000 yen, inclusive of taxes on urban and rural lands, income, *saké*, and soy. Payments on shares of various companies amount to 6,350,000 yen, of which three millions are receivable by the Japan Railway Company and two millions by the Funakoshi Railway Company. These facts might lead us to anticipate tightness in the money market. But since the sale of silk has been extremely brisk this year and tended to invigorate transactions of all descriptions, the money market remains as peaceful as ever, the rate of daily interest on loans to private individuals being from 2.7 sen to 2.9 sen per 100 yen. In short, funds are procurable without hindrance. Even the Bank of Japan's Weekly Report shows a considerable decrease in loans and discounts negotiated. The amount of repayments made to the Bank was unusually great, and though more or less stringency may be expected, as a rule, towards the close of the month, the financial world will be easy by the beginning of next.

According to the *Shogyo* the accounts of the Bank of Japan for the week ending the 11th instant stand as follow:—

Convertible notes issued.	Excess over legal limit.	Specie reserve.	Reserve securities.
Yen.	Yen.	Yen.	Yen.
6 192,781,077	11,192,480	102,417,120	90,363,957
7 191,850,617	10,714,589	101,964,551	89,886,066
8 191,207,499	10,677,396	101,358,626	89,848,873
9 191,165,472	12,535,593	99,458,502	91,706,970
10 190,842,041	12,957,373	99,529,119	91,312,922
11 190,671,642	13,359,901	98,065,182	92,606,460

From the above, it may be perceived that despite the decrease in amount of convertible notes issued during last week, and in the specie reserve held by the Bank, the amount of notes in excess of the legal limit has been gradually increasing.

An election of a representative of the Lower House was held in Saitama prefecture on the 14th instant, but owing to the great number of electors the result could not be ascertained that day. According to a report made by Mr. Nakajima, Director of the Progressionist Party, who has returned from Saitama, it seems that the action of the Liberals was indescribably violent and almost beyond control. Mr. Oshima seems to have received 2,400 votes; Mr. Nagase,

2,100. The rivalry in the fifth electoral section was especially keen. A telegram received by the authorities on the 14th instant, with regard to the competition between the two parties, runs as follows:—"Last night the district of Yoshikawa was the scene of terrible strife. The *soshi* of the two parties assailed each other in Hikonari village, one of them from Mr. Nagase's party being shot and killed, and another from Mr. Oshima's party, severely wounded." The above account is taken from the *Hochi*.

Since the fall in the value of silver and the rise in the rates of exchange with China, the trade with that country in marine products has almost come to a standstill. The following comparative table published in the *Shogyo* gives details:—

EXPORT.	AUGUST, 1897.		AUGUST, 1896	
	Catties.	Yen.	Catties.	Yen.
Dried Cuttlefish—				
China	1,290	194	28,923	4,271

Hongkong	—	—	—	—

Totals...1,773,246 93,870 4,905,503 136,916

Thus the staple exports to Hongkong, such as salmon, codfish, seaweed, &c., show a slight increase compared with last year, but the figures on the whole have decreased 64 per cent. in quantity and 54 per cent. in total value. Nevertheless, the price of silver having risen slightly at the beginning of this month, quotations for dried sea-slug and *awabi* rose two or three *yen* higher than last month, and transactions in these commodities began to revive. Japan has no rival in the supply of marine products to China, and the scarcity of stock in Shanghai, which may be expected to take place before long, will hardly fail to restore the trade to its former prosperity. Yet Japan, as a gold country, must be prepared to accept all the risks involved in transactions with the silver-using countries of the Orient. Marine products exported to China in particular are constantly liable to vicissitudes consequent upon fluctuations in silver. Merchants engaged in this branch of trade must therefore be prepared to meet any contingency.

On July 31st, Mr. A. J. Balfour, Leader of the House of Commons, rode from Downing-street to the House on a motor-car, on which was also Mr. A. F. Jeffreys, M.P. The start from Downing-street was witnessed by Mr. Chaplin, Sir W. Walsford, and other members of the Government.

TOTAL WRECK OF THE BARQUE "ALETTE."

NINE MEN DROWNED.

The telegram from Chiba published in Friday's issue of the *Japan Mail*, reporting the wreck of an American sailing vessel on the coast of Boshu, is now known to have referred to the Norwegian barque *Alette*, 1,306 tons, which left Vancouver for Yokohama, timber laden, on the 3rd of July last. Late on Thursday night, the Consul for Norway and Sweden at this port, Mr. J. H. de Reus, received a Japanese telegram informing him that the *Alette* was stranded near Tatehama, on the northern point of Tateyama Bay, at the entrance to the gulf of Tokyo, that ten of the crew had been drowned and assistance was urgently wanted. Mr. Reus, Captain Carst, Surveyor for Veritas, Capt. Weston, Mr. Laffin, Doctors Eldridge and Munro, and a representative of Messrs. Frazer and Co., consignees of the *Alette's* cargo, started for the scene of the disaster before 4 p.m. on Friday in the Canadian Pacific Co.'s steam-tug *Spindrift*, in charge of Captain Pope. The tug arrived back in Yokohama about 6 o'clock this morning, bringing with them the Captain, the second mate and three seamen of the *Alette*, the rest of the crew, nine men, having lost their lives. The surviving members of the crew after arrival at Yokohama were at once conveyed to the General Hospital, all being more or less hurt and exhausted, there they remained till Sunday morning. The *Alette* was a Norwegian barque of 1,306 tons, built in 1879, and owned by J. Gullichsen. She left Vancouver, consigned to Messrs. Frazer & Co., with about 800,000 feet of lumber.

Messrs. Eyton and Pratt's auction room was crowded on Monday morning on the occasion of the sale of the wreck and cargo of the barque *Alette*. The cargo, consisting of some 900,000 feet of Oregon pine, in the log, and as it may be found along the shore, was first put up in one lot. The bidding began at \$1,000 and rose by hundreds and fifties, the latter figure being the minimum bid allowed. There appeared to be several Japanese syndicates among the possible buyers, as well as a number of foreigners. By the time the bidding had reached \$7,000, nearly all the Japanese had dropped off; but from that figure it was carried on by the foreign buyers up to \$11,200, at which price it was knocked down to Capt. Weston. The second lot, consisting of what is left of the ship herself and her apparel, was knocked down to a Japanese iron dealer for \$1,400.

We understand that the bodies of three of the nine members of the crew of the *Alette* who were drowned, have been recovered and buried; one of them being that of the first mate. The survivors of the disaster, Captain Lornstelen, G. Telefen, second mate, J. Johansen, steward, A. Borj, sailmaker, and Charles Linstrom and Peter Hammons, seamen, are being looked after by the Norwegian Consul and will probably be sent home by the first opportunity.

YOKOHAMA SPECIE BANK.

The Yokohama Specie Bank held its regular half-yearly general meeting on the 10th inst., Mr. Soma Nagaiane, President of the Bank, being in the chair. The report for the past half-year, presented by the Directors and passed at the meeting, shows that the total profits during the term amounted to *yen* 4,769,970 and the expenses to *yen* 2,087,208, leaving a balance of *yen* 2,682,761, to which *yen* 195,296 brought forward from the previous account was added, making a total of *yen* 2,878,058. From this sum *yen* 3,500 was written off property account, leaving a balance of *yen* 2,874,558; of which *yen* 561,500 was appropriated for payment of a dividend at the rate of 15 per cent. per annum, *yen* 350,000 laid aside as reserve, *yen* 160,755 voted as remuneration to officials, *yen* 1,500,000 declared as a special dividend at the rate of 4 per cent., *yen* 50,000, passed to reserve for building purposes, and *yen* 251,303 carried to new account.

"LANDING OF A FOREIGN ARMY IN HOKKAIDO."

The above sensational heading introduces an article in the *Tokyo Asahi*, dealing with nothing more terrible than some military manoeuvres that lately took place in that part of the empire. The Third Battalion of the Local Militia seems to have been the force employed. In compliance with an order issued by the Commandant of the Seventh Division, the Battalion assembled at Takigawamura on the 4th instant, and having entered the train, was about to proceed to Sapporo, when fresh instructions reached it to the effect that a foreign force having taken possession of the Shigarua coast, and effected a landing at Awajiri, measures must at once be adopted to repel the invasion. The Battalion accordingly marched to Hokke, and having passed the night there, moved on to Kyomizu-dai the following morning. Scouts reported that the main body of the invading force had passed through Chubetsu at 8 o'clock that morning, and was advancing inland. Meanwhile the instructions issued to the invading army—composed, apparently of one wing of the Battalion—were that the enemy had landed at Muroran and were about to march upon Sapporo when news reached them of the landing effected by the invading force at Awajiri, whereupon they had changed front and moved in the direction of Daibagahara, whither the invaders were to proceed for the purpose of attack. The two bodies came into action in the afternoon, but the result not being decisive, fighting was resumed on the following day, the invaders being repulsed in the end.

JAPAN AND THE BEHRING SEA QUESTION.

The Honorable Charles S. Hamlin, late Assistant Secretary of the United States Treasury, is now on a visit to Japan. He has come here officially for the purpose of inducing the Japanese Government to take part in the Behring Sea Conference, but inasmuch as the Government had decided upon that course before Mr. Hamlin's arrival, his visit has been superfluous so far as its immediate object is concerned. He will be able, however, to convey to Japanese officials a clear idea of the view taken by the United States Government, and that, we presume, is considered desirable by the Cabinet in Washington. To outside observers, however, the aim of the Conference does not look very practical. What the United States Government desires, is the drafting and enforcement of a system of regulations imposing restrictions upon pelagic sealing. Assuming that the arguments advanced by the Washington Cabinet establish the advisability of the course, how is it to be enforced? Pelagic sealing is not poaching, neither can any area of the high seas be monopolized by a group of Powers for the purpose of conducting or preventing pelagic sealing. The United States, Russia, Japan and Great Britain may agree to abstain from pelagic sealing in Behring Sea, except under certain conditions, but will their agreement serve to procure the abstinence of other nations also? We see no reason to expect that it will. Already some of the vessels engaged in the business of pelagic sealing have transferred their register to Great Britain, in order to be able to enjoy the larger freedom secured by the English flag. There will be nothing to prevent another transfer of their register, say to Mexico, or Brazil, or Chile, after Great Britain has pledged herself to limit or suspend pelagic sealing. If the scheme is to be practically effective, it must be endorsed by a greater number of States than those now preparing to confer in Washington. Possibly there may be no difficulty in coming to an understanding with all the other Powers of the American continent, but we have not yet heard that anything of the kind is contemplated.

POSITIVE AND NEGATIVE SANCTIONS.

ONE would suppose that a discovery had been made. A party of members of the House of Peers, headed by Prince KONOYE, have issued a brochure, urging the advisability of altering the Fourth Article of the new Civil Code from a negative to a positive form. The Article, in its present shape, reads:—"Foreigners enjoy private rights, excepting those which are prohibited by law or treaty." Prince KONOYE and his fellow-thinkers wish to change it into:—"Foreigners enjoy such private rights as are permitted by law or treaty." Several journals discuss this question as though it were brought upon the *tapis* now for the first time, but the fact is that it has been before the public for nearly two years. Mr. MOTODA HAJIME, a barrister of considerable eminence and leader of the National Unionists, was the first to associate himself publicly with the proposed change. He advocated it by speech and pen in the 1895-6 session of the Diet, and endeavoured to direct the attention of the Lower House to a Bill embodying the principle last session. Public opinion, however, as we recorded in these columns at the time, was manifestly opposed to him. The Bill was quietly shelved, and the leading newspapers of Tokyo unanimously condemned it. With considerable regret, therefore, do we see the idea resuscitated and advocated by Prince KONOYE and his followers. Considered casually the change does not appear significant, but a moment's thought will show that its result would be far-reaching were not foreigners conventionally protected against the effects of such illiberality. With the exception of small portions of the new Civil Code, it may be said that not so much as one Japanese law has been framed with reference to foreigners. Every law now operative in Japan was framed for Japanese subjects, and in the exceedingly rare cases where the framers took account of foreigners, it was merely to provide that they should not be eligible for some particular privilege. Hence to enact that foreigners shall not be entitled to any private rights except those permitted by law, would be to cut them off from all private rights. We recently had an experience which may be recalled in this context. It was in connexion with the revision of the Press Law. Because the revisers did not alter the old formula that "Japanese subjects might edit, own, print or publish newspapers or magazines," certain critics contended that the revised law was intended to withhold those privileges from foreigners. But the fact is that the question of foreign journalists had not been taken into account at all, either when the Law was originally framed or when it was subsequently altered. The critics, in their desire to convict the Japan-

ese Diet of illiberality, interpreted the revised Press Law exactly as Prince KONOYE and his friends now want to have all Japanese laws interpreted. Because the privilege of engaging in the profession of journalism was not explicitly extended to foreigners by the Press Law, therefore, argued the critics, it was denied to them. That is just the principle for which Prince KONOYE and Mr. MOTODA HAJIME want to obtain general recognition. Take the Constitution, for example. It provides that Japanese subjects shall have liberty and sanctity of abode, security from arrest or punishment except according to law; inviolability of correspondence; inviolability of property; freedom of conscience; liberty of speech and pen; and the right of petition. Without these privileges life would be intolerable. But Prince KONOYE's contention, were it put into practice, would, in the absence of treaties, exclude foreigners from the enjoyment of all these privileges unless the Constitution were altered so as explicitly to include them. The idea is quite extravagant. We are glad to think that it will never receive the endorsement of public opinion in Japan. Happily, too, it would be without any practical significance in view of the Revised Treaties. The British Revised Treaty provides that, in all matters connected with the administration of justice, with rights of residence and travel, with succession to personal estate, with the disposal of property, with liberty of conscience, with religious worship, with the payment of taxes, with commerce and navigation, with the owning and hiring of houses, with travel and the transport of goods, with inviolability of dwelling, factory, warehouse and shop, with customs dues, with protection of trade marks and patents, and so forth, British subjects shall stand on exactly the same footing as Japanese subjects. According to the British Treaty, therefore, whatever rights or privileges are granted by Japanese laws to Japanese subjects in connexion with the wide range of matters here enumerated, will accrue to British subjects after the abolition of Consular Jurisdiction. It thus becomes evident that what Prince KONOYE proposes is, for the most part, frivolous, seeing that foreigners cannot claim any rights and privileges other than those guaranteed to them by treaty, and the rights and privileges thus guaranteed are beyond the range of the projected alteration. But the spirit that prompts such legislation is narrow-minded, illiberal, and discreditable, and we have too much faith in the Japanese people to suppose that they will follow Prince KONOYE's lead.

"Mr. E. T. Hooley's proposal to amalgamate all the freezing companies in Australasia into one large concern, has not met with very warm approval from the persons interested." So we read in a colonial contemporary. The meaning is clear, but the adjectives are somewhat mixed.

THE GOLD SYSTEM.

IT is alleged that many of the foreign merchants of Yokohama are sceptical about the enforcement of the gold monometallic system from the appointed date, namely, October the 1st, and that their doubts have induced them to make prospective exchange arrangements with the banks just as though the days of silver were to be indefinitely prolonged. The rumour is difficult to credit, but it comes to us on authority that we can not question. The banks, of course, are vastly pleased to encounter such a mood: they will make the sceptics pay handsomely to be guaranteed against risks which have only a subjective existence. How any reflecting man of business can seriously suppose that Japan will turn back now from the route deliberately selected by herself a few months ago, we are at a loss to understand. In order to postpone the operation of the Gold-standard Law, one of two courses would have to be taken. Either the Diet must be summoned in special session and asked to change the Law, or an urgency ordinance must be issued by the EMPEROR. The former course is obviously impossible. The Law of the Houses requires that a proclamation convening the Diet, whether for an ordinary or an extraordinary session, must be issued at least 40 days before hand. After August 15th a special session for the purpose of altering or postponing a law which has to go into force from October 1st, became an impossibility. An urgency ordinance, then, is the only feasible expedient. But why should an urgency ordinance be issued? Is it imagined that Japan's official financiers are seriously alarmed by the much discussed prospect of an influx of silver *yen* for exchange against gold? Why, that prospect was from the first regarded as a thing to be reckoned with. It can not surely have been forgotten that the Government made special provision to meet possible loss connected with exchange: it set apart for that purpose all the profits accruing to the Mint from the coinage of subsidiary silver tokens. Those tokens being only 800 fine, there is a clear gain of 10 per cent. to their issuers. Hence, assuming, as the Treasury is understood to assume, that at least fifty million *yen* worth must be struck, there is here a sum of five million *yen* to set against loss resulting from the redemption of the silver *yen*. Now how many *yen* coins are likely to be presented for redemption? The pessimists say 70 millions; the Government says 30 millions. Let us suppose that the truth lies between the two estimates, and that 50 millions will have to be dealt with at a loss of 12 per cent. Then the Treasury is confronted by the possibility of having to put up 2 million *yen* over and above the provision already made to meet the cost of exchange. That is the bagatelle on

account of which Japan is supposed to be scared to the extent of abandoning the whole scheme! The idea is supremely silly. If Japan drew back now, she would be deliberately abandoning all title to international credit hereafter. She would be playing the part of a giddy child in the face of the world, and must expect to be treated as a giddy child. Her method of pledging herself to gold monometallism savoured strongly of levity, and did not tend to promote her reputation in the Occident. But were she now to crown the proceeding by reversion to silver, she might just as well step out of the business arena altogether. If may be taken for granted that she appreciates that phase of the situation. Her responsible statesmen, at all events, appreciate it, and we venture to affirm that there is not the remotest possibility of their retracing their steps. People in Yokohama live at a considerable distance from political Japan, and are not disposed, apparently, to take either the Government or the people very seriously. They are wrong, we think, and we have been telling them so for nearly seventeen years. They seem to have now fallen into the mistake of attaching practical importance to the vapouring of party politicians. All the attempts made by Tokyo journals to invest the gold problem with alarming contingencies, and to suggest the necessity of postponing the operation of the new Law, have been inspired by a desire to destroy the Matsukata Cabinet's credit with the public. It does not suggest a very high sense of responsibility that matters of the gravest national moment should be dragged into the lists of party politics, but as yet nothing seems to be sacred in the eyes of Japanese agitators. The empire's statesmen, however, have never betrayed any disposition to under-estimate their responsibility to their own people and to foreign nations. In financial matters, above all, they have rigidly implemented every engagement made by them, and it is extremely short-sighted to imagine that they will now violate the most serious engagement to which they have ever pledged themselves; an engagement that has attracted the attention of all western countries, is watched with interest by the civilized world, and has already betrayed bankers into transactions of magnitude. Nothing but faith in the Government's determination and ability to consummate the adoption of gold monometallism has kept the silver *yen* ten per cent. above its bullion value during the past month, and the Japanese Government is distinctly responsible for the sterling rate at which the coin is now quoted. Merchants that pay the banks to shoulder purely imaginary risks, are simply throwing away their money, and displaying signal ignorance of Japanese character.

ADMINISTRATIVE REFORM.

THE Cabinet has taken a significant and noteworthy step. It has remodelled the Administrative Reform Commission, removing a number of members supposed to be more or less conservative in their views, and replacing them by politicians to whom offices have been recently given under the system of *Fin-sai-toyo*. Thus the Commission now includes Messrs. OISHI MASAMI, TAKE-TOMI TOKUTOSHI, KOMAI JUKAKU, OZAKI YUKIO, and KOMUCHI TOMOTSUNE. Our readers will be able to appreciate the import of this measure when we explain that these five gentlemen have hitherto distinguished themselves as leaders of a political party having administrative reform for a principal plank in its platform, but that, according to their repeated asseverations, their's is a kind of administrative reform differing radically from the kind contemplated by the Cabinet itself. In short, the Opposition in the House of Representatives, and, we may add in the press also, clamoured, during several years, for administrative reform, and insisted that now this Department of State, now that, did not deserve to be entrusted with the management of national affairs, or even with the expenditure of public funds, while the Government, in response to the outcry, made re-castings here or re-constructions there, but always failed to obtain the approval of its critics. We do not suppose that to obtain their approval was ever a possible achievement: they were determined to be dissatisfied. However, time and again the Cabinet of the day promised to do something, and time and again the leaders of the Opposition sought to enforce their view by unconstitutionally encroaching on the EMPEROR'S prerogatives and cutting down official salaries. Retrenchment in that direction was understood to be only a part of their scheme, but they never got any farther, and even the docking of pay already much too small in many instances, could not be accomplished. Perhaps it may be well to recall the last chapters of the record more explicitly. In 1893, a signal collision occurred between the Cabinet and the Lower House, the latter refusing to vote money for naval expansion unless the former agreed to a sweeping reduction of official stipends. The Diet had to be suspended, and for a time things wore a very ugly aspect. But a clever compromise saved the situation. The EMPEROR met the views of the Houses to the extent of ordering that, during a term of five years, official salaries should suffer a diminution of ten per cent.—HIS MAJESTY'S own income being included in the programme—, and met the views of the Cabinet by ordering that the funds thus obtained should be devoted to purchasing war-ships. In the follow-

ing year, the war with China broke out, and the Diet being convened solely for the purpose of granting supplies, no reference to administrative reform could be made. But, indeed, there did not appear to be any very active desire to reopen the question. It did not figure prominently in the debates of the 1895-6 session, and the Lower House, before rising last spring, took a step which seemed to indicate abandonment of the lists: it passed an Address to the Throne praying that the EMPEROR would thenceforth remit the ten-per-cent. reduction of official salaries, which, in the ordinary course of events, should have continued until 1898. We may almost say, therefore, that administrative reform ceased to rank among the burning problems of the day after the celebrated compromise of 1893. Still its existence as a problem demanding solution never failed to be insisted on by the various political parties, nor did they ever forget it when electing their committees and assigning the latter's subjects of investigation. Further, when the present Cabinet took office, its President publicly pledged himself to reform, and no time was lost in organizing a Commission to conduct preliminary inquiries. That is the Commission whose composition has now been materially altered. It originally consisted of 19 members, independently of the President. It has now been reduced to 12; and, moreover, while 13 of the old members have been removed, the six appointed in their places all belong to the ranks of political parties. The Commission, as at present constituted, represents the political parties hitherto standing outside the Government. The opportunity is afforded them of showing exactly what they understand by administrative reform. Probably our readers will be surprised to hear that any doubt exists on such a subject. But the fact is that very great doubt exists. We ourselves have never failed to study the manifestoes issued by the political parties, the speeches of their leaders and the articles of their journalistic representatives, but to this day we remain competely in the dark as to the scope and method of the reforms contemplated by them. However, they are now in a position to dispel all the obscurity that has hitherto shrouded their purposes. The Government has placed the modelling tools in their hands, and commissioned them to shape an image after their own hearts. One result of the plan is that it virtually shifts the responsibility from the shoulders of the Cabinet. When the latter meets the Diet next session, it will be able to point to the fulfillment of three important pledges—the grant of freedom of speech and pen, the recruiting of officialdom from the ranks of "men of talent," and the entrusting of the task of administrative reform to the political parties themselves. It must be confessed that a great change has come over the spirit of Japanese politics during the past five years.

THE HAKODATE AFFAIR.

THE *Chuo Shimbun* is of opinion that the recent complication at Hakodate in connexion with the arrest of six Chinamen, employés of a British man-of-war, should not have been allowed to assume the dimensions of an international question, but should have been "settled out of court." Our contemporary advances that view in consideration of the relations now existing between England and Japan, and quite independently of the merits of the affair. We can not but share the *Chuo's* opinion. It would be a most unwise, and, we hope, a most distasteful, policy on Japan's part to alienate Great Britain's sympathy, and while no moderate person can expect any voluntary sacrifice of rights, every one must understand that such problems are generally capable of solution in a manner which, while entailing no loss of dignity on either side, obviates all subsequent unpleasantness. In the present instance Great Britain is behaving with remarkable forbearance. For our own part, we fail to discover any solid ground for the position originally assumed by her, but the fact that she assumed it is sufficient evidence that she herself deemed it a warrantable position. Her protest, however, was set aside by the Japanese Government, yet she has not renewed it, and there can be little doubt, we think, that she has no intention of pressing it in any importunate manner. The Japanese, on their side, must be well aware that it is not the custom of great Powers to allow their protests to pass unheeded, and that if Great Britain shows such exceptional toleration, it is not because she believes herself to be in the wrong, but because she is unwilling to embarrass a friendly State for the sake of a bagatelle. Another consideration, also, has probably had great weight with her; namely, that, although claiming jurisdiction over the Chinese in question her Consular Courts would not have been competent to exercise it, the offence committed by the men not being punishable under British law. Great Britain does not want to be the accidental means of screening culprits from the consequences of an act which the Japanese authorities deem incompatible with the preservation of good order, though in the United Kingdom it can be tolerated without evil results. Such a motive deserves to be recognised by the Japanese. In truth, while unable to appreciate the grounds upon which the surrender of the six Chinese was demanded, we think that it would be difficult to show greater magnanimity and consideration than England has shown in her conduct subsequently to preferring the demand. The Chinamen have expiated their offence by this time. They were sentenced to a fortnight's imprisonment. The law fixes one month and two years as the minimum

and maximum penalties in such a case, but gives the Judge discretion to reduce the punishment under extenuating circumstances, and the discretion was exercised to the full in the present instance. Still the Japanese Authorities declined to surrender their jurisdiction, and certainly the history of Great Britain's dealings with Eastern nations would not have warranted any expectation of the good-humoured tolerance she has displayed in the face of an unsuccessful protest. In the matter of the *Kowshing*, in the matter of the Liaotung retrocession, and now in the matter of this disputed jurisdiction, it must be confessed that Japan has reason to congratulate herself on England's attitude towards her.

THE SENDAI TAXATION AFFAIR.

ONE hears a great many opinions expressed about the Japanese, sometimes complimentary opinions, sometimes condemnatory. But upon our own mind several years' observation has produced an impression which grows constantly deeper, namely, that where a principle is in question, they lose all sense of proportion. That is not by any means a bad characteristic. It finds time-hallowed expression in the nursery rhyme which inculcates the enormity of the sin of stealing a pin. But it may prove an exceedingly inconvenient characteristic where some ill-starred foreigner is the object viewed through the moral magnifying glass. Lying before us at the present moment are three Tokyo newspapers and one Osaka journal, all of the same date (Sept. 9th) each of which contains a lengthy paragraph about the Sendai taxation affair. It really does not matter a straw to the Japanese Government or the Japanese people whether the little band of foreigners living outside the Settlements pay local taxes or do not pay them, especially as all such problems will be finally solved two years hence. But there is a principle at stake, and so Japanese journalists have gradually written themselves into the conviction that this paltry matter deserves large space in their columns. That is precisely what we apprehended from the first. The sufferers are the men that decline to pay the tax. They, too, conceive that there is a principle at stake, and for the sake of that principle have incurred the penalty of being publicly talked about, misconstrued, and regarded as contumelious opponents of Japanese rights. At the outset we perceived very clearly that such would be the case, and ventured to say so. We venture now to repeat our comment that the long delay in settling this question is exceedingly unfair towards the foreigners concerned. A black mark of steadily increasing dimensions is being set against their names, and by and by it will be impossible for them to right

themselves in public opinion. Their most prudent plan would have been to pay the tax at once under protest. But since they have not done so, but have asked for instructions, it is not just that the issue of instructions should be so long delayed as to invest the problem with a fictitious semblance of importance. One vernacular journal says one thing, another says something else, but all alike miss the vital point, namely, that the two Englishmen in Sendai are not attempting to contravene any legitimate right possessed by the Local Authorities or to shirk any obligation properly devolving on themselves. They are simply waiting until official guidance is given to them. They do not deny the abstract principle that every inhabitant of a locality, whatever his nationality, is bound to contribute his due quota towards the necessary expenses of road making, sanitation, lighting, policing, and such matters. But they have been suddenly asked to pay a tax not levied upon foreign residents in any other locality, and not levied upon the other foreign residents in the Sendai locality. Moreover, it is a tax which, according to one of the vernacular journals now before us, was last year pronounced by the British Minister himself to be unwarranted. Naturally they have sought instructions. If they are officially recommended to pay, they will pay with the utmost cheerfulness. But until they receive an official recommendation, they can not pay except under protest, and in the meanwhile they are placed in the pillory and pelted with journalistic missiles in ever increasing quantity. It seems to us that they have legitimate cause of complaint. Moreover, from what we know of Japanese character, we do not hesitate to say that this affair will assume very troublesome dimensions unless it is speedily settled one way or the other. So much has been written in the newspapers, and the principle involved has been given such prominence over the facts, that thousands of persons must feel more or less excited. We are not alarmists and it is possible, therefore, that some weight may attach to our warning. Wherever the responsibility for the delay rests, it has already become a heavy responsibility, and will become heavier unless timely promptness is now shown.

"THE HAWAIIAN ISLANDS."

The Department of Foreign Affairs in Honolulu has lent its auspices for the issue of a brochure called "The Hawaiian Islands." It is a beautifully printed book with pretty colotype illustrations, and it contains, apparently, all the information that any one can desire about the Central Pacific Republic, its people, its politics, its industries and its resources. The most interesting feature of the work is a chapter on coffee planting. The writer asserts confidently that coffee planting is destined to become a great industry in Hawaii. There are, he says, large tracts of the finest coffee land in the world only waiting to be cultivated. An accurate

account of the method of coffee planting is given, and to it is appended an estimate of the cost of establishing and maintaining a coffee plantation of 75 acres from the first to the seventh year. Land for such a purpose can be purchased in Hawaii for \$10 (gold) per acre, the estimate is based on the hypothesis that 100 acres are purchased and 75 planted. The first two years show outlay only—a total of \$10,035. In the third year a crop of berries is obtained for sale, but the income thus obtained does not balance the expenditure. In fact, it appears to be necessary to have a capital of about \$12,000. for by the end of the third year the total net expenditures are \$11,505. From the fourth year, the balance begins to be on the right side, if the year's figures alone be considered, but if the whole account from the commencement be cast up the planter does not find himself in pocket until the end of the fifth year. Thenceforth his net gain is some ten thousand dollars annually, and at the end of the seventh year, he finds himself owner of a plantation in full working order, all his initial expenses recouped, and a net profit of \$21,275 [gold]. That is a sufficiently tempting estimate, and we read that the yields in it are far below what may be obtained by thorough cultivation and fertilizing. We observe, however, that no allowance is made for interest on capital. The owner, of course, is not supposed to devote his time to the plantation: he keeps a manager at \$100 a month. With the exception of the latter, the employees are set down as all Japanese, their pay being \$15 monthly.

CHINA'S BORROWINGS.

Do any of our readers recall an essay published in *Blackwood's Magazine* the year before last, discussing the final phases of the war between Japan and China, especially with reference to the parts played by Mr. Detring and Herr von Brandt? If so, they doubtless remember also what paramount stress the essayist placed on the financing of China's first loan by France and Russia, and on the terrible hold thus acquired by the two latter Powers on the throat of the Middle Kingdom. We ventured, at the time, to traverse the writer's ideas very emphatically; pointing out that England stood always in the background, ready to rescue China from any political troubles in connexion with finance, and that the task of supplying Peking with funds to pay the second half of the Indemnity would devolve upon London. For the first half of the Indemnity China had excellent security to offer. No capitalists, receiving such security, placed her under any obligation of gratitude by advancing a hundred million taels. But the second half was a different affair. The security there is by no means so satisfactory, and when we expressed our expectation that England would be China's banker at the time of real difficulty, we also said that the accommodation would be given quietly, as a pure matter of business, without any interference on the part of the British Government, and without any flourish of political trumpets. That is precisely what seems to be happening now. Of course no Englishman will pretend to think that there is any sentiment in the transaction, or that England expects China to feel thankful. If British capitalists advance money, it is because they see their account in doing so. They don't care a row of pins about China's "pretty eyes," nor are they influenced by any political considerations. We shall not hear, therefore, any renewal of the chorus that the alarmists raised when Russia and France undertook the unwonted rôle of finding money for an Oriental country, nor shall we hear from the Russians or the French any sinister suggestions about Great Britain's motives. These differences, however, are precisely the points that deserve notice, and it may be presumed that they will not escape China's notice.

THE "RURIK."

The Russian armoured cruiser *Rurik*, which arrived here on Wednesday morning, and exchanged salutes with the forts and the men-of-war in port, is undoubtedly the most formidable vessel in the Russian Pacific Squadron. Launched in 1894, she is constructed of steel, of 10,923 tons displacement, is 390 ft. 6 in. in length, 67 feet beam, and 26 feet draught, with twin screws and horse-power of 13,250. She is belted with 10 inches composition armour and has a protective deck of 2½ inches steel. The *Rurik* carries four 8 inch, sixteen 6-inch and six 4.7 inch quick-firing guns, as well as eighteen smaller quick-firing and machine guns, and five torpedo dischargers. She can steam 18 knots an hour; and when carrying 2,000 tons of coal can steam 20,000 knots at 10 knots an hour.

THE QUEEN AND THE SALVATION ARMY.

The Queen has given to the Salvation Army a certificate that its members evidently value very highly. This incident of the Jubilee is set forth in the following communications:—

THE GENERAL'S MESSAGE TO THE QUEEN.

To her Majesty the Queen-Empress, Windsor.
Your Majesty,—On behalf of the Officers and Soldiers of The Salvation Army now assembled in London for their Triennial Congress, may it please your Majesty to receive my congratulations upon the long period of your Majesty's reign, and upon the moral and philanthropic advances which have marked the progress of the nation since you ascended the throne.

I desire to offer my assurances of the faithfulness of my people in all parts of your empire to your Majesty's throne and person, and their determination to continue to devote their lives to promoting such works of religion and mercy as are calculated to benefit all classes, but especially the least fortunate of your Majesty's subjects, and by binding them together in the love and favour of God, to help to extend throughout your empire those principles of truth and righteousness which ensure order and good government, and which are the foundations of lasting prosperity.

Your Majesty may ever rely upon our prayers to Almighty God that you and all the members of your family may share abundantly in the grace of our Lord Jesus Christ, and that your Majesty may long be spared to influence your subjects so as to further their well-being for this life and for the life to come.

WILLIAM BOOTH.

HER MAJESTY'S GRACIOUS REPLY.

Windsor Castle, July 20, 1897.
To General Booth,—The Queen wishes to express to all the members of the Salvation Army now assembled for their Triennial Congress her heartfelt thanks for their touching message of loyal congratulations and earnest good wishes.

Her Majesty fully recognises the great and varied works so courageously undertaken by the Army on behalf of so many of their unhappy fellow-creatures in different parts of her empire.

The Queen fervently trusts that Divine guidance and blessing may accompany all future efforts of the Army.

We note, also, that Commander Booth-Tucker has had an interview with the President of the United States:—

Commander Booth-Tucker has had the honour of an interview with the President of the United States. The interview took place at the White House, Washington. The Commander presented a note of introduction from Vice-President Hobart.

The President, who received the General's American representative most cordially, expressed his pleasure at meeting a man of whom he had heard so much, and praised the work of the Salvation Army, in which, it seems, he has long taken a friendly interest.

The Commander presented the respectful greetings of the many thousands of Salvationists in the United States, and told the President that he was on his way West, to make enquiry as to land upon which to begin, on a larger scale, the Army project for colonising the destitute poor of the cities. The President showed much interest in this proposal, and wished the Commander God-speed in his undertaking.

THE CAMPHOR OIL TAX.

The following Notification (No. 9) has been issued by the Governor-General of Formosa with regard to the imposition of a tax on camphor oil:—

RULES OF TAXATION ON CRUDE CAMPHOR OIL.

Art. I.—Manufacturers of crude camphor oil shall pay a tax of three yen per hundred catties of oil produced.

Art. II.—When any camphor oil for which the tax has not been paid is mixed with camphor, or camphor with oil, the tax shall be levied on the whole quantity or weight so adulterated.

Art. III.—With regard to the business of camphor-oil manufacture, Law No. 12 of the 29th year of Meiji shall be applied.

Note.—No person but the holder of a licence for the manufacture, purchase, or sale of camphor is allowed to engage in any of the respective transactions.

APPENDIX.

Art. IV.—These Rules shall be put in operation from the 1st September of the 30th year of Meiji.

Art. V.—Manufacturers of camphor, brokers in camphor oil, or transporters of the same, who may be in possession of camphor at the time of the enforcement of these Rules shall also be dealt with in accordance with the same.

RULES FOR THE ENFORCEMENT OF THE ABOVE REGULATIONS.

Art. I.—No dealer in camphor is permitted to pursue his occupation in a place other than that specified for the purpose.

Art. II.—Any person who has received a license in accordance with the Rules for taxation on camphor need not receive a license for engaging in the camphor-oil trade.

Art. III.—The provisions of Articles II., V., VII., VIII., IX., and XII., of the By-laws for the enforcement of the Camphor Tax Law shall also be applied to dealers in camphor oil.

Art. IV.—Any person violating Art. I. of these Rules, or failing to keep proper account books and bills of lading, or to provide necessary books or to make entries in them, shall be sentenced to a fine of not less than two, and not more than twenty, yen.

Art. V.—Any person making fraudulent entries in the books or purposely neglecting to enter every transaction in them, shall be liable to a fine of not less than five yen and not more than twenty-five yen.

THE "HONGKONG DAILY PRESS" & THE CAPT.-SUPT. OF POLICE.

In a recent issue the *Hongkong Daily Press* published a letter said to have been addressed by Inspector Stanton of the Hongkong Police to the Captain Superintendent of that corps. Inspector Stanton was charged with neglect of duty—or something worse—in failing to report the existence of a certain gambling house. He compiled a long defence, in which some reflections were made upon the official to whom it was addressed—the Captain Superintendent—but he was nevertheless dismissed from office, despite twenty years' of good service. Indeed, his defence may have injured his cause, for its want of moderation, though probably due to defective skill rather than to any insubordinate impulse, was not calculated to propitiate the Captain Superintendent. The latter came to the conclusion that the publication of the Inspector's letter in the columns of the *Hongkong Daily Press* constituted a libel. He accordingly directed his legal adviser to call upon the newspaper for an apology, but the *Daily Press* declined to comply with the demand. It should be noted that the Inspector's trial was held in secret. The Captain Superintendent is invested with power to deal with such cases on his own responsibility. Mr. Stanton's defence partook, consequently, of the nature of a private document, and its publication will probably be judged a technical offence. The *Daily Press* contends that as Stanton, and the other police officials implicated in the recent accusations of bribery and neglect of duty, were publicly disgraced, they have a right to be publicly heard in their own vindication, although their trial was secret. That seems to us to be an undeniable proposition; but does it cover the ground of the Captain Superintendent's com-

plaint? Mr. May would not think of denying, we presume, that every man is entitled to publicly defend himself against public obloquy. But he may deny, and doubtless does deny, that a newspaper lending its columns for the insertion of such a defence, can avoid the responsibility ordinarily attaching to every act of publication. If the published matter is libellous, the newspaper is held accountable, whatever motive may have dictated the publication. We do not say that Mr. Stanton's letter was libellous. Upon that point no opinion may now be legitimately expressed. But we do say that in addressing its argument to Mr. Stanton's right to make a public defence, and ignoring the nature of the defence, the *Daily Press* seems to place Mr. May in a false position.

KOREAN TOPICS.

Mr. and Mrs. de Speyer arrived in Seoul on September 2nd. They had been escorted from Chemulpo by a number of Korean officials.

All the gold mines in Korea have been made the property of the Royal Household Department, and their control has been transferred to that Department from the Department of Commerce and Industry. We are not clear what the change means.

A Korean soldier appears to have conceived a good device for providing himself with a gun. He took one from a servant of Lieut. Hinehoff, the officer on guard at the Russian Legation, on the ground that the law did not allow private persons to carry firearms. But he did not hand the gun over to the Authorities, and they now are vainly trying to discover who the soldier was. Soldiers seem to discharge police functions in Seoul.

Mr. Min Yungik has been appointed to represent Korea at the Courts of Great Britain, Germany, Russia, Italy, France and Austria. *The Independent* writes about him:—

The newly appointed Minister to the six European Courts is the nephew of the late Queen. He has been for many years, and is still, sojourning in Hongkong and Shanghai. His cousin Mr. Min Yungwhan was sent to these missions early last Spring, but for some unknown reason he delivered his credentials to the Courts at St. Petersburg and London, and suddenly went to America before going to the rest of his accredited posts. He was dismissed from his office and the position has been vacant. The Government has now appointed Mr. Min Yungik in his place for the purpose of fulfilling the mission. We do not know whether the new Minister will return to Korea before his departure for Europe or not, but it is more than likely that he will come back here to receive his instructions before he makes the journey to Europe.

The idea of inducing the King of Korea to assume the title of "emperor" is again on the tapis. The new Prime Minister, Sim Suntak, accompanied by the other members of the Cabinet, was to appear before the King on Sept. 1st, and urge his Majesty to raise himself to the desired elevation. The anticipated programme was that the King would twice refuse, but that, being importuned a third time, he would yield. When this same project was on the tapis last year, some of the treaty-port foreign journals were very confident that the suggestion had come from the Japanese. Do they still hold that view?

We take the following significant paragraph from the *Independent*:—

The War Office has received an official communication from the Foreign Office to the following effect:—The Foreign Office has received a communication from the Russian representative who states that Article 2 of the contract which the Korean Government made with a Russian engineer, Mr. Remnoff, the engineer of the Royal Korean arsenal, allows Mr. Remnoff \$500 as his travelling expenses from St. Petersburg to Seoul. The Korean Government has not yet fulfilled that part of the contract and it is hoped that the Government will pay Mr. Remnoff the amount at an early date. Further, Mr. Remnoff complains that the Korean officials in the arsenal do not follow the instructions of the Engineer in the management of the institution, so that the effects belonging to the arsenal are often missing and the workmen spend the official hours by taking naps. Another unsatisfactory condition of the arsenal is that the Korean officials discharge the employees of

the machine shops so often that no one has time to learn to be an efficient mechanic. The Korean officials do not supply the engineer with materials for carrying on his work and he has been often treated discourteously by them. If this condition of affairs continue the engineer can not render effective service to the Government, and he can not be responsible for the property of the Arsenal. The War Office replied that the Department will see to the various matters mentioned in the communication of the Russian Minister and will remedy the defects as far as is possible within the power of the Department.

A gentleman of Seoul committed suicide on Sept. 1st under circumstances that would have met with Seneca's approval. He left this letter, according to the *Independent*:—

I have been a gentleman of leisure and have always enjoyed my life with the fortune which was left to me by my father. But the money is nearly all gone and I do not expect to get any more. I am a gentleman and I cannot think of doing menial work for a livelihood. The best way to get out of the difficulty and approaching disgrace is to die. Therefore I am going to take the step of self-destruction, and before doing it I leave a few lines here to my friends, bidding them cordial farewell. I want to say one more word, that is, to teach your children a skilful trade or some of the new knowledge of the West while they are young. If they grow up as I did, some of them will be, in after years, in the same condition I am at present.

CHINESE TOPICS.

Baron Guido Vitale, Chinese Secretary to the Italian Legation in Peking, has published a book containing translations of 170 Chinese nursery rhymes. The work is highly spoken of.

We gather from Shanghai contemporaries that China's projected loan of sixteen million pounds sterling has been virtually settled. Mr. Frosell conducted the negotiations in Peking, on account of the Jameson-Hooley Syndicate, and returned to Shanghai on September 5th, with the intelligence that some details about the railway alone remained to be settled. The money lies waiting in London.

The Tientsin newspaper seems to be quite in earnest when it discusses the contingency that "Russia is making preparations for an early spring attack upon Japan, or an immediate one before that Power can receive the magnificent additions to her navy now being constructed in English dockyards." We should not have regarded such hypotheses as serious if our Tientsin contemporary's language left any room for doubt. But it obviously believes what it writes.

The Tientsin community have been relieved from their famine. Consular pressure having been brought to bear on the City Magistrate, he was induced, not indeed to openly withdraw his proclamation against the slaughter of oxen, but to relax his measures for enforcing it, so that the butchers went to work again, and sirloins and steaks are once more to be found on Tientsin dinner tables. It was a curious incident.

With regard to the case of a little boy in Soochow, who was said to have killed his mother accidentally and to have been sentenced to death by the "slicing process," the Rev. W. Muirhead of Shanghai instituted vigorous inquiries, with the object of intervening on behalf of the lad. The results of the philanthropic gentleman's investigation suggests that the story had no foundation in fact. Nothing is known about it at any of the Soochow *Yaméns*.

The *North-China Daily News* says:—"The cotton spinning mills at Hanyang having been handed over to government control, all the female hands hitherto engaged there were immediately dismissed and male hands substituted in their places. The Chinese Government act on the principle that woman's sphere is in her home, and hence never engage females in the public service, but with one solitary exception—female wardens who look after female prisoners."

Mr. Voelkel, the dispensing chemist of Shanghai, through whose mistake in making up a prescription Mr. J. Chambers lost his little boy, was sentenced by the German Consul to

four weeks' imprisonment. There is naturally a great deal of sympathy with him in Shanghai. To have been instrumental in causing the death of a child under such circumstances must have punished him so terribly that the disgrace of imprisonment was not needed.

It is curious to observe that the Peking correspondent of the *Peking and Tientsin Times*, writing under date of September 3rd, gives a very different account of the loan affair. He says:—

Mr. Frisell, the Hooley representative, has been up here with Mr. Platt, endeavouring to work something for British coin, but though I repeatedly saw them running to and fro, looking hot, wearied and worried, I fancy their mission has fallen flat. Whether the quiet and persistent assurance on the part of the Russo-Chinese Bank that, whenever China requires money it is there ready at her hand in the vaults of the said Bank, has had anything to do with her independence, I do not know.

Mr. Frisell, or Frosell, we do not know which, and have to apologise to him for spelling his name in two ways—must have left Peking four or five days before the date of the above letter, and as the information contained in the Shanghai papers was apparently obtained from him direct, it deserves more credit than the speculations of the Peking correspondent.

Mr. Detring has presented to the *Tsungli Pamen* a petition of which the *N.-C. Daily News* has procured a translation. The petition bears no date, but we infer that it was sent in about April last, since it speaks of a first month petition ("previously submitted") as being three months old. Perhaps, however, Mr. Detring indicates the Chinese calendar when he says "first month." If that be so, the date of the second petition would be May. Considering Mr. Detring's reputation and the weight of his words when they refer to Chinese affairs, we should re-produce the document, were it not evidently marred by clumsy translation, and did it not extend to a length incommensurate with the facts it embodies. Briefly speaking, Mr. Detring recommends that China should set about developing her mineral resources as a means—the only means in his opinion—of extricating herself from her present financial difficulties. When he returned recently to China from Europe, he brought out with him at his own charges, a German mining engineer, and caused him to prospect in Chih-li and Manchuria. The engineer's report seems to have been most encouraging. He examined the ores of various places and "found them not at all inferior to those in Germany," coal, also, for smelting purposes being procurable in the vicinity. Mr. Detring's suggestion is that the mines should be managed on the same system as the Imperial Customs; in other words, that they should be placed under foreign direction and organization. It is an excellent suggestion, but that China will act upon it, seems too much to expect. The collection of Customs dues and the working of mines are two very different things, from the national point of view.

Perhaps the most interesting part of Mr. Detring's petition is his very outspoken denunciation of the prominent Chinaman known as Shêng Taotai—now very much higher than a Taotai, since he is a *Tai-changtsi*, or Director of the Court of Sacrificial Ceremonies. Concerning this great person, the position he has attained, and some phases of China's foreign relations, Mr. Detring says:—

There seemed to be no good methods until there appeared on the scene Shêng Ching'ching, who has undertaken to manage the business (mining) and who is becoming a substitute of another "in riding the tiger." Great honours and promotion have been bestowed upon him—he has been made an official of Metropolitan rank and *Tai-ch'angtsi*—Director of the Court of Sacrificial Ceremonies—and Director General of Railways. This is like opening the prison cage to invite people to come and occupy it; but neither Chinese nor foreigners will buy shares from him; both denounce him and no one has confidence in his conduct of affairs. He is riding the tiger and looking about in all directions without the least prospect of help; he enter-

tains the idea of feeding the tiger by cutting up the people. Belgium is a small country with wealth, but it has very little trade with China and there is no great friendship between the two countries. How is it that it can suddenly lend China such a large sum of money? The French, really, are the masters in the business, and the Russians help them, and so Siêng has been able to arrange his loan with Belgium. This matter is now settled, but China's danger is ever present. For instance, the Russian railway is to communicate with Manchuria and French railways will connect with Lungchow. France has had her eye upon Hankow for many years. The North and South are very distant but they are opposite each other. Their object is to obtain the central portion of China. At present the money and name are Belgian, but really it is France and Russia who are assisting in its completion. These two countries now possess all the advantages of this plan and leave China only one chance. When the time arrives and they see China occupied elsewhere, then will be their opportunity. Among the ten thousand countries of the world there is not one which gives to a single person the supreme power. For example, one man now has the control of our steamship company, the telegraphs, cotton mills, ironworks, and such like, with the control also of relations with foreign countries. There is great danger in giving all this into the hands of one man to manage. He will control China's trunk line, which will be like giving the tiger wings, i.e., he will be irresistible; whether there is injury or advantage in this the country will probably not recognise just at present. He knows that armed with such powers he is bound to win. What his heart wishes, that he accomplishes. Afterwards, if affairs should become unmanageable, or if the conditions should be changed, and if things turn out to be not agreeable to him, what is there to prevent him from letting loose the tiger to eat up the people? I do not know what virtues or what talents he possesses that the country should believe in him and use him to this extent.

GERMAN NOTES.

It is stated that Prince Radolin, the German Ambassador at St. Petersburg, will succeed Count von Hatzfeldt-Wildenburg as German Ambassador to Great Britain at the end of the year. The latter is retiring from the diplomatic service because of ill-health.

Accounts from Bayreuth report that this year's Wagnerian festival was supported mainly by Americans and English. The drift of the public taste toward Wagner has impelled many singers whose reputations have been acquired in the Italian school to the study of the German master. Jean de Reszke, it is believed, will devote himself almost entirely to Wagnerian rôles in the future.

Rinderpest being a cattle disease, Dr. Koch has found that it does not attack birds. He tried to inoculate hens, pigeons, guinea fowls, a crane, an eagle and a secretary bird with the bacillus of the disease, but it did not affect them. He was equally unsuccessful with dogs, mice, rabbits and guinea pigs, but is not sure that the disease may not be conveyed to cattle by any of these animals.

A great strike in the building trades began at Buda-pesth on Aug. 23rd. More than 20,000 men were involved. The strikers, in an endeavour to prevent others from working, came repeatedly into conflict with the police and desperate pitched battles ensued in several of the principal streets of the city. Two hundred persons were injured, some dangerously, and the police arrested 100 ring-leaders.

Wine exporters say that the vintage of 1897 will not rank high. The best reports have been received from Mayence, where it is said that a heavy crop is assured. In the important wine districts of Germany a high quality of grapes is expected. The French vintage is much smaller than that of 1896, though it is of fair quality. The port and sherry districts are lacking in both quality and quantity.

The German Minister for War, General von Gosler, has published a decree in the *Reichsanzeiger* in regard to the suppression of all socialism and socialistic literature in the army. In Wurtemberg, Lieutenant Rabe, of the One

Hundred and Twenty-second Infantry Regiment, whose inhuman treatment drove a recruit named Bauer to commit suicide, has been dismissed from the army and sentenced to four months' confinement in jail.

News comes from Vienna that the crypt of the Cathedral at Stuhweissenburg, lying north-east of Lake Balaton, Hungary, known as the Marienkirch, in which fourteen of the Arpad Kings of Hungary were buried, has been desecrated and many skulls and bones stolen.

To facilitate the discharging of cargoes of wheat vessels, pneumatic elevators have recently been adopted at the ports of Hamburg and Bremerhaven. The Bremerhaven pneumatic elevator is built on the wharf at Geestemünde. At the first glance it is a somewhat fantastic structure, its towers and tubes built on a regular ship's hull. This hull is 300 feet long and the towers go skyward at least fifty feet. The 400-horse-power engine has six cylinders, one each for high and low pressure, the remainder for suction purposes. Each tower has an automatic scale, which tips the beam at a ton and empties the grain into the hull of the elevator. From there conveyers, resembling the paternoster-baggers, shoot into smaller vessels bound for more distant points, or the warehouses along the wharf. The elevator unloads in one hour 120 tons. In a day the entire cargo of a big ocean freighter is unloaded, leaving the steamer ready for reloading in the shortest possible space of time.

Anton Seidl, as conductor of Wagnerian plays in London, has been winning high praise from the critics. Says *The Saturday Review*:—"Lohengrin has been sung scores of times at Covent Garden in one fashion or another; but I declare that we heard something resembling real 'Lohengrin' for the first time on Saturday evening last. We had come to regard it as a pretty opera, an opera full of an individual, strange, indefinable sweetness; but Mr. Anton Seidl came all the way from New York city to show us how out of sweetness can come forth strength." And the *London Musician* says:—"The *début* of Herr Anton Seidl, the new Wagnerian conductor, was perhaps the most important of the evening, for upon him much of the success of the ensuing season must necessarily depend. He is not exactly fresh to London, but it is so long since he has appeared among us that he may practically be regarded as a new-comer. The impression he made was distinctly favourable. His beat is firm and decided and his readings were thoughtful and musicianly."

MR. LAY'S REPORT.

Mr. Lay's Summary of the Trade of Japan for 1896, which strikes us as being one of the best compilations of the kind that we have had the advantage of examining, is thus noticed by the *London Economist*:—

Mr. Lay mentions that owing to the financial depression in the United States, that country in the past year made its appearance as a serious competitor with Europe in supplying Japan with machinery, rails, nails, and pig-iron. In rails alone American producers sold 30,000 tons at lower prices than British makers were willing to accept, and there appears to be a probability that American locomotive builders will secure a greater number of Japanese orders during the current year, owing mainly to the inability of British makers to always complete their orders within the time specified. Owing to the exertion of the representatives of British firms the list of approved locomotive makers to the Japanese Government has been increased from six to nine; but that does not appear to enable us to compete with the United States in time of delivery, so that if British makers are in a position to effect quick delivery they should lose no time in letting the fact be known in Japan, as the great extension of the Government lines and the rapid formation of new private railway companies will, it is expected, create a demand for a large number of locomotives within a comparatively short space of time. Mr. Lay mentions that in all catalogues the approximate prices of goods should invariably be given, and points out how

greatly the American competition has been assisted by the co-operation of the railway and steamship companies, which renders it possible for an American manufacturer in almost any city in the United States to obtain a through rate of freight and bill of lading. Spinning machinery is being imported in large quantities, indicating the rapid development of the spinning industry. With regard to the export trade, the abolition of the duty on raw cotton has greatly assisted the export trade in cotton yarn. At present China takes the bulk of this yarn, but Japan is endeavouring to supplant Indian yarn in her markets. Since the war great activity has been manifested in industrial and commercial undertakings, the capital invested in new enterprises last year having reached \$939,649,000, in contrast with \$329,840,000 in the preceding year. Many of the companies were, however, started on a purely speculative basis, and numbers of them were abandoned before long. The report refers to the large increase in long-dated credits in Japan in the past ten years, but there are not wanting signs that the people do not yet appreciate the value of this form of accommodation. Dealers have been in the habit of receiving payment from their country customers by means of promissory notes at 90 days, which were discounted by native banks; but early in October the wholesale cloth merchants of Tokio, finding it difficult to renew their notes, appealed to their creditors to extend the notes for about \$2,000,000 for two years. Eventually a compromise was arranged, but the banks took alarm, and have since gradually reduced the extent of their accommodation in this respect, with the result that trade became dull at the end of the year.

NEWS OF THE WEEK.

Ideal won the Insurance Cup in the 26-raters race of the Yokohama Yacht Club on Saturday.

The torpedo-destroyers *Whiting* and *Bat* were to hoist the pennant at Portsmouth on Aug. 10th for service on the China station.

H.M.S. *Mohawk*, 1,770 tons, a twin-screw cruiser of the third-class, six guns, will be placed in commission for the Australian station early this month.

Great Britain is considering a proposal to construct a graving dock at Simon's Town, Cape Colony, at a cost of two and a half millions sterling.

The Mosquito Yacht Club's race to Tomioka on Saturday, for the Ladies' Purse, resulted in a win for *Nandaka*; *Sodeska* being second, *Doris* third, and *Kodesu* fourth.

The members of the Cobden Club have caused a special gold medal to be struck for presentation to the Canadian Premier, Sir Wilfrid Laurier, in formal recognition of his attachment to free trade.

As the *Saikio Maru* was leaving Yokohama on Tuesday last an unfortunate accident happened. A Japanese deck-hand engaged in hauling up the forward port gangway, fell into the water just outside the light houses on the Breakwater, and though a boat was lowered he was never recovered.

The receipts of the American Board for eleven months of its financial year, ending July 31st, amount to \$409,805, which indicates a decrease for the period from last year of \$54,148. The falling off is in regular donations and legacies. There was an increase in donations for special objects, but a considerable falling off in each of the other items.

The Italian authorities are erecting a new quay at Brindisi, with the object of facilitating the passenger traffic in connection with the P. and O. Company's mail steamers. They hope to be able to accelerate the mail service between London and Brindisi, and to improve the arrangements in connection with the calling of the mail steamers at the latter port.

Says the *Hongkong Daily Press* of Sept. 7th:—Among the items in the Supplementary Appropriation Ordinance read a first time at yesterday's meeting of the Legislative Council is one of \$223.19, under the heading of "Go-

vernor and Legislature," which in the explanatory remarks accompanying the estimates is described as "Increase caused by expenses incurred in connection with the luncheon in honour of H.E. Li Hung-chang." This is the luncheon that Li would not land to eat.

There is a good deal of the mundane element in the Celestial after all. A Chinese witness, whose evidence had to be interpreted in the Thames Police Court, suddenly called out to the prisoner in very good English, "You—liar; you one loafer." No wonder that police magistrates are beginning to grow sceptical as to the necessity for employing interpreters where foreign litigants are concerned.

Near Bangkok on the 18th August, the boiler of a steam launch burst, killing eighteen or nineteen persons, including the owner, Prince Ong Chariat, a son of the late Second King of Siam, and Prince Chariat's wife. His little child was picked up unhurt. The deceased prince was only twenty years of age. The Bangkok papers are now demanding the proper supervision and examination of all steam craft plying on the river.

A shocking fatality occurred on the night of the 5th Aug. on board the recently built Japanese battleship *Yashima*, then lying in the Tyne, taking in ammunition and stores. A workman named John Templeman was employed in the hold, when his head came in contact with a huge hydraulic lift used for the raising of shell and ammunition. The unfortunate man's head was carried a considerable distance up the lift, the body afterwards dropping on the lower deck.

The P. & O. Company circulate the following announcement:—"Owing to the many complaints received from passengers of the discomfort and inconvenience caused by the presence of dogs on board the ships, the directors have reluctantly determined not to receive these animals in future. No dogs will, therefore, be conveyed in the company's steamers after Sept. 15th, 1897, the date on which the new regulations of the Board of Agriculture, with regard to the importation of dogs, comes into force."

Monthly current charts of the Atlantic ocean for six months of the year have been prepared by the British Meteorological Office from about 18,500 mariners' logs, extending back to 1880. Among the interesting facts brought to light is that the velocity of the Gulf-stream varies with the season, being about 100 miles a day in June, not more than seventy miles in October and November, and at times not over twenty miles. The Guinea and equatorial currents also undergo considerable variations with the time of the year.

It is stated that the collection of works of art bequeathed to the British nation by the late Lady Wallace will be vested in a body of trustees consisting of the following gentlemen, who have been nominated by the Treasury:—The Earl of Rosebery, the Right Hon. Sir Edward B. Malet, Sir John Stirling-Maxwell, Major-General Sir Arthur Ellis, Mr. A. B. Freeman-Mitford, Mr. Alfred C. de Rothschild, and Mr. John Murray Scott, who is required by the terms of the will to be a trustee. Mr. Claude Phillips has been appointed keeper of the collection.

Cases of plague continue to occur in Bombay at the rate of four or five a day. In some other parts of the province the disease is virulent. A Bombay telegram of the 16th August reads:—"The plague is raging badly at Kirkee, where there were 23 cases and 20 deaths yesterday. A segregation camp has been pitched, and a hospital will be established. Panic is prevailing in the bazaar, which has been closed. Many persons have also closed their houses. At Lanauli there were two cases and one death yesterday. The plague has also appeared at Sirur. The special plague hospital at Poona has now 31 patients.—*Hongkong Daily Press*."

It has transpired that the Anglican Bishops in Conference at Lambeth unanimously agreed to recognise the title of Archbishop which has been conferred on the Metropolitan of Canada.

They are also of opinion, as it was to be expected they would be, that the title of Archbishop should be borne by the Metropolitans in South Africa, the West Indies, and New South Wales. In the cases of Cape Town and Sydney the title will be annexed to the sees, but the Primacy in the West Indies is elective, and the title will belong to the see which, from time to time, may be held by the Primate.

The woman and one of the men who were concerned in the *Pegu* tragedy, have, it is reported, been arrested by Chut Nyak, Rajah of Kortie, and have been handed over to the Dutch authorities at Teluk Semawe. Cash, to the amount of \$7,000, was found upon them, and this money was also handed over by the rajah. The prisoners, says the *Pinang Gazette*, will in due course be taken to Edie. It is said that the other members of the band of pirates are away in the interior of Kortie, and are at present quite out of reach of the rajah, who is, however, doing his best to get at them.

Further details of the explosion which occurred in a cartridge dépôt at Rustchuk, Bulgaria, in August, show that the disaster was much more serious than the first reports indicated. The total number of persons killed is now stated to be 130, while 170 were injured. The persons killed and injured were mostly women and children who were engaged at the time in emptying old cartridges. Many of the unfortunate people who lost their lives were blown to atoms by the explosion, and a number of others who had their clothing set on fire jumped into the River Danube and were drowned.

The case in which the owners of the Austrian Lloyd steamer *Melpomene* are suing the owners of the "Blue Fannel" steamer *Patroclus* for \$30,000 damages for injuries received by a collision between the two steamers during the storm of Thursday morning last, was opened in chambers on Wednesday, before Mr. Justice Wilkinson, H.M.S. Acting Judge. Mr. Lowder appeared for the plaintiffs and Mr. Walford for the defendants. Evidence was taken during the forenoon and afternoon, so as to enable the vessels to get away as soon as possible, but we understand that the matter was not settled.

The following notice to Mariners, No. 310, for the Yangtze River—Chinkiang District—has been issued by the Coast Inspector of the I.M.C. It relates to Cooper Bank beacon light, which is discontinued. Notice is hereby given that the Cooper Bank Beacon Light, No. 61 in the published List for 1897, has been discontinued and replaced by a light-boat, exhibiting a fixed white light of the Sixth Order and moored on the north-eastern edge of the centre shoal of Cooper Bank. Vessels should pass to the northward of the light-boat.

Ireland of prehistoric times was the gold mine of Europe. In no other country, at any rate, has so much manufactured gold of early ages been found, not less than 400 specimens of Irish gold antiques being contained in the museum of the Royal Irish Academy alone, while the British Museum's gold antiques illustrative of British history are entirely Irish. Trinity College, Dublin, has many fine examples, and there are large private collections. Native gold occurs in seven localities in Ireland, and the ancient miners may have had sources of supply that are now worked out or lost.

The British officers who command the forces on the North-West Frontier of India have all seen active service. Brigadier-General Sir Bindon Blood, who holds the chief command, served in the Jowaki Expedition of 1877-8 and in the Zulu War of the following year. Then followed service in Afghanistan, in Egypt, and finally in Chitral, where he was Chief Staff Officer of the Relief Force in 1895. Colonel Meiklejohn, to whom has been entrusted the command of a brigade, took part in the Hazara and Afghan campaigns, and accompanied several expeditions. Colonel Jeffreys, who commands the other brigade, has seen service

in Zululand and Burmah: while Lieut.-Colonel Aitken, who is in charge of the Artillery, went through the Afghan and Burmah campaigns, and was also with the Chitral Relief Force.

Advocates of temperance often draw invidious comparisons between the bibulous Briton and the frugal Frenchman. But the official report of the last Municipal Ball at the Hôtel de Ville, Paris, throws quite a new light on this contention. We have not space to give all the figures, and must content ourselves with noting that the liquids consumed included 3,600 bottles of champagne, 8,100 glasses of punch, 2,700 bottles of beer, 810 bottles of Bordeaux, and, last and not least, 350 pints of orangeade. Can it be that this development of thirst among the Parisians is due to their recent enthusiasm for the Russians, a race renowned for their Homeric potations?

Among the last installment of "Collections and Recollections" contributed to the *Manchester Guardian*, we find the following quaint advertisements:—

Under-Housekeeper, under-matron, desired by a Young Woman, age 22. Energetic, domesticated. Great misfortune in losing right arm, but good artificial one. Happy home, with small remuneration. Apply—

The next is extracted from the *Manchester Guardian* of 1894:—

A child of God, seeking employment, would like to take charge of property and collect rents; has a slight knowledge of architecture and sanitary; can give unexceptionable reference; age 31; married.

Lord Esher, the "grand old man" of the English Bench, celebrated at the beginning of the Long Vacation the completion of his eighty-second year. He was born two months after the battle of Waterloo. His judicial career has occupied nearly half the Queen's reign and he was appointed a judge of the Common Pleas in 1868. His promotion to the Court of Appeal took place in 1876, and his appointment as Master of the Rolls in 1883. During nearly half his career on the Bench he has been entitled to retire on a pension. Rumours of his retirement grow more numerous as each Long Vacation comes round, but hitherto he has shown them all to be baseless by reappearing in the Court of Appeal in a new wig.

Wednesday last, says the *Nagasaki Daily Press*, was a red-letter day in the annals of Catholicism in Japan, for it was the anniversary of the third centenary of the introduction of the old faith in this empire. The occasion was fittingly availed of to consecrate the new Catholic church at Nakamatsu—an imposing building which does no little credit to its architect, the Rev. Pere Franeau. The ceremony of consecration began at nine o'clock in the morning, his grace the Archbishop of Tokyo pontificated, being assisted by the Bishops of Nagasaki and Osaka. At the conclusion of the ceremony the Archbishop delivered a most impressive sermon in Japanese. The attendance was all that could be desired.

It is stated in a home paper that Messrs. Humphreys and Tennant, of Deptford, where the engineering strike started, have filled some of the vacant places in their works with Japanese mechanics, whom they have secured from vessels in the river. These men only number a score or so, but the strikers are very indignant at anyone else doing the work which they refused, and a memorial is to be forwarded by them to the Japanese Minister in London telling him that his nationals should not be permitted to assist the employers in resisting the demands of British working-men. Meanwhile, the Japanese sleep and take their meals in the shop, where special accommodation has been provided for them.

A recent statistical estimate places the number of newspapers annually printed at the enormous figure of 12,000,000,000. A mathematician, apparently with considerable time at his disposal, in order to give a more comprehensive idea of this number, has calculated that a surface of 30,000 square kilometers

could be covered with these papers. The paper alone weighs 781,240 tons. In case one machine was forced to print these millions at the rate of one a second, 333 years would be necessary. Placed one upon another the papers would reach to the height of 80,000 meters. Assuming that a person devotes five minutes a day to reading his paper, the time used by the entire population of the world in reading newspapers each year amounts to 100,000 years.

In H.B.M.'s Court, on Thursday, before Mr. R. G. E. Forster, Acting Assistant Judge, Ole Otterbeck, a seaman belonging to the British ship *Lord Wolseley*, was charged with absence without leave from his ship from the 13th to the 16th inst. The charge was proved and accused sentenced to four weeks' imprisonment, and costs; to be put on board his ship should she leave port before the expiry of the term.

It is understood in the Straits that the Samuel Syndicate, which is now about to exploit South Borneo for oil, is prepared to spend a quarter of a million sterling on the work. The European staff numbers 40, of whom 33 are skilled American or Canadian oil prospectors. There are quantities of boring machinery now on the spot, as well as five miles of metre railway which will be used to take the machinery about the country, as required, the rails in rear being picked up and laid ahead again at a rapid pace as the rolling stock with the machinery and stores is moved on. The steamer *Craffie*, which unfortunately sunk the Norddeutscher Lloyd *Elbe* in collision in the North Sea, is to act as tender to the syndicate, and will run between Kotie and Singapore at intervals.

It seems that the immediate cause of Bishop Bickersteth's death was pneumonia, following a recurrence of his old Indian malady. Referring to the death of the late Prelate, an English journal says:—Bishop Bickersteth did much to consolidate and build up the work of the Church in Japan, and, although he took a hopeful view of the future of Christianity in that country, he was by no means insensible to the dangers which beset missionary effort amongst so philosophic a people. He recognised to the full that it would not be wise to force upon the native Church there the full system of the Anglican Prayer-book, and he was prepared to grant the Church a wide discretion in matters which do not belong to the essentials of the faith. He was a missionary statesman, and, although since he went to Japan three additional bishops have been consecrated to supervise the work in other parts of the country, his loss will be keenly felt, and his place will be hard to fill.

The popular impression of a Girton girl, according to R. S. Warren Bell in the *Windsor Magazine* for August, is that she is a wan and pale young lady, that she wears spectacles, that she is a mere bundle of nerves, and that, somewhat in the manner attributed to Ophelia, she wanders round muttering snatches from Greek plays or cudgelling her wearied brains for solutions of mathematical problems of abstruse kind. That this idea is mistaken, it is hardly necessary to point out. The Girtonian is little more than a big schoolgirl; when she is not working she is playing or talking hockey, cycling, golfing, or drinking tea, which is invariably made very weak (this is one of Girton's unwritten laws); she is blessed with an excellent appetite; she goes to bed early and gets up early; and there you have the average "Varsity woman in a nutshell. Each student has two rooms, these being connected by folding doors. Residence at Newnham is said to be cheaper than at Girton, and yet Girton—on paper—appears to make no inordinate charges for maintenance and education. The fees come to £35 per term, and this sum is an inclusive one, there being at a ladies' college few of those extra disbursements that are too often a sore trial to the needy undergraduate. Speaking roughly, a career at Girton costs about £100 a year. And when it is taken into consideration that the establishment is self-supporting, it must be

admitted that these terms are exceedingly moderate. A visit of a few hours' duration to Girton leaves a vague impression of endless corridors, bright little rooms, green lawns, and packed bookshelves in one's mind. I quitted Girton wiser than I entered it. I saw that there the famed blue-stocking is non-existent; that the muscles are cultivated quite as much as the brain, and that the students seem to be profoundly contented with their lot, each one being blessed, apparently with that truly enviable possession, a sound mind in a sound body.

Mysterious stories are being whispered in City shipping circles, says the *Westminster Gazette*, concerning the loss of the *Aden*. They are to the effect that the fact of the vessel being ashore on Socotra was known to a few fortunate shipping men with risks to insure before the public had any inkling of the cause of the ship's delay. The question, of course, arises as to how the favoured few could secure the information. The steamer *Volute*, an oil tank boat, owned by the Messrs. Samuels, reported having seen an abandoned ship ashore on Socotra, and the Liverpool steamer *Logician* made a similar report. In neither case were the officers of the reporting ships able to distinguish the name or any funnel mark about the wrecked vessel, although, oddly enough, a survivor of the *Aden*, writing on board the *India*, on his way home, said he and his fellow-sufferers on board the wreck saw an oil-tanker of the Shell Line, to which the *Volute* belongs, pass them about a mile away, and that they waved sheets in an unsuccessful attempt to draw attention. But this is a point of, comparatively speaking, side issue to the business world. What the City man ponders over is the oddness of the fact that between the date of the *Aden's* going ashore and the publication of the news of the disaster in London, large reinsurance companies are said to have been effected at Lloyd's, in some cases at very ordinary premiums.

The *Shanghai Mercury* has gathered the following account of the British fleet manoeuvres in the north this year:—H.M.S. *Immortalite* was one of a number of men-of-war engaged in defending the harbour against the entrance of the two newly arrived torpedo boat catchers *Handy* and *Hart*. The rest of the fleet were in readiness in the bay and in convenient positions anticipating an attack, which was made shortly before midnight. Search lights were used, and the attacking steamers were duly located completely enveloped in smoke, but not before they had dodged past the first line of defence and were well into the harbour. They were immediately fired upon and sunk (in imagination). Other tactics were gone through and all were satisfactorily completed. The ships then steamed away in couples to various places along the Russian Tartary coast with orders to rendezvous at sea at noon on a given date and in a given latitude and longitude. This they did; and the scene of the fourteen vessels all steaming up within a minute of the arranged time from all four points of the compass spoke much for the excellent arrangements for mobility of British men-of-war in foreign waters. Orders were then given to assemble at Hakodate, where some fourteen ships duly arrived to date, and about 4,000 British jacks were let loose on the Japanese outpost. A couple of grog sellers arrived about the same time, from Yokohama, and also some Salvation lassies as a wholesome corrective. Both classes of caterers were well patronised by the men. The blue-jackets enjoyed themselves very much and their equestrianism astonished the natives. A couple of German men-of-war were in port, but left before the Naval Regatta, which was a matter for regret on all sides. The Regatta was a great success and totalling up the wins, honours were pretty evenly distributed throughout the fleet. On the whole the men behaved in an exemplary manner and gave the Japanese policemen not so much as the ghost of an opportunity of running them in. True, some Chinese aliens from the ships were locked up for gambling, but, like the little dogs Dr. Watts tells us of, "it is their nature to."

CORRESPONDENCE.

ROMAN CATHOLICISM IN ITS RELATION TO CIVIL GOVERNMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I did not intend to reply to Mr. Snodgrass' answer to my letter because he seems to me (may be I am mistaken) to be of a kind of upside-down turn of mind, the consequence of which is that he makes others say what they have not said, or gives to their words a meaning not intended by their author. His pamphlet, which I have now read, contains more than one illustration of this.

Even in his answer to my letter, after quoting the *resumé* I had given of the teaching of Leo XIII. with regard to civil power, he adds that Leo meant Papal power, which presently was out of the question. I cannot consider this as fair dealing and have no time to waste in discussion of that sort.

Now another protestant Missionary has thought it pertinent to step in, and ask the same question (Is the Pope supreme?) under another form. I will therefore try to answer the question in all fairness, and, I hope, without provocation of any kind. He quotes a few propositions contained in the "Syllabus," adding that this is a document that will settle the question, as it is a document, which, coming from the Pope, no Catholic can refuse to admit. Exactly so, and I would be the last to refuse it my assent, provided it be taken in its true sense, in the sense meant by the Catholic Church, and not otherwise. The Syllabus was a bold act, I confess, and at first elicited much comment even in Catholic circles; but a better study of the document soon cleared away all these divergences, and even many non-Catholic writers have long ago recognized the appropriateness of the Pontifical act.

I suppose I am not expected to take all the propositions one by one and explain them here. The thing has been done many a time, and those who would know more I can refer to Rinaldi, *Il valore del Syllabo*;—to Ruffini, *Il Syllabo e la Regola di fede*, etc. Confining myself to the two first propositions, 19, 20, as embodying all the rest, I think I will have answered sufficiently the principal question.

I must establish first what the doctrine of the Church is with regard to the two powers; the Church and the State. The words of our Lord Jesus Christ to his Apostles:—*Render to Cæsar the things that are Cæsar's and to God the things that are God's*—teach us that "there exists a two-fold order of things, and, at the same time, that two powers are to be distinguished on earth. The one, natural, which provides for the tranquillity of human society and human offices; the other, the origin of which is above nature, supreme over the City of God, that is the Church of Christ, divinely instituted for the peace and the eternal salvation of souls. And the offices of that two-fold power are in wisdom ordained that the things of God should be rendered to God, and that, in obedience to God, the things of Cæsar should be rendered to Cæsar." (Encycl. letter of Pius IX., 21 Nov. 1873).

By these words the Lord Jesus has shown to us that his followers, besides being members of the universal Church, are also members of some special human society or nation; that they are at the same time Christians and citizens, and have Christians' and citizens' rights and duties; that there are two distinct authorities, each to be obeyed in its lawful behests. This, I suppose, is being admitted by all.

Each of these two powers is, in its own sphere, equally independent, equally supreme. No one can interfere with the other's affairs. The State has nothing to do in spiritual matters and the Church absolutely nothing to do in merely temporal affairs. This last point has been most emphatically established by one of the greatest Canonists of our time, Cardinal Tarquini (a Jesuit, and consequently a man not likely to lessen Papal power). In his "Juris. Eccl. publ. instit." second edition, p. 48, he says:—"In all temporal things and in what has a relation to the temporal end, the church has no control in civil society." Pope S. Gelase (to cite only one) himself, in a letter to Emperor Anastase, says:—"With regard to the administration of public (Civil) affairs, the Bishops, knowing that the Imperial power has been given you by the disposition of God, obey they also, to your laws."

It is not true, therefore, that the Church is antagonist to the State and shows a tendency to encroach on the civil power. Whenever there have been any quarrels between Church and State, the latter was always the aggressor in meddling in things that did not concern it.

For the Church also is a power. She represents the divine Sovereignty and is commissioned by

God himself to teach and to govern in his name. Her authority, then, is His authority, and it is He that teaches and govern in her and through her. As such, and in all spiritual matters, she is absolutely independent of the State.

But should a conflict arise, as it may happen in mixed matters—that is in temporal matters—directly or indirectly connected with faith and morals, which of the two powers shall be supreme, the Church or the State? This so much agitated question, too often the cause of ill-feeling, is, no doubt, a difficult one. It seems, however, that to answer it, we have but to examine the nature of the two powers. They have been established to correspond to a two-fold order of things: the natural and the supernatural. The first has for its object the welfare of man during his mortal life; the second raises the whole being of man to the supernatural end of the vision and possession of God. To affirm therefore, as Catholics do, the supremacy of the Church over the State in all mixed questions, is but to express, in another way, the supremacy of the supernatural over the natural order, of the soul over the body, of man's eternal happiness over temporal welfare, which fundamental truth no Christian can deny.

But can this monstrous pretension—as it is called—be supported by Holy Scriptures? In the Acts of the Apostles, chap. V., 28, 29, I read:—"Commanding, we commanded you, that you should not teach in his (Jesus') name."

But Peter answering, and the apostles said:—"We ought to obey God rather than men." We must remark here that the priests and ancients were the magistrates of the Jewish nation and the Apostles represented the Church. Here is a conflict between the two authorities, and the Apostles judged that no notice should be taken of the prohibition to preach. Suppose a Government enacts such a law as my conscience reproves, as if, for instance, I am commanded to lie, to steal, to apostatize, who will pretend that the State, being supreme, I must submit? No one. He will say that there is a superior law, the law of God, against which no human law can prevail, and he will not obey. It is all very well when the law is so manifestly unjust: but in cases where there is room for doubt, who is to determine whether the law is just or unjust? A great American philosopher, V. Brownson (art. War and Loyalty) has answered the question and I make no scruple to borrow from him:—

"Who is to determine whether the law is just or unjust? Not absolutely the State, for that would make the distinction between just and unjust laws nugatory, since the State, in enacting a law, decides that it is just; not the individual, for that would make the law depend on the assent of the subject for its legality, which cannot be the fact, if we are to have Government at all. We may answer the question by laying down the principle, that authority is always *presumptively* in the right, and the law *prima facie* evidence of justice. The *onus probandi* rests on the shoulders of the subject, who must prove the law to be unjust, before he can have the right to refuse it obedience. For this his own private judgment or conviction can never suffice. If he can allege nothing against the law but his own individual persuasion of its injustice, he is bound, by his general obligation to obey the laws, to obey it. No one, then, can ever be justified in disobeying on his own private authority. He must sustain his refusal to obey by an authority higher than his own, higher than that of the State, or else he will be guilty of resisting the ordinance of God.

"And where is this higher authority to be found? In the Scriptures? But if the Scriptures are interpreted individually they have no other authority than that of the individual who interprets them. Consequently none at all except if he can prove he has been divinely commissioned. Now the authority claimed and exercised by the Catholic Church is precisely nothing else but the assertion over the State of the divine Sovereignty which she represents, or the subjection of the prince to the law of God in his character of prince as well as in his character of man. That the prince or civil power is subject to the law of God, no man who admits Christianity at all dares question; and if the church be the divinely commissioned teacher and guardian of that law, as she certainly is, the same subjection to her must be conceded.

"This is called spiritual despotism. It is not the Catholic Church that establishes spiritual despotism; it is she, on the contrary, who saves us from it. Spiritual despotism is that which subjects us, in spiritual matters, to a human authority, whether our own or that of others. The Church teaches by divine authority; in submitting to her, we submit to God, she teaches infallibility; therefore, in believing what she teaches, we believe the truth, which frees us from

all falsehood and error, to which all men without an infallible guide are subject, and subjection to which is the elemental principle of all despotism."

The Rev. gentleman who writes from Nikko had done better to translate the propositions in their proper forms—the negative. It seems to be the same and yet is not; there are also inaccuracies, but there is no necessity to cavil at that. For his little sneer at infallibility, which of course he rejects as a monstrosity, I beg leave to offer him a few quotations only from German authors, as I think he is a German.

"Infallibility is the most important of all dogmas of Catholics: it is irrefutable." (Christlicher Diogenes, I liv. 44). "When in religion the starting point is a supernatural principle, one must necessarily admit that the Divinity who deigned to grant to man a revelation, will also take care that the meaning of that revelation be not abandoned to the arbitrary judgment of men: to reject that principle is to show inconsistency." (Stöcklin's Magazin, III., p. 83). "It is not without reason that it has been advanced that the Catholic system of infallibility is the only possible supernatural system." (Götting'sche Bibliothek, 1797, T. III., p. 721). "The mere statement of doctrines which must remain absolutely irrelevant to the control of reason is sufficient to put aside, as impossible, all appeal to reason for their interpretation and to demonstrate the truth of the Catholic system. For if God has really revealed these doctrines as necessary to salvation, their interpretation can be left but to a teaching authority always guided by the Holy Ghost and consequently infallible." (Leipziger Literatur Zeitung, 1829, No. 261). "If the end of all divine revelation is to give man not only practical truths, but also to assure him of the precise meaning of these truths, it obviously follows that the Christian Church who transmits them to him must be infallible." (N. Quartal schrift I, 2.)

I do not certainly give this as a proof of infallibility; but as all these quotations are taken from Protestant authors (and I could quote many more); they prove at least that, among the better educated class of Protestants, many think that, in believing the above dogma, Catholics are not after all so stupid as some imagine.

In one point, however, I agree with "A Protestant missionary." "That glorious statement that every legitimate power of a Government has its origin in the consent of those who are governed" did not arise from the Catholic Church. Never will she utter such a proposition, at least without a proper explanation. It does not require, indeed, long reflection to see that such a principle inculcated, such as it is, in the minds of nations, is far more dangerous for Civil Governments and the peace of the world than ever was the spiritual and temporal power of the Pope.

This letter is already too long, but I will not regret the time thus spent if only it can contribute to show where the real cause of dispute between Catholics and Protestants lies: it is a contest between authority and private judgment, nothing more, nothing less; a difference though, which, as long as it exists, will make reconciliation impossible and all other minor discussions useless.

They live at the two opposite poles; their fundamental principle is contradictory. Private judgment, which gives everyone the right to think for himself, to build a religion for himself, to believe or reject just what he likes, which refuses infallibility to the Church and arrogates to itself that privilege; such is the principle of Protestantism. To that principle—the only cause of disunion among Christians—Catholics oppose the principle of authority. They believe that the divine Founder of the Church did not abandon his children, leaving them to find their way as they could, without a teacher, without a guide, to prevent their going astray from the road to Salvation. Jesus Christ was God, consequently a "Wise person," who knew what he was doing when addressing his Apostles, he said:—"Going therefore, teach ye all nations, etc." (Matt. XXVI, 19). "He that heareth you heareth me."—Luke X, 16).

In submitting to the Church we submit to God and to God only. It has been said that this submission is the abnegation of reason. Nonsense. Reason does not, in submitting, fold her hands, close her eyes and take a doze, like a fat alderman after dinner, but keeps wide awake, and exercises her highest powers, her most sacred rights, according to her own nature. Catholics are not idiots.

Yours truly, A. PETTIER, Miss. Apost.
[We have to apologise to Mr. Pettier for erroneously styling him "Vic Apost." when inserting his last letter.—Ed. J.N.]

"DUTCH COURAGE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to ask you through the columns of your paper, whether the Japanese word *okubyō*—cowardice, pusillanimity, etc., can also mean "false or temporary courage inspired by or as by intoxicating drink; also the drink itself." The words last quoted are from the "Standard Dictionary" as its definition of *Dutch Courage*, which last expression you give as one definition of *okubyō* in your "Unabridged Japanese-English Dictionary." Now if the above can be the meaning of the Japanese word in question, should you not have given this definition of it in so many words before giving the definition of "Dutch Courage"? As it stands in your Dictionary, the natural inference is, to those who do not know the real meaning of "Dutch Courage," that the Dutch (Hollanders) as a nation are proverbially cowardly, pusillanimous, effeminate; epithets which the history of Holland in her dealings with other nations decidedly marks as false and slanderous. Hence, will you kindly state publicly in your paper, either that the Japanese word *okubyō* bears this meaning of "Dutch Courage" as properly defined, or, that this particular definition of *okubyō* is a mistake?

Yours truly,

A DUTCHMAN.

Nagasaki, Sept. 7th, 1897.

[Emphatically it is a mistake. "Dutch courage" means courage inspired by gin, or Dutch liquor, and has nothing whatever to do with the courage of Dutchmen. *Okubyō* can never, so far as we know, mean "Dutch courage." To give such a definition to it is a gross blunder. It may interest our correspondent to know that the words "Dutch courage" were deleted in the proof by the writer of this note. They had evidently been inserted under some misapprehension. But either the printer by neglect, or another authority by design, preserved them.—Ed. J.M.]

DISCOVERY OF ANCIENT MANUSCRIPTS IN CENTRAL ASIA.

A correspondent in Kashmir sends the *Globe* the following:—The sand-buried cities of the Gobi desert have already yielded up several documents of great philological and palaeographic interest. The vicinities of the Chinese town of Kachar have lately added to the Sanscrit leaves which are known to Orientalists as the Bower manuscripts. Dr. A. Rudolf Hoernle, Principal of the Calcutta Madrasah, is now engaged in deciphering a curious collection of papers that will probably become known as the Godfrey and the Macartney manuscripts. The manner in which the former of these two sets was acquired illustrates a not unpleasant trait of Eastern character. Some years ago the country of Ladak, through which the chief trade route from Kashmir to Chinese Turkestan runs, was visited by serious floods. The British Commissioner of Ladak, Captain S. H. Godfrey, while travelling there, fell in with a party of Afghan merchants journeying northwards. Their caravan had been stopped by the destruction of the bridge that spanned a deep and rapid river. Capt. Godfrey succeeded in replacing this bridge, and the merchants with their convoy of coral and valuable Indian products, resumed their interrupted expedition to Yarkand. The caravan leaders inquired whether there was any way in which they could make a return for the services they had been rendered. They were asked to procure if possible specimens of the old books which were popularly said to be occasionally exhumed from among the ruins of certain buried cities in Chinese territory. The gratitude of the Afghan merchants seems to have been real. About a year afterwards a parcel of ancient manuscripts, said to be early Tibetan records, were dispatched to Captain Godfrey from Khutan, and reached India safely. They were eventually placed in Dr. Hoernle's hands. The documents are reported to be very fragmentary, but it has apparently been ascertained that some of them at least are of Sanscrit origin.

The Macartney manuscripts are believed to have been purchased in Kashgar, and to be written in the Nagri character. Neither of the two sets has yet been translated. The Russian Government have in their possession similar specimens to those obtained by Captain Godfrey and Mr. Macartney. A translation or some account of these strange records should prove of scientific value, and it is to be hoped that Dr. Hoernle will publish his investigations of their contents. The philologists of both Great Britain and Russia will have a common interest in endeavouring to throw light upon relics which might show traces of a Central Asian colonisation of the Gobi desert older than the Norman Conquest or the establishment of the Romanoff dynasty.

AQUATIC SPORTS AT YOKOHAMA.

Never particularly lively, the annual water sports of the Yokohama Amateur Rowing Club this year surpassed all previous records for dullness and lack of interest. Slow, unutterably slow; were all the events from start to finish, and this despite a large attendance of members and a verandah overflowing with gaily dressed ladies. Friday evening was perfect for such an affair, the water being without a ripple, while the air was balmy; the water, however, was chilly. A band was in attendance and discoursed a variety of selections, including the following:—

PROGRAMME.

- 1.—The Gladiator March Southwell.
- 2.—Overture Z. Op. Die Schone Galathie Suppe.
- 3.—Grand Fantasia "Fidelity" Jaxone.
- 4.—Potpourri, Soldier's Life Bela.

At the conclusion of this series, a number of dances were given, but the numbers taking part were very limited, as compared with previous years. The prizes were neat match-boxes of hammered silver. The Committee were:—

H. C. Litchfield, President; F. J. Hall, Captain; W. W. Campbell, J. MacArthur, H. R. Main, G. C. Murray, G. Phillip, J. B. Rentier, M. Schellenberg, Hon. Treas., and H. E. Hayward, Hon. Sec.

Details:—

BATH TUB RACE.

H. Y. Irwine 1 | H. Lee 0
E. H. Irwine 2 | H. Goddard 0

Four started on this adventurous voyage "out and home," in the most homely of tubs with carpet-brooms for propellers. Lee was the first to capsize, but the other three kept on and rounded the stake-boat almost together. Goddard left the company of the tubbers near the end of the sea-wall, leaving the race to the Irwine brothers. Harold slowly overhauled Eric and then brought his "coracle" home first by a long distance.

TOURNAMENT.

FIRST ROUND.

H. Lee beat H. Y. Irwine.

This was sharp, short, and decisive, Irwine's resistance being of the slightest.

S. H. Kuhn beat W. Goddard.

Goddard succumbed to a neat prod planted right under the chin.

H. F. Arthur beat A. Kingdon.

Arthur forced Kingdon back into the boat and then followed on to his rival's quarter deck much to his own surprise.

J. M. Carst beat M. Sakamoto.

This was the best bout of the round, both men refusing to knuckle under to any ordinary "jabs."

SECOND ROUND.

J. B. Gibbs beat S. Kuhn.

A very fair fight was made before the youngster went overboard, though the result never seemed doubtful.

H. Lee beat H. F. Arthur.

Arthur seemed rather confident at the outset, but Lee had little difficulty in brushing him aside.

SEMI-FINAL.

J. M. Carst beat J. M. Scott.

A capital encounter, perhaps the best of the whole tourney, Carst getting in some capital strokes. J. B. Gibbs beat H. Lee.

Lee's luck seemed to have deserted him by this time for Gibbs had very little trouble in disposing of his man.

FINAL.

J. M. Carst beat J. B. Gibbs.

Gibbs was handicapped by having the services of a poor water man in his punt, and in the end he fell out more through bad balance than from the assaults of his rival.

GREASY POLE.

H. F. Arthur 1 | A. Kingdon 0
J. B. Gibbs 2 | S. H. Kuhn 0
W. Goddard 0 | H. Lee 0
H. Y. Irwine 0 | J. M. Scott 0

Eight entered for this event, from which, for reasons of humanity, the duck was eliminated this year. Arthur eventually collared the flag, Gibbs being a good second.

WATER POLO.

RED. H. E. Hayward (Capt.) 0
W. Goddard 0
E. H. Irwine 0
H. Y. Irwine 0
W. M. Carst 0
S. H. Kuhn 0
M. Sakamoto 0
W. T. Crane 0

WHITE. H. Goddard (Capt.) 0
H. A. Poole 0
H. F. Arthur 0
J. F. Drummond 0
A. Kingdon 0
E. M. Banby 0
J. M. Scott 0
H. Lee 0

White played with the tide in their favour and the sun on their backs. For the first few moments White pressed; then Red got the ball and worked it down, until Harold Irwine, playing on the side, secured it and with a skilful throw placed the leather between the posts. White then pulled together and had almost secured a goal when the whistle blew. Upon resuming, the teams changed ends and in the sequel to some brisk play, Hayward scored the second point for Red. H. Goddard at this point retired owing to cramp, while a little later A. Kingdon had to be helped aboard the barge from a similar cause. Thus weakened the White side could do little in defence and Harold Irwine had little difficulty in scoring the third and final goal for Red, who thus won by three goals to nothing.

SAMPAN RACE.

A. Kingdon 1 | J. E. Moss 0
J. M. Scott 1 | W. Goddard 0
W. Carst 2 | H. F. Arthur 0
L. Sallabelle 2 | F. L. Elliot 0
H. Lee 0 | J. F. Drummond 0
S. H. Kuhn 0 | H. Y. Irwine 0
H. Goddard 0
E. H. Irwine 0

The moon had long been up when this race started. Sakbelle was winning easily when his boat became unmanageable and struck the end of the pontoon. Before he could start afresh Kingdon and Scott came in and secured the gun.

LEPROSY IN JAPAN.

Dr. Day, medical officer of health at Honolulu, whilst investigating the working of the quarantine regulations in this country, also paid some attention to the subject of leprosy. In an addendum to his report, recently submitted to the Honolulu Board of Health, he says:—"Leprosy, unfortunately, is common enough, even in the large cities. No attempt is made by the Japanese Government to deal with it. In fact, the disease is ignored by the Government, just as consumption is, but public opinion deals with it almost as effectively as the Government might. The people fear the disease and force the lepers to live by themselves, apart from other people. They are outcasts, and for the most part beggars."

"In conversation with Dr. Kitasato, at Tokyo, I learned that in Japan the disease is not considered contagious, but is looked upon as hereditary. The doctor said he is working constantly upon the problem of an anti-toxin for leprosy, but so far without results. The treatment most in vogue amongst the Japanese for the relief of the disease is hot bathing and moxa. The moxa are closely applied over the tubercles and leprosy patches until they are completely covered with the canterizations. Some faces look like cases of recent confluent small-pox, the scars are so close together, and cover such a broad area. The treatment is considered valueless unless from 10,000 to 50,000 are used."

"The Kitasato Springs have the greatest reputation of any of the many hot springs for the relief of leprosy, and about 400 new cases come for the baths every season."

"Kusatsu is a pretty village, nesting in a valley near the foot of Shiranesan, an active mud volcano. There are many hot sulphur springs in the village, which probably have a common source, as the chemical analyses are almost alike."

"It is customary for the patients to use the baths as hot as can be borne. I have seen Japanese in water of 128 deg. F., but most foreigners do not use it hotter than 118 deg. They bathe from three to eight times a day and remain in the water about three minutes each time. After continuing the treatment from ten days to two weeks it causes a very troublesome eczematous inflammation of the skin which will pass away in three weeks if the treatment is persisted in, or can be promptly cured by resorting to the waters of Shibu Springs, 17 miles distant."

"The lepers, for they form only a small portion of the number of the invalids who come to Kusatsu for treatment, are obliged to live by themselves in the lowest portion of the village and to confine themselves to the use of one spring, the Gozanoya."

"Dr. Kondou, a Japanese physician, who lives in Kusatsu, thinks that the baths relieve the lepers, but do not cure them. He said he knew of three cases that he considered cured, but on further inquiry I found that the disease has remained stationary being paralysis and atrophy of the muscles supplied by the ulnar nerve. Nevertheless, the baths have an excellent reputation amongst the Japanese, and they certainly afford more relief in a short time than any treatment with which I am familiar."

BASEBALL.

Y. C. AND A. C. VERSUS "OLYMPIA."

On Saturday afternoon the deciding game in the series of baseball matches arranged between the Y. C. and A. C. and the U.S.S. Olympia took place. The weather was ideal, the heat of the sun being tempered by a pleasant breeze. The attendance of the general public was rather small, though the ladies' tent was well-patronised. Play began at five minutes past 3, Smith opening for Yokohama. He was caught on the fly before reaching first base. Merriman was second man in and was caught out by the catcher on the second ball. McChesney, third man in, obtained his first base on foul balls and his second and third by an overthrow from the field. Then Blake went in and got down to first base on the first ball. Morse followed in and had instructions to play a waiting game. He did so effectually, allowing McChesney to get home and score the first run; but Blake was left on third. Rooney opened for the Olympia, only to be caught at first base by Morse. Whalen followed and took his first base at the expense of the pitcher, and his second and third came through some wild overthrowing on the part of the field. Winslow, the third man in, took his first base, having been touched by the ball, but Thorne, who followed, was given out on strikes. Methfessel took a base on balls; and then the Olympia scored their first run. The next ball, the whole side were out; Blake making the decisive catch. Score, Yokohama, 1; Olympia, 1.

Bain went in to start the second innings of the home-side, but was given out on strikes. Azbill followed and obtained his first base easily. Vaughan was the eighth man in, and sending the ball down near third base, played it through the fielder's hands. Azbill profited by the blunder and got home—the second run for his side. Curtis filled the vacancy at the plate but was caught out on the second ball. Smith followed and got down to second base. Then Merriman secured a base, and Smith got in on an overthrow, to be followed by Merriman two balls later. McChesney was the next to get a base and steal another, but lost his third, the whole side thus going out. Score, Olympia, 1; Yokohama, 5. Church opened for the visitors in the next innings and provided plenty of fun at the various bases, finally getting home on a capital hit to deep field made by Probert. Probert, however, was put out by a quick throw-in. Davis, next in, was caught before reaching first base, and Rooney never left the plate. Score Yokohama, 5; Olympia, 2. Blake started the next innings for the home team with a brilliant two base hit; Morse and Bain were, however, given out on first base; Azbill was caught in right field by Methfessel, and the side were out, Blake being left on third base. No change had been made in the score. The Olympia had similar luck in their innings, none of their players getting home. A three base hit was made in the next innings by Vaughan off his first ball, when following on. Curtis went out for nothing, but Vaughan and Smith got home on a well placed ball played by Merriman. Merriman had a run to his credit off the next ball. Before the innings closed the score had been taken to 12—the Navy were evidently "rattled." In the fifth innings of the visitors, Blake did a pretty piece of double play, putting out a man on second and another on third. Again a maiden innings resulted for the Olympia team. It was not until the seventh innings was started that luck came back to the visitors, when, owing to some good strikes and indifferent fielding, they made 10 runs, bringing their score level with the home side—18 all. But after this they made nothing, and the game closed with Yokohama the winner of the game—and the rubber—by 23 runs to 18.

MODERN JAPAN. — INDUSTRIAL AND SCIENTIFIC.

THE CHANCES OF THE FOREIGN ENGINEER.

As pointed out in a former article of this series, there is now—and there must be for some time—a dearth of experienced native engineers in this country; for engineering requirements have been increasing with such rapid strides that the supply of thoroughly-trained men in this profession has not been able to keep pace with the demand. It must be borne in mind that modern technical education in Japan, on anything of a scale, only dates back a short time. But it is not theoretical training now that is wanting; but, from force of circumstances, the practical side of the engineer's education has been neglected.

On the other hand, the foreign engineer does not stand any chance whatever of remunerative employment in Japan; for the Japanese, in their crusade against the foreigner, admit that it is their policy to discourage him by every possible means. Foreigners may be utilised to advantage as purchasers of Japanese products, and for providing Japan with what she cannot make for herself, but, apart from this, they are not wanted.

The Japanese, who are nearly always logical, even when outsiders do not approve of their logic, and when the carrying out of their logic is injurious to themselves, will not have the foreigner at any price. They far prefer to put an inexperienced Japanese at the head of some important engineering enterprise than a thoroughly competent European. This, no doubt, is an expensive way of doing business, but, in the long run, I have no doubt that it will work out its own remedy. When I came to this country my instructions were to write: first, on the development of engineering work in Japan; secondly, on Japan as a market for British engineering products; and thirdly, on Japan as a field for the British engineer. On the first two points there is a great deal to be said, but with regard to the third, all that one has to say can be summed up in a very few words, viz., that, for the reasons given above, there is no field for foreign engineers out here at present, nor can one see any prospect of there being one in the future. For every year will increase the professional experience of the native engineers, and no one who knows anything about the Japanese can deny their great aptitude for absorbing knowledge and for profiting by experience.

Just now are the palmy days for young engineers in this country. They must be likened to that period, some fifty or sixty years ago, when in Great Britain the railway system began to develop with rapidity, and when, in consequence, anybody who could handle a theodolite and had a smattering of mathematics became, by a species of evolution, an "engineer," and was sure of profitable employment in that capacity. The situation here to-day differs, however, from the above state of things, in that the English ready-made engineers which were forthcoming at the time did not so much lack practical knowledge as they did a technical education; whereas, with the Japanese of to-day, the situation is reversed. It is probable that the system of technically educating engineers in Japan will bear comparison with that of any country in the world, and is certainly at the present day far superior to anything of the sort to be found in Great Britain, or elsewhere, half a century ago. Then, again, when railways in Europe were developing, people had to feel their way, and to go slowly in consequence, for there were no data to refer to, and no people with a higher knowledge to call in in case of emergency. With Japan, however, at the present time, it is a comparatively easy matter to start a railway company, and still more easy to purchase the necessary materials from abroad.

Thus it is that the business enterprise of the Japanese is just now running ahead of their capacity for coping with it, and it is for this reason that inexperienced students find themselves directly they leave college in good and remunerative employment at an age when in most countries such youths would be going through the drudgery of practical work with an engineering firm, or serving in the drawing office of a civil engineer, or, at the best, being employed on a small salary in a very subordinate position on some big engineering contract.

While there is no doubt that the foreign engineer is at a very great discount in Japan at the present time, it must not be imagined that his influence is not felt, nor, indeed, that his experience is not invoked, continually. For the London advisers of the Japanese are thoroughly competent men, and their handiwork in the way of designs, and so forth, which they have made and sent out to this

country, is traceable in almost every big engineering enterprise that is carried out here. And such will necessarily be the case for many years to come.

It is a continual cause of complaint by the foreigner here that the Japanese never demonstrate any gratitude for what the foreigner has done for the country. But while it is quite true that a foreign engineer seldom gets much, if any, honour and glory for his achievements in the way of modernising Japan, he has nearly always been extremely well paid for his work. For when the Japanese have considered that they require outside advice, they have been willing to pay for it. No doubt many people give the Japanese credit for originating and designing many things which have actually been worked out by foreigners, or directly copied from foreign designs. But in the first case such work has not been carried out by the foreigner from purely philanthropic motives, but from a business point of view; and in the second case there is not a civilised country in the world which does not copy from its neighbour, if it considers that there is any advantage to be gained by so doing.

English engineers must not build up any great hopes of employment in Japan when the new treaties, which are said to open up the country to the foreigner, come into force. For though, on the face of it, it might seem that a great many openings for foreigners would follow in consequence, such openings will not come in the way of engineering employment. It may, and I have no doubt will, do a great deal of good to commercial people; but the only chance for the foreign engineer would be in the event of a large number of foreign enterprises being started here.

But I can see no likelihood of the treaties having this effect, as the working of them, more particularly prohibit foreigners from establishing themselves industrially on any large scale. Then, again, in a few years' time there is no doubt that there will be a far larger supply of efficient Japanese engineers to compete with the foreigner seeking employment in this direction; and foreign employers out here would probably give the former the preference, from the point of view of the smaller salaries they would require. For it is not brains nor intelligence that the Japanese engineer lacks, but merely the necessary experience, which will come with time.—Special Commissioner of the Engineer.

PHARAOH AND THE SERGEANT.

Consider that the meritorious services of the Sergeant Instructors attached to the Egyptian Army have been inadequately acknowledged. . . . To the excellence of their work is mainly due the great improvement that has taken place in the soldiers of H. H. the Khedive.—Extract from letter.

Said England unto Pharaoh, "I must make a man of you,
That will stand upon his feet and play the game;
That will Maxim his oppressor as a Christian ought to do."

And she sent old Pharaoh Sergeant Whatisname.

It was not a Duke, nor Earl, nor yet a Viscount—

It was not a big brass General that came;
But a man in khaki kit who could handle men a bit,

With his bedding labelled Sergeant Whatisname.

Said England unto Pharaoh, "The" at present singing small,

You shall hum a proper tune before it ends."

And she introduced old Pharaoh to the Sergeant once for all,

And left 'em in the desert making friends.

It was not a Crystal Palace nor Cathedral;

It was not a public-house of common fame;

But a piece of red-hot sand, with a palm on either hand,

And a little hut for Sergeant Whatisname.

Said England unto Pharaoh, "You've had miracles before,

When Aaron struck your rivers into blood;—

But if you watch the Sergeant he can show you something more;

He's a charm for making riffmen from mud."

It was neither Hindustani, French, nor Coptic;

It was odds and ends and leavings of the same,

Translated by a stick (which is really half the trick),

And Pharaoh hearkened to Sergeant Whatisname.

There were years that no one talked of; there were times of horrid doubt—

There was faith and hope and whacking and despair—

While the Sergeant gave the cautions and he combed old Pharaoh out,

And England didn't look to know nor care,

That is England's awful way o' doing business—

She would serve her God or Gordon just the same—

For she thinks her Empire still is the Strand and Holborn Hill,

And she didn't think o' Sergeant Whatisname.

Said England to the Sergeant, "You can let my people go!"

(England used 'em cheap and nasty from the start)

And they entered 'em at Fiskeh on a most astonished foe—

But the Sergeant he had hardened Pharaoh's heart

That was broke, along of all the Plagues of Egypt,

Three thousand years before the Sergeant came—

And he mended it again in a little more than ten,

So Pharaoh fought like Sergeant Whatisname!

It was wicked-bad campaigning (cheap and nasty from the first).

There was heat and dust and coolie work and sun,

There were vipers, flies and sandstorms, there was cholera and thirst,

But Pharaoh done the best he ever done,

Down the desert, down the railway, down the river,

Like the Israelites from bondage on he came,

'Tween the clouds o' dust and fire to the land of his desire,

And his Moses it was Sergeant Whatisname!

We are eating dirt in handfuls for to save our daily bread,

Which we have to buy from those that hate us mos',

And we must not raise the money where the Sergeant raised the dead,

And it's wrong and bad and dangerous to boast,

But he did it on the cheap and on the quiet,

And he's not allowed to forward any claim—

Though he drilled a black man white, though he made a mummy fight,

He will still continue Sergeant Whatisname—

Private, Corporal, Colour Sergeant, and Instructor—

But the everlasting miracle's the same.

—Rudyard Kipling.

SOCIAL DYNAMITE IN CHINA.

Within the past six or seven years foreigners living in parts of China widely distant from one another, have had univalued opportunity for studying the evolution of those forces which, when fully developed, make formidable mobs, and inflict terrible damage. Within the past few months a fresh illustration has been afforded us, which, so far as we know, differs in some essential particulars from any of its predecessors.

In the month of June the railway from Tientsin to Peking was completed, and the capital was full of tales about children buried under the ties and slain to solidify the bridges. The rehabilitation of the old Roman Catholic cathedral at Tientsin, by special agreement with the Chinese Government, violently angered the people of that inflammable city. The gravity of the situation there was such that effective precautions were at once taken by the foreign Consuls, and the Chinese officials bestirred themselves in a way to do them great credit. Had the rulers of Tientsin last June been of the same stamp as those in 1870, there would almost certainly have been an outbreak, albeit foreigners were forewarned this time as they then were not. By numerous ruthless (and probably unjust) exertions in the district *yamen*, the people were held perfectly in control, so that the trouble may be said to have been quite nipped in the bud, and, with the exception of some rudeness to foreigners, there were no cases of a serious character requiring foreign interference. The Chinese officials acted

promptly and efficiently. Tientsin is the commercial centre of a large part of the four northern provinces, and is connected with three of them by numerous waterways along which social influences are easily and rapidly propagated. That vague rumours of something wrong in that metropolis should get abroad was inevitable. But the celerity of the transmission, as compared with the slow progress of mis-called "intelligence" in the time of actual war, a few months previous, was a surprise to every one. Not only so, but compared with kidnapping minors, the war news excited at best but a languid interest, even on the part of those who had some dim idea of what was going on. This was well illustrated by a Tientsin servant who had been informed by his mistress of the terrible battle of the Yalu, and the extinction of the Chinese navy. He received the news with interest, but after a moment's consideration said decisively, "they were not my boats!"

The Chinese have from antiquity been familiar with the kidnapping of women and children. The former goes on all the time even in quiet neighbourhoods, but the kidnapping of a woman implies her co-operation for its successful issue, otherwise she gets away, and the price is a loss. It is otherwise with children. At first the untutored foreigner finds it hard to imagine what boys are kidnapped for, when they are to be had everywhere in such plenty. It is probably true as alleged that a good many are annually swept off from Tientsin in the grain junks which go South after discharging cargo. Of these children some are treated with horrible cruelties to make them objects of commercial value. Some are clamped between parts of a split jar, with the head alone protruding, and are kept in this horrible posture permanently. This makes them little dwarfs with big heads, and such monstrosities can be exhibited at a large profit. There are children whose feet have been made to drop off by having the ankles girdled with fine wire kept tight. These may, at any time, be seen in the large cities as beggars. There are many ways in which small male children may be made objects of commercial value, but what becomes of kidnapped girls it is unnecessary to mention.

The Chinese seem to be unemotional and, to the last degree, a practical race. Under appropriate conditions they are most excitable, and conditions like those to which we have but alluded, amply explain the passionate excitement on the part of Chinese influenced by Tientsin.

During the second week in June the excitement in and about Tientsin over alleged cases of kidnapping amounted to a literal frenzy. It was currently reported there, with what truth we do not know, that several persons had been executed at the hands of the officials on the charge of complicity with these proceedings. Chinese magistrates neither know nor care anything about the laws of evidence, and in cases of this sort, there may be said to be a hundred chances to one that a friendless and unprotected man would be summarily dealt with, on the general principle of allaying popular feeling. At such a time some one must be sacrificed, and the possibly guilty man is the victim. But aside from those judicially murdered, it is supposed that at least six men were killed by mobs in and about Tientsin during the prevalence of this fatal mania. One of them was said to be a jirnikisha coolie who merely accosted a child. In *The North China Magazine* for August, a periodical published by the North-China Tract Society, there is a long and interesting article written by a native colporteur who was set upon by a crowd of loafers and ruffians in the northern part of the suburbs of the city of Tientsin, charging him with being a "Kuai tze" or kidnapper. His escape from the mob who threw stones at him, plastered him with mud and filth, and were about to tie him up and fling him into the river, was due to the timely arrival of soldiers who heard of the disturbance. After examinations by different officials, being made on one occasion to take two doses of his cough medicine in tea, and on another occasion five to show that it was not a poison, and after being ordered up to show his genuineness as a colporteur by reading and explaining in open court the fourth chapter of Acts—a most happy choice of the officials—he was at last released. In the villages about Tientsin Chinese who were known to have any connection with foreigners were reviled, had their houses searched, and were sometimes beaten. The impulse of excitement was propagated along every line of travel, like a tidal wave in the Pacific Ocean due to a South American earthquake. It seems to have been felt everywhere, to a distance of hundreds of miles from Tientsin. In all cases the old stale stories of eyes and hearts dug out for foreign use were revamped, and found ready credence. All the district magistrates issued proclama-

tions, and many of these were phrased in such a way as to inflame the people to madness. They were at once to seize every one who could not give an account of himself and to deliver him to the *yamen*. This was, of course, construed to mean that ordinary legal protection to human life was at an end, which was certainly the case. Specific cases were reported to foreigners living in different neighbourhoods, illustrating all forms of violence. In one instance a man who was listening to the hearing of a law-suit in open court was accused by a military attaché of being a "Kuai tze" on the ground that his clothes were of an unusual colour. The accused man was a returned soldier with a bundle of clothing to be pawned but he injudiciously banded words with his questioner, was at once accused to the official, who tried him on the spot and condemned him to be imprisoned in the "cage," which is one of the most horrible of the many illegal Chinese instruments of torture. In this rack, where he can neither stand nor sit, nor lie, unable to touch more than his toes to the ground, the accused is suspended by his head, exposed to the fierce rays of the dog-days' sun, slowly starving to death, reviled by every passer by, and pitted by no one. In this case bondsmen from the village of the accused came forward, but being snubbed by the magistrate, became frightened and left their townsman to his fate. In the prefectural city next to the one in which this happened another man was similarly treated by the prefect because he was from a distant province, did not speak clearly nor quickly and was, of course, a "Kuai tze." He was thus tortured to death on the third day. A woman on the way to a relative having engaged a lad to carry a heavy bundle, was set upon and half killed regardless of all explanations, till found by one who knew her in time to save her. In still another case, a half-witted man who was going somewhere, and who happened to be followed by a boy at some distance, was set upon by some rustics who were hoeing their fields, and after a few incoherent replies, he was dispatched with a hoe and his body flung into the Grand Canal. Considering the density of the population in the wide region affected by these rumours, it is not perhaps too much to estimate that hundreds must have been murdered outright, and many other hundreds grossly wronged, all on account of an excitement as baseless as a dream. Forces of this sort existing in Chinese society cannot be ignored, and ought not to be misunderstood. They do not indicate that the Chinese are worse than other races, nor even that they are necessarily more ignorant, although they often are so. They are a highly passionate people, and so also are we. Nothing that has here been mentioned cannot be more than paralleled in English-speaking countries, and even in this particular year of grace lynching goes on in many parts of the United States, even in the older and more "civilized" portions, while strike violence in England and the colonies: race, antipathies and race hatreds, wherever an adequate opportunity is given for their evolution, make our house so conspicuously full of glass, that it is not safe to throw many stones.

Nothing but a slow and a progressive enlightenment will free China from the dangers to which she is exposed from these dynamic forces of evil. The same enlightenment is needed wherever man has to do with his fellow. Whatever tends to promote such enlightenment should be sedulously encouraged. Whatever hinders it should be frowned upon and put away.—*N. C. Daily News.*

THE REFINING OF CHINESE OPIUM.

In the network of villages north-west of Swatow lies Saleng, about 20 miles distant from the Treaty Port. It is easy of approach by one or other of the numerous creeks which run in bewildering numbers northwards from Swatow, and is sheltered on its northern side by hills which afford cover to a few wild goats and porcupines. A small factory has been established at this spot with native capital and under native management. The object arrived at is to refine native opium so that it will be able to compete on even terms as regards appearance, smell, taste and strength with the foreign drug. If this can be attained then, it is stated, the refined native article will be placed on the market at a price against which foreign competition will be impossible. The idea of refining native opium has originated with some Chinese traders who have seen a little of the world as far as the Straits Settlements. The local merchant who has been abroad returns with larger ideas, at any rate as far as trade is concerned, and would no doubt strike out new commercial lines for himself were he sure of non-interference.

But he knows that he is regarded by his officials as a legitimate source of plunder and he is accordingly inclined to run in the old grooves unless he has some connection with the local foreign firms.

Handsome houses have been built in Saleng and the neighbouring villages and others are in course of erection. They are the property of Chinese engaged in business with Hongkong and the Straits Settlements. These men live retired lives and are seldom interfered with, for their travels abroad have emboldened them to dangle the terrors of the British flag before the eyes of would-be spoilers. Also, small sums judiciously distributed among *yamen* underlings have hitherto kept these wolves from the door.

To return, however, to our opium refinery. There are no chimneys belching forth black smoke, no ring of metal, no busy hum of voices, only a large Chinese house in a secluded nook with a score of Chinese women busily engaged in damping and singeing white poppy leaves. This process unites the leaves, which form a layer wherein to wrap an opium ball. One cash represents the emolument for the labour thus expended. The work is light and an active woman could probably earn \$4 to \$5 a month, but her wage-earning capacity is limited not by the work she can do but by the amount she is required to do.

The opium is refined in rooms on an upper floor. The manager was very nervous that we should get scent of his refining "medicine" and did not wish us to ascend and see for ourselves. The process, however, is simple. The native opium, which is in the form of tiles or slabs, is heated in iron pans under the supervision of an Indian workman. The dirt and other foreign ingredients are gradually eliminated as far as possible and the residue is then doctored. The refined opium is afterwards moulded into balls, of about 6lbs. each, which are covered with a wrapping of dried poppy leaves so as to retain the smell and strength. The medicine is said to be a prescription of the manager, who once kept a dispensary of foreign and native drugs in Penang. The Indian workman is not an "expert." He receives \$10 a month and will no doubt be superseded by Chinese who have by this time already learned the tricks of the trade, such as they are.

The manager, who is also part proprietor, is very sanguine of success and intends placing his goods on the market as soon as they shall have matured. A small quantity will be tried by way of experiment in the local opium divans during the coming winter. If the preparation be fancied by smokers it is expected that large orders will follow. The retail price will be, as far as it is possible to judge, about one-half that of the foreign article. It is estimated that about two balls of refined opium can be turned out monthly from the small premises at Saleng and any increase in the output can be met by additional capital. Some land near at hand has been sown with imported poppy seed and the leaves of these plants are used as coverings for the balls.

The establishment of the refinery is considered by the promoters as an experiment which, if successful, will enable native grown opium, to all intents and purposes similar to the foreign commodity, to be sold at a price which would preclude all idea of competition. Even if only partially successful there will be an increase in the demand for the native and a corresponding decrease in that of the foreign article.

The Imperial Maritime Customs collected 86 Taels 3,722,730 as duties on foreign opium in 1896. This represents a percentage of more than 20 per cent of the entire Customs Revenue. It is possible, therefore, that the Central Government may consider the duty on foreign opium so serious an item that, if native opium appears likely to completely displace its foreign competitors at a more rapid rate than it is doing at present, some arrangement will be made whereby the native will take the place of the imported drug in the Customs Returns. A steady decrease in the import of opium has been going on yearly, while the consumption of native opium has steadily increased, and the annual output is not less than five times the quantity of the foreign imports.

The want of ready money is pressing heavily upon both the central and provincial authorities. If, therefore, native opium can take the place of Indian it is reasonable to suppose that it will be subject to increased taxation. Theoretically speaking, of course, every encouragement should be given to the home grown product, but theories of this kind are very rarely worked out in practice in China. We have only to direct a glance at the tea trade, for instance, which is so hampered by direct and indirect burdens that it is being surely elbowing out of foreign markets by its Indian rival. It is also extremely unlikely that the use of opium, even if entirely home

grown, will ever be prohibited on moral grounds. Its consumption is too universal from the *yaméns* down to the coolie shops.

The Anti-Opium Society did once elicit an opinion from one of the best-known and most influential of Chinese viceroys that he considered opium to be the greatest curse ever visited upon his country. He omitted to add, however, that he was largely interested in the growth of native opium, which was being successfully cultivated on his own estates. This is but one example of the official attitude towards opium—public denunciation and private approval.

It remains to be seen, however, whether in the event of native opium being refined so as to compete on equal or approximate terms in quality with the imported drug, the consequent increase in the cost of the supply of the raw material and additional burdens in the shape of taxes and impositions will enable it to undersell its foreign competitors to any appreciable extent.—*N. C. Daily News.*

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE OPERATIONS IN EGYPT.

London, Sept. 9.

In consequence of the Dervishes having evacuated Berber, arrangements are in preparation at Suakin to make communication with the Nile forces. The Dervishes are withdrawing all their eastern posts.

THE DUKE AND DUCHESS OF YORK.

The Duke and Duchess of York have left Ireland, terminating their visit at Belfast, where they received an immense ovation.

THE RUPEE.

The Indian treasuries are receiving sovereigns and half-sovereigns at the rate of 1s. 3½d. per rupee.

GREECE, TURKEY, AND THE POWERS.

Sept. 10.

The Greek Government acquiesces in the foreign control of the revenues to meet the payment of the interest on the indemnity loan, but the Powers are still disagreed as to whether the first installment of the indemnity to Turkey shall precede the evacuation of Thessaly.

The recent proposal by the Marquis of Salisbury that Great Britain, Russia, and France jointly guarantee the Greek loan for the payment of the indemnity, and undertake the control of certain Greek revenues, has been accepted by the Powers.

The idea of raising the blockade of Crete has been abandoned owing to the opposition of Germany.

Russia, Great Britain, and Germany are unable to agree in regard to the indemnity question.

Germany and Great Britain have at length practically agreed upon a settlement of the indemnity question, the basis of the agreement being the Marquis of Salisbury's proposal for the evacuation of Thessaly, which has not been made subordinate to the payment of the indemnity.

COFFEE PLANTING IN NEW SOUTH WALES.

The Government of New South Wales is encouraging the planting of coffee in that colony.

SHORT TIME IN LANCASHIRE.

Two of the largest firms in Preston are working short time. Five thousand looms are affected, and the outlook is gloomy.

THE REBELLION IN CUBA.

The Cuban insurgent forces have captured an important fortified town, which has caused great excitement in Spain and the United States.

MINING CATASTROPHE.

A explosion of dynamite has occurred in one of the lower levels of a mine near Johannesburg, which resulted in great havoc to the works and the death of five white miners and twenty-five Kaffirs.

THE DONCASTER ST. LEGER.

The race for the St. Leger Stakes resulted as follows:—

Galtee More	1
Chelandry	2
St. Cloud	3
Silver Fox	4
Galeta	5

These five composed the field.

THE AFGHAN FRONTIER.

The troubles on the Afghan frontier are generally quieting and the gatherings of the hostile tribesmen are dispersing, the outlying posts having been relieved.

London, Sept. 14.

The Afridis, in great force, have been attacking all the British posts on the Samana range. They have captured the fort at Saragari, and are believed to have massacred the garrison, which consisted of twenty-one men. Generals Blood and Elles, with their respective columns, will advance into the Mohmaud country on the 15th instant.

Fifty-nine thousand men, with ninety guns, are now on the frontier.

THE FRANCO-RUSSIAN ALLIANCE.

There are varying reports in regard to the object and purport of the Franco-Russian alliance, one of which is that either is bound to assist the other whenever attacked, but not so if it declares war.

The *Times* Paris correspondent says that the leading subject that was discussed at the recent meeting at Peterhof was how best to paralyze the action of Great Britain if the latter joined the Triple Alliance.

THE BANK OF ENGLAND'S RESERVE.

London, Sept. 13.

The *Times* publishes an article, described as from a trustworthy correspondent, which states that the Bank of England has consented to hold one-fifth of its reserve in silver. The *Times* assumes that there are some weighty reasons of State for such a harmful and revolutionary measure, which would possibly stop the bimetallic supporters in the Government. The Bank of England has refused to confirm, deny, or explain the report.

The *Times*, in its money article, states that the one-fifth silver reserve scheme of the Bank of England is absolutely condemned in banking circles.

JAPANESE FINANCE.

An article in *The Times*, commending Japanese finance, concludes with the remark that Japan ought to find no difficulty in placing five per cent. loans on the European market.

LABOUR TROUBLES IN AMERICA.

Disturbances by striking miners have occurred in Pennsylvania, and the Sheriff, with a posse of Nagelton's men, fired into the crowd after the miners commenced hustling the Sheriff. The result was that 21 were killed and 41 wounded. The strikers are mostly Hungarians. General indignation is expressed at the action of the authorities.

THE BOMBAY SEDITION CASE.

London, Sept. 15.

Mr. Tilak has been sentenced to eighteen

months' rigorous imprisonment by the Bombay High Court.

[The Hon. Mr. B. G. Tilak, an additional member of the Bombay Legislative Council, was arrested in July last, brought before the Court in Bombay, and remanded on a charge of seditious writing in a native paper of which he is the editor. His publisher Kishan, and Mr. Kellar, another native editor, were also arrested and brought up on a similar charge, while two Brahmin inamdars, Sitar Natu and his brother Lalya Saheb, were arrested and afterward deported during the pleasure of the Government, for disloyalty.]

INDIA COUNCIL BILLS.

Tenders for twelve months' India Council Bills have been accepted at £97 5s. 3d.

THE NILE EXPEDITION.

The Egyptian troops have occupied Berber.

(FROM TONKIN PAPERS.)

FRANCE AND RUSSIA.

Paris, August 27.

The Czar and Czarina lunched on board the *Polhuau*. M. Faure proposed the toast of "The two friendly and allied nations fraternally united." The Czar proposed the toast of "The two friendly and allied nations, who are resolved to maintain peace." The farewells were most cordial.

Paris, August 28.

Enthusiasm is general in France. The public buildings have been decorated and will be illuminated on Tuesday on the occasion of the return of M. Faure. The French and foreign Press recognise the importance of the alliance.

Paris, August 30.

Paris is preparing to receive M. Faure worthily.

Paris, August 31.

On his arrival at Dunkerque M. Faure was loudly cheered.

2—P takes P, *en passant*, mate

2—P takes K1, mate

2—B to R 3, mate

2—R to K 8, mate

2—P takes P, mate

Correct solutions received from W.H.S., Nemo, P.E.F.S., and D.D.

BLACK.

1—P to B 4, ch

1—K1 to Q 3

1—Kt any other

1—Moves B

1—P to B 3

PROBLEM No. 338.

M. LISSNER.

This problem was composed by Mr. Lissner for the problem-solving tournament of the New York State Chess Association just concluded. Pillsbury secured a gold chess pin for handling in the solution after but six minutes' work:—

WHITE.

White to play and mate in three moves.

The match between the two masters, Bird and Lee, which we reported last week as having been won by Lee, has by mutual consent been pro-

longed to one of seven games up, and at the time the mail left the twelfth game had been reached. Lee has won six, Bud three, with two games drawn.

The British Chess Club has been dissolved and reorganized on a larger basis, in which chess is only a feature, though the principal one. Its new quarters are Carrington House, 4 Whitehall Court, London.

According to the *British Chess Magazine*, there is an effort being made to celebrate the Queen's Jubilee, in London, with a National Chess Tournament to take place in October next, open to British born and naturalized foreign players. The scheme has been mooted for some time past.

The summer tournament of the New York State Chess Association, held at Thousand Isles, N. Y. came to a close on Saturday, the 7th August, leaving the issue of the *Staats Zeitung* cup contest still in doubt. There were only three entries: Steinitz, representing the Staten Island Chess Club; Lipschutz, battling for the Manhattan Chess Club of New York city; and the Bay Champion Napier, of the Brooklyn Chess Club. Of the four games played, Napier won only from Steinitz. Here follows the score:—

CUP CONTEST.

Player.	Won.	Lost.
Lipschutz.....	2½.....	1½
Napier.....	1.....	3
Steinitz.....	2½.....	1½

Lipschutz beat Napier two games, and drew one with Steinitz; Napier beat Steinitz one game, lost one to Steinitz and two to Lipschutz. Steinitz won one with Napier, and 1½ with Lipschutz.

An effort was made on the concluding day to decide the tie between Steinitz and Lipschutz, but after a well-fought game of sixty-seven moves had been played and the chances of the contestants were about even, it was decided by the tournament committee that three more games should be played to decide the competition. These games will be played at intervals of one week and it at the close the tie is not dissolved the association will hold the trophy until next year. The cup has been won in previous years as follows:—1891, by J. M. Hanham, for City Club; 1893, by A. B. Hodges, for Staten Island Club; 1894, by J. W. Showalter, for Manhattan Club; 1895, by E. Delmar, for Metropolitan Club; 1896, by S. Lipschutz, for Manhattan Club.

The inter-state tournament was finished on 7th August and resulted in a somewhat unexpected victory for the New Yorkers by a score of 25½ to 21½ points. The following are individual scores, showing how many points each player contributed to his State's total:—

New York.	Pennsylvania.
Pillsbury.....	6½
Hodges.....	6
Deviser.....	4½
Hanham.....	4
Scheffelin.....	2
Delmar.....	2
Ruth.....	0
Total.....	25½
Kemeny.....	4½
Shipley.....	4
McCutcheon.....	3½
Hampton.....	3
Stuart.....	1
Young.....	3
Newman.....	2½
Total.....	21½

We have been compelled to resign both the games with Singapore, says "Black Bishop" of Hongkong. It is merely human to seek to find excuses for defeat and to suggest they had a larger playing committee than we, that they gave longer consideration to their moves and so forth, but it seems most straight-forward to confess at once that Singapore played better than we did and have well earned their victory. I trust that it may be found possible to arrange a return match, and that we may do better next time.

"JAPAN MAIL" CORRESPONDENCE TOURNAMENT.

The following moves have been sent in:—

10	11	Kt R4	10	P KR4

Another game was decided this week, "Pakeha" scoring a win from "Shepherd" in Game 2, the latter resigning on the 20th move. Three further games have had to be concluded in *vis-a-vis* play

previous to the departure from Yokohama of another of the combatants. The winners were:—Game 1, "Pakeha"; Game 5, "Shepherd" and Game 6, "Nemo." The score to date is:—

Player.	Won.	Lost.
Pakeha.....	2.....	—
Olymp.....	—.....	3½
Shepherd.....	1.....	2
Nemo.....	1.....	—
Fardel.....	1½.....	½

Below we publish the finishing moves of games 1, 5, 6, and 9, starting with the last moves published in our daily issue. We do this for the benefit of those who have followed the tourney from day to day, and not because these games possess any special merit. Those who are watching the progress of Nos. 3, 4, and 10, however, will be repaid for their trouble, for the games are well contested, and one, at least, is now at a critical stage.

TEA.

A fair business has been done but not so large as that during the previous week, though the shipments have been large. The total sales for the week in Yokohama amount to 184,000 catties, while the shipments have been, by *Energia*, 215,690 lbs., *Doric*, 3,208 packages, *Empress of India*, 5,250 packages. Prices still rule high.

INFANTILE LOVELINESS of the skin, scalp, and hair is assured by the use of CUTICURA SOAP, the most effective skin purifying and beautifying soap in the world, as well as purest and sweetest for toilet, bath, and nursery.

To preserve, purify, and beautify the skin, scalp, and hair of infants and children, and restore them to a condition of health when affected by distressing, itching irritations and scaly eruptions, no other treatment is so pure, so safe, so speedy, as warm baths with CUTICURA SOAP, assisted, when necessary, by gentle anointings with CUTICURA, purest and sweetest of emollients and skin cures.

For bad complexions, pimples, blotches, red, rough hands and shapeless nails, red, rough, oily, mothy skin, dry, thin, and falling hair, itching and scaly eruptions of the skin and scalp, and simple baby blemishes, it is simply wonderful.

Sold throughout the world. British depot: F. NEWBERRY & SONS, London. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A. "All about Baby's Skin," a 64-page book, post free.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, at 51, Main Street, Settlement, by ARTHUR BELLAMY BROWN, of "Noonlands," No. 156, Bluff, Yokohama.—SATURDAY, SEPTEMBER 18, 1897.

YOKOHAMA: SATURDAY, SEPT. 25TH, 1897.

SUMMARY OF NEWS.

THE Treaty of Peace between Greece and Turkey has at last been signed.

THE Yacht *Devonia* won the German Cup in the race for her rating on Saturday.

MARQUIS ITO's mansion at Isarago, Shiba has been sold to the Mitsui family for 30,000 yen.

MOST of the railway lines damaged by the storm of the 9th inst. have now been restored to working order.

THE Nippon Yusen Kaisha will pay off by lottery Bonds to the amount of yen 50,000 on the 30th inst.

SEÑOR WOLLHYM, Mexican Minister to Japan, presented his credentials to the Emperor on the 21st inst.

THE new Japanese battle-ship *Yashima* left Newcastle for Plymouth on the 15th inst. on her way to Japan.

THE Empress has contributed 4,500 yen towards the relief of the sufferers by the storm of the 9th inst. in Shizuoka Prefecture.

DURING the month of March, the number of telegrams to and from foreign parts amounted to

1,045,536 of which 69,313 were on Government service.

THE two men charged with grand larceny in the U.S. Consular Court this week have been acquitted owing to lack of evidence.

FIGHTING on the Indian frontier continues, and the British in one attack had to fall back on their camp, having sustained severe losses.

THE Naval Authorities have instituted new grades of officers corresponding to the ranks of Lieut. Colonel and Lieutenant in the Army.

THE Government will have yen 48,000,000 of gold coins sent to the Central Treasury from the Osaka Mint in the course of September.

AN expert of the Japan Marine Products Association will attend the International Fishery Exhibition in Norway, with exhibits from Japan.

YOKOHAMA Cricket week begins on October 12. A baseball match, a billiard tourney, and other sports are to be included in the programme this year.

THE members of the United Bankers' Corporation of Tokyo and Yokohama have decided to omit *rin* from their accounts from the 1st of November next.

THE revised Treaty between Spain and Japan, which was signed at Madrid on the 2nd of January was promulgated by the Emperor on the 16th of September.

THE new Administrative Reform Committee met at the official residence of Count Okuma, Foreign Minister, on the afternoon of the 21st inst., Count Okuma taking the chair.

LIEUT. GENERAL KAWAKAMI, Vice-President of the General Staff Office, and staff, who have been touring Siberia during the summer vacation, arrived in Tokyo on the 20th instant.

THE number of applications for registration of trade marks presented by subjects of England, Germany and the United States reaches 1,000, and yen 40,000 is reported to have been paid by them as fees.

THE Epidemic Diseases Hospitals, opened in Tokyo and eleven other Prefectures on the 23rd ult. for one month, will remain open for another month on account of dysentery still raging throughout the country.

MR. BURTON, consulting engineer in the Home Department, who has been in Formosa some time making investigations with a view to the construction of water works, has presented a report on the subject to the Government.

ACCORDING to Reuter, the U.S. Minister to the Court of Spain, has delivered a note from President McKinley fixing six weeks in which Spain is to put down the Cuban rebellion. The truth of this statement is greatly doubted.

THE draft of instructions in regard to the Hawaiian problem, which the authorities have been compiling for some time, was dispatched to Mr. Shimamura, Japanese Minister in Hawaii, on the 23rd inst. by the steamer *China*.

THE inhabitants of the Loochoo Islands have sent a deputation to Tokyo to petition the Government for special administrative regulations and the appointment of a Governor from the Sho family, the descendants of the former kings of the island.

MARQUIS SAIGO, Minister of the Navy, gave an entertainment at his official residence, Uchi-

saiwaimachi, Kojimachi-ku, on the evening of the 20th inst., to which Baron Rozen, Russian Minister to Japan; Vice-Admiral Alexieff, Commander of the Russian Pacific Squadron, and some Russian officers: Count Okuma, Foreign Minister; and other officers were invited.

EARLY on the morning of the 17th inst. a sea-man named Thomas Kennedy, belonging to the British ship *Glenericht*, met his death by having his skull fractured by a heavy blow during a *fracas* with Japanese in a street in the native town of Yokohama. An inquest has been opened and evidence taken, but the enquiry was adjourned till the 29th inst. to see if the Japanese police, who have arrested several suspects, can obtain evidence as to the perpetrator of the homicide.

THE Yokohama *jinrikisha* corporation, which presented a petition to the Kanagawa Prefectural Office the other day, requesting exemption from the existing tax, having received no reply from the Office, presented another petition with like effect. On the 20th inst. some *jinrikisha* coolies, about 50 in all, assembled at the office and asked to have an interview with the Chief, but they were dispersed by the police.

THE proposed regulations for the Formosa Administrative Office are not yet decided, though the subject was discussed at the meeting of the Cabinet held on Tuesday week. However, we hear that the Governor-General will be selected from personages above the rank of Lieut.-General or Vice-Admiral in the Army and Navy, and at the same time the Vice Governor General will also be chosen, the former residing in Tokyo while the latter stays in Formosa. In case there is no suitable Governor General to be selected, either Marquis Saigo or Count Kabayama will take charge for the present, and we learn further that the Vice-Governor-General who will officiate in Formosa will have to act solely on the orders from the Governor-General in the capital.

THE Import market during the past week, so far as regards cotton goods, fancies and woollens, has been utterly dead and stagnant, quotations being purely nominal. In yarns some little business has been transacted at a slight reduction in prices, but buyers are not inclined to make purchases for the future. The metal market is also dull in the extreme, a drop in home prices being anticipated by dealers, who are consequently loath to venture on any purchases except to fill immediate orders. In kerosene not much business has been done, but the market is firmer and it is expected that in a week or two business will become brisker, particularly as arrivals have been rather under than over the expected demand. In the sugar market there has been a brisk business in brown, both Manila and China, at higher quotations, owing to some extent to a rumour that the Spanish Government proposes to impose a tax on the export of sugar from Manila. In Exports a large business has been done in raw silk, though the excitement in the market which existed last week has calmed down. Prices at the end have hardened and the stock of Shinshu filatures has been cleared off. In waste silk there has also been a fairly brisk trade owing to better news from home markets. Dealers are firm and the tone of the market is towards a further rise. In tea business is gradually decreasing, as most of the stock on the market is of too poor a quality for the American market. Exchange has slightly improved, bank demand rate being 2/0-1/2 to 2/0-1/2 at closing.

SPIRIT OF THE VERNACULAR PRESS.

Ten years have passed since the system of examination as a necessary preliminary to official appointment was introduced. The reform was due to Marquis Ito, and the rule laid down was that all appointments must depend upon the qualifications of candidates as determined by examination unless certain educational or administrative tests had already been satisfied. There are four classes of officials: *Shin-nin*, *Choku-nin*, *So-nin* and *Han-nin*. The two first receive their appointments direct from the Emperor, and are consequently independent of the examination rule; it applies to the two last only. Briefly speaking, the *So-nin* are officials filling posts of importance, but of less responsibility than the post of prefectural governor or head of a bureau. The *Han-nin* comprise all officials occupying inferior positions. There are *employés* also, but they do not belong to the regular ranks of officialdom. It is to the *So-nin*, of whom there are 3,500, and to the *Han-nin*, who number 30,000, approximately, that the examination system applies. The rule, enacted in 1887, is that no person is eligible for a *So-nin* post without examination unless he has served for 3 years as a civil officer in an Upper School or as a public procurator or Judge, and that no person is eligible for a *Han-nin* post without examination unless he has graduated at a Middle School, or at a public school of corresponding status. The object of introducing these regulations was to correct an abuse concerning which the public had begun to complain much at the time, the abuse of appointment through personal influence. The Constitution had not yet been promulgated, and as there was no Diet to scrutinize the conduct of the Administration, political agitators contended that the offices of the State had been monopolized by the leading men of a few great clans, and that, by filling junior posts with their own creatures these men managed public affairs with a view rather to private than to national interests. The inauguration of the examination system greatly mitigated the evil and to a considerable extent quieted political clamour. But the wheel of change has now brought about a new phase of sentiment. It is contended that the reasons which dictated the examination system ten years ago, no longer possess efficacy, and that its result is to deprive the State of the services of many able men. The *Yiji Shimpō* takes that view, and it is a view that has been advanced for some time by politicians outside the Government, in other words, by the very men whose voices were formerly raised in condemnation of the idea that any appointments should be subject to the personal proclivities of Ministers of State. Our contemporary contends that clan government is a thing of the past and that no grounds exist any longer for denying the influence of public opinion on the conduct of the Administration. Proofs have just been furnished in the case of Formosa and the Colonial Department. Public opinion declared that re-organization was absolutely necessary in Formosa, and re-organization has been undertaken; public opinion declared that the Colonization Department was superfluous, and the Colonization Department has been abolished. The Cabinet, by appointing several men of note to *Choku-nin* posts—governors of prefectures, heads of bureau, and department councillors—has shown its appreciation of the fact that excursions should be made far afield in search of talent for the use of the public service, and it seems advisable that the same principle should be extended to the case of *So-nin* and *Choku-nin* officials. To that end, some modification of the examination regulations is necessary. The *Yiji's* arguments against hard and fast adherence to such regulations are precisely the arguments that have been advanced, from time to time, in Europe and America against the competitive examination system as a necessary gate to public office. There are no doubt forcible arguments, but there is much to be said on the other side. At all events, the significance of our contemporary's tone, and of the tone of

political parties outside the Government, consists in the fact that old-time suspicions of clan influence seem to have been laid aside, and politicians are now advocating the Cabinet's resumption of a power for the surrender of which they formerly contended.

It must have been foreseen from the first that the Law of Election in Japan would soon be subjected to severe criticism. Naturally and prudently the framers of the country's first representative system of government, regarding the essay as more or less experimental, confined its dimensions within comparatively narrow limits. Hence, as time went by, and as experience proved that the representative system was not unfitted to the genius of the nation, it was inevitable that politicians should begin to ask for its extension. Demands in that sense have been preferred now and again in the columns of the press, and have actually been embodied in Bills for presentation to the Diet. But the question has not yet reached the field of practical politics. There are signs, however, that it will henceforth attract more vivid attention. The *Nippon*, for example, has a series of powerful and carefully argued essays on the subject. There is always a difficulty in determining the basis upon which a representative system should be established. To block out the population into sections of equal size and allot to each section one representative, seems the simplest and most rational plan. But then the question arises, what should be the size of the sections. The Occident furnishes no hard and fast precedent for answering such a question. Great diversities are observable in the size of the electorates in different countries, and in the same country at different epochs. In the United States, for example, the ratio of the present electorate to the electorate of last century is about 3 to 1. The framers of the Japanese system adopted the rule of giving one representative to every hundred thousand of the population. But the result of their method of parcelling out the realm is that the total number of representatives falls far short of the number indicated by their rule of division. One representative for each hundred thousand of the population would give an aggregate of about 420 representatives, whereas the number in the Lower House is only 300. It can not be alleged, indeed, as a mere question of ratio, that the system is manifestly defective. But certainly the state of affairs it has produced is not satisfactory. In the first place, the number of representatives taking any really active and intelligent interest in administrative affairs, and subjecting them to the scrutiny which is the object of parliamentary institutions, is inconveniently small. In the British House of Commons there are 670 members, but if the proceedings of the House be carefully examined, it appears that not more than 70 can be described as active leaders of thought; not more than 70 take part in the debates and act as mouthpieces of the masses. A similar examination of the proceedings of the Japanese House of Representatives shows about 30 figures efficient in the above sense. Then it appears that the three cities and forty-three prefectures can not boast even one representative each who really makes their views known and openly advocates their interests in the Lower House. That is distinctly a defective condition, and that it would be in some degree remedied if each hundred thousand of the population sent a member to the House, can scarcely be doubted. There would then be from 420 to 430 members, and 40 or 50 among them might be expected to play the part of genuinely efficient representatives, so that at least each city and each prefecture would have a mouthpiece. A further objection to the arithmetical paucity of the present House is that it has a demoralizing effect. Nominally there are three parties in the House, the Progressionists (*Shimpō to*), the Liberals (*Yiyu to*), and the National Unionists (*Kokumin Kyokai*), but practically the three may be regarded as two, since one is always in opposition to the other two. Between them floats an uncertain element, the so-called "independents," who really hold the balance of

power. Thus an opportunity is presented for the Cabinet to secure a majority by improper means, and for the members to turn their position to lucrative account; an opportunity of which it were extravagant to expect that, human nature being what it is, no advantage will be taken. There are, in truth, unsightly abuses, whether their dimensions be large or small, and they are pretty sure to continue so long as the parliamentary system lends itself to them as readily and temptingly as it does at present. If, on the other hand, the number of representatives were increased to 420, it might be reasonably expected that the independents would aggregate 60 or 70, perhaps even 100, in the new House, and it is evident that the corrupt manipulation of 70 or 100 would be a much more difficult matter than the manipulation of 25 or 30. The composition of the House also invites unfavorable criticism. It represents, not the people at large, but the seniors and the men of property only. The aggregate of the direct taxes paid to the State is 68,231,032 *yen*, or an average of 1.69 *sen* per head of the population. But the property qualification for the franchise is the annual payment of 15 *yen* of direct taxes. Hence, speaking roughly, a man must pay ten times the average tax in order to have a vote. There are, in fact, 517,130 men throughout the whole realm who possess the franchise qualification in respect of taxes, and if from that total we subtract priests, teachers, and others specially excluded, the number is reduced to 467,887, or about one per cent. of the population. Of course, it is somewhat misleading to strike a general average in such a matter. The number of males under 25 years of age—namely 7,134,718—must be subtracted, and so also must the number of women—namely, 20,690,316. There then remain 12 millions of males, in round numbers, who, being over 25 years of age, satisfy the age qualification. Of these only 467,887 possess votes, so that the property qualification reduces the voters to 4 per cent. of the number that would be eligible under a system of universal suffrage. If the property qualification were one-third of the present figure—i.e. 5 *yen* instead of 15—the number of voters would be about 1½ millions, which seems the minimum that ought to have a voice in administrative affairs. Of course it may be argued that a high property qualification limits the suffrage to the intelligent and prosperous classes. That is true as a general rule. But in Japan's case the former *samurai*, that is to say, the present *shisaku*, are the real repositories of intelligence and education. The *shisaku*, however, were never blessed with large worldly possessions, and the abolition of feudalism rendered their resources slenderer than ever. Very few indeed among them now pay 15 *yen* in the form of direct annual taxes. They are virtually excluded from the franchise, which may be said to be chiefly enjoyed by well-to-do farmers, prosperous tradesmen, and persons who, without any merit of their own, have succeeded to property conferring the required qualification. In short, the electors may be said to consist of men of rank and men without special education or intelligence. Finally, the limits of the electorates ought to be changed. According to the present system, each city or prefecture is divided into a certain number of electoral districts, and each district returns one member. Undoubtedly there was originally a valid reason for that method of division. It was rightly felt that if a whole city or prefecture were invited to elect its representatives by the votes of all its franchise-holding inhabitants *en masse*, all the members would be returned by the political party possessing the greatest number of votes in the prefecture or city. Such an abuse had to be guarded against. On the other hand, it must be remembered that the persons elected are representatives of the nation, not of a mere section of the people or a mere portion of the realm. Unfortunately the men returned under the present system have given frequent proofs that their legislative horizon does not extend beyond the narrow limits of their constituency. It is most desirable that every defect of that nature should be

remedied, and the best plan would seem to be the extension of the electorates from districts to cities and prefectures. As for the danger that excessive representation would thus be secured to the strongest political parties, it can easily be obviated by the method of proportional representatives. As things are now arranged, it may easily happen that the strongest party in a prefecture or city fails to return even one member. Suppose that there are three parties, A, B, and C, the first possessing 11,500 votes in a given prefecture, the second, 7,500 and the third 5,000; and suppose, further, that the prefecture is divided into five electorates. Now if A has 2,300 votes in each district; B, 2,600 in the first district, 2,400 in the second, 2,500 in the third, and none at all in the fourth and fifth; and, finally, if C has 2,500 each in the fourth and fifth, it is plain that B can return 3 members, and C, 2, whereas A fails to secure a single seat. Hence in avoiding one abuse, the present system opens the door to another. Proportional representation would obviate all such evils, for each elector would then have one vote, and under the circumstances assumed above, A would return 2 members, B, 2, and C, 1.

Such is the gist of the *Nippon's* four essays. We have epitomized them at some length, because it is obvious that this question is among the issues destined soon to occupy public attention.

There is much talk at present of organizing a large political party. There has often been much talk of a similar project, but the occasion is now more imperative than ever. A large party is a very fine thing, and every one wishes that it could become a reality, but thoughtful persons do not fail to perceive that Japan's experience furnishes little hope of a large party's usefulness. The larger the party, says the *Kokumin Shimbun*, from which we are quoting, the more incapable it shows itself of effective action, and the more liable to disruption from within. One cause of that inefficiency is doubtless to be sought in defective organization. There is a president, there is a general committee, there is a business committee, there are managers, and there are local committees. But the functions of each are so ill-defined that they constantly encroach upon each other's spheres of action, friction, and confusion being the inevitable result. That, however, is in reality a minor defect. The great obstacle to success is that the members have no practical sense of discipline and no operative appreciation of the value of organization. Everyone behaves as if he were president, or manager, or committee man. If the majority want to move in one direction, the minority pull in another, and unless the latter's voices are heard and obeyed, they threaten to abandon their affiliation. To prevent disruption the majority have to halt in their course, and the final result is that the party stands wavering, tied to one spot by its own want of cohesion. These men who have banded themselves together for the proud purpose of giving practical effect to representative institutions, are incapable of adapting their own conduct to the most elementary principle of such institutions, namely, obedience to the will of the majority. No such suicidal unwisdom is to be noted in the behaviour of political parties in Europe. Even the socialists in France, whose platform does not suggest any high sense of order and docility, never fail in the Chamber to act as a compact body, obeying their leader's dictates and realizing all the advantages of organized union. So, too, in the British House of Commons, such a thing is scarcely ever seen as rebellion against the policy mapped out by the leaders of a party; every member subordinates his individual views to the general interests of the platform he is pledged to support, and so strict is the etiquette of parliamentary procedure, that the moral as well as the nominal position acquired by a member in the ranks of his party is recognized, in precedence of speaking, not merely by his own political associates but also by the members of the party opposed to him, and there

devolves upon the leader of each party the responsibility of preserving among his followers order and discipline towards the whole House. Compared with the English House of Commons the Japanese House of Representatives presents much the same appearance as a mob of rustics presents to the standing armies of Germany or France. The defects so glaringly apparent in the procedure of the House, make themselves still more conspicuous in the conduct of political parties outside the House, and until members learn the imperative necessity of discipline and subordination, it seems futile to talk of organizing a big party.

FOREIGN TRADE OF JAPAN.

A report of the foreign trade of Japan from January to August this year, with corresponding figures for last year, is published in the *Tokyo Asahi* as follows:—

	EXPORTS.		Increase or decrease.
	1897. Yen.	1896. Yen.	
Raw silk	27,856,216	12,990,593	14,865,623
Noshi & waste silk	1,633,979	1,641,292	—7,312
Habutae	5,829,847	3,488,862	2,340,985
Other silk fabrics	129,350	259,642	—130,291
Silk handkerchiefs	2,434,874	3,555,062	—1,120,187
Cotton yarns	9,448,634	2,238,595	7,210,039
Cotton fabrics	1,550,899	1,169,195	381,706
Rugs	700,672	749,774	—49,101
Matches	3,749,326	3,367,326	382,000
Coarse Matting	2,378,070	1,967,597	406,473

Total imports & exports	239,404,329	181,605,047	57,799,282
Excess of imports	38,774,875	43,186,894	—

THE "SHOGYO" ON THE EXCESS OF REVENUE.

The excess of revenue for the 29th fiscal year was stated in the actual accounts of the 31st July to have amounted to 18,750,000 yen. A report of the Finance Department shows the actual account on August 31st to have been as follows:—

	YEN.
Revenue	186,998,415
Expenditure	168,856,500
Balance of revenue	18,141,915

This excess is probably attributable to the fact that, some of the Government undertakings having been delayed, it became unnecessary to defray certain expenses during the fiscal year as originally estimated. To carry the amount to next year's account as a surplus would therefore be altogether incompatible with the spirit of good book-keeping. Whether this excess includes any amount that may legitimately be carried forward as a surplus to next year's account there is no means of ascertaining, as final accounts have not yet been made up. But even granting that the amount of 18,140,000 yen is really a surplus, it seems that a considerable portion of the revenue, yen 186,998,415, properly belongs to the estimates for the 30th year. Thus:—

	YEN.
Excess of Revenue for the 29th year	18,141,914
Less proportion of estimated revenue for the 30th year	10,815,186
Balance	7,326,628

While the account stands as above, if any outlays over and above the budgetary items are to be made after the entire disbursement of the Second Reserve, and if the supplementary estimates are, as is usual, supplied from the excess under notice, a serious deficiency will present itself. Whatever surplus there may have been for the 30th year will fall far short of supplying the deficit of twenty-three million yen for the 31st year.

THAT WONDERFUL JAPAN!

A short time ago Japan was about to swallow up Hawaii. So, at least, it was affirmed by agitators who saw their account in persuading the people of the United States that nothing short of annexation by America could save the little republic from falling into the hands of the new Eastern Power. The story was absurd, but it seems to have served its purpose to a certain extent. The sensationalists are now in the field with another and a still stranger tale. The *New York Herald's* special correspondent in Washington wires that journal:—"Japan, not content with interference with the annexation policy, now has designs upon the Nicaragua canal. According to semi-official advice just received here from Nicaragua, the Japanese Government is secretly negotiating with the Diet of the Greater Republic of Central America, which recently met in Salvador, for the construction of the Nicaragua canal, independent and in defiance of the interests and influence of the United States or other nations." American newspaper correspondents have become the greatest writers of fiction of the era, so far as mere imaginative powers are concerned, but the clumsiest if the realistic quality of their fabrications be considered.

SHIPMENTS TO AMERICA BY THE C.P.R. ROUTE.

We are glad to learn officially that with reference to the 22nd section of the United States new Tariff Law, a telegram has been received in Yokohama from Montreal stating that the U.S. Treasury have decided to suspend the operation of the clause, and so the duty of 10 per cent. that it was feared would be imposed on goods entering America by the C.P.R. route, will not be levied. Shippers will be glad to be relieved of anxiety in this matter.

ANOTHER PSEUDO-INTERNATIONAL QUESTION.

Vague rumours have been in circulation for some time with reference to exports of arms from Japan for the use of the insurgents in Manila, and it is now asserted that the Spanish Authorities have attempted to procure Japan's official assistance with the object of preventing such operations. Some time after the outbreak of the rebellion in the Philippines, the Japanese Government, having been approached by Spain on this very subject, namely, the possibility that arms might be shipped from Yokohama and elsewhere, is understood to have intimated its intention of discountenancing anything of the kind, and to have issued orders in that sense to the customs officials. The force of such orders must, of course, be very limited and their issue was a pure act of friendship, for the Government of Japan is not bound to interfere at all under existing circumstances. It is now alleged, however, that certain Spaniards, sympathisers with the Manila insurgents, have come to Japan, and located themselves at Hommoku, a suburb of Yokohama, where they collect arms and ship them to the Philippines. The story further runs that the Spanish Consul approached the Japanese Local Authorities, urging that, as the persons engaged in this export were living outside the Settlement without passports, they ought to be arrested and arraigned before him. How much truth there may be in that part of the rumour we do not pretend to say, but, from a theoretical point of view, we find it incredible. In the first place, it is not a matter of legitimate concern for a foreign Consul whether his nationals are provided, or are not provided, with passports when they travel or reside outside a settlement. That is a matter for the consideration of the Japanese authorities alone. In the second place, if any Spaniards are really living outside the settlement of Yokohama, it is to be presumed that they have complied with the formalities which are a necessary preliminary to such residence. The limits of the foreign settlement of Yokohama have become very elastic. They have virtually been extended to Negishi, Hommoku, Noge, Kanagawa, Totsuka, and even Tomioka. We do not know how the thing has been contrived, but the Japanese authorities are satisfied, and that is all that need be said about it. The Spaniards in question have doubtless employed the same means to set themselves right *vis-à-vis* the law, a process not calling for passports, not requiring Consular assistance, and not subject to Consular supervision. As for the export of arms, the injunction addressed by the Government to the customs officials ought to be sufficient. There is no question of observing neutrality in this case. These Manila insurgents are not recognized as belligerents, and foreign Powers have, consequently, no responsibilities towards either Spain or them in connexion with the rebellion. Indeed, it is difficult to see why agents for the export of arms should come to Japan. The Japanese Government has gone out of its way, to place obstacles in the path of proceedings such as theirs, whereas no obstacle whatever exist in Hongkong, Shanghai or Singapore. They could purchase and ship all the arms they wanted in any of those places. The Japanese Government

does not sympathise with the rebels, we presume. Neither do we, for the matter of that. Our sympathies are all with Spain in her gallant struggle, and if any legitimate plan could be devised for cutting off supplies of every kind from the rebels, we should advocate it heartily. But from what is written and spoken about this matter we infer a disposition to charge the Japanese with conniving at a violation of international law, and it is well that such a misconception should be dispelled. Probably the Hommoku business—assuming that anything of the kind really exists—is of dimensions too insignificant to be dangerous. But under any circumstances we do not see how it can be controlled except by the aid of the customs, a most defective instrument, seeing that the Spaniards can easily make their shipments through the agency of some other nationals with whose transactions the Japanese have no competence to interfere. It is, indeed, alleged that some of the Hommoku Spaniards have English names, real or assumed, and are carrying on their operations as British subjects. Unfortunately there is no help for such abuses. If the rebels had received recognition as belligerents, the case would assume a very different complexion, but under present circumstances nothing can be done.

JAPANESE RECRUITS.

We find it stated in the vernacular press that, according to investigations conducted in one of the Divisional sections of Japan—that is to say, in one of the sections forming the recruiting ground of a military Division—only 32 per cent. of the youths liable to conscription satisfy the physical standard. At twenty years of age every Japanese becomes liable to conscription, and has to present himself for medical examination. Those that pass are divided into two batches, according to their physical measurements, the best developed being placed in the first batch, and those of inferior, yet still qualifying, physique, in the second. First-class recruits constitute fully 20 per cent. of the total that qualify, and as, out of 200,000 who successfully pass the medical examination every year, only 40,000 are actually taken for service with the colours, it is seen that no necessity exists to go beyond the first class. Three years ago, we procured figures showing the measures obtained from five years' examination of recruits enrolled for service. The averages stood thus:—

Height	64½ inches.
Weight	126½ lbs.
Chest circumference	32.99 inches.
Difference of chest circumference caused by inspiration	2½ inches.
Cubic capacity of lungs ...	25.1 inches.

At that time, only 20,000 recruits were enrolled annually, and as the number is now doubled, the measurements are doubtless less favourable. Another fact brought out by the same statistics was that the average rejections for the whole empire, on account of deformity or other physical debility, were only 41.83 per 1,000, but the difficulty of procuring recruits of the prescribed height was considerable. In England the height qualification is 64 inches; in Germany 61.6 inches; in France 60.06 inches; and in Japan, 59.5 inches. Out of all the adult males in the empire the statistics for the five-year period 1890-4

showed that only 10.46 per cent. attained that height. The *Miyako Shimbun*, however, speaking on the alleged authority of an army officer, gives 32 per cent. as the average number that now come up to the physical standard. We do not understand the discrepancy, unless it be due to the fact that the *Miyako Shimbun's* informant applies to the whole empire figures obtained from investigations in one district only. It is well known that the average heights of the male population in different parts of Japan show marked discrepancies. The smallest men in the empire are to be found in the provinces surrounding Tokyo. The provinces encircling Osaka Bay come next in the list. Kiushu and the belt of inland provinces beginning with Yamato and ending with Mutsu, stand at the head. But we are not aware that in any part of of Kiushu, or even in the island of Tsushima, where the tallest Japanese are to be found, 32 per cent. attain a height of 59½ inches. It is necessary to conclude either that our Tokyo contemporary's information is incorrect, or that some confusion has crept into the statement. With reference to this question of height, our readers will observe, from the table given above, that despite the generally small stature of the Japanese, the recruits drafted into the service each year used to attain an average height of 64½ inches, prior to the inauguration of the Army Expansion programme. Now that the yearly draft is doubled, the average height is doubtless reduced, but no information on that point is at present procurable.

MR. AKIYAMA'S ATTEMPTED SUICIDE.

A very sad event occurred on the 20th instant. Mr. Akiyama, a Councillor of the Foreign Office, who was sent to Hawaii in connexion with the emigration trouble, and who left Honolulu for Japan on the 24th of July, has been in a melancholy frame of mind ever since his return to Tokyo. Nothing calculated to weigh upon his spirits had occurred, so far as the public knows, during his stay in Hawaii. He seems to have discharged his mission there in a perfectly satisfactory manner, and the agreement with reference to arbitration had been concluded before he left Honolulu. Still, from the time of his return, it was evident that he had some cause of chagrin. At 2 o'clock on the 20th, he went away from the Foreign Office, saying that he felt unwell, and on reaching home, he complained of suffering and retired to lie down, having first partaken of some tea prepared by his mother. About half an hour later, a member of the household entering his room, found him bathed in blood. A sword, some three feet long, was grasped in his right hand, and severe wounds were visible in his stomach and neck. He was almost unconscious, but happily owing to the difficulty of using a weapon of such length for suicidal purposes according to the orthodox Japanese fashion, he had failed to inflict mortal injuries. It would seem that when he plunged the sword into his stomach and attempted to draw it across, the impossibility of guiding it correctly resulted in its glancing upward against the ribs on the left, and although an effort was made to change the direction to the right, the enfeebling effect of the first cut rendered the second comparatively innocuous. The same difficulty saved the

jugular vein when the sword was directed against the throat. Still, two terrible wounds were inflicted, that in the stomach being 8 inches long and 2 inches deep, and that in the throat, 2 inches long and seven-tenths of an inch deep. When Mr. Akiyama's mother raised his head, and asked him what had induced him to take such a course, he made no answer, but managed to let it be understood that he did not wish to have medical aid. A physician was soon on the spot, however, and the wounds were treated, that on the stomach requiring fifty stitches. It is understood to be the doctor's opinion that if no complications ensue, a fatal result need not be apprehended. The almost invariable custom with a Japanese who contemplates suicide is to leave a written statement of his reasons for the act, but nothing of the kind has been found in Mr. Akiyama's case, and it is, of course, idle to speculate on the motives by which he was influenced. Possibly the simple explanation is mental derangement, but naturally there is a disposition to infer that some feature of the Hawaiian affair had distressed him beyond endurance.

Several of the vernacular newspapers contain paragraphs about Mr. Akiyama's resolute attempt upon his life, but all appear to be without any accurate knowledge. The *Yorodau Choho* confidently affirms that Mr. Akiyama prepared a brief but clear statement of his reasons, which was taken possession of by his mother and is kept secret. It may well be supposed that many particulars are published about Mr. Akiyama's disposition and his career. We should reproduce them if they presented any interesting features, but they may be summed up in the statement that he has always shown himself to be a man of a sensitive and perhaps hasty disposition with an almost romantic sense of honour and the obligations of moral dignity. The report that, ever since his return from Hawaii, he had showed signs of depression can not be reconciled with facts now published. On the evening of the 17th instant, he met Mr. Shibata, a Secretary of the Foreign Office, by appointment, and the two friends passed a considerable time in each other's company, drinking *sake* and discussing politics. The evening of the 19th was similarly spent at Mr. Shibata's house. On the latter occasion Mr. Akiyama is said to have been somewhat out of spirits, but he remained with Mr. Shibata until a late hour, and nothing in his demeanour suggested the least cause for uneasiness. The following day he attended to his duties at the Foreign Office as usual, and was engaged until the afternoon on work given to him by the Vice-Minister. There is a rumour that some official censure of one of the despatches prepared by him in connexion with the Hawaiian affair caused him much chagrin, but, on the other hand, it is confidently affirmed that his action throughout that complication was approved by the Minister of State for Foreign Affairs, and that he had reason to be gratified rather than disappointed by the result of his labours. The truth is that everybody is more or less perplexed by the affair, and that no reliance can be placed on any of the surmises published in the vernacular press. According to the medical testimony there are no symptoms of mental aberration at present. Mr. Akiyama graduated from the Imperial University in 1890, with the degree of

bachelor of law, and for a short time served as teacher in the Technical College at Waseda. He filled the post of secretary of legation in Russia and England before becoming a councillor in the Foreign Office.

Mr. Akiyama's condition is reported to be satisfactory. He is able to take milk and soup, and has not had any serious access of fever. If no complications ensue, his recovery is considered certain.

REV. J. M. McCaleb and the PASSPORT.

We do not know whether, in addressing the public through the correspondence columns of this journal, Mr. McCaleb invites an expression of our opinion or of anyone else's opinion with reference to the incident forming the subject of his letter. It must be assumed, however, that when he courts publicity, he is prepared to learn the aspect presented by his case to other people. We venture to say, therefore, that he seems to have placed the United States Minister in a very embarrassing position. His letter alleges merely that he declined to take part in the celebration of Independence Day because he regarded participation in such ceremonies as improper for missionaries. It is certainly within his right to hold such a view. Most people will think it an extravagant view, for it can not reasonably be argued, so far as we can see, that when the people of the United States rejoice over their country's attainment of independence, they either move to resentment the nation of which they once formed a part, or promote among themselves a feeling of strife, and it was explicitly because he regarded the celebration as a "Commemoration of strife between our fellow-men" that Mr. McCaleb declined to participate in it. His letter, indeed, does not say so, but the fuller account given in *The Shepherd's Voice* makes that part of the matter clear. Still Mr. McCaleb is absolutely entitled to view the matter in that light if he pleases. But it appears that he appended a rider to his objection. He added that "his citizenship was in heaven." On that point also his letter is silent, but again *The Shepherd's Voice* enlightens us. Now it was in his capacity as a citizen of the United States that Mr. McCaleb received an invitation to participate in the celebration of Independence Day, and when, in refusing to do so, he put forward as one reason for his refusal the fact that his citizenship was in heaven, it seems indisputable that he denied his American citizenship. There is no alternative inference, in our opinion. He is just as absolutely entitled to deny his American citizenship as he is to denounce celebrations of national independence, but when he approaches the United States Minister and seeks to obtain a privilege unobtainable except on the ground of his American citizenship, he ought not to be surprised if the Minister hesitates. Is Mr. McCaleb an American citizen or is he not? If he is, why did he allege his heavenly citizenship as an obstacle to commemorating an event without which his American citizenship would be an impossibility? The Minister, it seems to us, was bound to take that point into consideration. He offered Mr. McCaleb an easy exit from the difficulty, however: he asked him to prove his American citizenship by taking

the Oath of Allegiance. Mr. McCaleb declined to do so on the ground that he was "opposed to the taking of oaths." Surely Mr. McCaleb must perceive that he thus created an absolute *impasse* for the Minister. He would not join with American citizens in a national fête because his citizenship was in heaven, and he would not take the Oath of Allegiance because he was opposed to taking an oath. What remained for the Minister then?

There are two other points to which we feel bound to direct attention in giving publicity to Mr. McCaleb's letter. The first is his statement that no "American citizen has ever been compelled to take the Oath of Allegiance before being granted a passport to travel in Japan," and that, consequently, when he was asked to take the oath, "a special example was made of him." It is a scarcely imaginable hypothesis, yet Mr. McCaleb apparently fails to perceive that if an exception was made in his case, he himself, not the United States Minister, set the example. Having dissociated himself from American citizens in the matter of the Independence celebration, his dissociation from them in the matter of passports was not a new departure but a consistent result. The second point is the construction placed by him on Mr. Miller's language. We have no information other than that furnished by our correspondent's letter as to what Mr. Miller said, but assuredly the words attributed to him do not warrant the inference which Mr. McCaleb seeks to draw from them. A conciliatory attitude might have shown the Minister that Mr. McCaleb really wished to be regarded as an American citizen and might have tended to modify the apparent significance of his original statement. But Mr. McCaleb seems to have made things as difficult as possible for the Minister. It is altogether a most regrettable business. Mr. McCaleb, we believe, is as good an American citizen as any one else, and he doubtless labours now under the painful conviction that because he has ventured to stand alone in defence of what he regards as the right, he is discriminated against and more or less humiliated. But it does not do to be rigidly unbending in this world of ours, nor does the Bible, which Mr. McCaleb reverences so profoundly, recommend any such attitude.

CURRENT TOPICS.

What on earth the *Japan Gazette* means by saying that we have "come round to the same way of thinking as itself" with reference to the Hakodate affair, we are quite unable to perceive. We have not at all come round to the *Japan Gazette's* way of thinking. We have not changed our own way of thinking in the smallest degree. Our contention from the first has been, and our contention still is, that the Order in Council does not properly bear the construction put upon it by the British Authorities *vis-à-vis* Japan. With the principle that prompts that construction we are entirely at one, where a country like China is concerned. We hold it to be most desirable in the interests of humanity and for the sake of her own dignity that Great Britain should protect all persons in her public service whatever be their station or employment against submission to the jurisdiction of States where criminal procedure is semi-barbarous and

where the punishments of crime are torturous. But no protection of that kind is needed against Japanese jurisdiction, nor can any such protection be exercised in Japan on behalf of persons that are not British subjects, unless Japan is a consenting party to the usage. Japan is not bound by the usage of either China or Turkey.

Our contemporary says that "the Japanese are very ill-advised to raise such issues at the present time." As to that, we have already pointed out that whatever limits Japan succeeds in imposing upon the privilege of extraterritorial jurisdiction at the present time, will soon be binding on herself, and may prove distinctly inconvenient. But in view of the principle underlying the British claim of protection, we do not see how Japan could have failed to withhold her consent nominally. The easiest and most judicious exit from the situation, in our opinion, would have been to surrender the Chinamen to the British Consul, with an understanding between the Tokyo Foreign Office and the British Legation that the affair was not to be regarded as a precedent, so far as Japan was concerned, and that the surrender was made in order not to establish a rule which might prove very embarrassing under other circumstances. We repeat our conviction that the time has come for Japan to cooperate with Western Powers, not to oppose them, in construing extra-territorial privileges so that they shall best inure to civilized and humane purposes.

Charters for the construction of three lines of railway have been granted by the Department of Communications. They are:—(1) The Tobu Railway, from Kita-Senju to Ashikaga; 48 miles 51 chains; capital, 2,650,000 yen. (2) The Obama Railway, from Obama to Yobu *via* Otsu; 55 miles 20 chains; capital, 3,950,000 yen. (3) The Yoshino Railway, from Kuzu to Kitarokuta; 5 miles 70 chains; capital, 500,000 yen. A temporary charter has also been granted for an extension of the Toyokawa Railway from Toyokawa to Goyu; 4 miles 70 chains; capital, 135,000 yen.

The *Keisai Zasshi* says that the question whether foreigners living outside the Settlements are liable to pay local taxes was virtually settled long ago. In 1889, the Prefectural Authorities of Fukuoka addressed an inquiry to the Department of Home Affairs on the subject, and received a reply to the effect that both prefectural taxes (*kensai*) and district taxes, (strictly, "house taxes," or *kosu-wari*) should be levied upon foreigners residing in the interior, and that in the event of failure to pay, the fact should be reported to the Foreign Office. Instructions in a similar sense were sent—our contemporary adds—last July to Kumamoto Prefecture. But of course the *Keisai Zasshi* is well aware that the mere issue of such instructions does not establish their validity. There can be no doubt, we think, that every resident in a locality is properly liable for a share of the expenses connected with police, roads, sanitation, lighting, and such matters. But should a foreign resident be required to contribute to the maintenance of schools for Japanese, for example? Evidently the question does not lend itself to summary solution.

Some one has been questioning Count Okuma on the subject of Administrative Reform, which is now occupying a promi-

nent place in public attention. Count Okuma is President of the Investigation Committee, and nobody's voice carries so much weight as his in this matter. There is a notion among shallow-minded persons that some sweeping measures of reform are contemplated, and it was to that fancy that Count Okuma directed his attention. "I am totally at a loss to understand," he is represented as having said, with a smile, "what is meant by the radical reform of the administration that men talk about. People appear to regard the Government in the light of jugglers, and to be constantly expecting from it some exhibition of legerdemain. If any one imagines that the Administration Investigation Committee is going to perform conjuring tricks, he is egregiously mistaken."

The Communications Department has compiled a return of the number of collisions and derailments that occurred on Japanese railways, state and private, from the date of commencing traffic until the end of last year (1896). The total stands thus:—

NAME OF LINE.	TOTAL NUMBER		COLLI- SIONS.	DERAIL- MENTS.
	OF	MILES RUN.		
State Railways ...	4,806,696	...	60	...
Japan Railway ...	3,254,924	...	2	...
Sanyo " ...	1,498,738	...	4	...
Ryomo " ...	177,039	...	0	...
Iyo " ...	28,017	...	1	...
Osaka " ...	579,135	...	7	...
Kiushu " ...	1,121,738	...	0	...
Kwansei " ...	400,470	...	2	...
Chikuho " ...	389,300	...	24	...
Settsu " ...	87,494	...	0	...
Sano " ...	65,242	...	1	...
Bantan " ...	131,439	...	0	...
Bishu " ...	24,195	...	0	...
Nara " ...	200,987	...	0	...
Boso " ...	69,851	...	0	...
Nanyo " ...	23,977	...	0	...

It is pretty plain from the above figures that the Chikuho Railway ought to be subjected to some official scrutiny. It shows an average of 1 accident for every 4,690 miles traversed. That record, if applied to the Tokyo-Yokohama line, would mean a collision or a derailment about once per month.

THE UNITED STATES AND SPAIN.

It seems to be taken for granted that Reuter's agents are well informed about the United States Representative's alleged communication to the Spanish Minister of Foreign Affairs. General Woodford, according to Reuter's telegram, has informed the Spanish Minister that unless the Cuban insurrection is crushed by the end of October, the United States will consider itself justified in taking such measures as will secure the independence of Cuba. We do not believe that such a communication has been made. The United States Government is undoubtedly desirous of putting an end to the miserable state of affairs existing in Cuba, and nothing is more probable than that General Woodford repeated, in stronger terms than ever, the intimations already made more than once to Spain. But it is incredible that an ultimatum should have been suddenly presented, above all in such terms. To tell Spain that she is to be allowed six weeks for concluding a rebellion against which she has already struggled without decisive success for nearly two years, would be simply to destroy her chance of subduing the rebellion at all. The effect of such an announcement would be to redouble the capacity of the rebels for re-

sistance, and to paralyse Spain's capacity for attack. It would be in the last degree tactless and arbitrary, and if Spain bowed to the mandate, she would unquestionably have to face civil war at home. The Washington Government sees all that perfectly plainly. We are persuaded that it has not deliberately placed Spain in such an embarrassing predicament. The telegram is misleading.

PRESIDENT DOLE AND ANNEXATION.

The President of the Hawaiian Republic, in his message to the Senate with reference to the signing of the Annexation Treaty by Mr. McKinley, alludes to the fact that when the Provisional Government succeeded the Hawaiian monarchy on January 17th 1893, the fundamental law of the new Republic authorized the President to make a treaty of political or commercial union with the United States and says:—"The grounds for the adoption of this policy on the 17th day of January, A.D. 1893 were, first, the existing local conditions under which the maintenance of stable government was beset with great and increasing difficulties; and the growing menace to the small Hawaiian population, involved in the impending immigration, possibly unlimited, of races whose civilization was not in accord with the established institutions of the country. Second—The rapidly developing interests of the great naval powers in the Pacific ocean which rendered the permanence of the independent government of the Hawaiian Islands extremely uncertain. Third—The importance of securing such permanence of relations with the United States as would render possible the development of the resources of this country; and, fourth—an abiding conviction that it was for the best interests of all of the people of these Islands."

Most persons, we think, will be disposed to think that the third of the above reasons was the most cogent. Annexation means that a sum of about seven millions of gold dollars annually passes into the pockets of the Hawaiian planters.

A special session of the Senate was convoked for the purpose of discussing the Annexation Treaty. The discussion was to take place on Sept. 9th, and our latest advices are of Sept. 8th. A mass meeting of persons opposed to Annexation was held on Sept. 6th, when the following resolution was adopted:—

"Whereas, It has been submitted to the Senate of the United States of America by the President of the United States of America and its Secretary of State, a treaty for the annexation of Hawaii to the United States of America, and which still lies with the said Senate for action thereon to be had at its regular session which shall be in December next, and

"Whereas, A proclamation was issued by S. B. Dole, President of the Republic, calling all of the members of the Senate of this Republic to assemble in a special session of said Senate to be convened at the Executive building, in Honolulu, Island of Oahu, Hawaiian Islands, on the 8th inst., for the consideration of the ratification of the said proposed treaty of annexation of Hawaii to the United States of America, and

"Whereas, The native Hawaiians and a large majority of the people of the Hawaiian Islands have been in direct opposition to the annexation of Hawaii to the United States of America, and

"Whereas, The native Hawaiians and a large majority of the people of these islands have fully believed in the independence and free autonomy of these Islands and to the continuation of the Government of Hawaii as of a free and independent country governed by and under its own laws, therefore, be it

"Resolved, We, who in mass meeting assembled on the 6th day of September, A.D. 1897, at the City of Honolulu aforesaid, for ourselves and for and on behalf of the people of Hawaii, as well as for the large majority of the people of the Hawaiian Islands, earnestly protest against the annexation of Hawaii to the United States of America in any form or shape."

TANGLED NOTIONS.

THE interesting question of the Chinese arrested in Hakodate and punished by a Japanese tribunal, despite the fact that they were employés of a British man-of-war, is discussed by the *Japan Gazette* in an article which must certainly rank as a very remarkable exposition of international law. The *Gazette* sets out by affirming the proposition that a ship-of-war is regarded as part of the State to which she belongs; a proposition which has the advantage of being quite undeniable but the disadvantage of being absolutely irrelevant. Our contemporary then airily passes to the Admiral of a fleet, and contends that, since his ship is part of the State to which it belongs, the Admiral also is entitled to extra-territorial privileges. That, too, has the advantage of being undeniable, so far as it goes, but the disadvantage of being only partially true, and unfortunately its truth stops short precisely at the point where the *Gazette's* case begins. For to say that the extraterritorial privilege attaching to a public ship extends to her commander, is a statement quite valueless for the purposes of the Hakodate problem, unless it can be shown that the privilege covers crimes committed on shore as well as crimes committed on board the vessel. The *Japan Gazette* quietly ignores that essential limitation, and by ignoring it, begs the whole question. Moreover, the *Gazette* does not seem even to understand its own argument. It derives the extraterritorial privileges of the Admiral from the ship, and then proceeds to derive the extraterritorial privileges of the crew from the Admiral. "When a person," it writes, quoting from PHILLIMORE, "is admitted to extra territorial privileges, the persons that form part of his household or suite, are, generally speaking, sheltered under the same immunities." Now in the first place, that is an entirely superfluous process of reasoning. For if any one member of a man-of-war's personnel, be he admiral, midshipman, or blue-jacket, is entitled to claim absolute exemption from local jurisdiction, then all the members are equally entitled to claim the same exemption. One does not derive his title from another, but all alike derive it from the flag. In the second place, the *Japan Gazette* evidently confuses an admiral with an ambassador. The difference between the source of the extraterritorial privileges enjoyed by the suite of an ambassador and the source of the extraterritorial privileges enjoyed by the crew of a public vessel, is precisely that the former is constituted by attachment to the ambassador's person, the latter by attachment to the vessel. If the singular entanglement of the *Japan Gazette's* ideas on this point be due to want of knowledge or attention, it is a display of ignorance or carelessness extremely convenient for the

purposes of our contemporary's argument. An ambassador's suite certainly do enjoy full exemption from local jurisdiction, and they enjoy it by virtue of the ambassador's personality. Hence, by attaching the crew of a public ship extraterritorially to the person of the admiral, the *Japan Gazette* is enabled, with a certain degree of speciousness, to make the ambassadorial rule appear applicable to the crew of a man-of-war. As a controversial device the blunder is too apparent; as an accident, too opportune. If our contemporary really desired to obtain information for itself or to convey information to its readers, it should not have extracted a rule from one branch of international law and interpolated it in the text of another and quite distinct branch; should not have jumbled up rights of intercourse with rights of agents of intercourse. International law is quite clear with respect to the provisions covering the Hakodate case.

WOOLSEY, for example, in the fifth edition of his work, says:—"Ships-of-war are peculiar in this respect, that the vessel is regarded in a certain sense to be part of alien territory moved into the harbours of another State. The crews on board the public vessels are under their native laws, but on shore, if guilty of acts of aggression or hostility, can be opposed by force and arrested. So, also, the vessel itself must pay respect to the port and health laws. Crimes committed on shore expose persons belonging to such vessels not only to complaint before their own Sovereign, but also to arrest and trial." The italicized part of this quotation is certainly clear enough to dispel all doubt. That any member of the crew of a man-of-war who commits a crime while on shore in foreign territory may be tried and punished by the local authorities, is a proposition so universally admitted in theory and recognised in practice that we saw no occasion to prove it when writing previously on the subject. But it would seem that some journalists are still without knowledge of the fact.

THE HAKODATE AFFAIR.

THE *Japan Gazette* having very frankly admitted that an error crept into its recent statement of the provisions of international law bearing upon the Hakodate affair, we are glad to withdraw our imputation that the mistake was too opportune to be accidental. We take this opportunity, also, of referring to an article published by the *Japan Times* on the same subject. The *Japan Times* has shown very conclusively that the crew of a man-of-war are not exempt from local jurisdiction with regard to offences committed by them on shore in a foreign country. That point, however, was never in doubt, until the *Japan Gazette*, by dropping some links in its argument, seemed to contest the principle. Further

reference, therefore, would be unnecessary did not the *Japan Times* appear to be persuaded that by demonstrating the liability of a public vessel's crew to local jurisdiction, the illegality of Great Britain's contention in the Hakodate case is established. We can not, of course, be certain that our contemporary's view is limited to that very partial aspect of the question, but its article suggests that such is the fact, and since the discussion was opened originally in these columns, we are under an obligation to clear away misconceptions as far as possible. The contention of the British Authorities, as we understand it, is based, not upon the extraterritorial privileges attaching to a man-of-war and her crew under the general provisions of international law, but upon the extraterritorial privileges belonging to all British subjects under the special provisions of Great Britain's Treaty with Japan. If Her Majesty's subjects in Japan were judiciable by Japanese tribunals—in other words, had Consular Jurisdiction no existence in Japan—there would not be the smallest doubt about the right of the Japanese local authorities in Hakodate to arrest, try and punish any number of the crew of a British man-of-war detected in the act of committing a crime on shore. But Her Majesty's subjects in Japan are not judiciable by Japanese tribunals, and consequently the crew of a British public vessel when on shore in Japan enjoy exemption from Japanese local jurisdiction. Thus far every one is agreed. But now arises the point in dispute, namely, do the extraterritorial privileges granted to British subjects by Treaty extend to Chinese employés of a British man-of-war: do Chinese employés of a British man-of-war fall legitimately within the definition of "British subjects" as contemplated by Treaty. Her Majesty's Government claims that they do; the Japanese Government denies the claim. International law is silent on the subject. It is one of those peculiar problems which present themselves for solution under Conventionally divided jurisdictions and which have to be solved independently of written codes. The British Government by means of Orders in Council has laid down very clear definitions of what it understands by "British subject" for the purposes of the Treaty. Persons recognised by usage as being under British protection are included in the category, and Chinamen serving as cooks in a British man-of-war are said to be such persons. Thus the point in dispute is still further narrowed: we have only to consider the meaning of the term "usage," and its applicability to the Hakodate case. That has been already done in these columns. Perhaps it may be useful, however, to add here that "usage" is only another name for "precedent," and that all the precedents available for the purposes of this argument must be sought in the intercourse between

Occidental and Oriental States. In other words, Great Britain must go to the records of her relations with Turkey, or China, or some other country still lying outside the comity of civilized nations, in order to obtain examples constituting "usage," as applied to the Hakodate affair. It is problematical whether many examples of the kind can be found. But even if they be found, Japan does not appear to be under any obligation to recognise them. The acts of a man's neighbours have no binding force for him as usages unless his own circumstances are similar to theirs. But the circumstances are not similar in the case we are considering, as will be at once apparent if we look at the principle underlying the protective rights claimed by Great Britain. The principle is that aliens employed in her service and carried hither and thither in her public vessels, shall be guaranteed against risks involved in submitting to the jurisdiction of States where torturous punishments are inflicted and where legal procedure has not yet emerged from a barbarous, or semi-barbarous, condition. By recognising the proposed "usage" Japan would be acknowledging the justice of classing her with such States, and it is natural that she should decline to recognise it. On the other hand, Great Britain's difficulty is that, so long as the old Treaty with Japan remains in force, she has to guard against treating the latter in any manner calculated to create precedents embarrassing for the purposes of her intercourse with other Oriental countries. The indulgence of her inclinations *vis-à-vis* Japan is restricted by regard for the duties that the dictates of humanity and the principles of civilization impose on her elsewhere. Thus the problem has much interest, and we are strongly inclined to think that if Japan took a broad and far-seeing view, she would endorse instead of opposing Great Britain's contention. For though, so far as the letter of the law is concerned, no obligation that we can perceive devolves upon her, it may very well happen by-and-by that in her own intercourse with Oriental States she will find herself confronted by a similar contingency, and it is desirable that the widest possible scope should be given to the protection exercisable by civilized States over every one in their service. The time has come when Japan may cease to regard herself as fighting for admission to the comity of nations, and may consider that, having secured admission, the interpretation or enactment of international law has precisely the same interest for her as for them.

Our chief reason for recurring to this subject is that the article in the *Japan Times* indicates failure to understand the real issues, or to appreciate Great Britain's position.

THE OLD QUESTIONS.

"L'ECHO DE CHINE," in the course of a long article on the Franco-Japanese Revised Treaty, says:—

"We cannot deny to Japan the right of refusing to Europeans the ownership of land in her midst, but we can infer from it that a country which defies the others on the point of ceding a right so natural, and which, for that purpose, entrenches itself behind its traditions as the sole reason for refusing—has a right only to reciprocal treatment in this matter, and is not yet qualified to enter the comity of nations. Moreover, there is strong reason for fearing her partiality when we have given to her judicial rights over the whites towards whom she still manifests so much reserve. I dare say the Codes are perfect, but there are a thousand ways of unjustly applying the most just laws: and if we do not now dread Japanese justice we must still dread Japanese judges. This is why I protest here against the premature abandonment of our extra-territoriality and of our judicial rights in the concessions in Japan. This is why it would have been preferable to have had an intermediate period during which foreigners in the interior might be subjected to the laws of Japan, while retaining our territorial concessions at Kobe and Yokohama, where our nationals might have refuge in case of injustice or arbitrary bearing of native jurisdiction."

The writer of the article uses moderate language and gives evidence that he has studied his subject with some care. When he says that foreigners doubt the competence of Japanese judges to administer the laws lucidly and fairly, he expresses an apprehension very natural, but, at the same time, an apprehension that would be just as strong forty or fifty years hence as it is to-day, unless Japanese judges were given an opportunity of practically demonstrating their competence. We do not, for our own part, pretend to allege that they are competent. There are no materials for forming an intelligent opinion. But precisely the same lack of solid basis disfigures the contention of every foreign critic who declares them incompetent. The fact is that Japanese judges are a comparatively unknown quantity to foreigners, and must remain an unknown quantity until Consular Jurisdiction is abolished. It used to be said that they were partial, and that their bias was strongly exhibited in favour of their own nationals. That fallacy was completely exploded by an analysis of the mixed cases tried in Japanese civil courts during the past ten years. The analysis was made, at our request, from the archives of the Yokohama Local Court and the Tokyo Appellate and Supreme Courts, and was published in these columns. Had it warranted any deduction as to the moral balance of the Japanese judicial mind, the deduction must have been diametrically opposed to ordinary foreign opinion, for the record showed that in an overwhelming majority of cases the verdicts of the Courts had been in favour of Western suitors. *L'Echo de Chine's* essayist appears to be ignorant that such an analysis has been published. "There is strong reason," he says, "for fearing Japan's partiality when we have given to her judicial rights over the whites." On the contrary, there is no such reason. So far as experience goes, foreigners have no grounds for doubting the impartiality of Japanese judges.

That fact can not be too strongly emphasized. It would seem, also, that the French writer's doubts about the equity of the Japanese judicial mind are to some extent based on the question of land ownership. He lays down the proposition that any country which denies to aliens the natural privilege of owning land within its borders "is not yet qualified to enter the comity of nations." That is a most extraordinary proposition. We ourselves have not the smallest sympathy with Japan's conservative attitude towards the land question. We discern no valid grounds for her objection to foreign ownership, and we think that she takes a mistaken view of her own interests. But to say that her reluctance disqualifies her to enter the comity of nations is to speak with strange thoughtlessness. Not thirty years have passed since the ownership of land by aliens was interdicted in the United Kingdom itself, and there are still Occidental States where the veto remains valid. Japan can not be excluded from the comity of nations because she reserves a privilege which some members of the comity themselves reserve. All these questions have been threshed out time and again, and the same may be said of the proposal for an intermediate period during which Consular Jurisdiction would remain within the Settlements and Japanese Jurisdiction would be supreme without them. That solution was advocated by ourselves in these columns just fifteen years ago. It received some attention at the time, but its practical details proved, on examination, quite incapable of adjustment. The day has passed for all such compromises. France and Austria-Hungary may prove obdurate. We do not expect that they will. Indeed, there is every reason to expect the contrary in France's case at all events. But their abstention can not effect the general issue. Japan is pledged to finish a work that she has carried so far towards completion.

FOREIGN SUITORS IN JAPANESE COURTS.

WE have often had occasion to comment on the extreme slowness with which information on Japanese subjects percolates to certain strata of the Yokohama community. There appears to be a thick crust of prejudice, or conservatism, which defies penetration by any ordinary processes of instruction. Of course this remark applies to a small section only of the community, but unfortunately it is a section that thrusts itself into considerable prominence by the aid of a newspaper proverbial for ignorance and intolerance. In minor matters failure to have recourse to perfectly accessible means of obtaining information, and statements recklessly advanced without regard to accuracy and without any preliminary research, may not prove particularly mischievous. But where such

an important question as the civil procedure in Japanese courts is concerned, very serious harm may be done by misrepresenting the facts. There has always been a strong feeling of reluctance on the part of Europeans and Americans to submit to Japanese jurisdiction. Nothing could be more natural. Whatever the Japanese may be morally, there is no concealing that they are geographically an Oriental race, and that nothing in their past history, as known to the ordinary foreigner, justifies their differentiation from the general mass of Orientals. They have certainly by their modern progress and by their enlightenment established an indisputable claim to be so differentiated, but the ordinary Occidental is slow to recognise such a claim, especially where he himself in his own person has to incur all risks involved in the recognition. Therefore, it is perfectly natural that there should hitherto have existed among the foreign residents a strong objection to losing the privilege of Consular Courts and being handed over to Japanese jurisdiction. Equally natural is it that the public exponents of that objection should have sought to establish its validity by demonstrating the unfitness of the Japanese to be entrusted with the care of foreigners' lives and properties. But such a demonstration, made in the midst of the Japanese themselves, could not fail to provoke considerable resentment and indignation. It is not pleasant to have a man perpetually telling you that you are a person of inferior moral calibre and semi-civilized tendencies, and that only a very limited degree of confidence can be placed in your propensity to be upright and fair. The Japanese have had that kind of assertion dinned into their ears for a great many years, and although, on the whole, they have borne it with considerable patience, it has had the inevitable effect of creating a sense of injury and a feeling of soreness. We are almost disposed to think that they have become morbidly sensitive in some respects. Doubtless their attitude towards the Sendai Taxation affair suggests a badly balanced mood. Not that, speaking generally, there has been any preponderating display of unfairness. The leading journals have either left the question severely alone, or treated it with calm impartiality. But the fact that a comparatively insignificant local newspaper like the *Tohoku Shimbun* has been able to foster excitement, and has found a sufficient quantity of inflammable material lying around to make its sparks of invective dangerous, shows that things are not in a normal condition. It appears to us more than probable that if the circumstances of the Sendai affair were reproduced in England, for example, a great many strong expressions of partizan feeling would have been evoked. What we doubt, however, is that a question so petty in itself would have

assumed such magnitude in public consideration. Thus we are forced to conclude that the Japanese have fallen, for the moment, into a kind of *noli-me-tangere* mood. Not one bit surprised are we that such should be the case. We have anticipated it, and have predicted it in the most explicit terms, for many years. To have expected the advent of an evil does not, however, greatly mitigate its unpleasantness when it arrives, and we are persuaded that thoughtful Europeans and Americans will agree with us in deprecating any continuance of the process of exasperating misrepresentation which is chiefly responsible for the present state of affairs. If defects be observed in Japanese legal procedure or police management, let them be temperately pointed out; if any conditions be detected of such a nature as to suggest that submission to Japanese jurisdiction is calculated to cause injustice, let them be fairly represented. But certainly it is time to abandon the antiquated device of trying to prove the Japanese black whatever be their real colour. Our proximate reason for making this remark is that the old question of foreign suitors and Japanese civil tribunals has been again brought forward in a manner indicating strange ignorance of the facts as they actually exist. There are two aspects of this question. One is concerned with the mood of the Japanese tribunals. Do they show partiality or prejudice? Do they indicate a tendency to favour their own nationals as against aliens? These queries were effectually answered by statistics published some time ago in our columns, showing from the official records of the Yokohama Local Court and the Tokyo Courts of Appeal that, in the vast majority of mixed cases coming before those tribunals for adjudication, the foreign suitor won. All doubts of Japanese Judges' impartiality were thus dispelled. The other aspect of the question relates to the practical utility of judgments obtained by foreigners in Japanese Courts of law. Formerly such judgments were of very little value. Owing to defects in the civil procedure, a Japanese defendant could generally contrive to dispose of his property in such a manner, during the long interval between an inferior tribunal's decision and its endorsement by an appellate court, that nothing remained in the end to satisfy the judgment, and the foreigner, though successful at law, remained with his trouble for his pains. In the days when justice used to be thus defeated for want of proper remedies in procedure, the necessity of reform was often urged by the *Japan Mail*. The Japanese themselves, however, were fully sensible of the defect, and on April 21st, 1890, a new "Code of Civil Procedure" was promulgated. It went into operation on January 1st, 1891, and has now been working for nearly seven years with per-

fectly satisfactory results. Compiled in accordance with the best principles of European jurisprudence, it did not fail to provide due securities against the abuse mentioned above. A whole chapter—Chapter IV.—containing 26 sections, was devoted to the subject of "provisional seizure and provisional disposition," and ever since the Code went into operation, it has been possible for every suitor, foreign or Japanese, to take steps effectually guarding against the dispersal or diversion of a defendant's assets pending the delivery of final judgment. We did not conceive it possible that any foreign resident, possessed of the most ordinary intelligence, could have been ignorant of these facts. The *Japan Daily Herald*, however, is ignorant of them, for it declares that to win a suit in a Japanese Court is a wholly useless result, since the successful suitor is balked of his rights either by imperfections in the law, or by its mal-administration, or by the poverty or rascality of the defendants. All these obstacles in the course of justice—excepting the poverty of a defendant, which is a question entirely apart—were removed eight years ago, and to write as though they continued to exist is only another example of the extraordinary ignorance prevailing among a section of the Yokohama residents. It is not at all surprising that Japanese jurisdiction should bear a repellant aspect when to legitimate apprehensions connected with that little known quantity, the competence of Japanese judges, there is added a resolute determination to ignore every improvement in Japanese laws.

FUNERAL OF BISHOP BICKERSTETH.

The funeral of the late Dr. Edward Bickersteth, Bishop of South Tokyo, Japan, eldest son of the Bishop of Exeter, took place on August 9th in the cemetery of the Church of the Holy Cross, Chisleton, near Swindon. The ceremony, though simple, was of a very impressive character. Hymns were sung as the body was borne from Chisleton House through the village to the church, and again as it was carried from the church to the cemetery. The hymn, "Peace, perfect peace," written by the deceased's father, was sung at the graveside. The service was jointly taken by the Bishop of Kiushu, the Bishop of Osaka, Bishop M'Kim (American Bishop of Tokyo), and the Bishop of Salisbury; while the mourners included Mrs. Bickersteth (widow), the Bishop of Exeter and Mrs. Bickersteth, Mrs. Forsyth, Canon Valpy (Winchester), the Rev. Samuel and Mrs. Bickersteth, the Rev. F. K. and Mrs. Aglionby, the Rev. R. L. Ottery, the Rev. H. V. Bickersteth, Mr. Robert Bickersteth, and Mr. Ashley Bickersteth. There were also present Sir Ernest Satow (British Minister to Japan, now on leave of absence), Mr. Yoshida, Archdeacon Warren (C.M.S. Missionary in Japan), and Miss Bullock, representing St. Hilda's Mission in Tokyo. At one o'clock a memorial service was held at Christ Church, Westminster. Bishop Barry and the Bishop of Grahamstown officiated, and Bishop Phillips, of West Africa, the Bishop of Zanzibar, and the Rev. J. A. Reeve (rector of Lambeth) were also present. Bishop Barry delivered an address and paid a high tribute to the self-denying work of the deceased bishop in the missionary field. —*Globe*.

THE SENDAI TAX AFFAIR.

(COMMUNICATED.)

It is unfortunate, to say the least, that the settlement of the Sendai tax question should have been so long delayed. It has been discussed by the local press, and on and off by certain metropolitan papers, since the middle of July. For the past two weeks excitement over the affair has been growing in Sendai, and a public meeting was to have been held on the 18th, the real purpose of which was to extend the area of the agitation. The meeting, however, has been postponed *sine die*. Since so much unnecessary fuss is being made over a comparatively trivial subject, it may be well to state in order the facts of the case dating from its beginning, over a year ago.

In May, 1896, when Mr. Denning was residing in Kimachi-dōri, Sendai, in a house that had been rented by him through the mediation of the school authorities, he was served with a tax notice, showing a total assessment of 9 yen 99 sen 7 rin. The tax was described as *kensei kosuwari* and *shisei kosuwari*. The first step that Mr. Denning took was to show the notice to the Director of the school, Mr. Yoshimura Torataro, and to ask whether he was liable for such a tax. Mr. Yoshimura said that as to Mr. Denning's liability, it was not a question that he could settle, but that no such tax had been paid by former foreign professors in the school, and that he should recommend Mr. Denning to consult his Consul on the subject. Before adopting this advice, Mr. Denning called on most of the foreign residents of Sendai in order to ascertain whether any of them had received similar notices. He found that no attempt had been made to levy a similar tax on other foreign residents. In the representation of the case sent to Mr. Hobart-Hampden, H.B.M.'s Acting Vice-Consul, Mr. Denning drew special attention to the following points:—(1) That the tax is a newly levied tax as far as Sendai is concerned. (2) That, though there are many other foreigners residing here and living in rented houses, they have not been served with a similar tax notice. (3) That the alleged authority for levying the tax is, not an order from the Foreign Office, but a newly passed law of a *Kenkai*, or Provincial Council. (4) That the assessment is based on personal income and not on the size of the house occupied, and hence is to all intents and purposes an income tax. Mr. Denning asked whether a Provincial Council has the right to pass laws affecting foreigners without the permission of the Central Government, and whether in the present instance the action of the Provincial Council had been sustained by the Central Government. In explanation of the above, it is necessary to state that the Director of the School wrote to the *Kencho* to ask for an explanation of the action taken, and in the reply sent the information embodied in Mr. Denning's statement to the Consul was given. The instruction which Mr. Denning received from the British Legation was not to pay the tax, and to communicate with the Legation in case of pressure from the Local authorities. None of the questions given above were solved, as there was no real occasion for their being brought formally before the Foreign Office.

The Sendai tax collector not only neglected to take further steps to collect the tax, but when November came, he omitted to issue the second half-yearly notice. In September, 1896, Mr. Denning changed his residence, taking up his quarters at 29 Tsuchi-dōri. This change was known to the Local authorities, and they also knew that he remained in the employ of the Second Higher School. A whole year having elapsed, another tax notice was served, amounting to 10 yen 68 sen 5 rin, being also a *johanki* or first half-yearly tax. Dr. Seymour, likewise in the employ of the Second Higher School, was served with a similar notice. Mr. Hay, Dr. de Forrest and many other foreigners residing in the town received notices at the same time in which the amount of their assessment was in every case 26 sen 3 rin. Acting on the instructions received

from his Legation the year before, and utterly at a loss to comprehend the nature of the action of the local authorities, Mr. Denning took no notice of the tax and waited to see what would be the upshot of the affair. Though the tax is due in May, it was far on in July, after the school had broken up and Dr. Seymour had left for Tokyo, when the collector called and asked why the tax had not been paid. Mr. Denning said that he was not sure of his liability and that he would have to communicate with his Consul before taking action. "Other foreigners have paid," observed the collector. When asked to what their tax amounted, he replied, only a few sen. The collector came a second time and on this occasion showed Mr. Denning the order that he had received from the *Kencho* to collect the tax. Mr. Denning said that having referred the matter to his Legation, he was not free to take any action without instruction from his Consul, but that if the tax were shown to be legally due, he would of course pay it without further delay. No subsequent attempt to collect the tax was made. No communication has been addressed to Mr. Denning by the local officials on the subject, as is falsely represented in a mischievous Sendai paper. It may be well to add a brief account of the action of the local press, which alone is responsible for the existing state of feeling in Sendai. There are four newspapers in Sendai.

- (1) The *Tohoku Shimbun*, the best supported, but by no means the ablest—conservative and anti-foreign.
- (2) The *Sendai Shimbun*, a Jiyu-to organ—progressive and pro-foreign.
- (3) The *Ooku Nichi Nichi Shimbun*—quiet in tone and non-political.
- (4) The *Kohoku Shimbun* a newly started organ, on which it is too early to pronounce an opinion.

From the very first the *Tohoku Shimbun* has taken a most unreasonable view of the situation. Its account of the affair may be summarised in a very few words. "Our local government has levied a tax on a foreigner, which of course it had a right to do or it would not have done it; the foreigner, after the fashion of Occidentals, treats the matter with contempt and refuses to submit to Japanese authority of any kind." The *Sendai Shimbun* has taken up the cudgels on the other side and in 14 leading articles has defended Mr. Denning's action, contending that from the outset he has acted in the most rational manner possible. In doubt about the legality of the tax, he took the proper steps to test the question, and he is in no sense responsible for the delay that has occurred in the final settlement of the affair. But the *Sendai Shimbun* did not stop there. It commenced an attack on the local officials, published damaging documents of various kinds, and hence in an indirect manner brought about the state of feeling which exists to-day. Mr. Denning has suffered more from his friends than his enemies.

It was foreseen by Mr. Denning and by others that attempts would be made to involve him in a controversy with the school on the question. Baffled on other lines, the *Tohoku Shimbun* tried this plan. Jealous that the *Sendai Shimbun* was scoring by pouring forth interesting details day after day, the editor of the *Tohoku* sent an interviewer to Mr. Denning's house on the 6th inst. Several of the tax notices which the interviewer asked to see, Mr. Denning had forwarded to Tokyo and hence could not show them. Mr. Denning was asked whether foreign newspapers had published anything on the tax question and whether the affair was likely to be heard of out of Japan and so on. He also asked whether Mr. Denning could lend him a copy of the *Japan Mail* containing a recent notice of the affair. This at the moment Mr. Denning was unable to do. In the course of conversation Mr. Denning informed the interviewer that he did not consider that the *Tohoku* had made a fair use of the information with which he had supplied it. Liberties had been taken with his communications which were not allowable in newspaper correspondence, that his words and his views had been habitually and willfully misstated and misrepresented, and that he felt under no kind of obligation to sup-

ply a newspaper whose plain object was the stirring up of anti-foreign feeling with material of any kind. The interviewer left disappointed, and adopted the method of taking vengeance on Mr. Denning commonly practised by such papers. He bespattered him with mud in the columns of the *Tohoku* the following day. Words that had never been uttered by Mr. Denning were given in quotation marks. This, as the *Tohoku* hoped, attracted the attention of the Director and, since much of the language falsely attributed to him was very impolite, Mr. Denning was asked for an explanation. In a long letter Mr. Denning explained to the Director exactly what had occurred and furthermore suggested a method of settling the tax question, at any rate temporarily. But as for reasons which need not be discussed here, the school authorities did not see their way clear to adopting that method, it is unnecessary to give further details on the subject. The Director was satisfied with the explanation, but suggested that a full statement of the facts of the case should be sent to each of the Sendai papers. This was done. The document was printed in full on the 14th by the *Sendai Shimbun*, the *Kohoku Shimbun* and by the *Ooku Nichi Nichi*, the last prefacing the statement with a few sensible remarks to the effect that it had hitherto forbore to give publicity to the tax subject on the ground that it was a legal question that had been referred for settlement to the proper authority and was not one on which ordinary newspaper writers were competent to pronounce an opinion.

The *Tohoku* condescended to acknowledge the receipt of the document and to quote a few words from it, on which it placed its own interpretation. A letter addressed by the Director of the school to the same paper in the 3rd inst., representing that it is most improper to hold a meeting to discuss a question of a purely legal kind, now under the consideration of the Foreign Office, was treated in the same manner except that no quotation even was given, but only the gist of the writer's communication.

Since it was not impossible that one of the results of the projected meeting might be acts of violence committed against the foreigners concerned, the Governor was approached on the subject. But he informed the Director that he had no power to stop the meeting. Presumably he subsequently received the necessary authority from Tokyo, for the meeting has been postponed. Compared with Tokyo there seems to be little supervision of the press in Sendai. There is no room for doubt that the inflammatory writing of the *Tohoku Shimbun* from day to day is likely to lead to a breach of the public peace and on this ground, surely, the authorities might interfere. It seems most unjust that two foreigners who have committed no illegal act, both of whom are well disposed towards the Japanese and both of whom have resided a long time in this country and during that time have always observed laws and regulations of every kind, should be allowed to become the butts of popular hostility as a result of an agitation set on foot and kept going by a couple of insignificant provincial newspapers.

SENDAI LOCAL PRESS ON THE TAX QUESTION.

We have alluded more than once to the agitation fostered by the *Tohoku Shimbun* of Sendai with reference to the question of imposing local taxes on foreigners living outside the settlements. The impression produced upon the foreign residents by the attitude of the Sendai journal can not fail to be disquieting. It must appear to them that there is a disposition on the part of the Japanese to take a morbidly sensitive view of the acts of foreigners in this country, and to import passionate and prejudiced elements into the discussion of delicate problems. For example, the *Tohoku Shimbun*, in its latest article, contends that the foreigners who hesitated to pay the tax have been guilty of contumely toward Japanese officials, because they appealed over the heads of the latter to the

British Consul. The Taxation Regulations lay down the course to be pursued by persons objecting to the legality of a tax, and instead of adopting that course, the foreigners referred the matter to their own Consul. The *Sendai* journal calls that a most reprehensible act. There is little need to point out that such a contention is quite untenable. The question at issue was, "are foreigners that live outside the settlements under an obligation to obey the local taxation laws of Japan or are they not." To observe the procedure laid down in a section of those laws would have been an admission of obligation to observe the whole—a perfectly obvious conclusion, which, however, the *Tohoku Shimbun* is not sufficiently dispassionate to perceive. It is satisfactory, on the other hand, to observe that the *Sendai Shimbun* has treated the question throughout in a most moderate and cosmopolitan spirit. We have no doubt that our readers will be interested in hearing what it has to say, and we therefore proceed to summarize the contents of an article just published.

It is quite beneath the dignity of a government, we read, to issue orders which it has no means of enforcing. If the report published in a number of newspapers be true, the Government has taken an ill-advised step, for it is said to have informed the prefectural authorities that tax notices might be sent to foreign residents but that no steps should be taken to enforce the payment of the taxes. That places the local authorities in a very awkward predicament. If it were the Government's intention to make the payment of all local taxes levied on the Japanese a condition of foreigners' residence outside the Settlements, notice to that effect should have been given to the Foreign Ministers. But no such step has been taken, or the British Minister would not have instructed Mr. Denning to refuse to pay the tax levied on him. The idea that the principle of extra-territoriality does not hold good in the case of foreigners residing in the interior of Japan cannot be entertained for a moment. A policeman has no more right to enter a foreigner's house in Sendai without a consular order than he would have in one of the foreign settlements. In the case of Mr. Denning, he comes to Sendai as an employé of a Government school; that is to say, he has been invited to reside here for the convenience of the school. By accepting the invitation, he does not differentiate himself from other foreigners. He is still governed by his Consul and has to pay the annual Consular tax. He is required to observe only such Japanese laws as affect all foreigners directly or indirectly. The fact of his being an employé of the Japanese Government does not denationalise him in any way. Notwithstanding all the hue and cry that has been raised over this question, Mr. Denning has been guilty of nothing more than showing loyalty to his country. The men who are loudest in their praise of Japanese patriotism see no merit in the patriotism of an Englishman. What other course was open to Mr. Denning when first he doubted the legality of the tax than to apply to his Consul, and having applied and having been instructed not to pay the tax, what could he do but obey? If Japan has her laws, so have other countries, and why should odium attach to the name of a man who has only shown himself to be a law-abider.

Such, in effect, are the views advanced by the *Sendai Shimbun*. They may be traversed. It does not appear to us, for example, that the Government loses dignity by adhering to a principle which it can not enforce by recourse to the ordinary method, distraint. There are indirect means of enforcing the principle under consideration; means quite as effective as any provided in the Taxation Law. Besides, a foreigner living within the Settlements does pay local taxes, and it may be argued with much show of justice that he is at least equally liable when he lives outside the Settlements. But we do not propose to enter into the general question here. Our purpose is merely to show the remarkable fairness and sympathy that has marked the *Sendai Shimbun's* treatment of the subject.

We learn by telegraph from Sendai that Mr. Denning and Dr. Seymour have paid under protest, the local tax which has given rise to so much discussion. The position they are understood to take is that, owing to misrepresentations and misconceptions for which they are in no wise responsible, public agitation has been caused, to the manifest inconvenience of the Authorities; that, from the same cause, they find themselves depicted in the light of obstinately opposing a fiscal demand made by Japanese officials when in reality they have simply been awaiting instructions from their own officials; and that they now take upon themselves to pay the money without prejudice to the question of their legal liability, and with entire confidence that the Japanese Government will deal justly in the matter. We feel persuaded that Messrs. Denning and Seymour have chosen the only wise course. The principle under debate is not affected by their action and the excitement of the public will be allayed. So far as we can gather, the *Tohoku Shimbun* is solely responsible for that excitement. It has exaggerated or distorted the facts throughout, and the meeting which was to have been held on the 17th instant owed its conception and organization to the same journal. Presumably the *Tohoku* aimed solely at increasing its own popularity and circulation, for it must have been pretty well aware that no sufficient reason for such measures existed.

THE KOBE APOLOGY CASE.

Our readers are aware that a somewhat remarkable case was tried a few days ago in H.B.M.'s Consular Court in Kobe. A dispute had arisen between Mr. and Mrs. Rowe, on one side, and the Misses Sower, on the other, with reference to the accounts of a school in which they were all concerned. Being unable to come to an understanding, the questions at issue were submitted to arbitration, and the award of the arbitrator was made an order of the Consular Court. We may add that our readers need not give any further consideration to the monetary part of the complication, since it did not affect the subsequent proceedings, to which alone we apply the epithet "remarkable." The arbitration went almost completely against the Rowes, and they accepted it, to the limit of their somewhat slender resources, so far as the money was concerned. But there was another matter. Mr. Rowe, in a letter to the Misses Sower, insinuated that they had misappropriated certain funds. With regard to that the arbitrator rendered the following decision:—

This charge, or perhaps the proper word to use is insinuation, is contained in a letter addressed by Mr. Rowe to the Misses Sower dated Dec. 23rd, 1896; it eventually practically resolved itself into a charge against Miss E. A. Sower. Fortunately Mr. Rowe withdrew it before the hearing was finished, the question as to whether an apology should be offered by him or not being left to me. I now record it as my opinion after going into matters as carefully as I possibly could, that Mr. Rowe did not take sufficient precautions to assure himself that he had good grounds for a suspicion, and that without doing so he made a very serious charge against a comparatively unprotected woman in a foreign country. The alleged shortages turn out to be, calling them by the worst possible names, "mistakes," mistakes too which I have not found it, in the cases of the cheques at any rate, difficult to trace. Many of them are in the rough fees book, kept by the lady accused, self-evident. The witness Sandford Reich, who was supposed to have paid more than had been accounted for, could not swear to the absolute truth of his statement, and has since informed me that he included in one month's estimate (the only month in dispute) the fees of the other school to which some of his children had been going as well as those of the Kobe High School. I think that after this charge has so completely fallen to the ground I cannot do less than ask Mr. Rowe to make a written apology to Miss A. E. Sower for the part of the letter dated Dec. 23rd, insinuating misappropriation. The definition of the word given by Mr. Rowe in his letter to Mr. Skinner of January 5th, 1897, is no doubt correct but when that meaning is applied to trust money it means "embezzlement" which is a very ugly word. I

feel sure then that even without the order which I must make Mr. Rowe would see his way to make the apology required to the lady who for nearly six months has had this quite unfounded charge hanging over her. I shall go into the refusal of the Sowers to go into and give explanation of the accounts with Mr. Rowe when considering the partnership accounts, and the views I shall express then apply equally to this portion of my award. Costs will be arranged later.

It might be supposed that Mr. Rowe, having withdrawn the insinuation, would have had no hesitation about making an apology. But he declined to apologise unless the arbitrator's award were supplemented by fuller explanations; unless, in short, the monthly lists of school payments were examined as well as the Bank pass-book by which alone the arbitrator seems to have been guided. Plainly in advancing such an objection Mr. Rowe implied that his original insinuation was not unfounded, or, at any rate, that he had not been convinced of its baselessness. Why then did he withdraw it before the hearing? His conduct seems to have been inconsistent and wanting in magnanimity. On the other hand, the arbitrator's action appears incomprehensible. He "ordered" Mr. Rowe to apologise. Did he imagine that such an order could be enforced? It would seem that he did, and what is more, the Consular Court held the same view, for it sent Mr. Rowe to prison because he persisted in his refusal to apologise without being convinced of his error. We have never heard of such a proceeding until now. An apology is the one thing that a Court of Law has no power to exact. It may convict a man of libel, send him to prison, fine him, or condemn him to pay ruinous damages, but it can not order him to apologise, for the simple reason that to enforce such an order is beyond the competence of any tribunal. The Kobe Consular Court has made a record. Mr. Rowe was very speedily released from prison, and to add to the curiosity of the affair, he is apparently ignorant of the reason of his release. Some of the Kobe newspapers alleged that his impaired health rendered imprisonment dangerous, but Mr. Rowe has written a letter which can only be construed as a declaration that he does not know why he was released. We do not sympathise in the least with Mr. Rowe. He is said to be sixty years of age, and the fact is put forward as a reason against imprisoning him. It ought to have been a much more cogent reason against his utterance of slanders, and his refusal to apologise for them when he failed to prove them. But it looks very much as though there had been some erroneous administration of the law in Kobe.

BRITISH NAVAL MOVEMENTS.

The British Squadron left Hakodate on the 7th inst. for Endermo (Muroran), with the exception of the two torpedo-boat destroyers, but returned to harbour again that same evening on account of bad weather. There was a heavy sea running outside. Next morning they moved out again, accompanied by the destroyers, for Endermo. Going slow and carrying out steam tactics on the way, the Squadron arrived at their destination on the evening of the 9th. While there the weather was all that could be desired, with the exception of an occasional heavy swell. The squadron left Endermo Bay on the morning of the 14th for Yamada and Sendai Bays, where they break up and go to their respective stations, with the exception of the *Centurion*, *Immortalite*, and *Rattler* who return to Hakodate for a few days before finally departing for the south. The *Grafton* goes to Singapore and the *Immortalite* will be the senior ship at Yokohama. The *Alacrity*, leaving the squadron at Yamada Bay, arrived at Hakodate with the mails on the 17th, and having distributed them awaited the arrival of the flagship. H.M.S. *Archer* arrived in Yokohama on Wednesday morning, and left on Friday for Nagasaki. On Thursday the *Handy* and *Hart*, torpedo-destroyers, arrived at Yokohama, to be followed next day by the flagship *Grafton* and the *Rainbow*. The weather at Hakodate on the 16th, 17th and 18th was very disagreeable, being wet and squally, but it cleared up bright and fine on Sunday morning.

SUMMARY OF CURRENT JAPANESE LITERATURE.

In an address delivered before the Teikoku Kyōiku-kai a few weeks ago, on the "Revival of Education," Mr. Shimada Saburō expressed the following opinions:—Though a certain amount of progress is noticeable in education during the past ten years, its advance has not corresponded with that of other things in Japan, nor does its present stage of progress compare favourably with the position held by education in Western countries. Though the annual State expenditure has increased from 5 or 6 million to 120 million yen, an inadequate proportion of this money has been devoted to education. From 100,000 tons the Navy has risen to 200,000, and from 250,000 men the army has been increased to 500,000. Can education show anything to compare with this? Is it not stated at the present moment that there is a deficiency of 27,000 in the ranks of elementary school teachers? It seems to be universally admitted that few men of merit are content to pursue the avocation of a school-teacher longer than they can possibly help. There are those who hold that by raising the salaries and the status of teachers the evil would be remedied. But such is not our opinion. What is wanted is a change in the sentiments with which teaching is regarded by the mass of the people. In former days the calling was considered sacred. The respect felt for teachers resembled that felt for parents. But now the relationship has become perfunctory and sordid. A teacher ranks with ordinary hirelings who are paid to work so many hours a day. Then people have no confidence in the Department to which the management of education has been entrusted. There is a lack of feeling of responsibility with the officials of the Mombushō. After the war it was decided by the State that ten million yen of the Indemnity Fund should be devoted to education. What has the Mombushō done in reference to this? The Departments most feared by Provincial officials are, first, the Home Department; secondly, the Military Department; thirdly, the Department of Agriculture and Commerce. Nobody dreams of asking what the Mombushō thinks or says on any question. Hence the proposal, reiterated on all sides, for the abolition of the Mombushō. In seeking Government employ the best men apply to the Home Office, the Foreign Office, or the Department of Agriculture and Commerce. It is only the men who stand no chance of receiving appointments in these offices that apply to the Mombushō, resulting in an inferior equipment of the latter. This fundamental defect produces results now complained of throughout the educational world.

New magazines appear from month to month, despite the fact that there are already far more organs than men competent to write for them. A new literary periodical called 櫻花園 *Okwa koku* (The Country of the Cherry Blossom), and a political magazine called the 太平洋評論 *Taikeiyō-hyōron* (the Pacific Ocean Critique) have lately appeared. The latter is ultra-conservative and aims at damping the wave of cosmopolitanism which, it is asserted, is about to flood the country. The first number contains articles on "Japan's Relations to Other Countries," "America and the Pacific Ocean," "England and Germany in South Africa," and notes on literary and educational subjects.

In the *Teikoku Bungaku*, Mr. Ueda Bin insists on the importance to Japan of studying French literature. There are not a few signs, writes Mr. Ueda, that Japan's literary explorations are extended over too wide an area, and that the knowledge acquired lacks thoroughness. Russian, Italian, Spanish and even Norwegian literature are made subjects of study by certain Japanese. For the present it is advisable that attention should be concentrated on English, French, and German literature. Hitherto French literature, though ranking ahead of German, has had few admirers in Japan.

The only school where the French language is specially studied is the Hōritsugakkō. The students at the Imperial University who make a specialty of French are few. On the whole the subject has been treated with undeserved neglect.

In the pages of the *Teikoku Bungaku*, commenting on the views advocated by the 明治會雜誌 *Meiji-kai Sōshi* and the *Nihon Shugi*, Mr. Omachi Keigetsu says that, prior to the publication of the *Nihon Shugi*, there were three organs representing the cause of nationalism: the *Nihonjin*, the *Kokkō* (國光), and the *Meiji-kai Sōshi*, the first being perused by students, the second by the upper classes, and the third by the two or three thousand members who belong to the *Meiji-kai*. The principles of the first two magazines are somewhat undefined, but those of the third are declared to be (1) Respect for the gods, (2) Loyalty to the Emperor, (3) Love of country. But these three are one, since love of country involves both loyalty and piety. The *Meiji-kai Sōshi* has been in existence for nearly two years. It was founded by Count Sasaki. The Society whose views it represents is a quiet, unobtrusive body that places little value on noisy discussion, but is well versed in the tendencies of the age and exercises no small influence in favour of nationalism. The latest addition to the ranks of conservatism is the *Nihon Shugi*. To the party whose opinions are stated in this organ Mr. Takayama (of the *Taiyō*), is acting as lantern-bearer. This writer is most clamorous in advocating the abolition of religion, but his arguments exercise little influence on men in general. Mr. Omachi next attacks the *Nihon Shugi* and its supporters in a most vigorous manner, but as the subject dealt with is religious rather than literary we will not pursue it further.

The *Teikoku Bungaku* observes that though the main idea of starting a magazine like the *Gogaku Zasshi* is good, the publication as now conducted has many defects. It serves to excite the curiosity rather than stimulate the perseverance of students. At the rate of four pages of grammar per month it will take a number of years to obtain knowledge by means of the *Gogaku Zasshi*. The scope of the magazine should be narrowed and confined to English, French, and German. The conversational part of the magazine has, says the *Teikoku Bungaku*, received severe handling by the *Japan Gazette*, to which the compiler of the phrases given is not likely to reply.

The organ from which we have just quoted has some very discerning remarks on the cause of the general lack of appreciation of foreign literature in Japan. The following is the gist of what the editor of the *Teikoku Bungaku* has to say on this subject:—The Japanese view of life and things in general is strongly tinged with pensiveness. The pensive element in the Japanese nature, which is one of its most conspicuous constituents, was partly derived from Buddhism and a study of Chinese verses, but to a considerable extent is inherent. The imperfections, weakness, and sorrows that characterise man's existence make a lasting impression on the Japanese mind and give a special type to literary utterances. Japanese poetry all breathes the same spirit. It reflects the conviction produced in the writer's mind by external nature. The pensive sentiment in many cases has been cultivated to the extent of excluding all other feelings. The foreign novels and poems most popular in this country are those which appeal most to this feeling. In foreign literature we find the greatest variety of sentiments appealed to. Authors aim at placing themselves in touch with men and women who are prompted and controlled by a great variety of emotions. To describe life as he finds it the writer needs to master the diverse points of view and sympathies of the various actors. The young and old, the good and bad, the grave and the gay must all in turn excite and absorb the interest of the successful literary artist. Until Japanese students of foreign literature get rid of that

narrow preference for pensive writing which so strongly clings to them at present, they will fail to appreciate the most captivating of the charms of foreign books—their marvellous variety. To describe the many-sidedness of human life requires the highest art. Compared with this achievement, to express in however delicate a manner one's own sense of dissatisfaction is an easy task.

The *Taiyō* purposes collecting and publishing a number of provincial verses and operatic songs. Ordinary songs or ballads are to be arranged under the following heads:—(1) *Nōji-uta*, agricultural songs, used by farmers when at their various occupations. (2) *Kōji-uta*, songs used by labourers when working together, to put energy into their work, such as are heard when building is going on. (3) *Fūdo-uta*, songs founded on provincial sayings or customs, or local events. (4) *Yūgi-uta*, songs used by children in various games and pastimes. (5) *Komori-uta*, songs used by nurses. (6) *Bon-odori-uta*, songs that accompany dancing at the annual Bon festival. (7) *Jinji-uta*, sacred songs, used in worship or in connection with religious festivals. (8) *Shūgi-uta*, congratulatory songs, used at weddings, &c. (9) *Kikori-uta*, wood-choppers' songs. (10) *Funa-uta*, songs used by sailors. (11) *Mago-uta*, songs used by lads in charge of packhorses. Persons acquainted with this class of composition are requested by the *Taiyō* to send in contributions before September 30th. The design is a good one.

No. 15 of the *Taiyō* contains an article from the pen of Mr. Lafcadio Hearn entitled *Nihon Katagaron* (Japanese Painting), of which we give a short summary. At a meeting of the Japan Society held in London last year, Mr. Edward Strange read a paper on Japanese painting in which he spoke in laudatory terms of the peculiarities of Japanese art. This evoked a great deal of opposition and a warm discussion ensued. Among other things, it was said that no such woman as is sketched by the Japanese artist was ever seen. The question caused so much excitement that the Japanese Minister, Mr. Katō, in order to quiet the feelings of the combatants, turned the discussion into another channel. The objections to Mr. Strange's view were evidently founded on want of initiation into the mysteries of Japanese art. This art requires special study. My own experience was that at first Japanese painting seemed anything but attractive, but after two years' study I began to see something charming in it, and from that time it grew on me until it appeared no other than marvellous. A Japanese studying Western art would no doubt undergo a similar experience. The characteristics of Japanese art which have special merit I will now endeavour to indicate:—(1) The relation of individual objects to a given type, the subjection of special characteristics to an all pervading nature are invariably observed. By a few clever strokes of the brush an insect or a flower is made at once to declare its identity and to show its relation to the family to which it belongs. By sketching some characteristic property, or some special form of activity, the Japanese artist enables one to identify the object he represents, without going to the trouble of minutely examining its structure or form. Rather than nature herself he prefers to embody the idea which she suggests. (2) In Japanese portrait painting, in accordance with that strong national trait which makes the suppression and concealment of emotion meritorious, there is no attempt to represent passing states of feeling. From their pictures it is difficult to decide whether a person is old or young, good or bad, much less the state of feeling of the individual represented. The high regard in which an absolutely passionless state is held may be traced to Buddhism. (3) In ordinary foreign painting great minuteness is aimed at, but the Japanese think more of general effect. Both styles have their advantages, though to carry minuteness to an extreme is considered vulgar even in the West. What are called *Ukiyoye* convey to my mind a most vivid impression of passing scenes, but this impression is not caused by the faithfulness of

these sketches to details—by their reproduction of actually existing objects—but by a certain subtle suggestiveness which they possess. All high class art deals with the ideal rather than the real. The finest productions of Greece were founded on religious, or at any rate on transcendental, conceptions. There is a point where the art that is the result of special study and the art that comes from intuition meet, resulting in the creation of beauty of a very high order. Both Greek and Japanese fine art alike remind us of the idea of Herbert Spencer's, that expression is form in the process of creation. But Japanese imitations of nature may perhaps be better described as generalisations of objects, as bringing out prominently some universal properties, rather than embodying form in the process of assuming its permanent shape and character. (4) Greek art and Japanese art have much in common. They both aim at representing objects rather as they should be than as they are. The Greeks expressed their ideas respecting the gods and the aspirations of the human race. The Japanese represent the simple unsophisticated happiness of beings who live in harmony with nature, but portray also the superiority of self-control and observance of the laws that govern society. Modern Western art, which is occupied with present modes of life, with the greed of the money seekers, and kindred subjects, is not only far removed from the sublime idealism of the ancient Greek, but is inferior to the Japanese standard. (5) Much depends on the proclivities of the critic in all art criticism. It takes years to become accustomed to an entirely new style. I have often been amused and instructed by listening to the unvarnished opinions of Japanese children in reference to our Western pictures. Appreciation of anything valuable in the world of art involves years of laborious study. This fact is constantly overlooked by persons who undertake to pronounce an opinion on Oriental art.

The *Taiyō*, writing on the influence exercised by newspapers the world over, says that there are over 50,000 in the world, and furnishes the subjoined table:—

Country.	No. of Papers.
Canada and the United States	20,630
Great Britain.....	8,000
Germany	6,000
France.....	4,300
Japan	2,000
Italy.....	1,500
Austria	1,200
Various Asiatic countries	1,000
Spain	800
Russia.....	800
Australia	800
Greece.....	600
Switzerland	450
Holland	300
Belgium.....	300
Other countries.....	1,000

A series of volumes entitled 新撰百種 *Shinsen-hyakushu*, "New Selection of Various Works" is being issued by the *Kyōikuji-ron* printing office. Vol. I. consists of Questions and Answers on Philosophy. Vol. II. gives a history of Japanese maritime enterprise in former days. Subsequent volumes will discuss education, politics, economy, agriculture and industry and will contain poems. What has appeared is written in an easy style and the work is well suited to the wants of persons of limited education.

Dr. Inouye Tetsujirō has published a small volume entitled *Shaka Shusoku*, which deals with the much disputed question of the race to which Shaka Muni belongs, Dr. Inouye contending that he was not an Aryan, but a Turanian.

A translation of Dr. Ditté's German work on Practical Education has been published by the Hakubunkan under the title of *Jissen Kyōikugaku*. Mr. Fujishiro Teisuke is the translator.

A historical work of some importance, consisting of ten volumes, entitled *Aizu-shi* (History of Aizu) has recently appeared. The compiler is Mr. Ikeuchi Seijirō. It relates the parts played by Aizu, Oshū and Utsunomiya prior to and during the revolution. The volumes are illus-

trated and contain a large amount of material hitherto unpublished. The publisher is a Mr. Ikeuchi Seijirō, Wakamatsu. The price is 30 *sen* per volume.

Numerous as are the translations of works on mental philosophy already in circulation, another is announced, being the work of Prof. Ladd of Yale University, which has been rendered into Japanese by Mr. Oda Nobutada. Reviews speak well of the translation, which has been revised by Dr. Nakajima Rikizō. Prof. Ladd has contributed a special preface for the Translation.

An English book entitled "Cathay: the Way Thither," 2 vols., with two maps, by H. Yule, is, we believe, to be reprinted in Tōkyō. The original work was published in London in 1866. Only 150 copies were issued. The book is much sought after, as is evidenced by the fact that a copy will now fetch about 80 *yen*. The Tokyo publisher is Mr. Takakuwa Komakichi, 15 Yūmichō, Ichōme, Hongō. Only 100 copies will be issued, at 5 *yen* per copy. The subscription list will be open till Sept. 30th.

A writer in the *Waseda Bungaku* expresses the opinion that Kyōto and Osaka are far behind Tōkyō in the matter of literature. The *Osaka Asahi* and the *Osaka Mainichi Shimbun* are inferior to the best Tōkyō Dailies according to this authority. Osaka being a great commercial city, the majority of readers seek diversion and amusement when they take up a newspaper and would not appreciate anything solid. Although Kyōto is a great educational centre, in literature it makes little progress, even falling behind Osaka. The latter city has its Literary Society, its *Bungaku Hyōron*, its *Kiraku*, its *Yoshi Ashi Gusu*, and the like. But with the exception of a column in the *Kyōto Shimbun* devoted to contemporary literature, the western capital has nothing to show in the literary line worthy of comparison with Tōkyō publications. This cannot be regarded as otherwise than a subject of regret, says the *Waseda Bungaku*.

We read in the same magazine that Mr. Hitomi Ichitarō, who has already translated the *Man-yō-shū* into French, is now engaged in rendering the 今古集 *Kokin-Shū* into that language, to be followed by the *Nihon bunmei-shi* (History of Japanese Civilisation). These two translations are to be sent to the Paris Exhibition. Mr. Anezaki Masaharu is engaged in the preparation of a "History of Hindu Philosophy" in Japanese, and Dr. Nakajima Rikizō has in an advanced stage a history of Western Philosophy.

Mr. Owada Kenju, the well-known lexicographer, is about to publish another lengthy work, entitled *Sakubun-Hōten*, designed to meet the wants of advanced students in composition. The art of composing *uta* and of writing what is called *Famato-bun* is taught and illustrated from various sources. The work covers 1700 pages and the subscription price, is 1 *yen* 80 *sen*, up to September 30. The publishers are the Hakubunkan. A somewhat similar work is also being issued by the Hakubunkan entitled 詠歌辞典 *Yōka-jiten*, of which Mr. Sasaki Nobutsuna is the author. In addition to teaching the student the art of composing Japanese poems, the *Yōka-jiten* is designed to enable him to turn *gagen* (classical language) into *sokugo* (colloquial). This book, though 1400 pages in length, is offered for sale at 60 *sen*, subscription price. The list closes September 30th.

The Hakubunkan announces the publication of a History of the China-Japan war by Mr. Kawasaki Samuō. It is the most minute and the best written history of the war that has appeared in Japanese, covering 2,450 pages. It sells at 1 *yen* 90 *sen*, and the reputation of the author, it is said, will insure for it a wide circulation.

The *Jōgaku Zasshi*, writing on the home life of the upper ten thousand, says that the wives of men belonging to this class in many instances are of humble origin and hence are not acquainted with the rules observed by ladies of rank in the

management of their households. The social customs of this strata of society have deteriorated. The bad example set by women of rank is doing much harm among the middle and lower classes.

Another women's magazine, the *Yoshi-no-tomo*, discusses modern female costume, recommending the use of *hakama* and the discontinuance of the heavy, expensive *obi* now in use.

The *Fūsoku-gwahō* institutes a comparison between the women of Tōkyō and the women of Kyōto, according to which the latter are by far the more active and enterprising. In Tōkyō it is customary for women to stay at home and look after the house but in Kyōto they engage in a variety of out-door occupations, competing with men in a number of things. In the Western capital a large percentage of the bill collectors are women. Women frequently negotiate loans and business contracts. The distribution of newspapers, the delivery of milk and similar occupations are to a large extent engaged in by women. In charge of wayside shops and booths they are much more successful than men. In Tōkyō women are being used in various trades, such as tobacco selling. In both cities the women available for domestic service are decreasing from year to year. If women once begin to compete with men, says the *Gwahō*, men are likely to have a hard time of it.

In the *Tōyōtetsugaku* Dr. Katō Hiroyuki, writing on Confucianism, expresses the following opinions:—There is nothing in the world with which to compare Confucianism. Though serving as a religion to thousands, it is not a religion. Though resembling philosophy in many respects, it cannot be called a system of philosophy. In all religions there are dogmas, and Confucianism has no dogma: In all the great religions there are miracles, mysteries, doctrines, concerning the future life. Confucianism discourses not of these. Its teaching is founded on general principles. Though Confucianists of the Sung era (about 1100 A.D.) propounded a number of philosophical theories, it cannot be said that philosophy is the essence of Confucianism, in that the great sage arrived at virtue rather than truth and made efficient government the goal to be reached by means of the principles he laid down. His system, consisting of ethical, political and social elements, disconnected from the superstitions which form a part of the teaching of so many religions, is capable of being utilised in various countries. It has, despite some abuses which have grown out of it, done more to supply to the Japanese a code of morality of a noble type and to develop valuable traits of character than anything that could be named. Though some parts of Confucianism are not applicable in modern times, the system as a whole cannot be discarded without moral loss.

Mr. Fukuzawa has completed his Hundred Short Essays and they have been published in book form. Various literary organs have reviewed the work. Here is the gist of what the *Waseda Bungaku* has to say on the subject:—Though the topics treated are various the author's well known views make themselves felt in every line. The volume may serve as a Bible to the man of the world. Well versed in the history of recent times, and an eminent educationalist, Mr. Fukuzawa may be regarded as the Chief Priest and the Great Teacher of Western Civilisation in Japan, whose temple has been erected in the heads of men. For the past 30 years he has been the most consistent and the most relentless opponent of old customs, old ways and old beliefs that Japan can show. Without minutely inquiring into their comparative merits, he has in turn made use of foreign philosophy, foreign religion, and foreign art as reasons for the enlightenment and transformation of men's minds. In his allegiance to the cause of Western Civilisation he has never swerved for one moment. His definition of loyalty and filial piety differs entirely from that which Japanese are accustomed to hear. In fanning the flame of na-

tional piety he has never borne a part. He has preached the doctrine of perpetual progress and has ever reminded us that our attainments are still those of youth. Though the civilisation that he has striven to advance is mostly of a materialistic type, no one can read through his essays without perceiving that Mr. Fukuzawa, without professing any one religion, is no stranger to the reverence, awe, and sense of mystery inspired in the minds of thoughtful men by a contemplation of the wonders of the universe, as is testified by his use of such terms as 宇宙 *Uchū*, 天工 *Yenkō* and 天道 *Zendō*. The perfections of nature ever excite his admiration, and of the limited nature of man's intelligence he is ever deeply conscious. On the same subject the *Taihoku Bungaku* says, that in the possession of common sense and knowledge of the practical affairs of life Mr. Fukuzawa is unsurpassed. It is a style of writing far removed from the scholarly lines penned by Dr. Kaiō, but nevertheless is fully equal to the task of expressing fully and clearly any thought to which the aged seer may wish to give utterance.

No. 5 of the *Shakai Zasshi* furnishes some interesting statistics bearing on the circulation of magazines in Japan. It goes without saying that with most of them it is a hard struggle to make two ends meet. A large number of copies are given in exchange for other publications or sent to newspaper offices for notice in the dailies. The following magazines are stated to have the largest circulation:—Literature—The *Waseda Bungaku*. Philosophy—The *Tetsugaku Zasshi*. History—The *Kyū-bakufu*. Political Economy—The *Tōkyō Keisai Zasshi* and the *Kokka-gakkai Zasshi*. Education—The *Kyōiku Jiron*. Temperance or Total Abstinence—The *Kunino-hikari*. Buddhism—The *Shūshin*. Shintō, Confucianism and Buddhism combined—The *Daidō Jōshi*. Miscellaneous—The *Nagayo Zasshi*, *Nihonjin Kokumin-no-tomo*, *Far East* and *Sekai-no-Nihon*. A magazine like the *Taiyō* has a small circulation, the demand for a high class organ of this kind being very limited. Among popular magazines those containing fiction or those designed for youthful readers have the largest sale. But the circulation of these does not exceed a thousand. The editors of the magazines mostly do their work in their own houses and, as it is impossible to make a living out of one publication, write for five or six different organs. Hardly any of the magazines have establishments of their own. They are issued by various publishing houses as a rule, though a few literary organs are printed in *nagaya* situated in back streets. These are the publications which aim at pecuniary profit. Many are run at a loss month by month, for the sake of propagating the opinions of their supporters. Some eke out a living by advertisements, and this they are better able to do since the charges for advertising in newspapers have been raised. Five or six pages covered with tobacco advertisements are occasionally to be seen. In such cases the tobaccoist agrees to purchase a number of copies, which he distributes throughout the county. Magazines may be divided into four classes. (1) High class and independent, whose proprietors have no thought of profit. (2) Magazines dependent on help from individuals or some existing body. (3) Magazines started and kept up by five or six writers who share each other's views, each one bearing his portion of the loss involved in their publication. (4) Magazines conducted on purely business principles, whose main object is money-making. Of these the *Taiyō* is said to be the chief. The idea that there is much to be made out of this class of literature is not entertained by discerning men. But, happily, money-making is a very secondary object in the lives of modern educated Japanese.

A writer in the *Shakai Zasshi* contends that most of the foreign articles in use in Japan and the foreign methods that have been adopted owe their popularity to acknowledged merit and superiority, and have not been adopted from mere

love of change. To protest against Occidentalism is vain. Men are not going to be persuaded to give up what they believe to be a good thing for an inferior opinion. The organs of the nationalists and the anti-foreign party for political purposes represent the steady flow of popular opinion in a Westerly direction as an unmitigated evil, but the men of the nation turn a deaf ear to their warning. In this world of ours things must stand or fall on their own merits. In trade the term *hakurai* (imported) is synonymous with genuine, superior, trustworthy. The application of this term alone usually suffices to guarantee the quality of an article.

JAPANESE FACTS AND COMMENTS.

In order to carry out the harbour construction scheme at Osaka, it was decided, says the *Shogyō*, to delegate a portion of the municipal Headman's functions to one of the members of the Council, under the following rules drafted on the 13th instant:—

OSAKA MUNICIPAL RULES.

Art. I.—In regard to the affairs relating to the construction of a harbour in this city, the following duties shall be carried out by one of the members of the Municipal Council:—(1) Actual supervision of the work. (2) Appointment, dismissal, reward and punishment, of officials below the rank of Chief Engineer. (3) Contracting for labour and for the supply of necessary articles. (4) The issue of orders for the disbursement of expenses in connection with the harbour construction.

Art. II.—The commissioner specified above shall be appointed by the Governor of Osaka, who discharges the functions of Municipal Headman, and this person will not be permitted to deal, for the time being, with other civil affairs.

The above Rules were evidently framed for Mr. Nishimura, a member of the Osaka Municipal Council, and are to be approved by the Minister of Home Affairs, subject to the Imperial sanction.

With regard to the silk trade of Yokohama, the *Shogyō* remarks that the market is very active, a single firm (No. 221) having taken delivery of 46,400 catties on the afternoon of the 15th instant. This enormous deal was soon followed by a transaction with Messrs. Jardine, Matheson & Co. who bought 12,000 catties. Nos. 36, 33, and 225 were not long behind them in purchasing, the total transactions, including the above, amounting to 79,900 catties. In fact, the trade in one day aggregated 97,000 catties. Negotiations are still being carried on with Nos. 1 and 221, though no understanding was arrived at on account of the native dealers persisting in their extravagant demands. Sales, however, were made to these and two other firms to the extent of 17,600 catties on the 16th. It was expected that the total transactions would reach 50,000 catties by the evening of the 16th.

The rate of pay for various artisans is reported by the *Hochi* to have suddenly and extravagantly risen in consequence of the late storm and inundations. The following comparative table shows the more excessive of the increased rates:—

Occupations.	After the storm.	Before the storm.
Carpenter	1.00	75
Rouler (board)	2.50	75
Rouler (tin plates)	1.60	60
Glazier	3.00	75
Gardener	1.20	35
Roofer (tile)	3.00	65

The above are wages paid on works undertaken by special contract, and it is said that no work which fails to realize payment at the rate mentioned is accepted by the artisans. This extravagant scale of pay is due to the workmen's combining to squeeze their employers.

Kumamoto, remarks the *Sekai-no-Nippon*, occupies the most conspicuous position in sericulture among the provinces of Kishu. Silk manufacturers also have made commensurate progress. Last year a silk factory, complete in every respect, was organised by a joint stock corporation, and the weaving industry

having been thus developed to an extent never before known, Messrs. Rosenthal and Co., of Yokohama, specially despatched representatives to the district and stimulated the enterprise in various ways, whereupon a plant of the latest and best description was fitted up to supply the requirements of the business. In Japan, Ashikaga, Hachioji, Nishijin, and Fukui are among the centres of the weaving industry, but if Kumamoto meets with no serious drawback, it will soon, the *Sekai-no-Nippon* asserts, attain an equal footing with its rivals.

According to the *Hochi*, the gist of the Government's reply to Hawaii with regard to the proposed arbitration was as follows:—

- 1.—All matters bearing on facts shall be determined by the respective countries.
- 2.—All the legal points in dispute shall be submitted to the decision of the arbitrator, to whose verdict the two countries are bound to submit.
- 3.—The arbitration shall be entrusted to His Majesty the King of the Belgians.

In reply the Hawaiian Government seems to have intimated that it would consent to submitting the legal points in dispute to the decision of a third Power after the facts bearing on the question had been fully ascertained, and that the arbitrator should be consulted only after the facts regarded as indisputable had been settled by the respective countries concerned. To ascertain the actual facts is of course a matter of paramount importance. If they are amicably settled there will be no reason to expect any complication in carrying on negotiations for the selection of the arbitrator. Now that Hawaii's answer has been received, measures have been taken by the Government to prepare a draft in which all the disputed points are mentioned, so that the same may be forwarded to the Japanese Minister in Hawaii with due instructions.

Owing to the carrying away of river embankments, the district of Kambara, Echigo, was entirely devastated on the 7th instant. The local overseers delayed setting break-down gangs to work, and, in consequence, when the storm of the 9th inst. broke over the district, the inhabitants found their houses again inundated above the floors. The villagers of Kosodo, Komme, and Yukomizu suffered most, and seeking about for a pretext for the ventilation of their grievances, pitched upon the headman of the district as the principal cause of their misfortune. They accordingly resolved to severely censure him. On the 12th instant, the villagers held a meeting, a representative of every household of Kosodo being present, at which it was resolved that the villagers should together proceed to the house of the headman. Early the following morning, a mob numbering some 830, many of whom were armed with formidable weapons, marched out towards the headman's dwelling. On the way thither 30 men from Komme joined the crowd as a delegation from their village. Soon the march of the mob was arrested by the police, who had been hastily summoned from the surrounding district, but the rioters would listen to no words of remonstrance and attempted to pass on. Then a police-inspector drew his sword, intending to frighten the folk. But the action had a contrary effect, for enraged at the sight of the gleaming blade, the villagers broke through the police cordon and hastened towards the headman's house. Upon reaching the place they broke into it, and then, cooling down a bit, proceeded to the District office, where they petitioned for the removal of the obnoxious headman and all his underlings on the ground of their having neglected riparian works and thus brought ruin to the district.

"Hozansei," with the charming *natvete* that distinguishes the class of Japanese political quidnuncs to whom he belongs, advises Count Okuma, in the columns of the *Sekai-no-Nippon*, to refrain from transferring either Mr. Komura or Mr. Nakada from the diplomatic posts they at present occupy in order to fill the vacancy left by the retirement of Viscount Aoki from the position of Minister to Germany. In "Hozan-

sei's" opinion, Mr. Komura, Vice-Minister of Foreign Affairs, is the only man in the capital who knows anything at all about foreign affairs, and if Count Okuma sends him abroad, no one will be left in Japan to prevent the Count from blundering ignominiously in a realm that demands the exercise of the nicest discrimination.

The foreign trade of Yokohama and Kobe from January to August this year has been calculated as follows:—

	Yen.
Exports (August)	14,606,931
Exports (January to July) ..	85,707,796
Total	99,314,727
Imports (August)	22,508,279
Imports (January to July) ..	116,581,323
Total	139,089,602
Imports and exports	238,040,329
Excess of imports	39,774,875
Export of bullion (August) ...	307,625
Export of bullion (Jan. to July)	4,700,081
Total	5,007,706
Import of bullion (August) ...	593,651
Import " (Jan. to July) ...	70,054,044
Total	70,647,695
Excess of import	65,636,989
Taxes (August)	834,015
Taxes (Jan. to July)	4,215,896
Total	9,049,911

Who, exclaims the *Kokumin*, will say the amount of silver *yen* transported to Japan from abroad is considerable? Investigations carried up to the 13th September shows that the excess of exports over imports amounted to 1,700,000 *yen*. The following are the figures:—

	Exports. Yen.	Imports. Yen.
Hongkong	1,130,000	1,227,387
Singapore	1,525,000	250,088
Amoy	—	307,500
Other Chinese and Korean Ports	1,525,000	104,333
Total	3,713,590	1,949,308
Excess of exports	1,764,282	

The following table should prove of interest to industrial and commercial men as giving an idea of the present working capacities of Japanese factories:—

	July 1897.	June 1897.	Increase or decrease.
Factories	55	56	—
Average days at work ..	27	27	—
Spindles	686,015	694,094	7,379
Rings	67,666	70,073	2,409
Mules	754,333	764,369	9,448
Totals	1,527,975	1,568,565	40,590
Yarns	2,337,975	2,408,865	70,890
Rings	71,545	90,316	18,771
Mules	1,910,870	2,159,101	248,231
Totals	4,360,478	4,758,047	397,569
Cotton supplied	37,405,767 lbs.	39,238,810 lbs.	1,833,043 lbs.
Artisans employed—			
Men	22,016	22,477	461
Women	38,053	40,087	2,034
Yarns, average price per bale	10,202 yen	9,962 yen +	478 yen

The *Mainichi* fears that quotations for rice will continue to rise as the China crop appears to be below the average. Visible supplies at Yokohama are very small both for domestic and foreign rice.

The annual general meeting of the Rikun Agricultural Society, founded by Mr. Mayeda Masana, was held at Akita on the 10th, under the presidency of M. Iwao, Governor of the Prefecture. Among those present were Mr. Takahashi, engineer, of the Agricultural and Commercial Department, and Mr. Higuchi, of Tokyo. The subjects of debate were as follow:—

On agricultural industry—The necessity for extending the organization of the Agricultural Products' Inspection Offices; establishment of an agricultural college in the north eastern part of the Empire; opening of the 5th National Exhibition in the north-east; the most important preparations to be made by agriculturists in relation

to mixed residence; the process of establishing a council for encouraging a system of tenancy; investigation of the best method of banking savings in town or village.

Cattle breeding—Extension of pastures for stud horses and of offices for the conduct of affairs relating to the same; establishment of special quarters for cows for breeding purposes; encouragement to be given towards sheep rearing.

Lacquer-ware—Methods for increasing the export of lacquer ware; improvements in lacquering. Sericulture—Methods for securing greater uniformity in the method of packing raw silk in the six prefectures in Rikun; schemes for enforcing the same; the forwarding of a memorial to a responsible Minister of State urging the advisability of subjecting silk to microscopic examination; organization of silk institutes at the State's expense.

Weaving—The presentation of a memorial to the Government for organising special offices for the inspection of woven goods.

Forestry—Petitioning the Government to sell all the third class forests, or to make them the property of towns or villages.

According to the *Mainichi*, the first general meeting of the Japanese Weaving Corporation was held on the 15th instant at Kiriu, Joshu, when the accounts for the 1st half of this year were presented. The number of working members was declared to have reached 12,021. The subjects of debate were considered and the propositions passed in their original form. The following are the settled accounts:—

	YEN.
Gross receipts	81,063
Total expenditure	57,791

Balance

Repayment of initiatory expenses	7,276
Balance (net profit)	15,995

It was decided that 1,599 *yen* should be set apart as a reserve; 3,198 *yen* as a special reserve to meet depreciation of property; 1,599 *yen* as reward to officials; and 9,599 *yen* carried to next account.

Information from Shizuoka published in the *Tokyo Asahi*, announces that the number of deaths from the late inundations up to the 16th instant, totalled 72; persons injured were 222; houses entirely wrecked, 3,968; partially demolished, 3,808; damaged 30,428; and vessels swept away or damaged 1,287.

An Imperial Ordinance was issued on the 17th instant, embodying an amendment of the regulations for the promotion of higher naval officers. The changes shorten the period of actual service entitling to promotion, as may be seen from the following table:—

	Revised system. Years.	Old system. Years.
Rear Admiral and equivalent ..	3	3
Captain and equivalent	2	2
Second Captain and equivalent ..	2	—
Post Captain	2	3
Commander	5	5
Lieutenants	2	—
Sub-Lieutenants	1	3

The new scale comes into force from December this year; and for two years from the date of its enforcement, promotion from Lieutenant to Commander will be made at the expiration of the term of three years' actual service, calculated from the date of appointment. In the case of Post Captains, seven years will be the limit for promotion to a higher post, the term being calculated from the date of the former promotion to Commander. Captains and Lieutenant-Commanders are qualified for promotion when they have completed four years' service.

The Tokyo Municipal Council seems to have decided, says the *Chuo*, upon the following scheme for increasing the taxes:—

1. TAXATION OF COMMERCIAL COMPANIES.

The profits of banks and other corporations are to be taxed at the rate of two per cent. when a profit of ten per cent. has been realized on the capital; three per cent. when twenty per cent. is realized; and five per cent. when more than twenty per cent. is made.

2. SPECIAL TAXATION OF COMPANIES.

Tramway, Omnibus, Gas and Electric Light Companies, who make special use of highways or of public property, shall be taxed at the rate

of fifty *sen* per *ken*, the rails, routes, telegraph wires, and gas tubes being taken as a standard of taxation.

3. TAXATION OF CARRIAGES.

Since carriages of all descriptions have a most direct relation to the highways they shall each pay a tax of fifty *sen*.

The present scheme has not been evolved from an absolute necessity for finding new sources of revenue to supply deficiencies in the annual municipal budget. It is simply adopted in view of the steady development of the cost of municipal administration, in consequence of which deficiencies of revenue are likely to occur in the years to come. The new taxes are only provisional, and have to be sanctioned by the Municipal Council every year. At present, 81,000 *yen* are required for public works; 10,000 *yen* will be needed to replace an exhausted reserve; and finally, 120,000 *yen* must be appropriated for repairs rendered necessary by the late storm and inundations. These sums, of course, would be defrayed out of the new taxes, and it is supposed that the new rates of taxation are based on these estimates. All the questions bearing on the subject will be decided at a meeting of the Council to be held on the 24th instant.

According to the *Mainichi*, cases of dysentery since the first outbreak up to the 18th instant total 53,271, of which 10,997 have proved fatal. The following are the prefectures where more than three thousand patients are reported:—

	Patients.	Deaths.
Tokyo	5,554	1,247
Osaka	4,492	229
Saitama	3,861	884
Gumma	4,837	901
Shizuoka	3,982	934
Yamanashi	7,157	1,194

It is reported that about fifty cavalymen of the Imperial Guards were lately attacked by dysentery, and are now under medical treatment.

In Wakayama prefecture the number of families engaged in the rearing of spring cocoons this year, according to the *Hochi*, totalled 10,302, and the out-turn 6,701 *koku*. Perfect and pierced cocoons amounted to 747 and 80 *koku* respectively, while waste cocoons did not fall short of 473 *koku*. These figures show a decrease of 155 families engaged in the industry but an increase of 253 *koku* in cocoons, as compared with last year.

A few days ago the Bank of Japan, says the *Hochi*, received five million *yen* of new gold coins from the Mint. It has now received another five millions, making an aggregate of ten million *yen*. The amount to be supplied to the Bank by the end of this month is estimated at forty-three million *yen*, of which thirty-three millions are to be delivered to the Osaka branch.

The *Shogyo* informs us that the allied steamship owners of Kwansei are resolved, not to further extend the area of their operations nor will they place any further steamers on the various routes until the present ships are damaged or lost. Their scale of freight-charges will for the future be drawn-up, lowered or raised, by a central clearing-house, and all the accounts of the sub-agencies will be dealt with by the same office. Any owner of a newly built steamer who desires to join the alliance will only share in half the dividend declared for the first year after his joining.

The Okinawa islanders are earnestly pressing their petitions on the Government. They desire that a representative of their old kingly family be appointed perpetual Governor of the islands, and that the Sho family be also empowered to administer all the civil powers of the state, subject to the control of the Central authorities. They also wish to have a local parliament in which the affairs and finances of the islands may be discussed and approved.

A meeting has been called at the Nagoya Chamber of Commerce for October 3rd, of the united business corporations in the Prefectures

of Aichi, Miye, Gifu, and Shizuoka, to discuss the following questions.

- 1.—Should a *Saké* brewers' corporation be formed to embrace every brewer in the prefectures of the Tokaido?
- 2.—Can the tax now levied on clear *saké* be properly borne?
- 3.—Should the brewing of *saké* for domestic purposes be strictly prohibited?
- 4.—Should not imported alcohol be placed under stricter control?
- 5.—Are the provisions of the new law relating to the brewing of *saké* at all practicable?
- 6.—The above questions having been discussed, shall a memorial containing the views of the corporations here assembled be presented to the Ministers of State and the Diet?

The *Mainichi* remarks that the Mitsubishi dockyards at Nagasaki have had less repairing work to do this last half-year than in the preceding six months, but greater activity was to be noticed in ship-building. The daily number of mechanics employed was 2,387, an increase of 545 over the preceding term. The number of Japanese and foreign vessels repaired totalled 68 and 71 respectively, while several boilers were made to order. Vessels built or still in course of construction include a steel-clad steamer of 1,592 tons, ordered by the Osaka Mercantile Steam Navigation Company; another steel ship of 6,150 tons, ordered by the Japan Steam Navigation Company; a double-decked steel-clad ship of 1,540 tons, ordered by the Marine Commercial School; and a small wooden steamer ordered by the Nagasaki Customs House.

The *Mainichi Shimbun* is urging the passing of laws for the better control of the merchant marine of Japan. It points out the utter powerlessness of the captains of Japanese ships when their men refuse to obey orders, neglect their duty, or assault officers on the voyage; and further remarks that the provisions of the Penal Code at present do not provide punishment of an adequate nature in any of these cases. It is certainly time that something like the discipline enforced by the Merchant Shipping Act on English vessels should be applied to Japanese ships if the good name of Japan is to be preserved.

From a table that appears in the *Shogyo Shimo* we gather that the value of silk exported from Japan during the month of August amounted to yen 6,695,000, an increase of five millions over the previous month. Below is a table showing the average amount of silk exported from January to August for the past five years:—

Year.	Average value per picul.	Amount, Catties.	Value, Yen.
1893	818	1,635,333	13,378,674
1894	714	3,150,930	22,413,400
1895	804	3,278,742	26,381,171
1896	721	1,798,894	12,990,993
1897	762	3,054,840	27,856,217

NEWS OF THE WEEK.

Lancashire is the champion cricket county in England this year.

On August 25th over fifty thousand men were idle in England owing to the engineering dispute.

An American telegram says that the forthcoming Naval promotions will include the raising of Lord Charles Beresford to the rank of Rear Admiral.

Sir Ernest Satow, K.C.M.G., Her Majesty's Minister at Tokyo, arrived at Osborne on 11th Aug., and had the honour of dining with the Queen and the Royal Family. He left Osborne on the 12th.

A new first class cricket record, 379, has been established by Abel and Brockwell, playing for Surrey against Hampshire. This beats Brown and Tunncliffe's (for Yorkshire against Sussex) by one run.

The *Financial News* says the French Cabinet is considering the floating of a loan of £60,000,000 in 2½ per cent. bonds, partly for the redemption of the floating debt and partly for the reconstruction of the French navy.

The *Glengyle*, it seems, was run into by the British steamer *Coronet* in the Straits of Gibralt.

ter. The *Coronet* rescued the *Glengyle's* passengers and then ran into Gibraltar, where she found her fore peak to be full of water.

The *Times* learns that the Tokyo Hotel has been appropriated for the Brazilian Legation, and consequently the hotel is to be closed shortly. Mr. Lisboa and his family, who are now staying at the Imperial Hotel, will remove to the new Legation on the 1st of next month.

Admiral E. H. Seymour is talked of as a probable successor to Admiral Buller, in the China squadron. Admiral Seymour was on the China Station as a sub-lieutenant in the *Callista*, 74-gun ship, when Sir Michael Seymour was commanding the China squadron.

The Queen has been pleased to confer a Companionship of the Order of St. Michael and St. George upon Mr. R. F. Syngé, of the Foreign Office, in recognition of his services during the Jubilee festivities. Amongst other duties Mr. Syngé was attached to the Japanese Special Embassy.

Fortune comes to those who wait long enough. The new incumbent of the post of Provincial Treasurer at Foochow is said to be 73 years of age. A Chinaman at that age ought to have shaken off most of the follies of youth anyhow. But how much vitality is left?—*Echo*.

President McKinley receives on an average sixty begging letters a day. People in all parts of the United States write soliciting his aid to get them temporarily out of trouble. The other day, says an exchange, the total amount requested of the President in this manner footed up to \$25,000.

The war in Greece has been the indirect means of bringing to light a valuable example of antique architecture. A party of engineers at work on fortifications on the hill of Hokomata in the chain of the Oeta mountains, unearthed the ruins of a Doric temple bearing a close resemblance to the temple of victory on the Acropolis.

It is a pretty well known fact that most of the deaths that occur on the field of battle result from bleeding to death before surgical aid arrives. The French Government has under consideration a scheme of tattooing the soldiers of the French army with a certain mark over each artery, so that a wounded man would be able to stanch the flow of blood himself and thus increase his chance of living.

The Board of Trade, after taking the opinions of the leading shipping companies, appears to have decided at last to obtain powers for the erection of a lighthouse on Socotra. It is not surprising that this work has been long delayed, for even with the loss of the *Aden* for object lesson, experts are still very uncertain whether a light on the island will diminish or increase the dangers of navigation.

On Monday afternoon, about 2.30 o'clock, a carriage belonging to Messrs. Durand & Co., driven by a hetto, but with no other occupant, coming from the direction of Mayeda-bashi into Main Street, collided, at the corner opposite Clausen's Hotel, with a jinrikisha and a bullock cart. The shafts of the jinrikisha were smashed, and the hetto, falling from his seat, received rather severe injuries.

Nelson's *Foudroyant* dies like an old sea lion, still spreading havoc and destruction around her. A few weeks ago the *Anna* was wrecked in the operations connected with the dismantling of the old ship, and on August 17th the *Aurora*, a Clyde salvage boat, was battered to pieces by the sea at Blackpool, with 20 large cannon from the *Foudroyant* in her hold. Thus the old battleship imitates the end of the *Revenge*, which, in her last moments, sent off the Spanish vessels one after the other with something inside them that wrought their ruin.

The *China Mail* wrote on the Sept. 9th—“By a private letter from Manila we learn that Spanish troops (Spaniards from the Peninsula)

are going over to the Philippine rebel army. We are assured that the rebel forces are stronger to-day than ever they were, and that the prospect of the rebellion being suppressed is very remote.” Stories of this kind have been so often circulated and so often contradicted by events that every one must now hesitate to place any credence in them.

The liquidation of the late Johannes Brahms' estate has made a great step forward. It will be remembered that the composer died some months ago intestate and that both Germany and Austria claimed him as a citizen. The Hamburg authorities have now decreed that the old master had lost his German nationality by his long residence in Vienna. It is believed that Brahms' valuable collection of autographs, his manuscripts, and his fortune will go to the Viennese musical society to which he had verbally signified his intention of leaving them.

Newspapers in Italy persist in stating that, in his old age, Giuseppe Verdi has foresworn opera and is turning all his attention to the composition of sacred music. *Il Resto del Carlino*, a Bologna paper, says:—“A few days ago the glorious master was at Montecatini, looking strong, happy and lively. The few fortunate friends who can claim intimacy with him, state that he has already finished a *Te Deum*, and is now working on a mass for his own funeral.” Another newspaper commenting on this news says:—“As for the mass, O master, we want to hear it this century, and not wait till you die.”

The papers brought from San Francisco by O. & O. steamer *Coptic* contain very long accounts of M. Faure's visit to Russia, no opportunity for word-spinning being neglected. The same remark applies, we think, to the reports of the fighting on the Indian frontier, columns upon columns of picturesque detail appearing in the American papers, and all “telegraphed” from the seat of war. The “artist in head lines” has also been let loose among the war-dispatches and such breezy captions as “Afridis sweep the British away like chaff”; “British Forces in India compelled to fall back”; “British forces are fighting against overwhelming odds in India”; and so on and so forth abound.

The old proverb—one must go abroad to learn news of home—still holds good. A San Francisco paper publishes the following telegram from Victoria, dated August 28th—“The story of the wealth of the Klondike has reached the Orient, for on the new steamer *Columbia* of the Northern Pacific line, which arrived this morning, were four miners from Yokohama, who will outfit here for the gold fields.” We knew that Capt. Tipple had started for Klondike, and that a party is being arranged to leave Yokohama in the spring for the new Eldorado, but that Yokohama had already despatched a team of Argonauts comes somewhat as a surprise.

Messrs. Bandinel and Co., writing from Newchwang on 10th September, remark:—“The crops are magnificent and we hope to see a good demand for tonnage next month. New beans should begin to arrive about 25th inst.; and be in good supply by 10th October. Grain is very cheap, which may increase the consumption of imports. Meantime the old beans are decreasing in quantity and advancing in price, and shippers to Japan are losing heavily despite the favourable exchange and low freights. Arrivals to date:—14 ships and 262 steamers against 5 ships and 270 steamers last year.

The subject of “coincidences” has been discussed in the *Spectator* of late, and Mr. F. H. Balfour sends the following letter to that paper:—“The following statement of what I take to be a genuine coincidence may possibly interest your readers. A few weeks ago, being at Milan, I had a dream which—when I awoke—brought to my recollection a former friend of mine in Peking, whom I will call Vicars. I had not seen Vicars for several years, and for a few minutes I lay wondering what had become of him, how his schemes had prospered, and

whereabouts he was living. In a short time I got up, dressed, and went downstairs. On the hotel table lay the *Daily Telegraph*. I opened it, and the first thing I saw was the announcement of Vicars' death.

Advices received at Portsmouth from Portland on August 14th state that while the Channel Squadron was being exercised at general quarters at Portland the previous day, a 12-pounder quick-firing gun on the *Prince George* was inadvertently loaded with live cartridge instead of dummy, and when the gun was fired the projectile passed between the funnels of the Japanese battleship *Fuji*. Fortunately no one was injured, but considerable consternation was naturally caused. Apologies and explanations were sent from the flagship *Majestic*, and an official inquiry has been ordered into the matter.

The decision of the Italian Government to purchase, for the sum of £240,000, the famous Borghese collection, fortunately averts the danger, which was at one time imminent, of this splendid array of art treasures being dispersed; and the acquisition by the City of Rome of the palace in which the collection is housed ensures the preservation of the building and its contents without any alteration. Since among the pictures there are such notable works as Raphael's "Entombment," Titian's "Sacred and Profane Love," Correggio's "Dance," and many others by the greatest Italian artists, collected with admirable judgment, the loss to the Italian nation which would have resulted from an open sale would have been lamentable.

With regard to "sniping" in the Tochi Valley, an Indian official explains its meaning thus in the *Daily News*:—Three natives set out, two in one direction, one in another. The single man, when he believes he is in the neighbourhood of a sentry, lets off his rifle, no matter in what direction, and thus draws the fire of the sentry, whereupon the two other stalkers fire into the space lit up by the sentry's fire. This goes on all round the camp, and the result is constant alarm at night time. It is impossible to see the snipers, who generally stalk the sentries from behind stones. The soldiers have been told over and over again not to reply to a sniper, but they always fancy they see the enemy in the darkness, and the temptation to fire is irresistible.

The French armored cruiser *D'Entrecasteux*, contracted for in November, 1893, is nearly ready for her steam trials at Toulon. She is planned after the American armored cruiser *New York*, and is of 8,114 tons displacement, with 13,500 horse-power. A speed of 19 knots is expected. The battery of the *D'Entrecasteux* is composed of two 9.4-inch rifles in barbettes and twelve 5½-inch quick-firing guns in casemates. The battery of the *New York* consists of six 8-inch rifles in barbettes and twelve 4-inch quick-firers. The gun protection of the two ships is of the same thickness. As a long-distance cruising ship the French vessel has the advantage over the *New York* in being wood-sheathed and coppered.

A small gale has been raging in the musical papers of England regarding the alleged influx of foreign musicians, but it seems that there is very little in the cry. As the *Daily Mail* puts it, the fact of the matter is, British modesty is at fault. The folks at home will not believe that Britishers can blow brass instruments with the skill of foreigners, so to attract public favour, Smith of Whitechapel has to label him-Smitoffski, and become a "White Watsaw" bandsman; then the connoisseurs, Brown, Jones and Robinson, assemble in public concert-rooms to admire his exotic skill. *Propos* of this, a story is told of a hunt ball in the shires last winter, for which a "Pink Magyar Band" was engaged, but for some reason the bandmen were discontented with the treatment they received. As a consequence, they played their programme of dances quickly through, and declined to give any of the usual "extras," with the result that the programme was finished before midnight, when the men proceeded to pack up

their instruments. Just as the band were leaving, one of the "Pink Magyars" was heard to say that "he was blowed if they were going to play any more bally music if they didn't get any more bally beer."

The *Hogo News* says that its readers will doubtless remember the account given of a very pleasant gathering at Suwayama of the congregation and workers in Mr. Foss's Church on the hill, when, on their own initiative, an Address was voted to H.M. Queen Victoria on the occasion of her Diamond Jubilee. This was duly forwarded through the proper channels, and the following happy answer has just been received from Sir Arthur Bigge, the Queen's Private Secretary:—

Osborne, 31st July, 1897.

Dear Sir,—I have laid before The Queen the Address of congratulation to Her Majesty on the completion of the sixtieth year of her reign which you were good enough to forward to me from the congregation of Japanese Christians, and I am commanded to beg that you will convey to those who associated themselves in the communication the sincere thanks of the Queen for the kindly sentiments toward the Empire and Her Majesty which are contained in the Address.—I am, dear Sir, Yours very faithfully,

ARTHUR BIGGE.

Rev. HUGH JAMES FOSS,
The First, Kobe, Japan.

Socialistic legislation is making rapid strides in England, and a brief glance at the new Employers' Liability Bill will satisfy the most sceptical that there is truth in Mr. Labouchere's sneer that it is only a Conservative Government that can pass a Radical measure. The new act in regard to members of the printers' trade gives the workman compensation for any accident in consequence of which he is unable to follow his trade for two weeks. After the second week he is to have half his weekly wages at the time of the accident, provided that the payment is not to exceed £1 per week. Where death ensues in consequence of the accident, an amount equal to his previous three years' earnings or £150, which ever is the greater, with a limit of £300, is to be paid to his dependants. If he has none, his medical attendance and funeral expenses up to £10 are to be paid by the employer. These provisions are sufficiently drastic, as a London contemporary observes, but they will no doubt do much to increase the care already taken to make accidents preventable in every possible line of work.

The Hon. Auberon Herbert, in some descriptive notes on life in Constantinople, now appearing in the *Daily News*, says:—"A preternatural jealousy exists as regards the Sultan's successor. An official Turk will ride some miles out of his way rather than pass the Palace where the Heir-Apparent lives. A Minister who passed the Palace twice on his way on important business to the Bosphorus, where the Ambassadors were staying, found the most imperious messages waiting for him on his return, requiring his presence at the Palace to explain his conduct. Another had to explain because at the moment he was returning the salute of the guard the Heir-Apparent happened to pass in his carriage, and therefore his salute was supposed to be for the Heir-Apparent. Ministers get out of the way, and hide abjectly, in order not to meet and salute the Heir-Apparent. The most extraordinary precautions exist also as regards the troops. The troops are never drilled together. The officers of the same regiment do not know each other. A foreign officer told a friend that he knew his colonel, but not his brothers. They did not mess together, and never met."

During the night of the 21st-22nd, the house of Mr. P. M. Skinner, on the Hill, at Kobe, was broken into by a burglar, or burglars, and two clocks, three table cloths, and a purse containing some small money were made away with. Mr. Skinner was aroused during the night by a slight noise and got up and looked into the dining room, but observing nothing out of the way, retired to rest again. His appearance evidently frightened the unwelcome in-

truder, who was probably hiding at the time, and who made his escape with a limited amount of loot, leaving untouched some valuable ornaments and silver. Entrance to the house was evidently obtained by wrenching open one of the venetian shutters.

A rumour was current in Shanghai that Li Ching-yi, second son of H.E. Li Hung-chang, may get the much-covered appointment to Washington, to succeed Wu Ting-fong as Chinese Minister. In this case the latter gentleman will be transferred to Tokyo. This is given by the *Mercury* for what it is worth.

Rear-Admiral Alexieff, Commander-in-chief of the Russian Pacific Squadron, left for Europe on Thursday by the P. M. steamer *China*. As the mail-steamer passed the *Rurik*, she blew her syren and the *Rurik* answered with a hoot of her foghorn; the Russian sailors then lustily cheered the departing Admiral. The cheer was followed by a salute, and then the *Rurik* weighed anchor and left for Vladivostok.

The *Asahi Shimbun* reports that early on the morning of the 9th instant, the day of the typhoon at Yokohama, a three-masted sailing vessel was seen by some fishermen off Soya, Hokkaido, apparently water-logged. The weather was so rough that the fishermen could do nothing to assist the vessel, which was drifting apparently at the mercy of the winds and waves. In the morning, after daylight, information was sent to the port of Wakanai of what had been seen, and the steamer *Nisshin Maru*, which was in port at the time, went out to see if any assistance was required by the distressed vessel, but was unable to find any traces of her, and it is feared that the sailing vessel had foundered. No information is given as to the nationality of the vessel seen.

Joseph Marcaux, the Hermit of Versailles, has just died at the age of eighty-five. Although quite a celebrity, he appears to have been a hermit but a short time. It was only in 1894 that he made his appearance at Versailles, and built himself a little dwelling on the ground belonging to the Military Engineers. No one interfered with him, so he added a tiny garden to his property, and on the produce of this and the gifts of visitors he subsisted. He never asked for charity, and was a vegetarian, always refusing gifts of meat. He only left his small estate when it was necessary to procure some rags to replace those which were almost dropping off him. His dignified bearing and persistent silence interested many and caused considerable curiosity as to his antecedents; but though inquiries have been made, nothing has been learned either during his life or since his death.

The collision in Kobe harbour on Wednesday is thus described by the *Chronicle*:—"About seven o'clock this morning a collision occurred in the harbour between the O. & O. steamer *Coptic* and the Osaka Shosen Kaisha steamer *Minatogawa Maru*. It affords another illustration of the danger of allowing the Osaka steamers to run at full speed in the harbour. The *Coptic* was coming in from Yokohama, while the smaller steamer was going at the usual rapid rate in the direction of Osaka. At the time of the collision the *Coptic* was coming around the *Riojun Maru*. The *Coptic's* whistle was repeatedly blown, but no notice appeared to be taken of the warning by the *Minatogawa* until the steamers were close upon each other. Both then went full speed astern, but the Osaka steamer in dropping an anchor slackened off enough chain to allow her to run into the *Coptic*. The latter had two or three plates broken near the bow, while the Osaka steamer also sustained some injury."—The *Hogo News* adds:—"Almost at the same time the steam-launch which had put off to meet the Pacific liner ran down a sampan off the *hatoba* and sank it."

Slowly but surely the old notion that husband and wife are one is dying, says a home paper. It has just received a severe blow from the

hand of Mr. Justice Kennedy, who decided, at the Liverpool Assizes, that a married woman who has obtained an order for judicial separation can maintain an action against her husband for libel. The lady in question, who had obtained a separation decree under the Summary Jurisdiction (Married Women) Act, 1895, had received from her husband a series of most disgusting and libellous postcards. The common law, giving its full authority to the fiction that husband and wife are one, disables a married woman from suing her spouse, and the Married Women's Property Act, while enabling a wife to adopt every measure for the protection of her property, declares that, "except as aforesaid, no husband or wife shall be entitled to sue the other for a tort"; but the Matrimonial Causes Act, 1887, provides that a separated wife shall "be considered as a femme sole for the purposes of contract, and wrongs and injuries, and suing or being sued in any civil proceeding." The terms of this provision were held by Mr. Justice Kennedy, whose decision on the question is the first ever delivered, to confer on a separated wife a right to sue her husband for libel. Nobody will be inclined to quarrel with this decision. Perhaps the only regrettable thing about it is that it leaves a wife who has not obtained a separation order without any remedy for the libellous statements of her husband.

Sir W. H. White, writing in the marine number of *Cassell's Magazine* on the cost of war ships, says that the growth in dimensions, speeds, protection and armament has necessarily been accomplished by increase in cost. In 1637 the *Sovereign of the Seas* cost £41,000, half of which was for labour. This was quite an exceptional outlay, and, no doubt, other than legitimate expenses were charged against that vessel. At the beginning of this century a 100-gun line of battleship cost from £65,000 to £70,000, exclusive of armament. The 121-gun sailing three-decker of 1837 cost nearly £120,000, and the screw three-decker of 1857, about £220,000. The use of armour added greatly to the cost, and the *Warrior* of 1859, figured up nearly £380,000. The *Dreadnought* of 1873 cost £620,000, and the *Inflexible* which followed her, cost £810,000. These large amounts were partly due to the introduction of costly mechanisms required for mounting and working the heavy guns, and partly to large increase in the outlay on armour. Then came the reaction in favour of less costly ships, and vessels were produced for £600,000 to £650,000, between 1875 and 1885. The inevitable tendency reasserted itself in 1885, the *Nile* and *Trafalgar* each costing about £850,000. The *Royal Sovereign* class of 1889 cost about £775,000 and the *Majestic* about £840,000. All these figures are for ships built in the Royal dockyards, and exclude incidental charges as well as cost of armaments. They include gun mountings with their costly mechanisms and torpedo gear.

A correspondent of *Merch's Report* says that, to judge from indications, Florida bids fair to become a most important centre for the production of camphor in the near future. Supplies of camphor have heretofore come from China, Japan and Formosa, but of the vast camphor forests that once existed in these countries but a small portion remains, a direct result of the wanton waste in the process practised there for obtaining the gum from the tree. Camphor is usually obtained by boiling the chips of the wood and roots and bark in great kettles with water, and condensing the volatilized gum on rushes suspended over the kettle. In this process the entire tree is cut down, and even the roots dug up, but in Florida it was found that the gum could be commercially produced from the leaves and twigs, 77 pounds of which yield 1 pound of gum. Hence the bearing tree need not be disturbed nor injured in any way, as the foliage it bears is very dense, and may be thinned down one half without scarcely being noticed. The tree, beside, bears a great amount of pruning without injury. It is an evergreen, and makes three growths a year—

in April, June, and October. According to H. G. Hubbard, special agent of the United States Department of Agriculture, the tree removes nothing from the soil, the gum being formed entirely from the gases of the atmosphere, and hence the leaves, when deprived of their camphor and returned to the soil, constantly enrich the soil, which, in time, requires no fertilization whatever.

It is interesting to know that H.M.S. *Blake* cost some £440,000, or about twice as much as the unarmoured *Inconstant* laid down in 1866. The *Powerful* will cost about £680,000. She carries a considerable weight of expensive armour, and gun-mountings costing over £50,000. A French first-class battleship costs about £1,000,000, and so do the corresponding ships in the Russian and Italian fleets. The American battleship *Indiana* cost over £600,000 exclusive of armour, which involved an expenditure of nearly £340,000. For the German battleships now building, of 11,000 tons, the estimated cost is about £700,000. British battleships are, in proportion to their dimensions, less costly than battleships of other navies, and actually less costly than most foreign battleships of about the same date. The same thing may be said of cruisers. The French *Jeanne d'Arc* is estimated to cost about £800,000; a German first-class cruiser, about £650,000, and the American *New York* cost, exclusive of armour, &c., about £600,000. The actual costs of the great Russian cruisers are not known, but must reach high figures. As compared with the costs of the biggest passenger steamers the foregoing figures, no doubt, will appear very large. But if deductions are made for the expenses incurred on armour, gun-mounting, and mechanisms, torpedo gear and special fittings, representing together, say, £350,000 to £400,000 in a first-class battleship, the comparison is made fairer, and the warship approximates in cost very closely to the largest passenger steamers.

The Head-master of Harrow, one of England's foremost public schools, has been questioned on the subject of bullying among school boys. He said:—"I think you ought to distinguish carefully between bullying or physical cruelty and teasing or 'ragging,' as it is called. As to physical cruelty, I deny that it is practised nowadays to any extent. I have never had in all my experience a case of physical cruelty, of the kind, say, that is depicted in 'Tom Brown's School Days.' But that a system of petty annoyances, which may be described as teasing or 'ragging,' prevails in public schools, I will not deny. Why should I? My object is not to declare Harrow already perfect, but to endeavour to make it as perfect as possible, and to welcome the publicity of the Press on this subject as helping me in my endeavours. The great difficulty, and it is the main difficulty with which masters of public schools have to contend, is how to protect sensitive boys from such treatment. I can assure you it is a source of much anxious thought to me and my fellow-masters. The fact is, there is a class of boys who, I frankly confess, are hardly fitted for public school life at all. They are highly sensitive, prone to exaggerate, and ready to put a sinister meaning upon everything that is said to them. But the tendency nowadays is to send all boys to public schools, whether they are fitted for the life or not. Sometimes it answers well, so that a sensitive lad has his angularities rubbed off by contact in a big school, but sometimes it does not. You know that English public school life is based upon the principle of liberty. The boys are not subject to any clandestine espionage, but are more or less self-governed. The object, then, of a school-master must be to establish such a bond of sympathy between himself and his boys, and especially between himself and his leading boys, that what he disapproves of they shall disapprove of. That is the secret of school-mastering in a nutshell. You must make the boys hate what is hateful, by attaching yourself to them as their friend. There has been a great change of late years in the relation

of master to boys. A greater nearness has been established, and nearness, you know, promotes confidence."

CORRESPONDENCE.

AN OLD FRIEND WITH A NEW FACE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The story of Archbishop Longley and the vanished coat-tails, quoted to-day by *The Mail* from the *Church Family Newspaper*, is as amusing now as it always has been and always will be, in whatever age, or under whatever guise we may encounter it. Since the time of the reputed inventor, it has undergone many changes, which, though they have not added to its humour, have undoubtedly made it more presentable to the eyes of advancing civilization. It must be confessed that, as originally set forth in the Decameron, it could hardly have found its way into a journal bearing so chaste a title as the *Church Family Newspaper*. *Autres temps, autres mœurs*.

Mediævally yours,
Tokio, Sept. 18th, 1897.

E. H. H.

WHY I WAS REFUSED A PASSPORT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As there seems to be some confusion of thought and a good deal of unwholesome misrepresentation about my being refused a passport lately, for the benefit of those who might really like to know just how it is, I hope, by your permission, to state the matter briefly through your columns.

On being invited to take part in a Fourth of July celebration, I declined and spoke against it as not the proper thing for missionaries to do. My card was presented to the Minister of the United States. He held that I had denied my citizenship. To this I protested and said that it was only meant against carnality and worldliness and the encouragement of the spirit of strife, nor could my language by any proper construction be made so to mean. The Minister, however, failed to see it in this light and demanded that I take the Oath of Allegiance. I declined on the ground that I was opposed to oath-taking, that it would be admitting I had denied my citizenship, that it was making a special example of me since no American citizen had ever been compelled to take the Oath of Allegiance before being granted a passport to travel in Japan. The Minister felt that he must insist on the demand; I could not comply so the passport was not granted.

Mr. Miller, Interpreter to the Legation, thinks if I had been more conciliatory the matter might have been adjusted at the outset. Whatever this may say for my misfortune in not at all times possessing a more conciliatory temperament, it is a virtual admission that the refusal of a passport was not for a lawful reason, since no amount of conciliatoriness could enable the Minister to waive a lawful reason for refusing a passport.

Yours,

J. M. McCALB.

CANADIAN MAILS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A few months ago a correspondent called attention to the unnecessarily slow transit of mails to England by Canada. I can add a few instances from my own observation. By the *Empress of India*, sailing on the 9th of last July, I sent a letter to my home in England, which arrived on August 11th. By the same mail I sent another under cover to my sister in Connecticut, U.S.A., which, re-addressed by her, reached England on August 5th,—six days earlier than the letter I sent direct! Nor is this an isolated experience. In every case in which I have been informed of the dates of arrival, the letters re-addressed by my sister have reached England at least a day earlier than those sent direct. Here are some examples:—C. P. R. mail of January 3rd, 1896: direct, February 5th; by U.S.A., February 3rd. U.S.A., April 17th: May 20th, May 14th. U.S.A., May 8th; June 11th, June 4th. U.S.A., February 26th, 1897: March 31st, March 28th—respectively, two, six, seven, and three days earlier.

I recommend all my fellow-countrymen to have a sister in the U.S.A.!

Yours, etc.,

A. E. WEBB.

Tokyo, Sept. 21st, 1897.

THE SENDAI AFFAIR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It has been already stated in your columns that Mr. Seymour and I on the 20th instant

brought the Sendai tax affair to a temporary conclusion by paying the money alleged to be due, under protest. When this news reaches the ears of our many friends, Japanese and foreign, they will naturally ask why this step was not taken earlier, and you yourself will doubtless exclaim "is not this the course we advised Mr. Denning to follow a month ago?" There are weighty reasons, sir, for my not following your advice earlier; I leave Dr. Seymour to speak for himself, should he think it necessary. You were not in possession of all the facts, stated in your columns on Saturday last, which statement I beg herewith to formally endorse as absolutely correct. I will draw your attention and the attention of your numerous readers to the following points. (1) Sir Ernest Satow's instructions to me were of the most explicit kind and were conveyed to me by the Tokyo acting Vice-Consul at the time, Mr. Hobert-Hampden, in language that could only bear one interpretation. I was told not to pay the tax and further ordered that in the event of local pressure being brought to bear on me, I was at once to communicate this fact to the Minister and leave him to take what action he deemed fit. There has been a good deal said in your columns on the nature of the tax levied, you yourself at first maintaining that it was an ordinary house-tax, as the Japanese term used to describe it would seem to imply. I wish to point out that, as regards the action I have taken all along, this is entirely an irrelevant question. The tax notices (not copies) were forwarded to Sir Ernest Satow and his instructions were issued after a careful examination of these documents. As you are aware, Sir Ernest Satow is one of the best Japanese scholars we have and, more, is well acquainted with the whole history of taxation in this country. I admit, however, that he may have taken a wrong view as to the nature of the tax, but this is beside the question. The important fact to bear in mind is, that his instructions were issued after examining the tax notices and were couched in language that could only have one meaning.

(2) You are now aware that in 1896 no local pressure of any kind was brought to bear on me. Hence the situation which Sir Ernest Satow contemplated as possible when he issued his orders did not arise during last year, nor during this year till after Sir Ernest Satow's departure for Europe. In May last, another notice was served; not a repetition of the old one, but the first half-yearly notice for this year, the local authorities having omitted to serve the second half-yearly notice of last year. Late in July, the pressure for payment anticipated by Sir Ernest Satow commenced. This fact was communicated to the Legation and early in August I was told that the matter was under the consideration of the Foreign Office. From day to day and week to week I lived in expectation of the question being finally settled. I informed the Director of the school and the tax-collector that I regretted the delay, but that after receiving explicit instructions from my Legation, which had neither been modified nor withdrawn, I was placed in the unenviable position of having to choose between obeying my own Government and obeying the local representatives of the Government in whose employ I am. They perceived my difficulty and showed great consideration. Nothing further was said to me about the tax by the officials whose duty it is to collect it, who have throughout acted in a thoroughly kind and dignified manner. The course of events subsequent to this is solely attributable to newspaper interference and comment.

You must now see how extremely delicate was the situation in which I was placed. To write and ask H.M.'s *Chargé d'Affaires* to rescind, explain, or qualify the orders issued by Sir Ernest Satow would have been useless, as you must admit. I still lived in hopes that the problem would be solved by the central Government's openly declaring that the payment of all local taxes, of whatever kind, was henceforth to be made a condition of residence out of the settlements. Such a decision would have been intelligible, final, and, from my point of view in every way satisfactory. But, so far as I know, the central Government has not adopted this policy. Many of my friends, both Japanese and foreign, having suggested to me that, under the existing peculiar circumstances, I am justified in disobeying the letter of Sir Ernest Satow's instructions, and I myself being largely influenced by the knowledge of a fact the nature of which I am not at liberty to disclose, I have paid the tax under protest. With those who think that this is a conclusion that a person situated as I have been could reach in a hurry, I do not wish to argue. It is quite plain that such people have no capacity for seeing delicate situations. There was no doubt but those who will ask why Dr. Seymour and myself did not obtain legal advice from the outset. I for one cannot see that this

would have helped matters in any way. However this may be, numerous Japanese lawyers having expressed opinions on the case, when it is no longer *sub judice*, it would be interesting to hear what foreign lawyers have to say thereon. It is my conviction that any less deliberate method of taking upon myself the responsibility of paying, even under protest, a tax which I was ordered not to pay, would have shown more folly than wisdom. There are two things that I wish to render very plain. (1) That the payment which has been made is not the result of the irrational and unseemly agitation against me that has been going on in Sendai for weeks past, which has done infinitely more harm to its authors than it can ever do to me, but is solely the consequence of an altered view of the liberty allowed to me by Sir Ernest Satow's original orders, this change of view being brought about by information which only reached me last night. (2) I wish it to be distinctly understood that my action in the step taken to-day has not been caused by pressure from the school, by threats of dismissal, or anything of the kind. Nothing could be more magnanimous and impartial than the manner in which the whole affair has been treated by the Director of the School, Mr. Sawanagaki Masataro. He saw from the outset that it was not a matter for interference on behalf of the school. Valuable advice he has given all along, but always in a most deferential manner. The students have kept quiet and have shown no hostility to me of any kind. Not one of them has asked me a single question about the tax. They have no doubt watched the conflict with considerable interest, but have shown no sympathy with unscrupulous low-class agitators. A school as large as this is a little world by itself and has just much in common with the inhabitants of the town.

There is one point connected with this tax question on which, so far as I am aware, no one has commented, and yet which it seems to me may have had great weight in Sir Ernest Satow's mind, when he issued his orders. I refer to the fact that a portion of the tax levied is a Prefectural tax. Now whatever may be said in favour of foreigners bearing their share of town taxes, there is no conceivable reason why foreigners should be asked to contribute to the maintenance of Japanese Prefectural Government, towards paying the salaries of Prefectural officials and the like. I shall be very much surprised if the levying of any such tax on foreigners is sanctioned by the Central Government. In the case of Sendai the scale of the Municipal taxes is based on Prefectural taxes. What will become of the superstructure (municipal taxes) if the foundation (the Prefectural tax) as far as foreigners are concerned, is destroyed?

Apologising for the length of this letter,

I am, yours, etc., WALTER DENING.
29, Tsuchi-dori, Sendai, Sept. 20th, 1897.

A BRITISH SAILOR KILLED IN YOKOHAMA.

Early on the morning of the 17th instant a fracas occurred in Isezakicho, in the native town of Yokohama, between some seamen belonging to the British barge *Glenrich*, then in the Yokohama Dock, and some Japanese, in which one of the seamen, Thomas Kennedy, received injuries from which he died the same afternoon, on board the ship, to which he had been taken in a dying condition. An inquest was opened on the body at the General Hospital on the 18th instant, and continued at H.B.M.'s Court room on the 21st and 22nd instant, by the Acting Coroner and a jury. Evidence was given by Dr. Tripler, who was called to the ship to attend the wounded man, Dr. Monro and Dr. Rokkaku—who, in conjunction with Dr. Tripler, made a post mortem examination—to the effect that the man died from fracture of the base of the skull caused by a very violent blow from some blunt weapon. The evidence of the police as regards the disturbance and that of the other sailors concerned was rather conflicting, but it could be generally gathered that four men, Kennedy, Owens, Davies, and Parry went ashore on the evening of the 16th and went into a grogshop in Isezakicho and had a drink each, afterwards taking a walk and then returning to the grogshop, where they had more liquor and all got more or less drunk. Owens and Davies then went out and appear to have got into a quarrel with some of the crowd in the street, and were taken to the police station, one of them, Davies, being considerably knocked about. Kennedy and Parry remained for a time in the grogshop, when a policeman came in and Parry tried to make him understand that he wanted him to get the crowd away from the doorway so that he

could get Kennedy off to his ship. Parry then went out into the street and thinking that the policeman would follow with Kennedy, made his way back to his ship. There was no evidence to show what happened to Kennedy from that time till he was found by the police in a side street off Isezakicho lying on the ground unconscious, and bleeding from mouth, nose and ears. He was placed on a stretcher and taken to the Isezakicho police station, where, after a little while, he was examined by Dr. Rokkaku, who expressed the opinion that the man could not live, and the police inspector persisted in his being removed and taken on board ship in spite of the protests of the second mate of the ship, who had been sent to the station by the mate as soon as the police reported the matter to him. Evidence was also given by a bath housekeeper at No. 13, Sngatamicho Ichome, close to where the wounded man was found, that at about 12.30 that morning he had seen a foreigner running down the street pursued by a Japanese, who overtook him and struck the foreigner with a stick. The foreigner continued his flight after the blow, but the witness believed was struck a second time; though it was too dark for him to see the second blow struck. Evidence was also produced showing that two weeks or so before Kennedy had had a quarrel with a *jirikishaman* and had his ear cut, and also with a sampan man who had threatened him that he would be killed next time he went ashore. On Wednesday the inquest was adjourned for a week to see if the Japanese police could obtain any further evidence.

CRICKET.

A match was played on Saturday afternoon by teams under the respective captaincy of Mr. Edwards and Mr. White. The original composition of the teams was broken up to a considerable extent by several of the members enrolled failing to put in an appearance and the result was a scratch game in which Mr. Edwards' eleven, which went in first, scored an easy win, the Captain of the team retiring after putting together the very neat score of 52, and with young Kingdon, who was in fine form, not out for 48. For the other side Mr. White played a very fine innings for 62, carrying out his bat; his score including 8 fours, 3 threes, etc. In bowling for his own team, Mr. White took seven wickets for 75 runs and H. S. Goddard rolled three maiden overs in succession—a very fair achievement. On the other side Philip's trundling proved the most telling, and he took five wickets for 33 runs. The scores were as follow:—

MR. EDWARDS' TEAM.

Mr. C. B. Joy, c. Duff, b. White
Mr. W. J. Kenny, b. White
Mr. W. J. White, b. Goddard
Mr. H. Pinckney, b. White
Mr. D. Tyng, c. Mason, b. Jackson
Mr. A. Kingdon, not out
Mr. E. S. Edwards, (retired in play)
Mr. E. van Smith, c. Duff, b. White
Mr. Blake, b. White
Mr. Geo. Philip, c. Duff, b. White
Mr. W. Goddard, c. H. S. Goddard, b. White

The crew, eleven in all, belonging to No. 14 Torpedo Boat, under the command of Lieut. Matsunaga and Sub-Lieutenant Yuasa, have been awarded presents of money ranging from *yen 50 to yen 10*, in recognition of their praiseworthy conduct.

Count Itagaki, leader of the Liberals, left the capital on Thursday morning for Kiarazu, Chiba Prefecture, to attend the meeting of the Liberal Party there.

TREATY OF COMMERCE AND NAVIGATION BETWEEN JAPAN AND THE NETHERLANDS.

His Majesty the Emperor of Japan and Her Majesty the Queen of the Netherlands and in Her name Her Majesty the Queen-Regent of the Kingdom, being equally desirous of maintaining the relations of good understanding which happily exist between Them, by extending and increasing the intercourse between Their respective States, and being convinced that this object cannot better be accomplished than by revising the Treaties hitherto existing between the two countries, have resolved to complete such a revision, based upon principles of equity and mutual benefit, and, for that purpose, have named as their Plenipotentiaries, that is to say:

His Majesty the Emperor of Japan: Akahane Shiro, Shogei, fifth class of the Imperial Order of the Sacred Treasure, His Majesty's Minister Resident at the Court of Her Majesty the Queen of the Netherlands;

And Her Majesty the Queen of the Netherlands and in Her name Her Majesty the Queen-Regent of the Kingdom:

Jonkheer J. Röell, knight of the Royal Order of the Netherlands Lion, Minister of Foreign Affairs, Ph. W. van der Sleyden, Minister of Waterstaat, Commerce and Industry, J. P. Sprenger van Eyk, knight of the Royal Order of the Netherlands Lion, Minister of Finance, J. H. Bergsma, Commander of the Royal Order of the Netherlands Lion, Minister for the Colonies, and W. van der Kaay, knight of the Royal Order of the Netherlands Lion, Minister of Justice;

Who, after having communicated to each other their full powers, found to be in good and due form, have agreed upon and concluded the following articles:

Art. I.—The subjects of each of the two High Contracting Parties shall have full liberty to enter, travel or reside in any part of the dominions and possessions of the other Contracting Party, and shall enjoy full and perfect protection for their persons and property.

They shall have free and easy access to the Courts of Justice in pursuit and defence of their rights, and they shall be at liberty equally with native subjects, to choose and employ lawyers, advocates and representatives to pursue and defend their rights before such Courts.

In whatever relates to rights of residence and travel; to the possession of goods and effects of any kind; to the succession to personal estate by will or otherwise, and the disposal of property of any sort in any manner whatsoever which they may lawfully acquire, the subjects of each Contracting Party shall enjoy in the dominions and possessions of the other the same privileges, liberties and rights, and shall be subject to no higher imposts or charges in these respects than native subjects, or subjects or citizens of the most favoured foreign nation.

The subjects of each of the Contracting Parties shall enjoy in the dominions and possessions of the other entire liberty of conscience, and, subject to the laws, ordinances and regulations, shall enjoy the right of private or public exercise of their worship, and also the right of burying their respective countrymen according to their religious customs, in such suitable and convenient places as may be established and maintained for that purpose.

They shall not be compelled, under any pretext whatsoever, to pay any charges or taxes other or higher than those that are, or may be, paid by native subjects, or subjects or citizens of the most favoured foreign nation.

The subjects of either of the Contracting Parties residing in the dominions and possessions of the other shall be exempted from all compulsory military service whatsoever, whether in the army, navy, national guard, or militia; from all contributions imposed in lieu of personal service; and from all forced loans or military exactions or contributions.

Art. II.—There shall be reciprocal freedom of commerce and navigation between the dominions and possessions of the two High Contracting Parties.

The subjects of each of the High Contracting Parties may trade in any part of the dominions and possessions of the other by wholesale or retail in all kinds of produce, manufactures, and merchandise of lawful commerce, either in person or by agents, singly, or in partnership with foreigners or native subjects; and they may there own or hire and occupy houses, manufactories, warehouses, shops and premises which may be necessary for them, and lease land for residential and commercial purposes, conforming themselves to the laws,

police and customs regulations of the country like native subjects.

They shall have liberty freely to come with their ships and cargoes to all places, ports and rivers in the dominions and possessions of the other which are or may be opened to foreign commerce, and shall enjoy, respectively, the same treatment in matters of commerce and navigation as native subjects, or subjects or citizens of the most favoured foreign nation, without having to pay taxes, imposts, or duties, of whatever nature or under whatever denomination, levied in the name or for the profit of the Government, public corporations or functionaries, private individuals, corporations, or establishments of any kind, other or greater than those paid by native subjects, or subjects or citizens of the most favoured foreign nation.

It is, however, understood that the stipulations contained in this and the preceding Article do not in any way affect the special laws, ordinances and regulations with regard to trade, police and public security in force or which may hereafter be enacted in each of the two countries and applicable to all foreigners in general.

Art. III.—The dwellings, manufactories, warehouses and shops of the subjects of each of the High Contracting Parties in the dominions and possessions of the other, and all premises appertaining thereto destined for purposes of residence or commerce, shall be respected.

It shall not be allowable to proceed to make a search of, or a domiciliary visit to such dwellings and premises, or to examine or inspect books, papers, or accounts, except under the conditions and with the forms prescribed by the laws, ordinances and regulations for subjects of the country.

Art. IV.—No other or higher duties shall be imposed on the importation into the dominions and possessions of Her Majesty the Queen of the Netherlands of any article, the produce or manufacture of the dominions and possessions of His Majesty the Emperor of Japan, from whatever place arriving; and no other or higher duties shall be imposed on the importation into the dominions and possessions of His Majesty the Emperor of Japan of any article, the produce or manufacture of the dominions and possessions of Her Majesty the Queen of the Netherlands, from whatever place arriving, than on the like article produced or manufactured in any other foreign country; nor shall any prohibition be maintained or imposed on the importation of any article, the produce or manufacture of the dominions and possessions of either of the High Contracting Parties, into the dominions and possessions of the other, from whatever place arriving, which shall not equally extend to the importation of the like article, being the produce or manufacture of any other foreign country.

This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons, or of cattle, or of plants useful to agriculture.

Art. V.—No other or higher duties or charges shall be imposed in the dominions and possessions of either of the High Contracting Parties on the exportation of any article to the dominions and possessions of the other than such as are, or may be, payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the dominions and possessions of either of the two Contracting Parties to the dominions and possessions of the other, which shall not equally extend to the exportation of the like article to any other foreign country.

Art. VI.—The subjects of each of the High Contracting Parties shall enjoy in the dominions and possessions of the other exemption from all transit duties, and a perfect equality of treatment with native subjects in all that relates to warehousing, bounties, facilities and drawbacks.

Art. VII.—All articles which are or may be legally imported into the ports of the dominions and possessions of His Majesty the Emperor of Japan in Japanese vessels may likewise be imported into those ports in Netherlands vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Japanese vessels, and reciprocally, all articles which are or may be legally imported into the ports of the dominions and possessions of Her Majesty the Queen of the Netherlands in Netherlands vessels may likewise be imported into those ports in Japanese vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Netherlands vessels. Such reciprocal equality of treatment shall take effect without distinction, whether such articles come directly from the place of origin or from any other place.

In the same manner there shall be perfect equal-

ity of treatment in regard to exportation, so that the same export duties shall be paid and the same bounties and drawbacks allowed in the dominions and possessions of either of the High Contracting Parties on the exportation of any article which is or may be legally exported therefrom, whether such exportation shall take place in Japanese or in Netherlands vessels, and whatever may be the place of destination, whether a port of either of the Contracting Parties or of any third Power.

Art. VIII.—No duties of tonnage, harbour, pilotage, light-house, quarantine or other similar or corresponding duties of whatever nature or under whatever denomination, levied in the name or for the profit of the Government, public corporations, functionaries, private individuals, corporations or establishments of any kind, shall be imposed in the ports of the dominions and possessions of either country upon the vessels of the other country, which shall not equally and under the same conditions be imposed in the like cases on national vessels in general or vessels of the most favoured foreign nation. Such equality of treatment shall apply reciprocally to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

Art. IX.—In all that regards the stationing, loading and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the dominions and possessions of the two countries, no privilege shall be granted to national vessels which shall not be equally granted to vessels of the other country: the intention of the High Contracting Parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

Art. X.—The coasting trade of both the High Contracting Parties is excepted from the provisions of the present Treaty, and shall be regulated according to the laws, ordinances, and regulations of Japan and of the Netherlands respectively. It is, however, understood that Japanese subjects in the dominions and possessions of Her Majesty the Queen of the Netherlands, and Netherlands subjects in the dominions and possessions of His Majesty the Emperor of Japan, shall enjoy in this respect the rights which are or may be granted under such laws, ordinances and regulations to the subjects or citizens of any other foreign country.

A Japanese vessel laden in a foreign country with cargo destined for two or more ports in the dominions of Her Majesty the Queen of the Netherlands, and a Netherlands vessel laden in a foreign country with cargo destined for two or more ports in the dominions and possessions of His Majesty the Emperor of Japan, may discharge a portion of her cargo at one port, and continue her voyage to the other port or ports of destination where foreign trade is permitted, for the purpose of landing the remainder of her original cargo there, subject always to the laws and custom-house regulations of the two countries.

The Japanese Government, however, agree to allow Netherlands vessels to continue, as heretofore, for the period of the duration of the present Treaty, to carry cargo between the existing open ports of the Empire, excepting to or from the ports of Osaka, Niigata and Ebiu-minato.

Art. XI.—Any ship-of-war or merchant-vessel of either of the High Contracting Parties which may be compelled by stress of weather, or by reason of any other distress, to take shelter in a port of the other, shall be at liberty to refit therein, to procure all necessary supplies, and to put to sea again, without paying any dues other than such as would be payable by national vessels. In case, however, the master of a merchant-vessel should be under the necessity of disposing of a part of his cargo in order to defray the expenses, he shall be bound to conform to the regulations and tariffs of the place to which he may have come.

If any ship-of-war or merchant-vessel of one of the Contracting Parties should run aground or be wrecked upon the coasts of the other, the local authorities shall inform the Consul-General, Consul, Vice-Consul or Consular-Agent of the district of the occurrence, or if there be no such Consular officer, they shall inform the Consul-General, Consul, Vice-Consul or Consular-Agent of the nearest district.

All proceedings relative to the salvage of Japanese vessels wrecked or cast on shore in the territorial waters of Her Majesty the Queen of the Netherlands shall take place in accordance with the laws, ordinances and regulations of the Netherlands, and reciprocally all measures of salvage relative to Netherlands vessels wrecked or cast on shore in the territorial waters of His Majesty the Emperor of Japan, shall take place in accordance with the laws, ordinance and regulations of Japan.

Such stranded or wrecked ship or vessel, and all parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and

merchandise salvaged therefrom, including those which may have been cast into the sea, or the proceeds thereof, if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners, master or their agents, when claimed by them. If such owners, master or agents are not on the spot, the same shall be delivered to the respective Consuls-General, Consuls, Vice-Consuls or Consular-Agents upon being claimed by them within the period fixed by the laws of the country, and such Consular officers, owners, master or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the case of a wreck of a national vessel.

The goods and merchandise saved from the wreck shall be exempt from all the duties of the customs unless cleared for consumption, in which case they shall pay the ordinary duties.

When a ship or vessel belonging to the subjects of one of the Contracting Parties is stranded or wrecked in the dominions and possessions of the other, the respective Consuls-General, Consuls, Vice-Consuls and Consular-Agents shall be authorized, in case the owner or master, or other agent of him is not present, to lend their official assistance in order to afford the necessary assistance to the subjects of the respective States. The same rule shall apply in case the owner, master, or other agent is present, but requires such assistance to be given.

Art. XII.—All vessels which, according to Japanese law, are deemed to be Japanese vessels, and all vessels which, according to Netherlands law, are to be deemed Netherlands vessels, shall for the purposes of this Treaty, be deemed Japanese and Netherlands vessels respectively.

Art. XIII.—The Consuls-General, Consuls, Vice-Consuls, and Consular-Agents of each of the Contracting Parties, residing in the dominions and possessions of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from the vessels of their respective countries.

It is understood that this stipulation shall not apply to the subjects of the country where the desertion takes place.

Art. XIV.—The High Contracting Parties agree that, in all that concerns commerce, industry and navigation, any privilege, favour or immunity which either Contracting Party has actually granted, or may hereafter grant, to the Government, subjects, citizens, ships or merchandise of any other State shall be extended immediately and unconditionally to the Government, subjects, ships or merchandise of the other Contracting Party; it being their intention that the trade, industry and navigation of each country shall be placed, in all respects, by the other on the footing of the most favoured foreign nation.

Art. XV.—Each of the High Contracting Parties may appoint Consuls-General, Consuls, Vice-Consuls and Consular-Agents, in all the ports, cities and places of the other, except in those where it may not be convenient to recognize such officers.

This exception, however, shall not be made in regard to one of the Contracting Parties without being made likewise in regard to every other Power.

The Consuls-General, Consuls, Vice-Consuls and Consular-Agents may exercise all functions, and shall under the same conditions, enjoy all privileges, exemptions and immunities which are, or may hereafter be, granted to Consular officers of the most favoured foreign nation.

Art. XVI.—The subjects of the High Contracting Parties shall under the same conditions enjoy in the dominions and possessions of the other the protection accorded to native subjects or subjects or citizens of the most favoured foreign nation in regard to patents, trade-marks and designs, upon fulfilment of the formalities prescribed by law.

Art. XVII.—The stipulations of the present Treaty shall be applicable, so far as the laws permit, to all the colonies and foreign possessions of Her Majesty.

The subjects of His Majesty the Emperor of Japan will enjoy, however, in the above mentioned Netherlands colonies and possessions concerning their commerce, ships, merchandise and custom duties, import as well as export, the same rights, privileges, immunities, favours and exemptions, which are, or will hereafter be granted to the most favoured foreign nation, with the exception of the special favours accorded or to be accorded to the native states of the Eastern Archipelago for their navigation and the importation of their products into the Netherlands East Indian Colonies.

Art. XVIII.—The present Treaty shall, from the date it comes into force, be substituted in place of the Treaties respectively of the 23rd day of the 12th month of the 3rd year of Ansei, corresponding to the 30th day of January 1856, of the 29th

day of the 8th month of the 4th year of Ansei, corresponding to the 16th day of October 1857, and of the 10th day of the 7th month of the year of Ansei, corresponding to the 18th day of August 1858, the Convention of the 13th day of the 5th month of the 2nd year of Keio, corresponding to the 25th day of June 1866, and all Agreements subsidiary thereto concluded or existing between the High Contracting Parties; and from the same date such Treaties, Conventions, Arrangements and Agreements shall cease to be binding, and, in consequence, the jurisdiction then exercised by Netherlands Courts in Japan, and all the exceptional privileges, exemptions and immunities then enjoyed by Netherlands subjects as a part of or appurtenant to such jurisdiction, shall absolutely and without notice cease and determine, and thereafter all such jurisdiction shall be assumed and exercised by Japanese Courts.

Art. XIX.—The present Treaty shall not take effect until the sixteenth day of the seventh month of the thirty-second year of Meiji, corresponding to the sixteenth July one thousand eight hundred and ninety-nine.

It shall come into force one year after His Imperial Japanese Majesty's Government shall have given notice to the Government of Her Majesty the Queen of the Netherlands of its wish to have the same brought into operation. Such notice may be given at any time after the sixteenth day of the seventh month of the thirty-first year of Meiji, corresponding to the sixteenth July one thousand eight hundred and ninety-eight. The Treaty shall remain in force for the period of twelve years from the date it goes into operation.

Either High Contracting Party shall have the right, at any time after eleven years shall have elapsed from the date this Treaty takes effect, to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice is given, this Treaty shall wholly cease and determine.

Art. XX.—The present Treaty shall be ratified by the High Contracting Parties and the ratifications thereof shall be exchanged at Tokio within twelve months after its signature, as soon as the formalities required in each country shall have been fulfilled.

In witness whereof the respective Plenipotentiaries have signed the same and have affixed thereto the seal of their arms.

Done at the Hague, in duplicate, this eighth day of the ninth month of the twenty-ninth year of Meiji, corresponding to the eighth day of September of the eighteen hundred and ninety-sixth year of the Christian era.

PROTOCOL.

The Government of His Majesty the Emperor of Japan and the Government of Her Majesty the Queen of the Netherlands, deeming it advisable in the interests of both countries to regulate certain special matters of mutual concern, apart from the Treaty of Commerce and Navigation signed this day, have, through their respective Plenipotentiaries, agreed upon the following stipulations:—

1.—It is agreed by the Contracting Parties, that one month after the exchange of the ratifications of the Treaty of Commerce and Navigation signed this day, the import-tariff now in operation in Japan in respect of goods and merchandise imported into Japan by the subjects of Her Majesty the Queen of the Netherlands, shall cease to be binding. From the same date the general statutory tariff of Japan for the time being in force shall, subject to the provisions of article IX. of the Treaty of the 10th of the 5th year of Ansei, corresponding to the 18th August, 1858 at present subsisting between the Contracting Parties, as long as the said Treaty remains in force, and thereafter, subject to the provisions of articles IV. and XIV. of the Treaty signed this day, be applicable to the goods and merchandise, being the growth, produce or manufacture of the dominions and possessions of Her Royal Netherlands Majesty upon importation into Japan. But nothing contained in this Protocol shall be held to limit or qualify the right of the Japanese Government to restrict or to prohibit the importation of adulterated drugs, medicines, food or beverages; indecent or obscene prints, paintings, books, cards, lithographic or other engraving, photographs, or any other indecent or obscene articles; articles in violation of patent, trade-mark or copyright laws of Japan; or any other article which for sanitary reasons or in view of public security or morals might offer any danger.

In all other respects the stipulations of the existing Treaties and Conventions shall be maintained unconditionally until the time when the Treaty of Commerce and Navigation signed this day comes into force.

2.—The Japanese Government, pending the opening of the country to Netherlands subjects, agrees to extend the existing passport system in such a manner as to allow Netherlands subjects, on the production of a certificate of recommendation from the Netherlands Representative in Tokio, or from any of Her Majesty's Consuls at the open ports in Japan, to obtain upon application passports available for any part of the country, and for any period not exceeding twelve months, from the Imperial Japanese Foreign Office in Tokio, or from the chief authorities in the Prefecture in which an open port is situated; it being understood that the existing rules and regulations governing Netherlands subjects who visit the interior of the Empire are to be maintained.

3.—The Netherlands Government, so far as they are concerned, give their consent to the following arrangements: The several foreign settlements in Japan shall be incorporated with the respective Japanese communes, and shall thenceforth form part of the general system of Japan.

The competent Japanese authorities shall thereupon assume all municipal obligations and duties in respect thereof, and the common funds and property, if any, belonging to such Settlements, shall at the same time be transferred to the said Japanese authorities.

When such incorporation takes place, the existing leases in perpetuity, under which property is now held in the said Settlements, shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property. It is, however, understood that the Consular authorities, mentioned in the same, are in all cases to be replaced by the Japanese authorities.

All lands which may previously have been granted by the Japanese Government free of rent for the public purposes of the said settlements shall, subject to the right of eminent domain, be permanently reserved free of all taxes and charges for the public purposes for which they were originally set apart.

It is, however, understood that if on any of these points more favourable conditions are granted to any other foreign nation, those conditions shall without further stipulation be equally applicable to Netherlands subjects.

4.—It is understood, that although with the entering into full operation of the Treaty of Commerce and Navigation signed this day the jurisdiction now exercised by Netherlands judicial authorities in Japan comes to an end, still in respect of all those affairs, that are actually pending at the time the treaty takes full effect, the said jurisdiction shall continue to be exercised until the final decision of such affairs.

5.—The undersigned Plenipotentiaries have agreed that this Protocol shall be submitted to the two High Contracting Parties at the same time as the Treaty of Commerce and Navigation signed this day, and that when the said Treaty is ratified, the agreements contained in the Protocol shall also equally be considered as approved, without the necessity of a further formal ratification.

It is also agreed that this Protocol shall terminate at the same time the said Treaty ceases to be binding.

In witness whereof the respective Plenipotentiaries have signed the same and have affixed thereto the seal of their arms, etc., etc.

Done at the Hague, in duplicate, this eighth day of the ninth month of the 29th year of Meiji corresponding to the eighth day of September of the eighteen hundred and ninety sixth year of the Christian era.

"	VAN DEL KAAJ.

The undersigned, His Imperial Japanese Majesty's Minister Resident at the Hague, in virtue of special authorisation from His Imperial Japanese Majesty's Government, has the honour to announce to Her Royal Netherlands Majesty's Minister for Foreign Affairs, that the Imperial Japanese Government, recognizing the advantage of having the Codes of the Empire which have already been promulgated in actual operation when the Treaty stipulations at present subsisting between the Government of Japan and that of the Netherlands cease to be binding, engage not to give the notice provided for by the second paragraph of article XIX. of the Treaty of Commerce and Navigation, signed this day, until those por-

tions of said Codes which are now in abeyance, are brought into actual force.

The undersigned avails himself of this opportunity to renew to His Excellency the assurance of his high consideration.

Japanese Legation,

the Hague, the eighth Sept., 1896.

AKABANE SHIRO.

YOKOHAMA CONSULAR TRADE REPORT.

The British Foreign Office received on June 30th a Report on the Trade and Navigation of Yokohama for the year 1896, which had been drawn up by Mr. Troup, Her Majesty's Consul here: it runs as follows:—

REPORT ON THE TRADE AND NAVIGATION OF YOKOHAMA FOR THE YEAR 1896.

GENERAL REMARKS.

The returns of imports and exports, and of British trade, forwarded with this report, are compiled as in previous years from the revised customs returns.

The *yen*, or silver dollar, of the customs returns is, for imports from gold countries and from India, converted into sterling at the rate of 2s. 2½d. per *yen*, being the average for the year of the quarterly rates used by the customs in converting gold into silver values. In the valuation of imports from silver countries, except India, and of all exports, the *yen* is taken as equal to 2s. 2d., being the average bank demand drawing rate for the year.

The returns thus converted into gold values show the total trade of the port for the year to have been worth 14,632,382*l.*, being 7,948,637*l.* value of imports, and 6,683,745*l.* value of exports.

If there is added, as has been done in some previous reports, to the figures for imports deduced from the customs returns, a correction of 15 per cent. to cover approximately the amount of freight and other charges paid on those goods between the place of production and this port, we arrive at a sum of 9,140,933*l.* as representing the actual value on the spot of the import trade, and of 15,824,678*l.* as representing the total foreign trade of the port.

In 1895, the corresponding figures for imports were 6,780,448*l.*, and for the total trade, 15,666,208*l.* The figures for exports were 9,185,760*l.*

Last year, therefore, was an increase of nearly 35 per cent. in the import trade over that in 1895, a decrease of 27 per cent. in the export trade, and a decrease of about 1 per cent. in the total trade of the port.

The following is the silver valuation of the trade, as given in the customs statistics, but with the above correction of 15 per cent. on the valuation of imports:—

	1896. Yen.	1895. Yen.
Imports	83,724,368	64,510,204
Exports	61,696,108	84,791,633
Total	145,420,476	149,301,837

SPECIES AND BULLION.

Gold coin has been imported to the value of 670*l.*, and exported to the value of 124,918*l.*; silver coin imported to the value of 169,600*l.*, and exported to the value of 335,593*l.* There have been during the year considerable shipments of silver *yen* from Japan to the Straits, where this coinage has still found favour, notwithstanding the introduction of the British dollar. Customs dues and duties levied amounted to 424,905*l.*

DIRECT TRADE.

As an indication of the extent of the growth of what is known as direct trade between Japan and foreign countries—that is of the trade which is done by Japanese merchants with other countries without the mediation of merchants here of other nationalities—it may be of interest to note that of the total imports at this port last year nearly 23 per cent. in value were brought in by Japanese merchants or for Government use, mainly by the former. Of the total exports 17½ per cent. were similarly sent abroad, and of the trade of the port 20½ per cent. stands to the same account.

BOUNTIES.

At various periods efforts have been made to foster trade of this character by means of Government assistance; and the most recent manifestation of this principle is exhibited in the passing by the Diet, at the close of its last session, of a Bill providing for a bounty to be given on raw silk exported by Japanese merchants, the amount of the bounty to be determined by imperial ordinance, and in accordance with a method of classification of the silk. The further development of this mea-

sure will be watched with interest. It would appear to be intended to divert from the hands of the British and other foreign silk merchants established here the most important branch of the export trade of Japan.

FEATURES OF THE YEAR'S TRADE.

The main characteristics of the year's trade are an excess of imports, and a decrease in exports. A scarcity of money and contraction of credit existed amongst Japanese merchants in the latter part of the year, the result, no doubt, of several causes, among which may be enumerated an indifferent harvest, the rice crop showing a deficit of some 9 per cent. on a good average crop; natural calamities, in the form of a tidal wave and floods, and excessive activity in the direction of the promotion of companies. The effect of this on the import business will be noted further on. The decrease in exports will be seen mainly under the headings of raw silk, tea, and silk manufactures; and this decrease naturally also acted unfavourably on the import trade, by accentuating the stringency of the money market.

RICE CROP.

The rice crop, as has been said, was short; and prices have never been so high as they were towards the end of the year, unless during a time of famine. This is probably not due, however, merely to the shortness of the crop.

RISE IN COST OF LIVING.

A general rise has been observable for some years past in the cost of living in this country, as estimated in the currency of the country, which is silver, or paper representing silver. This rise commenced from about the year 1889, and taking the principal articles of food and fuel used by the Japanese, amounts now to as much as 90 per cent. in the case of rice, and 100 per cent. in that of fish and vegetables; while the cost of articles of ordinary Japanese wearing apparel has risen variously from 30 per cent. to over 100 per cent. Wages have undergone a similar rise. It may be further noticed that more recently, say since the war, the ratio of rise in the cost of living has exceeded that of the fall in the gold price of silver.

PROTECTION OF FOREIGN PATENTS AND TRADE MARKS.

The stipulations for the registration and protection of foreign patents and trade marks, made under the British and German Treaties having come into force, numerous applications have already been made under these provisions to the Japanese Patent and Trade Marks Bureau.

NEW CUSTOMS TARIFF.

It is understood that the new General or Statutory Customs Tariff will not come into force before the commencement of next year, and that the Conventional Tariff appended to some of the new treaties concluded between Japan and Foreign Powers will be brought into operation at the same time as the General Tariff.

BRITISH TRADE.

The return of the trade between this port and the various portions of the British Empire shows an increase, both in imports and in exports, over that in 1895. Adding to the total of imports as given in that return the correction of 15 per cent., which has been applied above to the total of the general table of imports, it would appear that the value of imports brought into Yokohama in 1896 from the British dominions amounted to £5,185,980. The value of exports amounted to £1,307,490, and thus the value of the total trade to £6,493,470. The increase hereby shown on the previous year's trade amounts to 25 per cent. and occurs in the trade with the United Kingdom, which consists mainly of imports, and in that with British India and with Hongkong. The trade with Canada and that with Austria do not gain ground.

British trade with this port last year amounted in value to 41 per cent. of the total trade of the port. The import trade from the United Kingdom constituted over 44 per cent. of the total import trade of the port; and that from all the British dominions over 56 per cent.

IMPORTS.

The following estimates of the deliveries of cotton, woollens, and other manufactures are taken from the statistics of the Yokohama General Chamber of Commerce:—

Articles.	Deliveries.	1896.	1895.
Cotton yarns	Lbs.	14,337,200	9,521,200
Grey shirtings	Pieces	759,400	597,420
T-cloths	"	51,570	81,990
Indigo shirtings, &c. ..	"	164,985	41,260
Prints	"	223,900	102,160
Cotton Italians	"	78,500	41,670
Turkey-reds	"	77,050	88,800
Velvets	"	48,240	28,970
Victoria lawns	"	124,850	81,320

Silk-faced satins.....	"	1,940	2,632
Flannel	"	104,900	55,400
Italian cloth	"	129,000	76,330
Mousselines.....	"	471,450	349,870
Cloth.....	"	6,450	4,340
Blankets	Pairs	528,600	551,800

COTTON YARNS.

The deliveries of the finer classes of yarns are now included in these returns. The chief increase last year has been in gassed and other fine yarns; but 2/42's, 2/32's, 16/24's, and 28/32's have also increased. The import of the first-named was somewhat excessive, and some quantity had to be carried over to the new year.

SHIRTINGS.

A large increase appears in grey shirtings; but, in general, owing to increase in cost, these did not prove remunerative to importers during the latter part of the year.

In fancies the trade in the early part of the year was fairly good; but during the last six months arrivals were in excess of requirements, and difficulties were experienced in clearing goods. The competition of Japanese home-dyed cloths is apparently affecting unfavourably the trade in Turkey-reds. Black velvets show an increase, but stocks carried over to this year were also heavy, owing largely to the liability of Japanese dealers not to clear what they had contracted for. A somewhat similar remark applies to flannels.

BLANKETS.

The usual autumn trade in blankets was hardly good; the competition of the Japanese manufacture of striped blankets and rugs seems to be affecting this trade. In cotton Italians, mousselines, and Victoria lawns the stocks carried were heavy; and, indeed, in all classes of cottons and woollens stocks had increased at the end of the year.

The importation of iron and steel shows an increase last year under nearly every heading, and comprises bar and rod, galvanised sheet, nails, pipes and tubes, plate and sheet, rails, roofing and miscellaneous.

PIG IRON.

Pig shows a decrease; and this is to be accounted for by the large import in the two previous years. A steady demand is, however, anticipated for this class of iron in the future.

DELIVERIES.

According to the Chamber of Commerce statistics, deliveries of iron of all denominations amounted to 50,008 tons, as against 49,784 tons in 1895; wire nails to 9,047 tons, as against 7,210 tons in 1895; and tinued plates to 27,727 boxes, as against 37,073 boxes.

In the supply of bar and rod Belgium takes the lead; in that of the other classes of iron and steel for merchant business Great Britain, as a rule, stands first.

An important feature which has recently appeared in the iron trade is the development of the importation of that metal from the United States. Wire nails are imported from there at lower prices than from the Continent of Europe; and although the quantity imported last year was small in comparison with that brought from Germany, it about equalled that imported from Great Britain and Belgium together. Orders have also gone there last year for pig-iron and for rails.

LOCOMOTIVES. RAILWAY PLANT.

Locomotives, while largely ordered from England, have also been so from the United States.

For other railway material Great Britain shares with Germany and Belgium the custom of Japan. Naval requirements are obtained most largely from British makers, gun material partly from France.

There are some things which those acquainted with the import business in metal manufactures often find it hard to get the English manufacturer to understand. One of these is that the Japanese buyer has now reached the stage where he knows, or at least believes he knows, what he requires when he orders an article. In making tenders the English maker is too apt to act on the principle that he knows what the purchaser requires better than the latter himself does; and, acting accordingly, offers an article in another style, or of another design than that which is asked for. The result is that the order is placed, say, with some Continental firm who are more alive to the situation.

The Consul is often liberally supplied with circulars, with the request that these may be exhibited in his office. There, however, no one looks at them. The use of circulars is for distribution to possible buyers, and this can undoubtedly best be effected through business houses on the spot who are in immediate touch with purchasers. Catalogues, to be of any use, should be priced.

Allusion has been made, in a previous report

from this Consulate, to the necessity for British manufacturers of machinery paying due attention to packing. They have still to learn from their Continental rivals in this respect.

SUGAR.

The import of sugar, both white and brown, last year shows an increase in quantity, and an increase in the total value. Browns by themselves show a decrease in value. The value of the import of white sugar, by itself, amounts to 556,343*l.*, as against 386,227*l.* in 1895. Prices were higher last year than in 1895, and the trade in white sugar from the Hongkong refineries promises to continue to grow. The importation of German beet sugar, although not large, has continued.

According to the Chamber of Commerce figures, deliveries of sugar of all kinds amounted to 102,594 tons, as against 83,305 tons in 1895.

KEROSENE.

Of the kerosene imported last year, 13,280,000 gallons were American oil and 10,570,000 gallons Russian. This shows an increase in American and a decrease in Russian. Total deliveries have amounted to 22,760,000 gallons, a decrease of nearly 1,000,000 gallons on those of 1895, the decrease being mainly in American oil.

Of late years the petroleum industry in Echigo has been receiving fresh attention and the increase of refined petroleum in Japan may, to a small extent, account for the decrease in deliveries of imported oil. The latest figures to hand—those, namely, of 1892 and 1893, show that the total production of refined petroleum in Japan had reached 1,086 tons in the former year, and 1,612 tons in the latter.

EXPORTS—SILK.

The export business in raw silk has been characterised by considerable stagnation, relieved in February and April, and again in August and towards the end of the year, by periods of activity. The decrease observable in the year's export is largely due to the shortness of the crop. In the early summer the weather was unfavourable for hatching and for the rearing of the worms, and the result was a shortness of cocoons. Suspicions even existed that the disease known as "pebrine" had affected the worms. The uncertainty of the financial prospect in the United States during the Presidential election had also an unfavourable effect on the export to that country. The total export for the year amounted to 5,225,179 lbs., valued at 3,123,220*l.*, as against 7,746,723 lbs., valued at 5,185,511*l.*, in 1895. The total supplies for the season 1895-96 amounted to 8,433,000 lbs., as against 6,998,700 lbs. for the season 1894-95. Stocks at the end of the year amounted to 2,487,333 lbs., making, together with the export from the opening of the season in July to the end of the year, the total available supplies for that period 5,619,333 lbs., as against 8,064,000 lbs. for the same period in 1895. This reduction is mainly, no doubt, attributable to the shortness in the crop; but, in part, it may be accounted for by the activity in home manufactures.

Attention has been repeatedly called to the want of care in the reeling of Japan silk. The quality of the silk is good, but through carelessness in reeling the interests of the reellers themselves are sacrificed, and constant anxiety is caused to buyers at the port. The silks of Shinshui are stated to be those which give most trouble to inspectors from the above cause.

To endeavour to remedy this and other faults in the preparation of the silk for export, it was remarked in last year's report that a conditioning-house was being erected here for the inspection of silk. It would appear, however, that this has not superseded the old methods of inspection in the exporters' warehouses.

The export of waste shows but little reduction on that 1895. Price was in favour of the exporter in this case.

A separate place has been assigned in the table of exports annexed to this report to silk manufactures, which have hitherto found a place among miscellaneous exports. The importance of this trade calls for such special attention being given to it, but the actual figures of the export, whether in handkerchiefs, "habutae," or other silk manufactures during last year fall considerably short of those for the year previous. Various causes are assigned for this—Excessive export in previous years, inferiority of the goods, and the uncertain position in the United States, which has been the chief customer of Japan for these goods.

TEA.

The tea export amounted to 26,315,528 lbs., valued at 441,082*l.*, being a decrease of over 3,000,000 lbs. in quantity, and of over 126,000*l.* sterling in value on that of 1895. Prices paid to producers were fully 15 per cent. less than in the

previous year, although the crop was superior, as also the make of the leaf. The producers appear to have come to realise that it is necessary to devote care to the preparation of the leaf if they desire that their teas retain favour. A large decrease has taken place in basket-fired teas. This is due to a rise in the price of this preparation in the United States.

During the opening months of the season business in the home markets was dull, but an impetus was given to it by the probability of an increased tariff in the United States, and a large and remunerative business was done, with results satisfactory to exporters.

The cost of the preparation of tea has largely increased in this country, owing to the rise in the price of labour, charcoal, and other elements in this cost. It would seem to follow from this—seeing that the price of tea has been decreasing—that the prime cost of the raw teas must be less. Statistics show that over 50 per cent. more tea is produced in the country than there was ten years ago. This, accompanied as it would appear to have been, generally, with a tendency towards the production of second-rate and cheap quality, may be sufficient to account for the decline in price.

COPPER.

The export of copper calls for little remark, being almost on a level with that of the previous year. The value is rather higher.

COTTON.

Cotton manufacturers have, like silk manufacturers, been assigned a separate place in the export table. A considerable increase appears under the heading of cotton yarn. The main destination of this export is China, but a portion of the export of cotton flannel and cotton crepe finds its way to India.

EXCHANGE AND CURRENCY.

Rates of exchange have shown less fluctuation during last year than at any time since the commencement of the rapid fall of silver as against gold. The bank demand drawing rate on London opened in January at 2*s.* 13*d.* The highest point reached was in March, when it touched 2*s.* 3*d.*; the lowest in September, when it reached 2*s.* 0*d.* The closing quotation of the year was 2*s.* 1*d.* The average for the year was nearly 2*s.* 2*d.*; for convenience in calculations in this report it has been taken at 2*s.* 2*d.* The fluctuations have thus been about 44 per cent. above and 33 per cent. below the mean; or just over a range of 8 per cent. in all. Owing to the cheapness of money in London during the first half of the year, and longer, the banks granted telegraphic transfers in sterling at their quotations for demand bills.

Money was plentiful with the foreign banks in the first part of the year, less so in the last three months. Amongst Japanese, money has been dear, some of the principal Japanese banks having for some time been offering 54 and 6 per cent. interest on 12 months' fixed deposits.

GOLD STANDARD.

Public attention has already been called to the fact of the passing of a Bill, during the last session of the Diet, for the introduction of a gold standard in Japan. The unit of value is to be a gold dollar of the value of slightly more than 2*s.* 0*d.* For a time the silver *yen* or dollar remains a legal tender side by side with the new gold coinage. Meantime the Mint is closed to the coinage of silver *yen*, and open to gold. The new coinage is to come into use from October 1 next. As a preparation, no doubt, for this change, movements have been for some time observable in the direction of the increase of the gold deposit in the Bank of Japan.

A principal object of the measure is probably to facilitate the financial operations of the Government in connection with the West. A result of it must be greatly to steady exchange as between Japan and other gold countries. An argument raised against the measure has been that it would do away with the advantage which Japan has reaped in the development of her manufactures, by the possession of a silver standard. No doubt such an advantage was very great while silver continued to fall in its relation to gold, and the silver prices of the necessities of life and of labour had not yet appreciably risen; but it can hardly be doubted that the effect of this fall has now exhausted itself; and, so, what Japan has already gained was to be gained by her from the fall of silver—whether as affecting the development of her manufactures, or in stimulating her export trade. What the further effects to her and to her foreign trade, may be of the adoption of a gold standard it would probably be premature to attempt to discuss.

SHIPPING.

Last year there entered this port 2,085 merchant

ships, of an aggregate of 2,757,335 tons, as against 1,658 vessels, of 1,953,081 tons in 1895, 2,031 vessels, of 2,002,248 tons, in 1894, and 2,159 vessels, of 2,063,932 tons, in 1893. It is necessary to go thus far back in time in order to institute a proper comparison with previous years, because from the year 1894 the ordinary course of entries became disturbed by the war between this country and China. Comparing the entries of last year with those of 1893, it appears that there has been a decrease during the former-named year as compared with the latter, of 74 vessels, but an increase of 693,404 tons in the tonnage. This shows that a larger class of vessels has now come to be employed in the trade of the port.

BRITISH SHIPPING.

To obtain a fair estimate of the relative increase of the shipping trade of the port under different years, it becomes necessary, in the same way, to go back to the year 1893. The number of British vessels which entered the port last year amounted to 435, of an aggregate of 894,681 tons. This is less than the number and tonnage in 1895, and the number is less than that in 1894; while the tonnage is somewhat greater than in that year. The relative decrease last year is to be accounted for by the fact that in 1894 and 1895 a considerable number of British steamers were employed on coast charters, to supply the places of the Japanese steamers which had been taken up by the Government to serve as transports during the war. The number and tonnage of British steamers entering the port in those years thus became abnormally high. On going back to the year 1893 it is found that there entered in that year 337 vessels, of 631,629 tons. The increase in last year's British shipping over that in 1893 thus amounts to 29 per cent. in the number, and nearly 42 per cent. in the tonnage.

JAPANESE SHIPPING.

Under the Japanese flag there entered last year 1,461 vessels, of a total tonnage of 1,541,245 tons. In 1893 the number of vessels was 1,677, and the tonnage 1,172,140 tons. The increase in size of the vessels flying the Japanese flag is very noticeable from these figures. A great expansion has been taking place of late in Japanese steam navigation to foreign countries, and further extensions are proposed. Only the lines taking their departure from this port are here enumerated.

A monthly service to London and Antwerp, calling at intermediate ports, was inaugurated last year by the Nippon Yusen Kaisha. Six new steamers, of 6,000 tons gross register, were ordered for this line in England. Three of these have now been put on the line, the others are under construction. A monthly service by the same company to Seattle, State of Washington, via Honolulu, was inaugurated in August last, to run in connection with the Great Northern Railroad. This service is to be extended to a fortnightly one, and steamers placed on the line. A monthly service to Australia also was commenced in October. On this service several large new steamers are to be employed. A four-weekly service is maintained by this company between Yokohama and Bombay; and the old established weekly service to Shanghai continues. A single steamer keeps up communication with Manila, via the China Coast and Formosa.

SUBSIDY TO NIPPON YUSEN KAISHA.

Towards the end of the last session of the Diet, a Bill was introduced by the Government for the granting of a special subsidy to this company to enable it to carry out its extended programme. The session ended without the Bill having passed the Diet, and what the result will be on the proposed operations of the company is not yet apparent.

The Toyo Kaisha (Oriental Company) have contracted for three steamers to be used in the Pacific trade. They are to be 17 to 18-knot steamers of about 5,000 tons, and to have good passenger accommodation. The steamers will probably connect with Portland, Oregon, or with San Francisco, and the first is to be ready about the end of this year. Additions to the service will probably take place later.

During the year, three British vessels were sold and transferred at this port to the Japanese flag, for a total sum of 79,700*l.*

FOREIGN SHIPPING.

Under the German flag there entered last year 80 vessels, of 140,621 tons, as against 53 vessels, of 92,249 tons, in 1893.

Under the United States and French flags the entries and tonnage remain almost stationary. Last year, 18 entries, of 20,015 tons appear under the Norwegian flag, as against 32 entries of 22,463 tons, in 1895.

ANALYSIS OF BRITISH SHIPPING.

Under the British flag there entered, steamers from the United Kingdom, 133; from New York,

14; from Hamburg and Antwerp, 13; from San Francisco, 33; from Vancouver, 15; from Batoum, 9; from Victoria, B.C., and Tacoma, 17; from Portland, Oregon, 14; and from other ports, mainly from Hongkong and the China and Japan coasts, 169; and, sailing vessels from the United Kingdom, 4; from New York, 8; from Victoria, B.C., 11 (sealers); from South America, 1; from Guam, 3; and from sealing cruise, 1.

FRIGHTS.

Silk freights to European ports by the regular mail steamship lines stood at 8 dol. during the year; to New York, by Pacific steamers and rail, at 4 and 3 c. per lb. gross. Tea freights to eastern cities of the United States and Canada, by Pacific steamers and rail, varied from 1 to 2, $1\frac{1}{2}$ to $1\frac{1}{4}$ c. throughout the year. To ports on the Pacific Coast of North America, the steamer rate was 8 dol. per ton; and, by Suez Canal route, to New York, the rate from January to April was 21. 15s. For general merchandise the rates to London were, by Peninsular and Oriental steamers, 11. 15s.; by Messageries Maritimes steamers, 21. 5s.; by Nord-Deutscher-Lloyd steamers, 21. 2s. 6d.; by Ocean Steamship Company's steamers, 11. 15s.; by Nippon Yusen Kaisha steamers, 11. 10s. 9d.; and by other Suez Canal steamers, from 11. 15s. to 21.

To New York, general freights, by Pacific steamers and rail, ranged from 11 to 16 dol. per ton measurement; by Suez Canal steamers the rate was 21. 5s. To San Francisco and Vancouver the rates were 10 and 11 dol. To Bombay, general freights, by Peninsular and Oriental and Nippon Yusen Kaisha steamers stood at 7 dol. 50 c.; for silk goods the rate by Peninsular and Oriental steamers was 20 dol.

HARBOUR WORKS AND DOCKS.

Active operations on the harbour works which, on account the money to complete the works not having been voted, had been suspended from July, 1894, were resumed in February, 1895; and, at the end of May of last year, the breakwater was completed.

The project for the construction of graving docks at this place, which has been alluded to in previous reports, has now taken shape, and the work of their construction is going on. The Dock Company propose to build four docks in all, but of these only two have been commenced. The one known as "No. 2 Dock" was begun in January, 1895, and has now been completed and opened for the reception of vessels. "No. 1 Dock" was commenced in July of last year, and will likely be finished in December, 1898.

The capital already subscribed by the company is 1,500,000 dol.

The dimensions of No. 2 dock are as follows:—Length on blocks 351 feet; outside caisson to top of dock 400 feet. Width of entrance at top 60 feet, at bottom 45 feet. Whole depth of dock, inside, 35 feet; on sill 31 feet. Depth of water on sill and blocks at springs 27 feet, at low water 19 feet 8 inches.

The dimensions of No. 1 dock are to be as follows:—Length on blocks 478 feet; outside caisson to top of dock 518 feet. Width of entrance at top 93 feet; at bottom 75 feet. Whole depth of dock, inside, 38 feet; on sill 34 feet. Depth of water on sill and blocks, 30 feet at springs, at low water 22 feet 7 inches.

ENGINEERING WORKSHOPS.

The same company has purchased the engineering works here hitherto owned by the Nippon Yusen Kaisha. The machinery of these works will be transferred to the vicinity of the new docks; and it is intended, in time, to have workshops in connection with the docks fully equipped with all appliances necessary for the repair of marine machinery and ships.

URAGA DOCKS.

There are also being constructed by private enterprise, at the Port of Uraga, near the entrance to the Bay of Tokyo, two docks—the first of which is being built by the Ishikawajima Dock Company, of Tokyo, and is to be of the following dimensions:—Length on blocks, 410 feet; outside caisson to top of dock, 435 feet. Width of entrance at top 66 feet, at bottom 54 feet; width inside 85 feet. Depth on sill at high-water springs, 26 feet; mean depth on sill 23 feet, when dredging is completed. This dock was commenced in March, 1896, and is expected to be completed in March, 1898, at a cost of 500,000 dol. Workshops at a cost of 300,000 dol. are to be erected in connection with this dock also, and are to be furnished with all the requisite appliances. The second dock is being built by a new company, and is to be of dimensions similar to those of the first. The subscribed capital is 1,000,000 dol. This dock was commenced in April, 1896, and is to be finished about April, 1898.

POPULATION.

The Japanese population of the town of Yokohama, on December 31, amounted, to 179,484 persons; and of the town of Kanagawa to 17,125, or 196,609 persons in all, an increase of 9,409 persons in all, an increase of 9,409 persons during the year 1896.

The foreign population of Yokohama, exclusive of Chinese, amounted, on the same date, to 1,827 persons, of whom 868 were British. This shows an increase during the 12 months of 82 persons in the general foreign population, and of 62 in the British by itself.

The Chinese population is returned at 2,298, which is still more than 1,000 less than the number before the war.

RAILWAYS.

The Report for 1896 of the Railway Bureau is not yet procurable; but, according to that for 1895, there were, at the end of that year, in the whole of the Empire 2,290 miles of railway open to traffic, and 1,368 miles under construction. During the same year the passenger traffic on the State railways showed an increase of 26 per cent., and the goods traffic an increase of 88 per cent.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")
THE AFRIDI WAR.

London, Sept. 17.

The defence of Fort Gulistan, on the Afghan frontier, before that place was relieved by General Biggs, was a most heroic affair lasting thirty hours, the ladies in the fort tending the wounded under a continuous fire.

The Afridis who attacked all the British posts on the Samana range in great force kept up the fight for three days, during which the British lost thirty killed and fifty-nine wounded.

One of General Blood's brigades, after entering the Mohmand country, was attacked at night by a force of Mohmands armed with Martini-Henry rifles, who kept up the firing for several hours. In this affair Lieutenants Tomkins and Bailey, of the Indian Army, were killed, and there were eight other casualties.

London, Sept. 20.

Colonel Jeffreys, with the Second Brigade, attacked the Mohmands on Thursday last, but after severe fighting was forced to retire to camp, with the loss of nine officers and 129 men killed and wounded.

THE BANK OF ENGLAND.

London, Sept. 17.

At a meeting of the Directors of the Bank of England, the Governor of the Bank said that he had written in July last to Sir Michael Hicks-Beach, Chancellor of the Exchequer, saying that the Bank was prepared to carry out what was permissible under the charter, namely, to hold one-fifth of the Bank's reserve in silver, provided always that the French Mint resumes the free coinage of silver and prices whereat silver is procurable and saleable are satisfactory. The Governor further added that the Bank had had no communication with the American Commissioners at present in England endeavouring to arrange a bimetallic conference, nor had the Bank purchased any silver.

TURKEY AND GREECE.

The treaty of peace between Turkey and Greece, which has finally been initialled, provides that the evacuation of Thessaly shall take place one month after the financial control of the Greek revenues assigned for the payment of the indemnity shall have been established.

London, Sept. 20.

The treaty of peace between Turkey and Greece has been signed at Pera.

THE CHINESE RAILWAY LOAN.

The contract for the Chinese Railway Loan with the Hooley-Jameson Syndicate has been signed, the issue price being ninety-four. The syndicate advances two millions for the Shanghai-Nanking line, and engages to advance three millions at a future date for the extension through Honan.

THE INDEPENDENCE OF CUBA.

London, Sept. 21.

General Stewart Woodford, the new American Minister to the Court of Spain, has had a long interview with the Minister for Foreign Affairs at Madrid, when it is understood that General Woodford informed him, courteously but firmly, that if the war in Cuba was not finished by the end of October next, the United States Government would consider itself justified in taking such measures as would secure the independence of Cuba.

ATTACK ON THE MEXICAN PRESIDENT.

Mr. Murota, our Minister Resident to Mexico, has sent the following telegram to the Foreign Office:—

City of Mexico, Sept. 16.

The President went to Alameda to-day in order to attend the celebration of Independence Day, to be held there. Upon arriving at that place he was struck in the back by a man in the crowd, but received no injury. The man was put under arrest at once. The people gave cheers for President Diaz.

A LEAGUE OF THE POWERS.

London, Sept. 22.

The *Daily News'* correspondent at Rome says that an understanding exists between Russia, Germany, France, and Austria in regard to the Levant, in view of an eventual division of spoils, and that efforts are being made to induce Italy to join the league.

(FROM L'INDO-CHINE FRANCAISE.)

STRENGTHENING THE FRENCH NAVY.

Paris, Sept. 3.

The Admiralty has decided to construct several large cruisers capable of steaming 21 knots per hour.

ANOTHER ANARCHIST OUTRAGE.

Paris, Sept. 4.

In Barcelona, an anarchist named Sampan, 27 years of age, fired several revolver shots, about midnight, at the Chief of the Police as he was leaving the Théâtre Puyas. The Chief was seriously wounded in the breast. The anarchist was arrested.

(FROM THE "SHANGHAI MERCURY.")

ANOTHER CRUISER FOR THE CHINA STATION.

Hongkong, Sept. 11.

The first-class British cruiser *Endymion* has been ordered to join the China Squadron.

ENGINEERS STRIKE AT SINGAPORE.

The Straits engineers struck work, demanding increase of pay, and the steamers were laid up for two days, when the owners came to terms. The crisis is now over.

(FROM THE JAPANESE PRESS.)

THE KOREAN DRILL QUESTION.

Seoul, Sept. 23.

The Minister of War has withdrawn the order announcing the stoppage of the selection of some Korean soldiers from the Body-guard, for drill by Russian instructors, and has issued another order to select two hundred soldiers, which are intended to form two companies of the King's Body-guard, but the order has not yet been acted upon.

THE KOREAN MINISTRY.

Seoul, Sept. 23.

There are signs indicating radical changes among the Ministers of State shortly.

CHESS.

3—Kt to K 8, mate
Correct solutions received from W.H.S., P.E.F.S., and D.D.

PROBLEM No. 339.
By NEMO.

White to play and mate in three moves.

OVER THE CHESS BOARD.

The programme of the Berlin Chess Congress has come to hand at last. The International Masters' Tournament began on September 13, first prize £100, &c. There was also to be a minor tournament, with prizes of £20, £12, &c., in which English amateurs who are not masters might compete. We have every reason to believe that England was well represented, Messrs. Blackburne and Burn having signified their intention in August of competing, and Messrs. Mason, Lee, and Bird were also desirous of being in the fray.

The match Bird v. Lee has been finished. Lee, by winning the thirteenth game, won the match with a score of 7 to 4, and 2 drawn games.

Owing to some misunderstanding between the contending parties, no game for the possession of the *Staats Zeitung's* cup was played as arranged between Steinitz and Lipschutz, the representative of the Staten Island and Manhattan chess clubs, respectively. The Manhattans claim the cup on a technicality, and the matter cannot be settled until the board of managers of the New York State Association meets. It is generally understood, however, that the board, when it does meet, which may not be until late this month, will settle this most unfortunate dispute and order a new schedule of dates, on the basis that the best score in three games will secure the cup. Relative to the Manhattans claiming the cup, Mr. Steinitz said that he did not understand on what ground the club did so, when he was quite prepared to play with Lipschutz under protest, in case they insisted upon it. This they did not do. Furthermore, Lipschutz never sat down to a board; did not start the game, nor set his clock in motion when he (Steinitz), failed to appear to play the game in question, and consequently had no legal right to claim a win. The veteran player further stated that so far as he was personally concerned he was ready to waive all claims in order to reach a satisfactory result; provided, that a speedy arrangement is brought about and that the games are played off at the rate of two a week.

The *Wochensach* is authority for the information that there are 9 Chess Clubs in Prussia, 581 in the British Empire, 206 in Germany, 111 in the United States, and 30 in Austria.

STEINITZ AND NAPIER.

Comments by *Reichelm* in *The Times*, Philadelphia.
"For the *Staats Zeitung* Cup 'twixen Steinitz, the grand old man, and Napier, the wonder-boy:"

LATEST COMMERCIAL.

IMPORTS.

The import market so far as regards cotton piece goods, fancies and woollens, is still utterly stagnant, scarcely a single transaction having been recorded, prices being nominally the same. In yarns a little better feeling is to be noted, but dealers appear disinclined to commit themselves to any future business and only buy what may be required for immediate demands, and this only at generally lower quotations.

COTTON PIECE GOODS.

	PER POUND.
Grey Shirtings—8 1/2 yds, 38 yds, 39 inches	\$2.50 to 2.80
Grey Shirtings—48 yds, 45 inches	2.80 to 3.35
P. Cloth—7 yds, 21 yards, 32 inches	1.50 to 1.90
Indigo Shirtings—52 yards, 44 inches	1.95 to 2.90
Prints—Assorted, 24 yards, 30 inches	2.00 to 3.75
Cotton—Italians and Salteens Black, 32 inches	0.18 to 0.25

Pig Iron, No. 3	2.10 to 2.20
Hoop Iron (1 1/2 to 1 3/4 inch)	4.80 to 5.00

KEROSENE.

The market firmer, with prices rising; not much business has been done, but another week or two should see a change for the better.

	PER POUND.
American	\$2.00 to 2.10
Russian	2.00 to 2.10
Langkat	—

SUGAR.

A good business has been done in Brown. Arrivals of Manila amount to about 5,900 piculs, and of China about 3,842 piculs, while sales of Manila amount to 50,000 piculs and of China 11,700 piculs. Prices are from 5 to 20 cents higher, a report that Spain is about to impose an export duty on sugar from Manila having had something to do with the rise. Of Formosa some 2,500 piculs have been sold at an advance of 15 cents. White refined is unchanged and a fair business has been done.

	PER POUND.
Brown Takao	\$3.90 to 4.00
Brown Manila	4.20 to 4.80
Brown Daitong	3.30 to 3.35
Brown Canton	3.30 to 4.20
White Java and Penang	6.50 to 6.60
White Refined	7.30 to 8.90

EXPORTS.

RAW SILK.

The excitement in the market noted last week has to a great extent subsided, but nevertheless a considerable business was done in the early part of the week, both for America and Europe, at gradually advancing rates. The stock of Shinshu Filatures has for the moment been cleared out, but fresh arrivals are anticipated. Stocks of all kinds amounted on the 21st to 5,500 piculs.

QUOTATIONS.

Filatures—Katra 9/15, 10/12 den.	\$900 to 920

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cowan, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, 51, Main Street, Settlement, by ARTHUR BRADLEY BROWN, of "Noklands," No. 156, Bluff, Yokohama.—SATURDAY, SEPTEMBER 25, 1897.

"FAISCE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and cheques be made payable to same, and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 2ND, 1897.

DEATHS.

At Negishi on the evening of Sept. 26th, ALFRED, infant son of Mr. C. BRETSCHNEIDER, aged one year.
On the 13th Sept., at 108, Orchard Road, Singapore, the Wife of Dr. DR. STURLER, of a Daughter.

MARRIAGES.

On the 27th ultimo at Christ Church by the Rev. E. Champneys Irwine, M.A., in the presence of Geo. H. Scidmore, Esq., Deputy-Consul-General of the United States, ISABELL BURSON, daughter of the late James Nelson Burson, Merchant, of San Francisco, to HORACE FRANK ARTHUR, of Yokohama.

On the 23rd September, by special license, HARRY SAMUEL BICKERTON-BRINDLEY, of Awoicho, Tokyo, to ADA BAGSHAW, of Leeds.—By cable.

On the 14th Sept., at the Cathedral of the Good Shepherd, Singapore, by the Very Revd. C. Masey, V.G., JOHN EASTMAN, Master Mariner, R.N.W., of Appleford, Devon, England, to PHELOE, widow of the late Norman Maher Symons, of Pahang Civil Service.

DEATHS.

At 72-B Bluff, Yokohama, on the night of the 28th ultimo, in the 51st year of his age, JOHN SAMUEL ROBINSON, a native of Shrewsbury, England, Out-side Supt.-Engineer, Nippon Yusen Kaisha.

On the 19th September, at Naoda, Island of Hainan, of dysentery and chronic gastric catarrh, Rev. JOHN C. MELROSE, of the American Presbyterian Mission, in the seventh year of his service and thirty-eighth year of age.

SUMMARY OF NEWS.

THE new gold currency came into force on Friday.

THE yacht-racing season in Yokohama closes to-day.

STORMS and floods have played sad havoc during the past week in many parts of Japan.

DYSENTERY is still rife in Yamaguchi Prefecture. Over 7,000 cases have occurred and 2,000 deaths.

MR. AKIYAMA, a Councillor of the Foreign Office, who attempted suicide a few days ago, is recovering.

THE British authorities are grappling firmly with the Afghan frontier rising and the Mad Mullah's forces are demoralised.

GREAT BRITAIN objects to Japan and Russia appearing at the Behring Sea Conference at Washington, urging that they have no *status quo*.

H.M. the Emperor gave his sanction to the promulgation of the amendment for Naval Uniforms and Naval Inspection regulations on the 16th inst.

OWING to the heavy rain of Thursday morning the Totsuka railway tunnel on the Tokaido line caved in. A luggage train was derailed in consequence.

DURING the severe rain storm on Thursday four houses standing under the cliff at Jizōzaka, Yokohama, were crushed in and one poor woman was killed.

OWING to the great rise in the price of *saké*, big imports of *samsu* are taking place at Yokohama, the business being in the hands of Chinese merchants.

SURGEON-GENERAL BARON ISHIGURO, who sent in his resignation a few days ago, has been released from his post and Surgeon-General Ishizaka is appointed in his stead.

THE telegraph wires leading south to Kobe and beyond have been thrown out of work in order by the gales, but it was possible to get a telegram through to Kobe late on Friday.

MR. HAYAKAWA, Director of the London branch of the Bank of Japan, who has been in London for a long time, is expected at Yokohama about the 8th of October, having left Marseilles on the 18th inst.

THE catch of herrings in the waters of the Hokkaido this year amounted to 1,006,000 *koku*, showing an increase of about 100,000 *koku* on last year's production, the Province of Oshima being the centre of the fishing.

MR. MAYEDA MASANA, one of the chief business men in Japan, who went to America and Europe for the inspection of Western markets, left Marseilles on the 26th inst. for Japan; so he may be expected early in November.

THE steamer *Tonegawa Maru*, constructed at the Osaka Iron Works to order of the Osaka Shosen Kaisha, was launched on the 24th inst. The vessel is said to be able to carry 500 passengers, her gross tonnage being 635 tons; she is to be placed on the China line.

GOVERNOR-GENERAL NOGI issued an order imposing a tax on camphor oil, which was to

come into force from the 1st of September. But the communication not being general some merchants were without knowledge of the order and have petitioned the authorities to postpone its operation.

FIGURED *kaihi*, which was once exported largely to the United States, but stopped on account of rough manufacture, has again come into vogue and many orders have been received in Japan since September last year. Home manufacturers are now busily engaged in the export of the goods.

ACCORDING to statistics made by the Treasury, the exports and imports by foreign and Japanese merchants during the month of August were as follow:—By Japanese merchants—Exports, yen 3,968,194, and imports, yen 10,454,090. By foreign merchants—Exports, yen 10,361,027 and imports, yen 11,978,244.

THE Japanese battle-ship *Fuji*, which was to leave Colombo on the 1st of October for home, is expected to arrive at Yokosuka about the 20th of October, after calling at Singapore and Hongkong. The new battle ship *Yashima*, which is now in the Mediterranean, is expected to arrive in Japan about the 20th of November next.

THE departure of Vice Admiral Baron Ito, chief of the Naval Command Bureau, for Formosa, is accounted for by the fact that, though many military officers have gone to Formosa for inspection tours, very few officers in the Navy know anything about the real condition of the Island; hence his departure.

THE disturbances in Formosa seem to be far from suppressed. Intelligence under date of the 16th Sept. reports that three companies under the command of Major Ishi met about six hundred insurgents on the 11th and after some firing, dispersed the rebels, while another company under the command of Lieutenant Kitaoka shot 19 rioters with a loss of three wounded on the Japanese side.

THE Import market generally during the past week has been dull and stagnant. Heavy rains and storms in various parts of the country, resulting in interruptions of railway traffic on various lines, and also of telegraphic communication, have seriously militated against business, just when some improvement in trade might have been anticipated. Some business, it is true, has been done in yarns, but in cotton piece goods, fancies and woollens, next to nothing. The same may be said regarding metals, the stock of which is increasing—particularly of pig iron—but dealers still hold back for a fall in prices. Some transactions have been effected in kerosene, at hardening prices, and the tone of the market has improved. In sugar, the stocks of brown, of various sorts, is decreasing, owing to next to no new arrivals, while a fair amount of sales have been effected at slightly advanced prices. In white refined a steady moderate business has been done. The export market has been fairly brisk. A good business has been transacted in silk, for the American market, at rising prices. Holders of fine-sized filatures are standing out for still higher rates, and will probably get them eventually. The waste silk market has also been active and some considerable transactions have taken place at higher quotations. The business in tea is gradually decreasing but is still steady and satisfactory to dealers, who anticipate clearing the whole of the season's production before the close of the year, instead of, as usual, having a million pounds or so left over. In rice export nothing is doing and prices are abnormally high. Exchange remains weak.

SPIRIT OF THE VERNACULAR PRESS.

The *Mainichi Shimbun* devotes no less than six long articles to the discussion of administrative reform. The interest of its observations would be heightened if we knew exactly what section of the political world it represents. But Mr. Shimada Saburo, the editor and proprietor of the *Mainichi*, though nominally one of the leaders of the Progressionists (*Shimpo-tō*), that is to say, of the party that supports the Okuma Cabinet, is understood to be the head of a semi-independent section of the party, a kind of *imperium in imperis*. It can not be assumed therefore, that the views put forward in the columns of the *Mainichi* are the views of the majority of the Progressionists, but it may be assumed that their resolute advocacy by the section of which Mr. Shimada is the able mouth-piece would greatly influence the attitude of the whole party, or, if confined to that section, might involve a fatal disruption of the *Shimpo-tō's* organization. We do not for an instant contemplate subjecting our readers' patience to the trial of following the *Mainichi's* arguments through half a dozen columns, but will confine ourselves to indicating the broad outlines of its contention. It will be remembered that, a few days ago, the Committee nominated last year for conducting investigations preliminary to administrative reform, was completely reconstructed, several of its original members being removed and their places given to new men—the men chosen, within the past twelve months, from the ranks of the *Shimpo-tō* and appointed to the posts of *Choku-nin* Councillors of Department, Heads of Bureaux, and so forth. It will also be remembered that a remarkable feature of the Committee's reconstruction was the extrusion of all members representing the Departments of the Army and of the Navy; from which extrusion the public, with evident justice, inferred that whatever reforms were contemplated, their scope was to be limited to the civil sections of the Administration, and was not to be carried into the sphere of the Army or the Navy. Finally, we may add to this retrospect the fact that Count Okuma, in an interview published by the *Yomiuri Shimbun* during the past week, ridiculed the idea that the Government was about to undertake reforms of such a drastic character as to astonish the nation, and declared his inability to understand what people meant when they talked of "radical reform" (*Kōron teki Kaikaku*). That much premised, our readers will be better able to appreciate the fact that the whole series of editorials to which the *Mainichi* has devoted its columns for six consecutive days, are intended to advocate "radical reform." What, then, does our contemporary mean by "radical reform," which Count Okuma, President of the Administrative Reform Committee, has described as incomprehensible therefore, presumably, impracticable? It means, briefly, speaking, that the programme of post-bellum measures should be recast in the sense of bringing into equilibrium the schemes for the increase of the Army and Navy. The *Mainichi* holds that the schemes, as originally mapped out by the Ito Cabinet and tamely endorsed by the Matsukata Cabinet, never stood to each other in a proper ratio; that they were dictated by a feverish military impulse comparable with that which precipitated the Crimean war, and that the effort of carrying them out in their integrity is embarrassing the national finance without conferring any proportional national advantage. Against naval increase as projected in the programme, our contemporary has nothing to say. But it considers that the country has no need of an army of over half a million men, and it insists that unless capacity to utilize such an army be developed *pari passu* with its growth the force must prove a comparatively worthless and very costly superfluity. Following the policy advocated in Great Britain's case by Sir Charles Dilke, the *Mainichi* urges that the ratio of naval to military increment should be as 7 to 3, and that, in order to make good the genuinely defensive character of the scheme, greater

attention should be paid, and larger sums devoted, to coast defence and naval stations, the army being relegated to the rank of an auxiliary. This part of the subject is discussed at great length, but the arguments may be reduced to the following points:—first, that in a small insular country like Japan, an army of over half a million men can have no logical *raison d'être* except for offensive purposes; secondly, that to employ a large military force effectively beyond the sea, there must be not only an ample supply of transports, or vessels available for transport purposes, but also good means of internal communication; and thirdly, that over-sea enterprise is out of the question unless the security of the country itself be assumed. Summing up the situation, the *Mainichi* holds that administrative reform, if it is to be anything but a mere name, must have for its basis the recasting of the Army and Navy Expansion programmes, and that, instead of being confined to a few changes of bureaux or reconstructions of Departments, it should aim at bringing the finances of the State in comfortable accord with the expenditures. All those objects, however, are evidently eliminated by the Cabinet, since the representatives of the Army and Navy Departments have been removed from the Administrative Reform Committee, and it consequently follows that the position assumed by the *Mainichi Shimbun* is diametrically opposed to the position taken by the Cabinet. It is difficult to foresee what dimensions this difference of opinion may assume, but there are strong reasons for thinking that the nation, as a whole, will not consent to any reduction of the programme of Army expansion.

* * *

Without any apparently proximate reason, the *Nichi Nichi Shimbun* writes a long and very pregnant article on the subject of Japanese officials in China. The Middle Kingdom has now become the cynosure of Western eyes. Since the war of 1894-5, European attention has been concentrated on the Far East to an extent hitherto unprecedented. The Great Powers vie with one another to lend China money, and since it must be assumed that their action is not purely philanthropic, the question arises, what do they contemplate and how do they expect to repay themselves. The *Nichi Nichi* does not attempt to answer these queries. It merely propounds them for the sake of calling attention to the importance that Chinese affairs have assumed. On the other hand, the policy of the Matsukata Cabinet, as expounded by Count Okuma, is based on the principle that Japan ought to play the part of an adviser and mentor to China, leading her into the paths of progress which this country has been following for the past thirty years. There are as yet no evidences that China recognises the propriety of Japan's playing such a part, or that Japan has begun to play it in practice. But the policy is clearly enough mapped out. It becomes evident, therefore, that the staff of the Legation in Peking should be chosen with the utmost possible care, and that its members should possess qualifications adapted to the difficult duties devolving on them *vis-à-vis* European designs, on the one hand, and the policy of the home Government, on the other. The *Nichi Nichi* evidently thinks that such care is not exercised, but it refrains from formulating any definite charges, though it hints, plainly enough, that the talk now heard about increasing the number of diplomatic and Consular officials in China, means nothing more than an extension of the happy hunting ground where the Government's political *protégés* are now finding fine game. (A common expression now a days is *ryokwan*, a word which, in the short compass of two syllables, conveys the significance of an official, useless so far as public functions are concerned, but supported by the State in the same way as pet birds or beasts are nurtured by private individuals.)

* * *

The *Yiji Shimo*, with unwearied patience, advocates unity of action on the part of the leading *Meiji* statesmen. There was a time, it

admits, when such unity could scarcely be reconciled with the state of public opinion. But that time is past, and the condition of the country's affairs is now altogether favourable to a coalition among politicians of all parties. Children may allow their personal disputes to hold them asunder when no peril threatens the head of the household, but if their parent be attacked by a dangerous disease, they must lay aside their petty causes of quarrel and join together for the purpose of nourishing and succouring the sick man. That is, virtually, the condition of affairs now in Japan. The interests of the country imperatively demand that its leading statesmen should waive their minor differences of opinion and conflicts of ambition, and should combine their abilities for the promotion of patriotic purposes. Our contemporary's article points explicitly to Marquis Ito and Count Itagaki. It advocates their return to the Cabinet, or, if that be impossible for the moment, at all events their active association in the councils of the State. There have been abundant proofs in the past that when national duty calls, the *Meiji* statesmen know how to subordinate personal considerations to public responsibilities. Their integrity and disinterestedness are beyond doubt, and the occasion has come for another display of those qualities.

* * *

In the *Yomiuri Shimbun* we find an article complaining that the unification of the Japanese nation is not accomplished. Two sections of the people, namely, the inhabitants of Okinawa (Loochoo) and Formosa, remain practically without the pale. Their language, costume, and customs differ from those of the Japanese proper, and so do the administrative and fiscal methods pursued there. In Okinawa the system of taxation is essentially different from that adopted in the mainland, and the inhabitants complain, with apparent reason, that they are the victims of unfair discrimination. There appear to be two parties in the islands: a conservative party, the leaders of which still turn their eyes to China and would fain restore Chinese supremacy; and a so-called progressive party which advocates the restoration of the old monarchical family to administrative control. It would seem that there is no party in favour of complete amalgamation with Japan proper. That is simply because the people have not been taught to appreciate the advantages of being Japanese subjects. They have no experience of the content and prosperity that mark the lives of their neighbours on the mainland. Turning to Formosa, the *Yomiuri* reiterates the often-formulated charges that the Central Government lacks earnestness and resolution in dealing with the affairs of the new territory; that crying official abuses have been suffered to pass almost unchallenged, and that, owing to the failure of the authorities to establish law and order, it has been impossible to carry out the works of improvement for which money was voted by the Diet. Our contemporary's indictment is accusatory; it contains no definite suggestions as to the course to be pursued in the case of either Okinawa or Formosa.

* * *

In order to put the Revised Treaties into operation from July 1899, it will be necessary for the Japanese Government to give notice of that intention in July of next year at the latest. The recovery of her judicial and tariff autonomy by means of Treaty Revision has been Japan's cherished object for the past thirty years, and may be said to have occupied the practical attention of her statesmen since 1871. Moreover, not the national honour alone is concerned, but also the national purse, for under the new tariff the country's revenue will receive an addition of from 4½ to 6 million *yen*. Unfortunately two States block the way to achievement, France and Austro-Hungary. The former, owing to parliamentary complications, the latter because of delays due to the duality of the monarchy, have not yet concluded the necessary steps. Thus the Minister for Foreign Affairs, says the *Seikai-no Nippon*, has now to consider seriously what course should be pursued towards those

two countries. Is there a reasonable hope that the negotiations for Treaty Revision will be completed with them and that ratifications will be exchanged in time for Japan to give the requisite notice next July? If there is not such a hope, then evidently the operation of the new Treaties will have to be postponed until 1900. A year's delay would not be a consideration of overwhelming importance, but there is always the possibility that, before 1900, the wheel of fortune may bring round some international complication which would have the effect of practically invalidating the Treaties already revised. Is Japan, then, to run the risk of throwing away all her long labour and failing to assert her national rights, as well as to incur the certainty of losing a considerable sum of revenue, simply because two Powers out of sixteen or seventeen hesitate to revise their Treaties with her? Surely not. It becomes necessary for Count Okuma to consider seriously whether the time has not arrived for telling France and Austria-Hungary that unless they can conclude the revision of the Treaties by the end of the current year, Japan will be reluctantly compelled to denounce the existing Treaties. Such are the views of the *Seikai-no-Nippon*.

COUNT OKUMA'S ESSAY IN "THE FAR EAST."

In the last number of *The Far East* there appeared an essay from the pen of Count Okuma. Briefly speaking, its purpose was to combat the idea that Japan is living beyond her means, and that her resources are overtaxed by the large undertakings upon which she has launched in the sequel of the War with China. Count Okuma admits that victory came to her more easily than was, perhaps, altogether wholesome, and that it created an industrial and commercial stimulus stronger than the circumstances actually warranted, but he is persuaded that the situation contains no really disquieting elements, and that the country's future may be regarded with hope and confidence. The line of argument leading to that conclusion is that the development of the material resources during the past twenty years more than justifies the bold course now pursued, in support of which assertion the Count marshals some striking statistics. Thus:—

	Acres.
Area of rice land under cultivation in 1880.....	6,408,630
Do. 1895.....	6,948,067
Area of wheat and barley under cultivation in 1880.....	3,580,860
Do. 1895.....	4,428,057
Quantity of silk cocoons in 1880.....	595,923
Do. 1895.....	2,258,173
Quantity of tea produced in 1880.....	3,206,361
Do. 1895.....	8,615,074
Number of factories using steam or water power in 1883.....	84
Do. 1893.....	2,758
Number of steamships in 1872.....	96
Tonnage.....	23,364
Number of steamships in 1895.....	827
Tonnage.....	213,221
Mileage of railways open in 1872.....	18
Do. 1897.....	2,637
Value of Foreign Trade in 1872.....	Yen. 43,201,461
Do. 1896.....	289,517,230

These figures are very striking. They indicate a vigour of development that justifies Count Okuma's optimism.

Count Okuma further declares that Japan has no desire to expand her territory. We are somewhat surprised to observe that the Count's views on that point are regarded by the *Kobe Chronicle* as likely to displease the "strong-foreign-policy" party, whose leaders, according to that journal, look forward to the extension of Japan's territorial limits, and whose nominee Count Okuma is supposed to be. We ourselves have never understood that territorial aggrandisement is a plank in the platform of the advocates of a strong foreign policy. The two fields in which the activity of those politicians has always mani-

festated itself are Korea and Treaty Revision. As to Korea, they have persistently held that Japan ought to make the independence of the peninsula a paramount object, and should shrink from no danger involved in the pursuit of that aim. As to Treaty Revision, they used to insist that foreigners should be granted no privileges other than those actually secured to them by the text of the existing Treaties, and that if Japan's reasonable proposals, urged with due patience and courtesy, failed to commend themselves to foreign States, she should not shrink from denouncing the old Treaties. But territorial aggrandisement has never, so far as we know, been advocated by exponents of the *Kyōko shugi*, and we venture to predict that Count Okuma's enunciation of policy, so far as that point is concerned, will be received with perfect equanimity by his party.

With reference to this essay of Count Okuma's, our *Kobe* contemporary makes a singular comment:—"As we understand that Count Okuma is not sufficiently versed in English to write in that language, it would be interesting to learn how far the translation published in *The Far East* follows the original. It is, indeed, curious to observe how closely the opinions expressed by Count Okuma—opinions which, judging from his speeches in the vernacular, he would scarcely be credited with holding—coincide with those held by the editor of the *Kokumin-no-Tomo*, who is also, we believe, the editor of *The Far East*." There is only one inference to be drawn from the *Kobe Chronicle's* words, namely, that it suspects the editor of *The Far East* of having "Englished" the Minister's essay so as to make it correspond with the views of the editor himself. We doubt, indeed, whether our contemporary can have intended to convey that impression, but certainly the words quoted convey it very distinctly. It is a strange idea. Count Okuma has at his command some of the ablest English scholars to be found in Japan, and, moreover, he himself reads English with the greatest ease and the most critical understanding. The *Kobe Chronicle* may rest assured that the essay in *The Far East* is a perfectly accurate translation of Count Okuma's original.

CONCERT IN TOKYO.

On Monday evening, a concert was given in Tokyo by Mr. Sydney H. Morse. The building chosen was a missionary lecture hall, opposite Trinity Cathedral in Tsukiji; a place of bare and uninviting aspect and very defective acoustic properties. Professor Von Koeber had been announced for two pianoforte solos, but to the great disappointment of the public, he failed to appear. Where an amateur is concerned, it seems ungracious to complain of neglect of engagements, but if Professor Von Koeber realized how much pleasure his playing gives and how earnestly the fulfilment of his promises is looked forward to, he would probably be more careful about committing himself to pledges which he has no certainty of redeeming. In such a room as that of the Tsukiji Parish Building, and on such an instrument as did duty last night for a piano, we should have regretted, for our own part, to see Professor Von Koeber perform, but impediments of that nature are capable of being anticipated and ought to be taken into due account before public announcements are made. Owing partly to very inclement weather, and partly also, to very insufficient advertising, a scanty audience assembled. It was, however, a highly appreciative audience, as well it might be, for Mr. Morse's singing can scarcely be too much praised. His voice is of delightful quality, his elocution admirably distinct, and his method, artistic. Neither Tokyo nor Yokohama has ever heard such a tenor, and it appears to us very astonishing that so many of the foreign residents of the capital should have failed to avail themselves of an occasion not likely to occur again. The gem of the evening was "Echo," which beautiful song Mr. Morse sung with exquisite feeling. Coun-

less Von Schlutterbach played two cornet solos and sang thrice, a display of good nature for which the fullest thanks are due, and a young lady—whose name, not being inserted in the programme, we refrain from mentioning—delighted the audience with a recitation which alone would have sufficiently repaid a visit to the hall. We append the programme:—

1. Song—"Wait her Angels"—Handel. Mr. Sydney H. Morse.
2. Cornet Solo—"Werner's Parting Song"—Nesster. Countess Von Schlutterbach.
3. Song—"The Beggar Maid"—Barby. Mr. Sydney H. Morse.
4. Recitation. Pucinello.
5. Song. Countess Von Schlutterbach.
6. Song—"Echo"—Lord H. Somerset. Mr. Sydney H. Morse.
7. Cornet Solo—"O thou sublime, sweet evening, star"—Wagner. Countess Von Schlutterbach.
8. Song—"Annette"—Grieg. Mr. Sydney H. Morse.
9. Song. Countess Von Schlutterbach.
10. Duet—"Excelsior"—Balle. Mr. Sydney H. Morse and Mr. T. V. Twinning.
11. Song. Countess Von Schlutterbach.

MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for August, showing the foreign trade of the Empire for the month:—

	1896. SILVER YEN.	1897. SILVER YEN.
Exports.....	7,928,959.080	14,606,931.750
Imports.....	17,375,241.150	22,508,279.770
Total exports and imports.....		37,115,211.520
Excess of imports.....		7,901,348.020
Exports.....		278,109.740
Imports.....		533,681.999
Miscellaneous.....		22,223.368
Total.....		834,015.107

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

	Exports. Silver Yen.	Imports. Silver Yen.	Total. Silver Yen.
British India.....	575,016.790	4,435,124.081	5,010,140.871
Hongkong.....	1,009,235.110	1,746,854.710	2,756,089.820
China.....	3,855,808.310	1,740,616.170	5,596,424.480
Korea.....	351,362.800	498,844.370	850,207.170
Russian Asia.....	159,864.700	317,334.470	477,199.170
Annam & other French India.....	1,354.600	387,059.330	388,413.930
Philippine Islands.....	13,830.200	204,417.400	218,247.600
Siam.....	334.000	74,715.010	75,049.010
Great Britain.....	699,078.150	8,748,123.070	9,447,201.220
France.....	3,555,808.310	1,900,319.200	5,456,127.510
Germany.....	76,616.150	1,209,867.310	1,286,483.460
Italy.....	363,083.930	4,410.000	367,493.930
Austria.....	1,343.800	302,877.800	304,221.600

THE HAKODATE AFFAIR.

That very ancient bit of extraterritorial history, the Ross case, has been brought once more upon the *tapis* for the purpose of proving that even where two Occidental Powers are concerned, a claim such as that advanced by Great Britain with respect to the Hakodate Chinese is recognised in practice. Our contention is that such a claim has no *raison d'être* unless the jurisdiction against which it is set up is of a semi-civilized or barbarous character. If, for example, a foreigner serving in a British public vessel, commits a crime on shore in China, it is a point of humanity that Great Britain should assert her right of jurisdiction over him as a protected subject, rather than suffer him to be judged by Chinese tribunals. That principle, indeed, is the sole and only intelligible explanation of "protection" exercised in the manner under consideration; the sole and only ground for departing from the general tenet of international law which declares that every member of the crew of a foreign public ship is subject to local jurisdiction in respect of offences committed on shore. Such is our contention. We are now answered by reference to the Ross case. The Ross case is a very old friend of ours. We had the pleasure and the pain of writing several articles about it in the year 1881, by which time it had assumed the dimensions of quite a pretty international problem. Our articles were intended to demonstrate the soundness of the position assumed by Great Britain on that occasion, and we remain to this day unshaken in our conviction that England was right, though we had at the time, and have still, a very thorough appreciation of the arguments on the other side. When, therefore, we are accused of suffering from a "convenient memory" because we ignore the Ross case in our discussion of the Hakodate incident, we can only smile. Our candid advice to our opponents is to let the Ross case alone. We tender that counsel on two grounds: first, that if the Ross case is relevant, the position that Great Britain then took is precisely the opposite of the position taken by her with regard to the Hakodate affair; secondly, that the Ross case is irrelevant. What was the Ross case? Simply this:—John Martin Ross, a seaman of the U.S. merchant ship *Bullion*, was charged before the U.S. Consular-General Court of Yokohama with the murder of Robert Kelly, another member of the same crew, on board the vessel as she lay in the port of Yokohama. Ross objected to the jurisdiction of the Court, claiming to be a British subject. The Court over-ruled the objection, and the British Consul at once demanded the surrender of Ross for trial by a British Court. Thus, supposing the Ross case to be relevant to the Hakodate discussion, it would follow that, in 1881, Great Britain refused to recognise, as belonging to American vessels, the very privilege that she claims for her own vessels in 1897. That is the first feature which renders the Ross case worse than useless for the purposes of our opponents' argument. They will doubtless say, however, that Great Britain's contention was over-ruled and that the Ross case has become a precedent in the opposite sense. We are not aware that Great Britain has ever formally abandoned the position taken by her on that occasion. But even assuming that she has, the fact remains that the Ross

case is not relevant to the Hakodate incident. We shall not weary our readers by entering into a detailed discussion of that point unless the necessity arises. It will be sufficient to note here that the United States did not rest its case on any such untenable ground as that Ross was "protected" against British jurisdiction by the fact of his serving in an American private vessel. The question at issue related to the mutual scope of the two Powers' acquired jurisdictions. In the Hakodate incident, the question is whether a Chinese *employé* of a British public vessel possesses the status of a British subject for purposes of jurisdiction. We have already gone into that point pretty thoroughly, and will now confine ourselves to appending the views expressed by Hall, who is admittedly one of the highest, as he is also the most recent, authority on this subject. He says:—"It may be worth while to note the limitations upon an outlying instance of protection temporarily accorded to persons, not on their own account, but because of their association with British property. Persons forming part of the crew of a British vessel, whatever may be their nationality, are protected while in an Oriental port, not merely to the point up to which the customs of Europe allow members of a crew to be subjected to British jurisdiction, but to the full range, whether with respect to acts done on the vessel or on shore, that merely protective jurisdiction stretches in an Eastern State. *Punitive jurisdiction does not, however, go with protective jurisdiction in this instance. British Courts can only exercise criminal jurisdiction over British subjects and persons to whom the privileges of British subjects have been regularly extended; they consequently have no power to try a foreign seaman belonging to a British ship for any offence committed within or without the territorial jurisdiction. He must be handed over to the Consular authority of the nation of which he is a subject.*" The passages which we have here italicised are sufficiently explicit. The Chinese arrested by the Japanese police in Hakodate would have been judicable by a Chinese Consular Court if China possessed extraterritorial jurisdiction in this country. But she does not, and they consequently became judicable by Japanese tribunals.

YOKOHAMA JINRIKISHA COOLIES.

It is to be regretted that some one does not take the trouble to invoke the assistance of the law when a Yokohama *jinrikisha* coolie attempts to practise extortion. An instance has just come to our notice of a young lady who, having ridden from a distant part of the Settlement to the railway station, gave 40 *sen* to the two men drawing the *jinrikisha*. They at once insisted on having 50 *sen* each, a monstrous demand. The young lady declined to be so grossly victimized, but her situation was decidedly unpleasant, for the two extortioners seemed disposed to make things so hot that the additional sixty *sen* would be paid in self-defence. She asked the men to accompany her to a police man, but they declined to do anything of the kind, and became still more peremptory in their demand. Fortunately a gentleman observed the trouble and came to ask whether he could render any assistance. At the lady's request he went in search of a policeman, who soon

dealt with the truculent extortioners, telling them 15 *sen* was an ample fare for the work they had done. The policeman would have taken back 10 *sen* and restored it to the lady, but she preferred to abide by her original intention. So many instances of these unwarrantable demands now occur, that the necessity of making an example seems imperative. Possibly our readers do not know that to demand an excessive fare is criminally punishable in Japan. It seems to have escaped notice that a *jinrikisha* coolie in Kobe received 10 days' minor confinement for that very offence a short time ago. It was the coolie by whom a charge of assault and battery was preferred against an American naval officer, and who was himself the object of a similar prosecution by the officer. Both charges were dismissed, but the fact of attempting to extort an excessive fare having been proved against the man, he was tried independently for that offence and corrected. There can be little doubt that if a few similar convictions were procured in Yokohama, the *jinrikisha* man would learn prudence. Of course there is always the difficulty of evidence. If a foreigner goes into court with only his own unsupported testimony to tender, it is easy for the other side to produce such a preponderance of witnesses that the judge's hand is forced. But when application has been made to a policeman, and the facts have been ascertained by the latter, nothing remains except to take the *jinrikisha*'s number and then prefer a formal complaint. The policeman might prosecute, but he can hardly be expected to do so, it seems to us, unless the foreigner shows a disposition to come forward. So soon as an "incident" with a *jinrikisha* drawer is over, one's natural disposition is to dismiss the thing from one's thoughts and not take any more trouble about it; but a little public spirit might be of great public service.

TREATMENT OF FOREIGNERS IN JAPANESE PRISONS.

One of the questions that have occupied the attention of the Committee appointed last year for the purpose of considering the measures advisable in connexion with the operation of the Revised Treaties, has been that of prisons. Ought foreigners imprisoned in Japanese jails to be treated differently from Japanese prisoners, or should the same treatment be extended to both? It is an interesting and important problem, and we can easily foresee that a good deal of discussion will be provoked by it. When the matter was discussed recently in the Department for Home Affairs, it is understood that the balance of opinion was in favour of adopting for foreign prisoners a system different from that pursued in the case of Japanese. The food, the dress, the manner of sitting and sleeping, and many other matters vary so greatly as between foreigners and Japanese, that to treat them alike would be harsh, and since to differentiate them within the same jail would be embarrassing, the plan most feasible in the eyes of the committee was that a separate prison should be built for the accommodation of foreign criminals. The *Nippon* has an article traversing that view. While admitting that the most civilized principles are in favour of treating prisoners leniently, it thinks that to make a distinction between foreign-

ers and Japanese would create discontent among the latter and would encourage the former. After all, when foreigners come under Japanese jurisdiction, it must appear to the public that they ought also to be placed under the Japanese prison system, and that to make an exception in their favour would be injurious to Japan's dignity. Doubtless foreigners are accustomed to live differently from Japanese, but if sentiment be excluded from the question, there is nothing to prevent a foreigner from faring very well on Japanese diet, dressing very comfortably in Japanese garments, and living very healthily in Japanese rooms.

Such is the view of the *Nippon*. It is a view that would naturally present itself to a Japanese, especially to a Japanese of the type made familiar to us by the *Nippon*. We are disposed to think, however, that despite our contemporary's desire to eliminate every factor except strict justice from its statement of the problem, a very palpable violation of justice is involved in the proposed solution. The *Nippon* will unquestionably agree that when Japan recovers her judicial autonomy, any foreigners convicted of an offence against her laws ought to be subjected to exactly the same penalty as a Japanese offender under like circumstances. There must be neither a more nor a less about the matter: absolute equality of treatment within the limits of reasonable possibility, is necessitated by strict justice. That being so, we invite the *Nippon* to answer this question:—Suppose that a Japanese and a European or an American are condemned to a year's imprisonment, and suppose that the European or American, during the whole term of confinement, has to eat Japanese food, wear Japanese costume, and sleep in Japanese fashion, either with no pillow at all or with a wooden one, is the severity of the punishment the same to the foreigner and to the Japanese? Does not the foreigner's punishment, on the contrary, extend to matters which the law had no intention of including in the penalty, and does not the punishment of the Japanese stop short of such matters? An exactly corresponding injustice, so far as we can see, would be committed if two Englishmen having been convicted of the same offence before a British tribunal, the one was sentenced to a year's imprisonment on ordinary prison fare, and the other to a year's imprisonment on bread and water with deprivation of his mattress at night. None of us makes the smallest pretence of claiming for a foreign culprit any better treatment than that extended to a Japanese undergoing punishment for the same offence. Different treatment does not necessarily mean better treatment. Nor does different treatment necessarily involve any assertion of the foreigner's superiority. On both of those points the *Nippon* seems to labour under a misapprehension. A European fed on oatmeal porridge, boiled beef, tea, bread and vegetables may appear to fare more sumptuously than a Japanese fed on barley, rice, pickled *daikon* and other simple relishes, yet each probably finds his diet equally distasteful, and each would consider his punishment greatly aggravated by having to exchange food with the other. There are other things to be included in the account, but since this fundamental principle appears to have escaped the *Nippon's* notice, we need not carry the discussion any farther.

METHOD OF EXCHANGING SILVER YEN.

According to instructions issued by the Finance Department, foreigners desirous of changing silver yen for gold on and after the 1st of October, will be able to do so by carrying the silver pieces to the Specie Bank or its agencies in Yokohama and Kobe. The Treasury does not pledge itself, however, to effect the exchange at once across the counter. That will be done so long as a sufficiency of gold coins is in possession of the Specie Bank and its agencies, and since a plentiful supply will be placed in their hands, immediate exchange will probably be always possible. But should it happen that the stock of gold in the vaults of the Yokohama or Kobe bank is temporarily exhausted, then the foreigner will be given a note, stating the amount he is entitled to receive, which will be cashed so soon as the silver presented by him has been forwarded to the Bank of Japan in Tokyo, and so soon as the amount of gold required has been sent from Tokyo to the place of exchange. In the latter case, the foreigner will of course lose the interest on his money during the period of transmission to and from Tokyo, but the expenses of transmission will be borne by the Government. With regard to Japanese in the interior desiring to exchange silver for gold, the Government, deeming that their motive in nearly all cases will be the mere novelty of the thing, has decided that they will have to hand in their silver and await the advent of gold coins from Tokyo. Of course bank-notes will be always procurable, and residents of Tokyo, being able to apply direct to the head office of the Nippon Ginko, will never experience any delay.

THROUGH FROM TOKYO TO NAGASAKI.

The Sanyo Railway has now been carried as far as Tokuyama, the distance of which place from Moji, across the Suwo Nada, is only 40 miles. On the 23rd ultimo, traffic was opened as far as Tokuyama, and a line of steamers having been established between Tokuyama and Moji, it may almost be said that through railway communication overland exists between Tokyo and Nagasaki, or Tokyo and Yatsushiro. Thus, leaving Tokyo by the 6 a.m. train on Monday, suppose, one reaches Kobe at 11.20 p.m. the same day, and can catch the 11.55 train on the Sanyo Railway, which arrives in Tokuyama at 7 o'clock on the following evening (Tuesday). A steamer from Tokuyama takes one to Moji, in time for the train starting thence at 10 a.m. Eight o'clock on the following morning (Wednesday) sees one at Hayaki. Hence a steamer carries one to Tokitsu by 11.20 a.m., and entering the train again at Tokitsu, one arrives in Nagasaki at 1 p.m. the same day (Wednesday), the whole journey thus occupying 55 hours. It is exceedingly problematical, we imagine, whether all these connexions could be made successfully, but the schedule is as we have here set it down.

Mr. Rider Haggard's sister, the Baroness d'Anethan, has written a novel relating to Brazil, where the Baroness lived for some time. It is a tale of diplomatic life. The volume will be published by Messrs. Chapman.

JAPANESE SMOKELESS POWDER.

Vernacular journals assert very confidently that Major Shinagawa, of the Infantry, Superintendent of the Itabashi Powder Factory, working in conjunction with Mr. Matsuoka, an expert of the same factory, whose chemical knowledge is said to be of a high order, has invented a smokeless powder better and cheaper than that obtainable from abroad. Major Shinagawa, having been engaged as a workman in European powder factories for years, has an accurate practical acquaintance with the details of powder making. A long time has elapsed since he first devoted himself to the question of smokeless powder, but his success is said to be now quite assured. Half a charge of his powder gives at least twice as great penetrating power as twice the weight of ordinary powder. Experiments recently conducted at Itabashi, showed that whereas a ball fired with 5 grammes of ordinary Japanese powder penetrated only one-fifth of an inch into a pine board at a distance of 40 yards, the same ball, with 2 grammes of the new powder, passed clean through a board nine-tenths of an inch thick at the same range. It is also claimed that the great difficulty connected with smokeless powder in Europe, namely, its very hygroscopic qualities, has been completely overcome in the Japanese powder, and that the latter can be produced at one half of the former's cost.

THE DRILL INSTRUCTOR PROBLEM.

It appears to savour somewhat of the comical that Japanese newspapers should continue to discuss that worn-out subject, the engagement of Russian military men for the purpose of drilling Korean troops. They talk of an agreement, or convention, or something of that kind between Russia and Japan, and discuss the probabilities of its being concluded. The *Nippon*, for example, has an article in its issue of the 29th instant, forecasting the policy of Mr. de Speyer, explaining that he seems bent upon managing everything in the quietest manner possible, opining that he will make no departure from the lines followed by his predecessor, Mr. Waeber, and concluding with the query, what will be the issue of the drill-instructors' problem under these circumstances? To us it seems that the query is a little belated. The Russian drill instructors are actually at work in Seoul. There is no longer any room for speculation. They are a small number, it is true, but the originally circulated report that they were mere tourists who, taking advantage of a spell of leave, had planned a casual kind of trip to Korea, is completely exploded. The vernacular journals might as well recognise the accomplished fact, and give up speculating about contingencies which no longer admit of question.

NEW SHIPS.

The *Hochi Shimbun* says that the despatch boat *Miyako*, the keel of which was laid down at the Kure dockyard in March, 1896, is now nearly completed and will shortly be launched. She has a displacement of 1,800 tons and a speed of 20 knots. The cruiser *Akashi*, which has been under construction for some time at Yokosuka, is also nearly finished, and her launch is expected to take place in the middle of October. Our contemporary adds that the ceremony of launching will be according to British custom.

BLUE-FUNNEL BOAT IN COLLISION.

TWENTY SEVEN PERSONS DROWNED.

A telegram in a paper brought over by the *Empress of China* from Canada on Monday morning says:—Port Said, Sept. 11.—The British steamer *Polyphemus*, from Yokohama to London, was damaged in a collision near Jebel Tar, an island in the Red Sea, according to a dispatch just received from the Island of Perim, and 27 of the crew were drowned.

THE HAKODATE AFFAIR.

IT is not to be supposed that a question of international law involving no serious issues, can have much interest for the general public, and we feel, consequently, some reluctance in reverting to the discussion provoked by the Hakodate affair. A very few words, however, will suffice to dispel the singular propositions advanced by the *Japan Gazette*, which journal, unfortunately for the cause it espouses, has endeavoured very industriously to prove that the Chinese servants of a British man-of-war are exempt from Japanese jurisdiction with regard to offences committed by them in Japanese territory. In the first place, there is an emphatic dictum by HALL, one of the latest and best authorities on international law, to the effect that Chinese servants—it will be understood, of course, that in speaking thus we are fitting the special facts of the Hakodate Affair to the terms of HALL'S general proposition—that Chinese servants, under the given circumstances, are protected to the full range that merely protective jurisdiction stretches in an Eastern State, but that punitive jurisdiction does not go with protective jurisdiction in such a case, and that for all purposes of punitive jurisdiction, the Chinamen must be handed over to their own Consular Authorities, in other words, to the Japanese Authorities, since Chinese Consuls do not exercise criminal jurisdiction in Japan. Nothing would be clearer or more explicit than HALL'S verdict on the subject. The *Japan Gazette*, however, maintains that since the act committed by the Chinese is not an offence according to British law, the British Government is entitled to protect them against the punishment prescribed for their act by Japanese law. It is very difficult to treat such a proposition seriously, nor are we at all surprised to find that it is accompanied by some of the invectives invariably indicative of a weak case. What Great Britain claims with regard to the Hakodate Chinese is jurisdiction for herself, not their exemption from punishment. If any one thing could tend, more than another, to discredit her claim in her own eyes and to deter her from advancing it, it is the unfortunate accident that in this particular case she can not herself exercise the jurisdiction of which she seeks to deprive the Japanese, and that the consequence of her claim's immediate recognition would have been to defeat the ends of justice by averting from the Chinese the punishment to which their offence properly exposed them. Great Britain does not constitute herself in this instance a protector of Chinese gamblers. It has been reserved for the *Japan Gazette* to represent her in that disgraceful light. If she does not find it necessary to employ for the suppression of gambling in the United King-

dom measures so strict as those considered essential by the Japanese Government in Japan, it is not to be supposed that she condemns such measures as superfluous in Japan, or that she debases the flag of her war-ships by employing it to secure for her Chinese employes the privilege of defying the gambling laws of Japan in Japan. In point of fact, she has enacted and she enforces similar laws for the preservation of good order among her own Chinese subjects in the neighbouring colony of Hongkong. Her claim in the Hakodate affair is a positive claim of jurisdiction over foreigners serving on board of her public vessels with respect to all crimes committed by them in Japanese territory, and when the *Japan Gazette* perverts that broad claim into the petty issue of protecting such foreigners against the just consequences of one particular offence, it not only insults England but makes her case farcical. The question lies between Japanese jurisdiction and British jurisdiction, not between the criminality or innocence of a particular act.

We pass now to the ROSS case. It has been a matter of some amusement to us to watch the *Japan Gazette* plunge deeper and deeper into the ROSS case, and to observe, at the same time, that our courageous contemporary had never read the records of the case, and was splendidly ignorant of the facts on which it undertook to base a provision of international law. The position assumed by Great Britain in the ROSS case was a position in exact accord with the dictum of HALL, alluded to above, but a position diametrically opposed to that taken by her in the Hakodate case, supposing the cases to be cognate. In the ROSS case she claimed that a British subject serving on board an American vessel should be handed over to the British Consular Authorities if he committed an offence in Japanese territory, whereas in the Hakodate case she denied that a Chinese subject serving on board a British vessel should be handed over to the Chinese Consular Authorities if he committed a crime in Japanese territory. But, says the *Japan Gazette*, England abandoned that position ultimately. "The British and United States Government," writes our contemporary, "after a year's deliberation, decided that a crime committed ashore by a British subject serving on an American ship was judiciable by an American Consular Court, and that constitutes a precedent." There is just one difficulty about admitting the *Japan Gazette*'s statement as evidence, namely, that it is a falsehood. The British Government never decided anything of the kind. The British Government fought the question unwaveringly for two years, and concluded by renewing, in 1882, its emphatic protest against the legality of America's action. The last phase of the discussion was a proposal from the United States Govern-

ment that Great Britain, in the character of appellant, should submit the case to the judgment of the American Supreme Court. Great Britain declined. Her reasons must be too obvious to need recapitulation here. One, however, may be noted. She said that, whereas diplomatic reversal of the United States' position need not affect ROSS' punishment, legal reversal by the Supreme Court would invalidate the sentence pronounced against him in Yokohama, and might thus lead to the escape of a heinous murderer, since evidence to convict him at a fresh trial must be almost unprocureable after the lapse of two years. HER MAJESTY'S Government nevertheless explicitly repeated its original protest, and there the matter rested. Now we do not assert that the ROSS case is relevant to the Hakodate question. On the contrary, there are features that differentiate them. But the *Japan Gazette* has chosen the ROSS case as the sheet anchor of its assertions, unfortunately ignorant that, in so doing, it is ascribing British sanction to a provision of international law against which Great Britain remains to this day an emphatic protester. It is in truth, very diverting to find the *Japan Gazette* charging a great jurisconsult like HALL with "ignorance of a most important decision" which has no existence outside the *Gazette*'s imagination, and with "undertaking to instruct others on what he himself is lacking in knowledge" (*sic*) when the lack of knowledge is entirely on the side of the *Gazette* itself.

THE PASSPORT AND INDEPENDENCE DAY.

IN commenting on the incident of the Revd. J. M. MCCAULEY'S passport, the *Kobe Chronicle*, after unfavourably criticizing the conduct of Mr. MCCAULEY, makes the following remarks:—

Nevertheless, even if the difficulty in which Mr. McCaleb is placed has been brought about by his own act, we at the same time cannot but think it would have been more dignified if the United States Legation had taken no notice of his vagaries of expression, and had granted him the passport for which he asked. It is to be feared that not a little of the feeling aroused against Mr. McCaleb was because of his refusal to make any subscription to the Fourth of July celebration, but it surely cannot be asserted that an objection to such a commemoration necessarily places a man outside the pale of citizenship. It is just as if a British subject were to be denied the rights of his nationality because he refused to contribute to the Diamond Jubilee celebration. Indeed, we may go so far as to say it is possible to have some sympathy with Mr. McCaleb's avowed objection to the commemoration of bloodthirsty conflicts, and to agree with him that men, whether English, American, German, French or what not, might devote their energies to better causes than perpetration of national differences. That Mr. McCaleb's methods are unpleasant and impudic does not come into the question, and he may fairly argue that if he is more emphatic than others in the enunciation of religious commonplaces about his citizenship being elsewhere, this affords no valid ground for a discrimination by his Legation against him.

These remarks appear to us to be in great part justified by the facts as they presented themselves to our Kobe contemporary. But in order to form a correct judgment, it is necessary to supplement the particu-

lars hitherto published, and inasmuch as the case was originally laid before the public in these columns, it seems right that we should approach the subject again for the purpose of furnishing information which we have now been able to obtain. As a matter of fact, the United States Legation did not take any notice whatever of Mr. MCCALED'S expression of views about the celebrations of Independence Day. Towards such celebrations a United States citizen is at liberty to assume any attitude that pleases him: his officials are not at all concerned with his ideas. But although Mr. MCCALED may be unaware of the fact, the question of his citizenship had been mooted for some years, and when he applied for a passport to travel outside Treaty limits, fresh prominence had been given to the query by his manner of dissociating himself from his nationals on Independence Day. He had, in fact, placed himself by his own public statements in a position which compelled the United States Legation to examine whether he had complied with the regulations clearly laid down by the Department of State. Those regulations emphatically direct that before endorsing an application for a Japanese travelling permit, the Legation in Tokyo must have proof of the applicant's citizenship. Such proof is generally furnished by taking out an American passport, which can be done either at the State Department in Washington, at the United States Legation in Tokyo, or at one of the United States Consulates in the foreign settlements. In order to obtain the passport certain statements under oath or affirmation are necessary, including a declaration of allegiance, so that the possession of the passport constitutes valid evidence of citizenship. We are correct, we believe, in saying that all persons receiving the protection of the American Legation in Japan, or obtaining its endorsement for any purpose, are provided with passports. Mr. MCCALED, however, had never taken out an American passport in Japan. Thus, so far from being discriminated against when he was asked either to take out a passport in Tokyo or to show that he had done so in Washington, the truth is that he was simply invited to correct an omission which discriminated him from his alleged fellow-nationals. Information that we have been able to obtain shows that every facility was furnished for him to repair his long-standing oversight, and that the utmost courtesy and consideration were shown towards him, travelling permits being sent for his family pending his own act of qualification, and the declaration of allegiance being couched in special terms to suit his conscientious scruples. But he appears to have found insuperable difficulty in disabusing his mind of the erroneous impression that exceptional

conditions were imposed in his individual case, and in appreciating the fact that the exception consisted solely in his own previous failure to furnish evidence of a citizen's due allegiance to the Government whose protection he claimed. We desire to avoid all harsh expressions in referring to such a subject, but practical men can not fail to see that the case reduces itself to this: for five years Mr. MCCALED had been violating the regulations of the United States Government, which all other American citizens observe, and he then complained of being discriminated against because the United States Minister declined to be a party to his continued violation of them. With conscientious scruples all should sympathize, but some times the field of a man's moral vision is occupied by a mote to the exclusion of the beam lying beyond. That appears to us to be Mr. MCCALED'S condition when he girds at the imaginary grievance of being discriminated against, but would be content to disobey, and to force the United States Minister into disobeying, laws which every conscientious citizen is bound to observe.

THE STATURE OF THE JAPANESE.

The information furnished by medieval armour in Europe is that the men of the present day are physically much finer than the men that wore the armour. And indeed if we look at the athletic records of the past and the present, there can be no doubt that, so far as Englishmen, at any rate, are concerned, the race shows a steady improvement. But the opposite is said to be the case in Japan. Few men are to be found now-a-days capable of filling the armour worn by the Japanese six or seven hundred years ago. We read in a Japanese journal that, even during the Meiji era, there has been distinct deterioration of physique. In 1871, when the conscription system was introduced, fifty per cent. of the youths liable to serve were found to be physically qualified, whereas the number does not now exceed thirty to thirty-five per cent. In other words, two-thirds of the men of twenty years of age are not qualified for military service. The *Military Magazine (Heiji Zasshi)* referring to this fact, says that the three most valuable attributes are generally set down as talent, virtue and strength, but it is inclined to place the last first, for the old adage wisely says *mens sana in corpore sano* (*kenzen naru shiso wa kyōken naru tai ni yadoru.*)

THE CARVER CASE.

It has already been recorded that the charge of battery and assault preferred against an employé in the Matsumoto store, Kobe, on behalf of Mrs. Carver, was dismissed by the first tribunal before which it came, and that the Public Prosecutor appealed against the verdict. We now learn from the *Kobe Herald* that the upper court has reversed the judgment of the lower, and sentenced the employé to five days' imprisonment, from which finding a further appeal has been made. Apparently the case went before a district court (*Ku-Saibansho*) in the first place, and was carried on appeal to the Kobe Local Court (*Chiho-Saibansho*), but as our contemporary reverses these terms it is difficult to be quite sure of the facts. At all events, the higher tribunal was satisfied that the assault had taken place, and we have now to await the decision of the court of appeal in Osaka. The case being so interesting and so singular, we are surprised that none of the Kobe local journals has succeeded in procuring a copy of the proceedings.

THE HAKODATE CASE.

Experience has taught us to be prepared for novel and interesting displays of logic on the part of the *Japan Gazette* when that journal undertakes to discuss public questions, but we have now to congratulate it on quite a superlative effort of reasoning power. The point is of sufficient importance to warrant two brief quotations:—

"JAPAN MAIL."
Hall says:—"It may be worth while to note the limitations upon an outlying instance of protection temporarily accorded to persons, not on their own account, but because of their association with British property. Persons forming part of the crew of a British vessel, whatever may be their nationality, are protected while in an Oriental port, not merely to the point up to which the customs of Europe allow members of a crew to be subjected to British jurisdiction, but to the full range, whether with respect to acts done on the vessel or on shore, that merely protective jurisdiction stretches in an Eastern State. Punitive jurisdiction does not, however, go with protective jurisdiction in this instance. British Courts can only exercise criminal jurisdiction over British subjects and persons to whom the privileges of British subjects have been regularly extended; they consequently have no power to try a foreign seaman belonging to a British ship for any offence committed within or without the territorial jurisdiction. He must be handed over to the Consular authority of the nation of which he is a subject." The passages which we have here italicized are sufficiently explicit. The Chinese arrested by the Japanese police in Hakodate would have been judiciable by a Chinese Consular Court if China possessed extraterritorial jurisdiction in this country. But she does not, and they consequently became judiciable by Japanese tribunals.

"JAPAN GAZETTE."
The *Mail* has the audacity to quote Hall on the matter. With the quotation we do not quarrel, but it has italicized the wrong portion. Hall says, according to the *Mail*, that "persons forming part of the crew of a British vessel, whatever may be their nationality, are protected while in an Oriental port, not merely to the point up to which the customs of Europe allow members of a crew to be subjected to British jurisdiction, but to the full range, whether with respect to acts done on the vessel or on shore, that merely protective jurisdiction stretches in an Eastern State." That is the portion the *Mail* should have underlined, because if the acts done by the Chinese had been done by English subjects, they would not have committed any offence, and thus on Hall's own showing if the Chinese had been properly protected they could not have been punished.

Our readers will observe that it is against us that a charge of "audacity" is preferred, and that it is preferred by a newspaper which quietly cuts a quotation in two, and omits the second half altogether though it contains provisions explicitly limiting the meaning of the first half. Hall emphatically declares that the "protective jurisdiction" possessed by the British Authorities over foreigners serving in their vessels does not include "punitive jurisdiction" in respect of offences committed by such foreigners in a country like Japan, and that for purposes of "punitive jurisdiction" the foreigner must be handed over to his own Consul. The *Japan Gazette* coolly eliminates all that, and then has the charming assurance to quote Hall as an authority for its own contention that "protective jurisdiction" does extend to "punitive jurisdiction."

THE RAILWAY ARTISANS' STRIKE.

The Shimbashi workshop belonging to the Railway Bureau, contains about 1,300 artisans engaged in lacquering, painting, carpentry, casting metals, and turning lathes. On the 23rd ultimo, about ten workmen, representing the lacquering and painting section, suddenly applied to the Director of the Transport and Car Department for an increase of wages. This class of artisans now numbers 130, receiving pay from 18 to 90 *sen* per day (boys being paid from 18 to 20 *sen*). Their wages are therefore comparatively higher than those paid to other classes of workmen. For this reason the Director refused at once to make any further increase of their wages, whereupon they tendered their resignation and stopped work from the following day. So much we have gathered from the *Yomiuri*.

The rest of the artisans, however, appear to have taken a similar attitude, if the *Chuo* is rightly informed. They have held meetings at Shiba and resolved on bringing to light all the abuses connected with bribery, and also threaten to kill any of their companions attending the workshop before their application is accepted. Three or four of them, armed with swords or clubs, kept watch near the Railway Bureau. In short every sign of disquietude manifests itself to the no small apprehension of the railway officials. It is said that the Bureau incurs a loss of 12,000 yen per day in consequence of the strike.

JAPANESE JURISDICTION.

One of the troubles connected with much of the criticism penned by local foreign journals on the subject of Japanese Jurisdiction, is not merely their ignorance of Japanese laws and Japanese Jurisdiction, but their ignorance of European and American laws and jurisdiction also. An instance is before us. After adducing the *Kimura-Cornes* case—which, it may be observed *en passant*, had nothing whatever to do with Japanese laws or their administration—the *Japan Gazette* writes:—

Even worse is the case of the Portuguese, S. M. Severin, who was imprisoned, but given right to appeal. The whole of his sentence was eight months, and of this three and a half have elapsed. His appeal comes on next Monday! Now supposing the man to be innocent—and the granting of the appeal suggests he may be—what about the time he has spent in prison? Can we in the face of facts such as these feel confidence in coming under Japanese jurisdiction?

That looks plausible at first sight, but is, in truth, the most undiluted silliness. The *Japan Gazette* appears to labour under the impression that matters should be so arranged as to insure the hearing of an appeal immediately after the pronouncing of the judgment against which it is lodged. That would be an ideal state of affairs, no doubt, but unfortunately it can not be attained in practice. If the *Japan Gazette* had any acquaintance with the records of legal procedure in Occidental countries where appeals are permitted in criminal cases, it would know that a delay of 33 months is a mere trifle compared with the delays that commonly occur there. But the truth is that to be Japanese amply suffices to discredit any judicial act in the eyes of some foreign critics.

YOKOHAMA STEAM-LAUNCH BUILDING.

The Yokohama Engine and Iron Works have just finished a handsome steam-launch for the P. & O. Company for use in Kobe harbour. On Thursday a trial run was made that was attended by most satisfactory results. With a pressure of 85 lbs. per square inch, she attained a speed of 10½ knots, this pressure being 30 lbs. per square inch less than is expected at her official trial. This trip is expected to take place on Tuesday next, the 28th inst. The new launch's dimensions are:—

Length between perpendiculars. 50 ft.
Beam, moulded 10 ft.
Depth 6 ft.

She has compound surface condensing engines of the following dimensions:—

High pressure cylinder—7".
Low pressure cylinder—14".
Length of stroke—9".

The new launch is to proceed, under her own steam, to Kobe in a few days' time.

We hear that another launch is being built by the Engine Works for their own use, which is expected to be completed next month. She will probably be one of the fastest launches in the harbour, as, though slightly smaller than the new P. & O. launch, she is fitted with similar engines, and has the same boiler power.

THE NEW CURRENCY.

The Bank of Japan's Weekly Report, published in the *Hochi*, shows the average amount of gold and silver reserves for the past week to have been 54,291,971 yen and 42,452,011 yen respectively, making a total of 96,743,982 yen, of which 15,867,478 yen, is to be liquidated by the end of this month. Deducting this figure from the gold reserve we have a balance of 38,414,393 yen only. Supposing for a moment that the silver to be exchanged for gold on Oct. 1st amounts to 20 million yen, the gold reserve will then be reduced to 18,414,493 yen, and the silver reserve will be no less than 62,852,011 yen. The supply of present reserves therefore, unless it is increased by special means, is short by 20 million yen. An issue of convertible notes beyond the legal limit must necessarily follow. Such is the *Hochi's* verdict, but the figures upon which it is based are not in accord with the figures previously published by semi-official journals. Our contemporary seems to have confused the reserves held by the Bank itself as security for its issues of convertible notes with the reserves available for the purposes of the non-metallic system. The subject being of importance, we repeat the table recently published in these columns:—

	YEN.
Stock of gold now in the Treasury ...	76,468,670
do. do. Bank of Japan	39,530,173
do. do. lying in London	43,000,000
Total	158,998,843
Silver now in the Treasury	29,680,000
do. do. Bank of Japan	27,000,000
Total	56,680,000

Apparently the *Hochi Shimbu*n falls into the error of supposing that any drain caused by exchanging silver for gold will fall upon the Bank's reserves alone. Perhaps we may take this opportunity of noting that no indications are visible of the much-talked-of inundation of silver yen. Only very small quantities have, thus far, been carried to Japan from abroad, and we hear nothing of accumulations being made either in the great cities or at provincial centres. Indeed, on this morning of the day when the new system goes into operation, we do not hesitate to repeat our often expressed conviction that the Treasury will not be subjected to any inconvenience in the matter of exchange. Little by little any silver yen circulating abroad will certainly find their way to Japan, and be presented for exchange, but there will not be anything in the nature of a violent operation. As to the silver yen in the interior, the Government estimates them at 37 millions, in round numbers, and expects that two-thirds will be presented for exchange. Where are they, these 37 millions? The notes in circulation do not exceed 200 millions yen, so that if there are 37 millions of silver yen, there ought to be more than one silver yen for every six paper yen. But we never see such a thing as a silver yen. Is it conceivable that they are all lying in the strong rooms of banks or hidden away by hoarders? At any rate, whatever quantity of them have to be ultimately exchanged before they descend to the rank of bullion, we believe that the holders will generally prefer the new gold-notes to gold coins.

STORM AND DEATH IN YOKOHAMA.

The rainy, tempestuous weather of the past few days culminated on Thursday morning in a violent downpour of rain that did a tremendous amount of damage in Yokohama. On the Bluff landslips were general, more especially along the cliffs facing the sea, drains were washed up, and storm culverts wrecked. The lower parts of the Settlement were flooded, China-town suffering the most, while from 2 o'clock till well past three, Main Street bore the aspect of a fast flowing river. The wooden coverings of the main drain that runs through the centre of this street were washed away and many narrow escapes from falling down

the yawning pits thus left have to be recorded this morning. The surface of all the roads in Yokohama have been badly washed and in some case destroyed.

But it is in the Japanese part of the town that the worst has to be told. About 2 a.m. the hill-side at 6-chome, Ishikawa naka-machi broke away and a bath-house known as the Yanagiya, that stands just below the slope was wrecked. A sad fatality occurred here, the wife of the house-holder being crushed to death. Several other houses collapsed in other parts of the town, but the greatest havoc was caused at Ishikawa-nakamura, where the hill-side fell bodily upon a long row of houses built beneath and half buried them. All the inmates are said to have fled in due time and thus escaped certain death, though a little child is thought to be missing from one household. This morning the weather has cleared, the sun shining from the bluest of blue skies.

Messrs. Favre-Brandt have kindly placed the following figures at our disposal. During the typhoon of the 9th inst., the lowest barometrical record was 29.016. On Wednesday at 6 p.m. the barometer stood at 29.725. By midnight it had fallen to 29.489. Then at 2 a.m., when the storm was at its height, it fell to 29.213. After this it gradually rose, indicating 29.449 at 8 o'clock this morning.

The Home Department has been notified that the tunnel between Hodogaya and Totauka and a tunnel on the Yokosuka line fell in during Wednesday night. It is further reported that a goods train which left Tokyo at 10.50 p.m. on Wednesday, almost directly after entering the Totauka tunnel ran into the pile of fallen earth. The train was thrown off the line and several of the cars smashed to pieces. One man, a stoker, is said to have been seriously injured.

JAPANESE WAR-SHIPS IN FOREIGN SEAS.

It is certainly a fact, as the *Mainichi Shimbu*n observes, that the flag of Japan is very little seen in foreign seas. All Occidental Powers send squadrons, large or small, to distant countries, but so strange is Japan to the habit that when she ventures to despatch even one solitary vessel to Hawaii, people talk as if the act were full of significance. Apparently a feeling of dissatisfaction is growing up on the subject. It is said that the public begin to ask why she refrains from doing what other States deem necessary, despite the fact that many of her subjects have settled abroad, and are presumably in as much need of protection as are the subjects or citizens of any Occidental Power. Hawaii, America, Australia, Korea and China are spoken of as countries to which Japanese ships of war should be sent, from time to time, and it is alleged that the funds required for the purpose will be asked for by the Government in the next session of the Diet. We can not be surprised at the dissemination of such ideas, but it is to be observed that many of the Western States whose example Japan seem anxious to copy, would gladly be relieved of the necessity of despatching war-vessels to distant seas, and would feel themselves much stronger did circumstances allow them to concentrate their strength in home waters.

MILITARY MANŒUVRES IN IBARAKI PREFECTURE.

The First Division, whose headquarters are at Tokyo, has sent its Third Regiment of Infantry, its First Brigade of field artillery, and its First Brigade of Sappers, to engage in military manœuvres in Mushino plain in Ibaraki Prefecture. The force numbers between two and three thousand, and is under the command of Major-General Shiroya. The 25th, 26th and 27th are to be devoted to the manœuvres, the particulars of which are given in the vernacular press, but would scarcely interest our readers.

JAPANESE FACT AND COMMENTS.

The Finance Department has just issued a notification (No. 60), revising Notification No. 27 of the 30th year of Meiji, with regard to the receipt or delivery of bullion at the Mint. The principal alterations are in Arts. II. and III. They now read:—

Art. II.—With regard to freight and insurance "9.5 sen" in section 1, shall be changed to "4.7 sen"; and "19 sen," in section 2, to "9.5 sen."

Art. III.—With regard to the fineness of bullion for which a certificate of refinement or analysis is required, "5,000 yen" in clause (1), shall be altered to "10,000 yen"; "10,000 yen" in (2) to "20,000 yen"; "30,000 yen" in (3) to "60,000 yen"; "70,000 yen" in (4) to "140,000 yen"; and "70,000 yen" in (5) to "140,000 yen."

It is very strange, remarks the *Sekai no Nippon*, that the ancient system of poll-tax should still be in existence in the present enlightened era of Meiji. Okinawa became a dependency of Japan in the Keicho epoch, and its feudal system was abolished in the 12th year of Meiji, a prefecture being established in its stead. The Government, however, fearing public sentiment, hesitated to make any radical changes in the administration, and suffered the old customs and manners to continue. This unwise course has led to serious misery. It seems that taxes are paid in kind, and in the three districts of the main island, sugar, rice, millet, and woven goods are accepted at the inland revenue offices. Until these tithes, or tribute, are paid in, no sales of commodities are allowed in the islands. The officials fix the quantity of goods that will be received in lieu of hard cash, and accordingly they alone reap the profits that may arise through the appreciation in value of any of the goods or articles so paid in, the islanders not getting any share at all. That universal discontent should prevail among tax-payers in consequence, is therefore not surprising. The system of taxation is also peculiar, being a kind of poll-tax, without regard to poverty or wealth, and falls on man and woman alike. Persons above fifteen and below fifty years of age, and in some places, those above sixteen and below fifty-one, are divided into four classes and subject to different rates of taxation. Nor is the process of collection less irksome. Among commodities received as tribute are woven goods. They have to be prepared by the tax-payers at a workshop in front of the government office. Moreover, the inhabitants are required to furnish such goods as the officials may think proper to demand at any time and at their own discretion. Illness, adversity, or any other circumstance does not absolve the people from the duty of paying tribute. Thus it frequently happens that the poorer classes are compelled to perform hard labour for life by entering into bondage with some rich family, in order to pay their taxes. The inhabitants are prohibited from migrating or transferring their domiciliary registration beyond the limits of the island. Their misery, laments the *Sekai no Nippon*, is therefore almost indistinguishable.

The *Shogyo*, discussing the apparent lack of subsidiary coinage in the Japanese currency system, says that the deficiency ought to be supplied as soon as possible, the growing prosperity of the nation making such a step imperative.

The *Shogyo* alleges that great irregularities can be brought home to the Treasury officials who have charge of the Indemnity. It publishes various tables showing the amounts received and the sums disbursed, and then alleges that great carelessness is noticeable in the manner of bringing the money from England and its subsequent disposal.

The *Yomiuri* enters at length into the question of the removal of the present Governor-General of Formosa to a more subordinate post, and the placing in his stead of a well-known Satsuma statesman. Our contemporary says that Count Matsukata was of opinion that his shoulders were already sufficiently loaded with the burdens placed on them by the Treasury and

the Premiership, yet when the Colonial Department was abolished, the practical control of Formosa devolved upon him. He finds the duties more than he can conveniently discharge, and would welcome a change in the Governor-Generalship of the island. Viscount Takashima, says the *Yomiuri*, conveniently forgetful of the blunders he made as Colonial Minister, is willing to become Governor-General of Formosa.

According to the *Tokyo Shimbun* the one-yen silver piece will circulate only until March 31st, 1898, according to the most recent decision of the Cabinet.

The production of Japanese coal, remarks the *Nippon*, has considerably increased in consequence of the growing demand for it in the interior and in foreign countries. In the 24th year of Meiji, the amount produced did not exceed 3,175,000 tons, of which 2,239,000 tons were exported, realizing a value of 4,749,000 yen only. In the 29th year, however, the figure was raised to 5,200,000 tons, of which two million tons, valued at 8,000,000 yen, were exported. Coal now enjoys the third rank among the staples of export. The value of the export from January to August this year amounted to 7,150,000 yen. Below is a comparative table for the seven years:—

Year.	Produce. Tons.	Export. Tons.	Value of export. Tons.
1891	3,175,844	1,239,821	4,749,734
1892	3,175,671	1,299,352	4,571,988
1893	3,319,601	1,505,413	4,817,912
1894	4,268,135	1,701,130	6,578,462
1895	4,772,654	1,844,815	7,604,788
1896	5,249,919	2,194,412	8,879,265
1897, up to Aug. —	—	1,396,966	7,173,209

The internal consumption is also steadily increasing. In 1891 the amount was limited to a little less than 2 million tons, but it increased to 3 millions last year.

Some time ago, a few of the Government organs asserted, remarks the *Yoroku*, that when the new Russian Minister arrived in Japan the supplementary protocol or stipulation of the two countries regarding Korea would be concluded without any difficulty. The assertion, however, has now proved entirely illusive. That the Russian Government is disposed to undertake the drilling of Korean troops is now proved to be a fact. Despite the transfer of Mr. de Speyer to Korea, the drill question has rapidly progressed, and steps have actually been taken to commence the work of instruction in Seoul. What has become of the negotiations between Count Okuma and Baron Rosen? As the latter was found not to possess the plenipotentiary authority anticipated, the proceedings of the Russians in Korea with regard to the drilling of the native troops could in no way be checked or suspended through his agency. Thus it became necessary for the Count to settle the affair by opening direct negotiations with the Russian Government. That, too, is not so easy a matter as might be imagined, and the Count seems, the *Yoroku* alleges, to be in a state of deep despondency. We (*Japan Mail*) may add that all the above is to be taken with a large grain of salt.

The riot at Iida had scarcely been suppressed, remarks the *Yoroku*, before another broke out in Kanazawa. Reports of disturbances are coming to hand from various localities. In Niigata the poorer classes of the people, in spite of the steady rise in the price of rice since the spring, have managed to earn a subsistence by hard work. But the recent depression of trade having considerably decreased the demand for labour, while the damage from inundations and the spread of noxious insects became almost universal, they are now at the depth of misery. On the 20th ultimo, a representative of the poor people applied to the Town Hall, urging that the means of living having been lost through the extravagant rise in the value of rice, assistance might be afforded them by the supply of cheaper rice, and threatening that should their petition be refused they

would destroy the dwellings of the wealthy citizens and of the dealers in grain. To make matters worse, about two hundred fishermen in Shitamachi are on the verge of starvation on account of the entire failure of their industry. These too threaten to join in the violent movement now about to be carried out. The police are on the alert to prevent the trouble, but the spirit of disturbance seems to have spread to several villages in Hokuyetsu, which were lately devastated by locusts and inundations. Women, old and young, are fast deserting their villages to seek employment elsewhere. Saga, Takamatsu, Nagano, and Toyohashi, are scarcely less prominent in point of popular disturbance. In Yamagata prefecture a body of wretched men, numbering over one thousand, attacked the house of Mr. Yokoo, member of the House of Peers, on the 16th ultimo, and slightly wounded him. It is surprising, our contemporary adds, that under these circumstances a socialist party has not yet sprung up in Japan.

The number of prisoners in the three principal prisons in the capital on the 21st ultimo, according to the *Chuo*, was as follows:—

KAJIBASHI PRISON.

Criminal defendants awaiting trial—	
Men	776
Women	33
Convicts—	
Men	50
Women	—
Offenders under police supervision—	
Men	25
Women	—
Total	982

ICHIGAYA PRISON.

Offenders not convicted but under police surveillance—	
Men	57
Women	3
Convicts—	
Men	867
Women	158
In Penitentiary—	
Men	2
Women	—
Total	1,082

SUGAMO PRISON.

Under police supervision—	
Men	29
Women	—
Convicts—	
Men	1,738
Women	—
Total	1,767

According to the *Chuo*, a deficiency of twenty-three million yen in next year's estimates of revenue will exist even after public loans have been raised to the amount of 40,223,322 yen, together with appropriation of a portion of the indemnity to the amount of 34,934,120 yen into the accounts, as presented by the Cabinet in the 10th session of the Diet. That is the information obtained from a certain Government official. Of the installments of indemnity received, the amount of thirty-three millions still remains undisposed of and may legitimately be conveyed to the account for next year; but as for the raising of a loan of forty million yen, could the scheme be successfully carried out? So far as the programme of undertakings is concerned, there is an absolute necessity for raising the loan. Nevertheless the present condition of the financial market shows no prospect of success, and so the item of the loan must be regarded as a vague and unreliable estimate. The real deficit of revenue therefore does not fall short of fifty-three millions of yen. Even granting that the deficiency of 23 millions can be supplied by increase of taxes, the whole financial administration can not be adjusted so long as the huge sum of 40 million yen remains unsettled.

The High Education Council, says the *Chuo*, is now discussing the following three memorials to be forwarded to the Government:—(1) The necessity of improving the general system of learning in the Imperial University, and foster-

ing virtuous behaviour on the part of the Minister of Education and all other Ministers of State, including the Premier. (2) Increase of aids from the Treasury for practical education. (3) Conferring decorations on educationists.

The conference between the Bank of Japan and the Finance Department regarding notes exchangeable for gold having been concluded, says the *Hochi*, steps are now being taken to manufacture five yen notes in the Printing Bureau of the Department, in order that the same may be put into circulation within two or three months. The size of the paper is to be the same as that of the present one yen note, with slight alterations in the design. The latest reports place the amount of convertible notes hitherto in circulation at 108,500,000 yen, of which 65 millions are of 1 yen denomination, 60 millions of 5 and 10 yen value, and the rest of 100 yen. Although no serious changes have occurred in the amount of notes of 1 yen, 5 yen, and 10 yen denominations, the volume of 100-yen paper has been frequently expanded or diminished in proportion to the requirements of the currency.

The second examination of female candidates for university education in the United States is to be held in Tokyo in December next under the superintendence of Miss Tsuda Ume, Chairwoman of the Committee. The funds for carrying out the scheme were originally supplied by American ladies, at the instance of Miss Tsuda when she was sojourning abroad. Miss Tsuda is now able to send Japanese women to America for university education by appropriation of the interest of the capital. The first candidate, Miss Matsuda Michi, was sent to America in the 25th year of *Meiji* (1892), and has since been receiving instruction at the Brenmore University. As to the qualifications of candidates it may be noted that they must be above seventeen and below thirty years of age, unmarried, and in good health. The candidate, is examined in Japanese and Chinese literature, Japanese history, mathematics, one branch of science, and some English essays.

In consequence of the amalgamation of the Kiushiu and Chikuho Railway Companies, a meeting of the principal officers of each company was held, according to the *Tokyo Asahi*, on the 15th and 16th ultimo, when the following provisions were decided upon:—(1) The ordinary and a special meeting of shareholders shall be held on the 25th October next. (2) At the special meeting, a question respecting the increase of capital by five million yen, apart from the sum of thirty millions owned by the Kiushiu Railway Company, shall be presented, with a view to making various improvements and extensions. (3) The scale of freights shall be maintained as before until the formal sanction of the authorities is obtained to the proposed change. (4) The Chikuho Railway Company shall be dissolved on the 1st October. (5) Negotiations shall be carried on for the purchase of three other smaller railways in Tsukushi, Kurate, and Kokura.

According to the *Shogyo*, a competitive exhibition of cocoons, silk and woven goods is to be held in Ashikaga, Shimotsuke, from the 1st October to the 15th November, by the United efforts of one city and six prefectures. The new buildings were lately completed, and a special committee is now busily engaged in making the necessary arrangements. The expense to be incurred for the exhibition is estimated at 8,666 yen, of which a little over 2,000 yen will be defrayed out of the local taxes and the rest from voluntary contributions.

From the *Yoroku* we learn that the aborigines of Hokkaido having perished at the average rate of 100 per annum, there are now only 30,000 Ainos throughout the territory. Special protection therefore became necessary. Investigations were made by the Hokkaido Office, and it was eventually decided that two *cho* (5 acres) of land, under prohibition of sale, transfer, or cession, should be bestowed upon

each native now living, and that a tract of land formerly granted by the Imperial Household or Colonial Office, which to this day is held by the natives as their common property, should be placed under the direct control of the local Governor for protection. The scheme is to be presented in the forthcoming session of the Diet.

The *Shogyo* publishes the following estimates of the rice crop for this year in various parts of the empire:—

Prefecture.	Estimates at the time of sowing. koku.	Damages from the late inundations and insects. koku.	Estimates for this year. koku.
Yamanashi...	1,335,200	2,208	1,318,473
Tochigi	773,629	—	895,000
Yamaguchi ..	1,300,000	200,000	1,100,000
Kanagawa ...	360,000	45,000	315,000
Miye	1,262,070	85,000	1,177,000
Hiego	1,771,600	113,908	1,647,692
Ishikawa	1,000,000	300,000	697,600
Aichi	1,500,000	80,282	1,416,840
Ehime	605,380	30,750	641,451

The decrease of the crop is calculated to be 38 per cent. in Ishikawa, 15 per cent. in Kanagawa and Aichi, and 6 per cent. in Yamaguchi, as compared with the amount of average years.

According to the *Chuo*, the Budget for the 31st year was lately reinvestigated by each Government Department on the basis determined by the Finance Department. Yet many of the former items having been restored, the excess over the amount fixed by the Treasury seems to have reached 8,975,929 yen. If this figure is approved by the Cabinet, the total deficit will not fall short of 32,297,171 yen. It is scarcely necessary to remark that there is a serious difficulty in making up such an enormous deficiency. The scheme of increasing certain taxes would not cover even the deficit of twenty-three millions in the Finance Department's estimate of expenditures. The following shows the amounts of the original estimates of each Department, of the reductions made by the Treasury, as well as the figures restored:—

Department.	Original estimate. Yen.	Reductions. Yen.	Restored. Yen.
Foreign	943,509	332,795	1,650
Home	3,470,184	852,967	1,731,585
Finance	2,458,784	885,019	603,575
War	8,631,604	3,449,044	794,336
Navy	3,361,399	1,588,848	848,470
Judicial	1,095,466	533,081	61,850
Educational	4,166,607	362,339	1,140,655
Agricultural and Commercial ...	1,672,222	549,920	283,800
Communications ..	15,281,877	6,118,572	2,390,000

The restored figures divided into ordinary and extraordinary expenditures are:—

	Ordinary Expenditure. Yen.	Extraordinary Expenditure. Yen.
Fixed by Treasury	127,387,041	102,838,625
Restored	3,678,890	5,287,039
Total	131,065,931	108,125,664

The *Fiji Shimpō* states that the Government contemplates raising a sum of fifteen million yen within five years by increasing the rates of postage, in order that the money may be appropriated for the extension of postal and telegraphic institutions. Sales of post cards and stamps for this year are estimated to amount to twelve million yen, while letters and telegrams are increasing year by year, next year's receipts being expected to exceed fourteen million yen. The use of post cards doubles every year, their total number having reached 220 or 230 millions, valued at 2 or 3 million yen. If the Government's project is to be put into operation, it will be necessary to increase postages of all descriptions by twenty per cent. on the average. The process will require not only a different classification of mails, but also a revision of the scale of weights. The matter is attended with considerable trouble, nor is it improbable that public opposition will be raised.

The Tokyo Chamber of Commerce recently engaged in the discussion of problems concerning the revision of taxation. The conclusions arrived at are epitomized by the *Hochi*, to the effect that the taxes on land, *saké*, and tobacco, together with customs duties,

should be taken as the fundamental source of revenue for the administration of the country, and that all other forms of taxation, such as the Business tax, Income tax, Revenue Stamp duty, Hokkaido Marine Products duty, and Mining tax, should be entirely abolished, the Government being merely entitled to receive a certain amount of fees and other miscellaneous payments besides the four great sources of revenue referred to. With regard to the land tax, it is alleged that this tax should be levied on the actual value of land on the basis of a report from its owner, which may be revised in case of changes occurring in the value of land of more than one-fourth, and that the correctness of the report should be ascertained by a special investigation committee, and the rate of taxation fixed at 100%.

Should the above schemes be enforced, the revenue from the land tax could be increased by 21 million yen, and then the entire receipts of the Treasury, as estimated by the Chamber of Commerce, would be as follows:—

	Yen.
Land tax	59,600,297
Customs duties	15,000,000
<i>Saké</i> tax	30,000,000
Tobacco tax	10,000,000
Fees and other miscellaneous receipts	35,000,000
Total	149,600,297

The *Hochi Shimbun* relates a remarkable story from the North. It bears that, on the 2nd instant, a fisherman named Yamada, of Kan-zaki-mura, Kitami Province, Hokkaido, with a crew of six men, was returning to port in a junk with a quantity of game and sea-animals—presumably seals—on board, when they were overhauled off Kaiba island by a foreign sealing schooner, the crew of which boarded the junk, and threatening to fire on the Japanese if they resisted, seized all their game and carried it on board their vessel. The Japanese being unprepared for fighting, could do nothing but submit, and returned to their homes in the junk. They decided, however, to have revenge on the schooner, and a number of fishermen armed with swords and fire-arms are reported to have started in search of the schooner.

It may be of interest to know, remarks the *Shogyo*, what amount of gold and silver is held by the Government and by the Bank of Japan when Japan passes from a silver to a gold standard country in October next. The following are the figures obtained by the latest investigations:—

	Yen.
1. Gold bullion purchased by Government with indemnity	76,607,021
2. Gold received by Government by the sale of War Bonds	43,520,085
3. Reserve in gold coin and bullion held by the Bank of Japan	38,271,600
4. Gold coin in circulation in the interior at current value	9,680,179
Total	168,078,885

1. Silver bullion in the hands of Government, purchased with indemnity	1,214,777
2. Silver bullion held by the Bank of Japan	26,801,292
3. Silver coin held as a specie reserve by the Bank of Japan	12,225,307
4. Amount of silver circulating in the interior in July this year	36,791,415
Total	77,032,791

According to investigations made at Mr. Moki's Commercial Office, as published in the *Chuo*, silk received in Yokohama from the various producing districts and sold to foreign firms, or exported direct to the West, from June 1st to September 21st this year, was as follows:—

	1897. Bales.	1896. Bales.	1895. Bales.
Arrivals	43,704	28,582	63,604
Sales	29,008	8,497	35,399
Direct export	6,161	1,456	6,509
Returned	3,739	7,784	2,526

The Government intends in the next session of the Diet to introduce certain laws that will conduce to the better regulation and improvement of the artisan class. The Japan Spinning

Guild has accordingly appointed a committee representing the seventy-seven companies in the association, to guard the mill-owners' privileges.

During the first half of September, an increase of 3,000,000 *yen* was noticeable in the import returns of Kobe and Yokohama. This excess will be averaged up towards the end of the month, however, by the very large exports of silk now being made.

Mr. Sone Arasuke, ex-Minister to France, is showing much zeal in the establishment of a bank in Japan by the aid of foreign capital. He desires the bank to be of such a scope as to control Far Eastern finance and to this end would amalgamate the Bank of Japan and the Specie Bank, and open branches all over the East. He estimates the capital required at 25 millions of *yen*.

According to the *Yomiuri*, a general meeting of the Imperial Education Council is to be held at Aioicho, Kobe, for three days commencing on the 2nd October. Mr. Tazuki, Vice Minister for Education, and more than five hundred members will be present. The subjects of debate are as follow:—(1) School age should run for seven years, from the age of seven to the age of fourteen; but the obligatory term for attendance at school should be limited to five years. (2) Any person employing children who have not yet completed the prescribed educational term, is required to send such children to school for instruction five hours per week. (3) The law should prohibit drinking and smoking on the part of youths below twenty years of age. (4) Admittance to ordinary middle schools should be made only after the completion of a course of study in the 3rd year course of a higher preliminary school.

Hokkaido, asserts the *Yomiuri*, possesses over 5,600,000 *cho* of Government forests, of which 1,700,000 *cho* were originally set aside for the Crown. But in the 28th year of *Meiji*, that idea was abandoned and the forests were made State property. Forests owned by private individuals in Hokkaido do not fall short of 20,000 *cho*. The forestry affairs of the island need revision, and plans are already drawn-up whereby one-third of their present area will be turned into agricultural plantations.

Commenting upon the number of unnatural deaths contained in the latest police statistics to hand, the *Sakai-no-Nippon* says that suicide from mere cowardice has increased of late, while suicides undertaken from mortification arising from a stern sense of responsibility have considerably decreased.

The following are the figures for the three years:—

	Mental derangement.	Poverty.	Illness.	Love.	Disgrace.
1893	3,602	1,115	921	407	285
1894	3,470	1,327	878	251	313
1895	3,231	1,703	801	385	291

What do these figures mean—social progress or retrogression?

Information from Hokkaido, published in the *Tokyo Asahi*, states that the catch of herrings in that territory this year exceeded 1,006,000 *koku*, showing an increase of over 100,000 *koku* as compared with last year. Hiyama and six other districts in Oshima were the most successful, having secured more than double the quantity caught in the previous year. Kitami seems to have suffered considerably from floating ice, and the recent heavy rains caused decay among stored fish. In spite of the scarcity of fish manure from the above causes, prices have fallen, and the owners of stock appear to have resolved to hold their goods until a more favourable opportunity.

A report is published by the *Nichi Nichi* that the immediate cause of the attempted suicide of Mr. Akiyama, Councillor of the Foreign Department, was as follows:—On the day of his suicide he entered into a somewhat vehement conversation with Count Okuma, in regard to the claim to be made against the Hawaiian Government. Mr. Akiyama seems to have regarded the present as the best opportunity for

making the claim, while the Count preferred to transfer the negotiations to America, on account of the projected annexation of Hawaii by the United States. Thus a collision took place between the two, each insisting upon his own opinions. The dispute was with difficulty brought to an end by the intercession of Mr. Komura, Vice-Minister of Foreign Affairs. We (*Japan Mail*) regard this story as wholly chimerical. It carries its refutation on its face. No open question exists at present with regard to Japan's claim against Hawaii. It has been definitely decided that the matter shall be submitted to arbitration, and the two Powers are now engaged preparing a statement of facts, which both may subscribe, for the information of the arbitrator. It is inconceivable, therefore, that any discussion of the nature indicated by the *Nichi Nichi Shimbum* can have taken place between Count Okuma and Mr. Akiyama. Very different rumours have reached our ears as to the cause of the attempted suicide, but we do not consider it any part of a newspaper's functions to disclose the private affairs of anyone.

The Cabinet, remarks the *Osaka Asahi*, seems to have resolved upon increasing taxes on house lots with the intention of supplying the deficit in the revenue. The following table shows the steady rise in the value of house lots in the principal cities and towns throughout the country, 100 being taken as the standard of value for the 20th year of *Meiji* (1887):—

	1887. 1896.		1887. 1896.
Tokyo.....	100 170	Shimonoseki	100 124
Kyoto.....	100 162	Hakodate...	100 625
Osaka.....	100 222	Mayebashi..	100 173
Yokohama ..	100 167	Otau.....	100 429
Kobe	100		167

Cases of dysentery in the capital since the first outbreak up to the 27th September, according to the *Hochi*, totalled 6,170, of which 1,595 proved fatal. The following are the details:—

District.	Cases.	Deaths.
Kojimachi ..	84	20
Kanda	347	100
Nihon-bashi ..	76	25
Kyobashi	146	50
Shiba	202	69
Azabu	19	12
Akasaka	29	10
Yotsuya	42	16
Ushigome	57	16
Koishikawa	83	23

Kita Toshima ..	162	37
Minami Adachi ..	15	9
Minami Kasushika ..	27	8
Nishi Tama	1,119	203
Minami Tama	1,978	483
Kita Tama	1,057	277

LITERARY NOTES.

Mrs. Brightwen, F.E.S., has three times given to the world a book in which her intimacy with "Wild Nature" has found genial expression and met with popular approval. She has now essayed something more designedly instructive in a book entitled "Glimpses into Plant Life," which Mr. T. Fisher Unwin will publish in the autumn. It is, in fact, an easy guide to the study of botany, and with its numerous illustrations by the author and Mr. Theo. Carreras, at least makes for that end. It was the author's belief that the many botany-books which preceded hers might as well have been written in Sanskrit, considering the nature of their appeal to the average intellect. It has been her intention to produce a work that should not bristle with Latinisms naked and unashamed. These terrible scientific weeds cannot wholly be uprooted, but she has deprived them of their thorns by the aid of a copious glossary.

Children are among the most fascinating products of real life, but invented children are not

often a success. Between the fibberty gibbets of the immortal Helen and the impeccable aristocrat known as Little Lord Fauntleroy, lies the great army of unrecorded average children. Two of these have turned up in a literary sense to the surprise of a not altogether hardened publisher, and have produced a book "by themselves." "Those Dreadful Twins, Bosun and Middy" is the title, and the pictures thereof are real photographs of two real boys in sleep, in war; and in mischief. It is a fact that they live in Kensington and patronise the Round Pond, that they go to school, and that they spend their holidays with a retired seaman with glistening white braces. They are devoted to one another, and in the long run, and taking one day with another, a good many people, including their relatives and even a trade-engrossed merchant or two, are devoted to them. Mr. Unwin will publish the book in the autumn.

It is not generally known that the famous historian Hippolyte Adolphe Taine left a posthumous work behind him which has just appeared in France under the title of "Carnets de Voyage." Mr. Fisher Unwin has been fortunate enough to procure the English rights, and he will issue an illustrated translation in the autumn under the more precise title of "Journeys Through France: Being Impressions of the Provinces." The notes date from August, 1863, and were written in three successive years, during the journeys which Taine made as Examiner for admission to the military school of Saint-Cyr. The volume may be compared with his "Notes sur l'Angleterre," etc. Mr. Unwin has had his translation "got up" in a form similar to that in which he produced his "Riviera," and "Rome and Pompei," volumes which were also translations.

POSTAL RATES.

In the *Official Gazette* of the 25th ultimo is published a Notification (No. 270) of the Communications Department, showing the revised values of Japanese and French coins mentioned in the comparative table of currency of various nations, subjoined to Article IV. of the By-laws of the International Postal Regulations. Thus: French coin...25 centimes 10 centimes 5 centimes Japanese equivalent coin. 10 *sen* 4 *sen* 2 *sen*

Other notifications (Nos. 271 and 272) state that mail matter addressed to the Japanese postal districts in Korea, viz., Fusan, Inchhon (including Söul), and Wonsan, shall be dealt with in accordance with the rates of postage adopted for the interior, whereas matter directed to the Japanese postal districts in China, viz., Shanghai, Tientsin, Chefoo, Soochow, Hangchow, and Shashi, will be charged postage at the rate of 5 *sen* for every 15 grams, a *sen* for each post card, and 1 *sen* for every 50 grams of printed matter, commercial samples, and legal and commercial papers. Postages to countries in the Postal Union, to the various ports of China, and to all other countries not included in the Union (viz., those to which means of exchanging mails have been opened) are revised as follows:

	<i>Sen</i> .
Correspondence.....	10 for 15 grams.
Ordinary post card	4 each.
Return post card	8 each.
Printed matter	2 for 50 grams.
Commercial samples ...	4 for less than 100grams.
do do	2 for every 50 grams.
Legal and commercial papers	above 100.
do	10 for less than 250 grams.
do do	2 for every 50 grams.
Fee for registration	10 above the limit.
Fee for certificate of delivery	5
Special delivery.....	12

Singapore papers announce the death of Senor Minguez, of the Singapore branch, Campana Transatlantica Spanish mail line of steamers. Deceased, who had been suffering from some slight mental aberration, was on his way home by the M.M. steamer *Ernest Simons*, and he is supposed to have committed suicide by jumping overboard.

FUNERAL OF MR. J. S. ROBINSON.

The funeral of the late Mr. John Samuel Robinson, acting Superintendent-Engineer of the Nippon Yusen Kaisha, took place on Thursday afternoon at the General Cemetery. A number of friends of the deceased assembled at his late residence, No. 72 Bluff, where the first part of the service for the dead was performed by the Rev. E. Champneys Irwine, after which the funeral cortege formed and proceeded to the cemetery, the pall bearers being Messrs. T. Suda, Beattie, Fox, Clarke, Cleveland and Pitts. At the Cemetery a large and representative gathering had assembled to pay their last respects to the deceased. The congregation included almost all the Nippon Yusen Kaisha employes in port, representatives of many of the mercantile firms of Yokohama, of the Engine and Iron Works, and other engineering establishments, a strong contingent of Freemasons, of which Fraternity the deceased had been an esteemed member, and many Bluff residents, including a number of ladies. After reading the concluding portion of the burial service at the graveside, Mr. Irwine, in brief but telling words, referred to the manly, amiable and sterling qualities of the deceased, the high esteem and affection in which he had been held by those who had known him in his business and domestic relations, as well as in those of the great Brotherhood to which he belonged, and the loss they had all sustained by his demise. A wealth of beautiful floral offerings were sent by loving friends, the long list of the donors including Mr. Thos. E. Beatty, Mr. and Mrs. Bowden, Mr. and Mrs. J. Hamilton Boag, Mr. Emil Gulbrand Bergersen, Mr. W. Thompson, Mr. R. Hamilton, Mr. and Mrs. Manley, Mr. and Mrs. R. W. Borthwick, Mr. Edmund P. Pallister, Mr. and Mrs. G. Blundell, Mr. Rich. Abbey, Mr. and Mrs. D. I. Scott, Mr. and Mrs. J. J. Eford, Mr. and Mrs. G. Booth, Mr. and Mrs. Fred Owen Eustace, Mrs. A. Wright, Mr. and Mrs. Henry Macarthur, Mrs. Bartin H. Pratt, Captain Carsi and family, Mr. and Mrs. J. Annal, Mr. P. J. Hellaendal, Mr. and Mrs. B. Roth, Mr. and Miss Scott; Worshipful Master, Wardens and Brethren of "O Tentosama Lodge," 1263 E.C., Mr. O. Keil, Mrs. Kenderdine, Mr. Jas. Hood, Mrs. W. Thompson, Mr. John W. Hall, Mr. and Mrs. E. J. Moss, Mr. A. R. G. Clark, Mr. and Mrs. Walter K. Tresize, Mr. and Mrs. Ellerton (Kobe), Mr. and Mrs. P. E. F. Stone, Mr. and Mrs. James W. Weaver, Mr. J. W. Eckstrand, Mr. W. H. Forbes, Mr. and Mrs. M. A. Howe, Mr. and Mrs. Alfred H. Dare, Mr. and Mrs. Henry Pollak, Mr. and Mrs. J. H. Curtis, Mr. and Mrs. Wm. Graham, Mr. and Mrs. J. T. Eddale, Mr. and Mrs. J. B. Gibbs, Mr. G. Charlesworth, Mrs. Cain, Mr. and Mrs. Vincent, Mr. and Mrs. John W. Cain, Mr. and Mrs. Edwin Noble, Mr. James Johnstone, Mr. and Mrs. Richard Swain, Mr. and Mrs. James Martin, Mr. and Mrs. E. Eagling, Mrs. C. B. Clausen, Mrs. Frances C. S. Cameron, Officers and Members of "Star in the East," No. 640, S.C., Mr. S. Otani, Mr. Tamio Hayashi, Mr. T. Suda, Mr. C. Iehizawa, Mr. T. Okochi, Mr. I. Wada, Mr. Y. Iwato, Mr. K. Moteji, Mr. P. Kagawa, Mr. S. Ninagawa, Members of the late Nippon Yusen Kaisha Engineering Works, and Mr. Ah Sung.

Mr. Robinson came out to Japan, we believe, in 1868 and was originally in the employ of the Mitsui Bishi Co. before that company was merged in the Nippon Yusen Kaisha, in whose service he has since been employed as one of their most valued officers. He had been suffering from a severe cold for some time, which turned to bronchitis, and latterly pneumonia supervened, but he had been confined to his bed only some ten days before his death. Mr. Robinson was married about ten years ago, and the sincerest sympathy of the community will be felt for the widow—who is most highly esteemed and loved by a large circle of friends—in her sad bereavement.

BANKING PROFITS IN JAPAN.

The following table is published by the *Ma-nichi*, showing the rate of profits made on their capital by the various national and private banks throughout the empire for the first half of this year:—

Districts.	National Banks.	Private Banks.	Per cent. per annum.
Huogo	65th	95.4
Kumamoto	91th	78.1
Nagasaki	18th	75.7
Ehime	5and	73.3
Hakodate	113th	58.5
Osaka	130th	53.1

BIRTH OF AN IMPERIAL PRINCESS.

An extra of the *Official Gazette* announces that Madame Sono gave birth to an Imperial Princess at 11.05 a.m. on the 24th ultimo. This is the Emperor's thirteenth child, and Madame Sono's fifth. Nine have died, and the four living are the Prince Imperial, born August 31st, 1879; Princess Tsune, born Sept. 30th, 1888; Princess Kane, born Jan. 29th 1890, and the little Princess just born. Of the four Imperial children now alive, Madame Sono is the mother of three.

KOREAN NOTES.

It is an old experience that accession to official power has the effect of bringing out a man's conservative views. Mr. Kim Kachin, Governor of Whanghai, is acting in accordance with precedent. For many years he has been a prominent figure in Korean politics and a progressionist of the progressionists. But the air of Whanghai is bad for progress. A magistrate in one of the districts fraudulently squeezed ten thousand *yen* out of the people. Governor Kim, getting information of the fraud, sent another magistrate who compelled the guilty man to disgorge. Progressive principles would have dictated the restoration of the money to the defrauded people. But Governor Kim ordered that it should be sent to himself, and on reaching him, it "remained." The Governor has also issued a proclamation denouncing the abolition of the caste system as "the crime of the age," and declaring, further, that the adoption of a foreign religion by Korea would lead to the destruction of the country.

Mr. H. N. Allen has presented his credentials as the new United States Minister in Seoul.

When we read that, in accordance with a recently issued royal ordinance, no less than seventy-two gold mines in Korea have been transferred to the Royal Household Department, we are impressed with the idea that the peninsular Kingdom must be a Clondyke in disguise. Seventy-two mines, all designated by name, and thirty of them in Pyengyang province! Either they are burlesques of mines or the manner of working them is a parody.

A Washington engraver, who was employed in the preparation of Korean postage stamps, claims that he is owed \$322 by the Korean Legation in the city. The Legation having no money for such a purpose, has applied to the Bureau of Communications in Seoul. The Bureau denies that it owes a cent. Probably the money stuck *en route* somewhere to the engraver.

The Fusan Chamber of Commerce (Korean) has addressed to the Soul *Independent* a letter containing some curious complaints. The signatories say that, in the first place, the tax-collectors have called upon them to pay twenty per cent. of their gross receipts for the purposes of a "royal kitchen supply fund"; secondly, the local officials require them to insure their property at the rate of 33½ per cent. Thirdly, they have already had to contribute \$2,000 for purposes of street repairing, and no repairs have been done. They conclude their letter with a very pointed menace:—"Under such circumstances we, the feeble tradesmen, cannot exist and much less become prosperous. To whom shall we complain? Who will deliver us from this constant oppression? We are patient and obedient, but we are afraid that we may be driven into a desperate movement by these 'blood suckers' who call themselves agents, secret inspectors and tax collectors. We appeal to our rulers for their mercy and justice, and pray they may spare us from taking a rash step which will be an injury to both the Government and the people."

The discussions periodically held by the Debating Society of the Soul Independence Club must be an interesting novelty to the citizens. The subject of the last discussion (Sept. 12th) was whether "a nation's prosperity depends entirely on the increase of commercial enterprises." There were four speakers, one Mr. Hyen and three Messrs. Yo, and the "ayes" had a majority of four.

That remarkably veracious and observant person the Korean correspondent of the *N.-C. Daily News* is beginning to be appreciated in Korea as he has long been appreciated elsewhere. Referring to a letter of his in which he says that the Independence Club was founded by Kim Kachin "of illegitimate birth," and by An Kyungsu "of no birth at all," the editor of the *Independent* remarks that Kim "has ab-

solutely nothing to do with the founding of the Club"; that An is "of a good country family of the upper class," and that "the meanness of saying such a thing, the utter lack of the milk of human kindness, is so appalling, that I, for one, would rather be Kim Kachin than the thing that penned the contemptible statement." The "thing," as the *Independent* calls him, has been penning "contemptible statements" for such a long time that he is not likely to heed any new *exposé* of his habit.

Mr. Kato, Japanese Representative in Sōul, is now Doyen of the Corps Diplomatique in that city.

"Patriotic" Koreans are again beginning to seat themselves at the entrance to Legation Street in Sōul, with petitions recommending the death of the "traitors who have run away to Japan."

Of the seven administrative departments in Sōul only three are furnished with active Ministers at present. The Departments of War and Education have neither Ministers nor Vice-Ministers, and the Ministers of Finance and Home Affairs are sick.

Nothing can be quainter than some of the incidents that mark financial operations in Korea. A shortage of \$1,800 was recently discovered in the accounts of the disbursing office in the Law Department. The Chief of the Office declared that the guilt rested entirely with a subordinate. Presently it appeared that certain persons had borrowed part of the money from the Chief. They paid back \$400, and, at the same time, the Supreme Court sent in an equal sum, the proceeds of fines. The Chief wrapped up the money carefully, took it home and disappeared. Another case is this:—The War Office keeps back 50 cents monthly from each soldier's pay to form a fund for the man when he leaves the service. The Agricultural Department borrowed \$2,000 from that fund and sent it to the Korean Minister in Tokyo to purchase lithographic apparatus. The Minister closed on the money, declaring that his Government owed him several times the amount.

It appears that there is a very pretty mixture of languages in the words of command used in the Korean army—Chinese, German, English, Japanese and Russian.

A speech delivered by Dr. Jaisohn, the editor of the *Independent*, on Founders' Day at the Independence Club, bore very practical fruit. One of the audience was so impressed by the Doctor's remarks on the evils of slavery, that he went home and freed 32 slaves belonging to himself and his relatives.

We take the following paragraph from the *Independent* of the 18th instant:—"The War Office has ordered the first and second regiments to select one hundred men from each regiment to be sent to the front of the Kyengbok Palace every morning at seven o'clock. They will be drilled by the new Russian officers recently arrived. The Department has further ordered the fourth and fifth regiments to send one hundred men from each to the same place every afternoon at 3 o'clock for the same purpose. Two hundred will be selected from the third regiment and will be drilled by Lieut. Sa Chaiheup, of the Royal Body Guards, at their barracks inside the East gate.

"The recently arrived Russian officers, three lieutenants and ten non-commissioned officers, commenced their work last Thursday by drilling the selected four hundred men from the different regiments."

A cargo boat owned by Mr. Suyama of Haneda, Ebara-gun, which was despatched from Hachiman-zuka, Boshu, for Yokohama with a load of gravel ballast, foundered just outside Yokohama harbour in the choppy sea on Sunday last. The crew of three men were rescued by a fishing boat.

NEWS OF THE WEEK.

Mr. E. J. Plaza, Second Secretary of the Mexican Legation in Tokyo, has been recognised by the Government as Consul-General for Mexico at Yokohama.

During the visit of H.M.S. *Pigmy* to Bangkok, Commander Dormer had his gold watch stolen. It was recovered in a pawnshop, where it had been pawned for Ticals 60. Three natives were concerned in the theft.

Brother Louis, visitor of the Christian Brothers at Saigon, has been appointed Chevalier of the Legion of Honour as a reward for his services in the Far East. Brother Louis was for several years Director of St. Joseph's College in Hongkong.

The *Times* Simla correspondent says that opinion generally inclines to the belief that the Ameer is not directly concerned in the frontier risings. His desire to answer the Viceroy's letter is proven by his sending duplicate letters by different routes.

The Duke of Cambridge attended the German Army manoeuvres at Coblenz, and, on the 30th August, led his regiment past the Emperor, who, at a banquet in the evening, heartily thanked the former Commander-in-Chief of "the brave British Army" for honouring the manoeuvres with his presence.

It is reported that seven more Achinese, who took part in the piratical outrage on the British steamer *Pegu*, are now in the hands of Tungku Di Buah, about three miles from Kerti, and that Chut Nyak, of Kerti, has insisted upon Tungku Di Buah handing over the men promptly to the Dutch authorities.

On Tuesday morning, about 9 o'clock, a piece of the hill side at the back of No. 26 Bluff, fell in, owing to the heavy rainfall, and a servant girl of about 15 years of age, who was in the kitchen of the house occupied by Mr. Kurokawa, received some injuries while attempting to escape.

Fire broke out in one of the workshops in the Osaka Iron Works and Shipbuilding Yard on Friday morning. The damage was fortunately confined to the Carpenters' Shop, and the loss is understood by the *Kobe Herald* to be about \$1,500 or \$2,000.

According to a vernacular paper, the Yokohama Electric Light Company will raise its rates by 10 *sen* or 20 *sen* from the 1st of Oct. As though the charges for a very poor and unreliable light were not already high enough in all conscience!

Mrs. Bishop has nearly finished the book in which she describes her travels in Korea and other parts of the Far East. Most of the illustrations from the photographs are also ready. Mrs. Bishop discusses some of the political problems of the Far East.

It is said that the proprietors of the London *Daily Mail*, which was established a little more than a year ago and took an immediate hold on the British public, because it was conducted on the most modern methods, find that although the paper has a circulation of 350,000 per day, they cannot make the venture pay at a half-penny, so from January 1st it will come out as a penny daily.

The members of the British Trades Union Congress have formally agreed to financially support the engineers whose strike is paralyzing the iron, steel and hardware trades at home. Mr. Benjamin Pickard, M.P., president of the Miners' Federation of Great Britain, in supporting the motion, said that all the trade unionists should tender eight hour notices and "sink or swim" with the engineers.

Latest news from Clondyke is to the effect that all the good claims are now staked. The condition of the people at Dyea and Dawson City who have as yet failed to get across the mountains to the land of promise, is said to be

very terrible and steamers are returning south laden with disappointed folk. Many of them, however, will make another attempt in the spring, when conditions will be more favourable.

The *Kobe Chronicle* learns from the Osaka *Asahi* that in the Osaka District Court, on the 22nd inst., Mr. Kato Masahiro, the editor, and Muneta Maoru, the publisher, of the *Hatahara Shimbu*, an Osaka journal, were each condemned to imprisonment for eight months and ordered to pay a fine of 30 *yen*, for having libelled a certain official or officials. These are all the particulars the *Asahi* gives of the case.

Says the *China Mail*:—The numerous friends of Commodore Swinton C. Holland, R.N., will be pleased to learn that Her Majesty the Queen has conferred upon him the special medal issued to commemorate the sixtieth year of her reign. Commodore Holland is one of the most popular officers in the service, and is as much beloved by his subordinates as he is popular outside naval circles. He did good service on the China Station some years ago in H.M.S. *Sylvia*, and surveyed the Korean and Japanese coasts. Commodore Holland is an A.D.C. to Her Majesty.

The latest disease of the hour is "Clondycitis," and, according to *Vanity Fair*, Her Majesty Queen Victoria is one of the victims. Not that the Queen wishes to pack up her trunks and make tracks for the frozen north. No, the royal lady is only very greatly interested in the rush to the Clondyke gold mining region, and has asked many questions regarding the protection afforded there to her subjects. Her Majesty knows a great deal about British Columbia, where a vast estate was purchased for the Crown a few years back.

According to a despatch to the *Standard* from Moscow, a fanatical monk has given another curious illustration of a form of religious delusion now raging in many parts of Russia. The priest had himself buried to the arm-pits in a cave near the town of Urals, the capital of the Government of the same name on the Ural. He hoped to find salvation by mortifying the flesh and asked his friends to return to him in a week, when he expected to have found the object of his desire. They consented to the arrangement, but on returning found him dead.

A new engine ought to be a simple thing to hit, even for a woman, when the missile is a champagne bottle and the range is two yards. Yet women are full of surprises! The other day, in West Australia, as the wife of a mine manager was attempting to christen a new engine under these circumstances, she took aim, hurled the bottle, missed the engine by a handsome margin, and hit her husband full in the place where Abner Dean of Angel's received the old red sandstone, the blow forcing him back into a cistern full of water. This should be a christening record, remarks a home paper.

If you ask the man in the street where the typewriter was invented, he is pretty sure to tell you in America. It seems, however, that the first patent for a typewriting machine was taken out by an Englishman, one Henry Mills, so long ago as 1714. Rather more than fifty years since, another patent was granted at Frankfurt, to a blind mechanic, Pierre Foucault, and his machine was largely used on the Continent. The type-bar principle was first adopted in 1856, by one A. H. Beach. The Remington typewriter, however, which claims to be the first machine to come into really practical use, was invented in 1867 by an American, C. L. Sholes, who in 1873 transferred his patent to Messrs. Remington & Sons, the well-known gun-makers of New York, by whom it was successfully placed upon the market, under the name which it now bears.

An extraordinary meeting of the Yokohama Cricket and Athletic Club was convened at Keil's building on Thursday evening for the purpose of electing a Vice-President and Captain of Cricket in the room of Mr. C. M.

Duff, resigned. Only ten members put in an appearance, however, and after waiting the usual half hour, the President, Mr. J. P. Mollison, adjourned the meeting until Saturday next at 5 p.m., when members will meet at the Pavilion at the close of the cricket or base-ball match.

There lives a gentleman at Worcester, Cape Colony, who might without offence, be described as a pluralist. Here is a list of what a Colonial paper describes as "a few of his offices":—"Legal adviser to the Municipality, part printer and advertiser to the Municipality, printer and advertiser, notary to the A.B.C. Bank, director of the Worcester Gold Exploration Company, Justice of the Peace, auditor to the Colonial Brandy Company, secretary to the Municipal Council, secretary to the Divisional Council, inspector of roads to the Divisional Council, Deputy Sheriff and Civil Messenger to the Resident Magistrate's Court." In addition, he is an attorney, a notary, and conveyancer, and a newspaper proprietor and editor. *Pook-Bah*, by comparison, would be regarded as quite an idle person at Worcester, Cape Colony.

It may be said of Prince Hugo zu Hohenlohe-Oehringen, Duke of Ujest, who died at his castle in Silesia in the latter days of August, remarks a home paper, that he was one of the keenest sportsmen in Germany. He kept a large stable, and had twice won the German Derby. Latterly, however, he was not such a constant visitor to the principal races in Germany. Prince Hugo, who received the title of Duke of Ujest at the coronation of William I., was senior of the united house of Hohenlohe. He was an active soldier, and during the Austrian campaign acted as personal aide-de camp to William I. His services to the Army were pleasantly recognised last year. On the occasion of the celebrations in honour of the foundation of the Empire, the Empress herself singled him out for special recognition.

The *Whiting*, t.b.d., Lieut. I. P. Barton, which, at her commissioning trial on 13th Aug., maintained a speed of 29½ knots, left Portsmouth on 14th ult. for Portland. The *Whiting*, which has been commissioned for service on the China Station, will be conveyed to Gibraltar by the Channel Squadron. During a steam trial off Plymouth on 18th ult. the torpedo boat destroyer *Shark* broke down badly, having cracked the casing of her high-pressure cylinder. Instead of proceeding to the China Station, for which she was commissioned, she will be paid off and her crew turned over possibly to the *Sparrowhawk* as soon as the damage she received in collision with the staging of the dock is repaired. This latter boat, whilst being moved into dock at Devonport on the 17th Aug. to have her underwater fittings examined, came into collision with the pontoon at the dock entrance, part of which was carried away as the vessel backed out. The forepart of the *Sparrowhawk* was considerably damaged, all the plates on both sides of the bows for a distance of 8 ft. from the stem being strained and indented.

The *Daily Telegraph's* autumnal correspondence—to call it silly season gup would be unkind—got off with a magnificent start. In a couple of days there were columns of letters from "A Citizen of the World," "The Modern Adam" and other illustrious personages who hid strawberry leaves and K.C.M.G.'s under what Mr. Sala would have called names of the quill. It is all about Broadstairs and bathing and more or less about bloomers. Will "False Modesty" develop the splendid staying powers of "Is marriage a failure?" We are not sure; it is a sad but undeniable truth that more people are addicted to matrimony than to washing. The correspondence, at any rate, is booming at present like a 100-ton gun when they have not forgotten the powder. Walt Whitman, the Mahrattas, and the Garden of Eden have already been pressed into service, while "A Friend of Facts" takes a trick by a quotation from St. Paul. We seem to detect in his letter the hand—not of a duke—but of a D.D.—Dr. Parker, to wit. The story about his

meeting a Mahratta woman at a ford, and her goings-on with her simple garb of *choli* and *sari*, would bring down the roof of the City Temple. "I only salaamed to her in deep respect."

The steamer *Flintshire* landed eighteen Maxim guns at Singapore in the first week of Sept. They are all .303 bore, to be used with cordite. These will be variously used for flank defence of forts, and of the harbour entrances, as well as for general land work with infantry. Some will be on fixed cone mountings and others on light wheeled carriages. From a practical point of view (says the *Singapore Free Press*) that is, fire efficacy, these eighteen,—reckoning one Maxim as equal to 75 infantry, deployed and in action—are about equal to 1,340 additional infantry, as a reinforcement to the garrison. And as we have before remarked, they draw no pay, rations or clothing, they need no extra barracks, they don't require to be sent home in troopships at intervals, nor do they go into hospital. With the four of the S.V.A., which is the Senior Maxim battery in the British service, there are now twenty-two of these valuable weapons available for use in the Singapore defences.

The conceit of a Melbourne man in regard to the advantages of his town has passed into a proverb throughout Australia. It is therefore not surprising to find that the Premier of Victoria, Sir George Turner, appears to have found only one thing better in London than in Melbourne—the police. They were most tactful and accommodating. The shops were no better than Melbourne, the streets were much worse, the public buildings were dirty; even the slums were disappointing—they were not "so bad as I had been led to expect." The people were most friendly towards the colonies, and most ignorant regarding them. The House of Commons was no better than the Melbourne Assembly, which has proportionately as many able men and good speakers, and when the Melbourne Knight was entertained by the nobility he advised them to cultivate their "unused land"—the vaulted parks of England. There was no theatre in England as good as the Princess's, and Melbourne papers were better than the London dailies. After this it is consoling to find that, though Sir George could not express an opinion of Lord Salisbury, he liked Mr. Chamberlain so much that he wanted to go and help him get his bills through the House, and he found the Prince of Wales very kind, and that her Majesty had much charm of manner and a beautiful voice; but he omits to mention whether they had not a better Queen somewhere in Melbourne.

The following is Sir Walter Besant's character sketch of the average Englishman:—"He is, to begin with, more readily attracted by things practical than by things theoretical; he prefers a feat of arms to any intellectual achievement: he would rather hear of things done than of things attempted; he worships success in everything, because success means battle and victory; he is combative and aggressive; he likes fighting as much as his ancestors. Whenever there is fighting to be had, whenever the army is creditably engaged, the recruits flock in by thousands. He is subject to restlessness; he cannot be always sitting still; he will throw up his situation and go roaming about the world; he likes trade, especially trade across the seas, because it demands enterprise and courage—it is a great mistake to suppose that the love of trade denotes a mean and money-grubbing spirit. He is profoundly religious, but he will not endure the dominion of priests; he is tender and even chivalrous towards women; he loves children; he sits at home with his wife and children, and desires no other society. To the kings who have from time to time attempted to extend the royal prerogative, and to curtail his own liberties, he has always opposed a steady, stubborn resistance—in the long run it has been the worse for that king—and he demands freedom of speech, freedom of thought, freedom of faith. He insists on self-government as his

inheritance, he enters into combinations and associations with readiness, and understands what is meant by give and take. He is not the most courteous person in the civilised world: he is well satisfied with himself; he seldom troubles himself much about the position and the views of other people. Add to all these points that he is a strong, big, and healthy animal; that he is greatly led by his animal instincts; and that his views on all subjects are influenced by sentiment rather than reason.

Under the title of "The English and their Army," the *Petit Parisien* publishes an article which, although it contains some unpleasant truths, is none the less deserving of notice. After alluding to the opinion expressed by Sir James Fergusson, that the military forces of England were no longer in harmony with the existing state of things, the writer proceeds:—"Great Britain, in spite of her ambition to take part in the affairs of the Continent, was absorbed during a whole century in the exploitation and extension of her colonies, which to-day cover over twenty-one millions of square kilometres, and include over two hundred and twenty millions of inhabitants. But nobody knows better than England how fictitious this greatness is. The incomparable spectacle of the Jubilee was imposing at least in one respect—it turned public attention from foreign affairs. For several weeks the people gave themselves up to all kinds of imagination, but England soon recovered from the excess of her enthusiasm. She asked herself if her power was as firm as it was brilliant, and capable of resisting all attacks. A redoubtable rival rose before her—Germany—who now disputes the commercial and industrial preponderance of the world. She was stopped by Germany at the very moment when she was about to lay hands on the Transvaal, in the same way as she was stopped by Russia when she intended to confiscate Afghanistan. In Africa, Germany keeps her in check. In Asia it is Russia who holds her back. In India the position is delicate, and West Africa is no better off. She keeps Egypt, but she feels that Europe will one day call on her to evacuate it." After giving a detailed account of the military forces of England, and showing the necessity of adopting the system of conscription in the place of voluntary service, the writer concludes:—"All these forces exist more or less only on paper. No doubt, in the hour of national danger, England would call them out, and they would not shrink from their sacred duty, but of what weight would the riflemen, suddenly turned into soldiers, be in a campaign against a regular army? In addition to this, the attitude of colonial affairs would force the Government to provide for fresh necessities, and the resources of the active army would be thereby considerably diminished. The situation, therefore, can only be remedied by the adoption of a new system of recruiting which shall not leave England exposed to peril on all sides."

EARTHQUAKES.

That grotesque imagination is not quite extinct in England, remarks the *Globe*, is proved by Professor Milne in the lecture upon earthquakes which he delivered before the British Association. After the earthquake in the Severn Valley at the end of last year, he said, among other curious communications which he received was one attributing the commotion to a huge serpent which until recently had been buried beneath London, but latterly had escaped to the air above, and was occasionally to be seen hovering over Trafalgar-square. In what precise way the serpent so incommoded the dwellers in the Severn Valley we cannot say, but it is pleasing to find still a capacity for fantastic theorising on the subject. [We wonder whose leg was being pulled? The Professor's or the Professor's audience: "Honest John" was rather an adept at that kind of thing. At any rate we in Japan constantly hear the dragon theory solemnly propounded over the luncheon table for the benefit of the newly landed griffin.] Science has destroyed for us, continues the *Globe*, so

much of the picturesque. The old earthquake theories were infinitely more interesting and fanciful. Compare with them the prosaic theory of the present day: that earthquakes are the result of rocky strata being bent—as in the process of mountain formation—beyond the limits of their elasticity; or, in simpler language, that they are “accelerations and announcements of orogenic and bradyseismical processes, which tell us that adjustments have taken place in the elastic or gravitational isostasy of the earth's crust.” Such was the limp explanation offered by Professor Milne to the devout at Toronto; but most persons, while admitting the value of Professor Milne's researches, will prefer to think of the Poseidon of their schooldays “humping himself,” as the Americans say, down below.

CORRESPONDENCE.

THE OKAYAMA ORPHANAGE.

TO THE EDITOR OF THE “JAPAN MAIL.”
SIR,—On Sept. 22nd this well known Asylum passed its tenth year line. I have no thought of attempting here a review of its wonderful life and varied service during these years. Any who care to read the story are referred to the institution's own journal, *Asylum Record*, or other publications. To have helped 500 needy people up into a larger and better life, to have served as an inspiring example to scores of similar institutions, to have awakened a world-wide sympathy and response, to have stood the test alike of desperate need and of a rapid development, keeping true to the old faith and the old humility amid the rush and enterprise of a dazzling success, is an achievement worthy of high praise and a feeling of profound gratitude to him in whose name the institution was founded and by whose grace alone it has been and can be sustained.

On Wednesday evening last a delightful service was held in Buxton cottage. This building, by the way, will henceforth be known as Buxton Chapel and will serve as the general assembly hall now that the old temple has been relinquished by order of the Buddhist priests, who would no longer permit a Christian orphanage to rent their unused temple. This service was private, being confined to the workers and children. Two practical features of the meeting may be mentioned. A thanksgiving collection of several dollars was taken up to be divided between home and foreign charities, and a strong plea was made for a building and endowment for the Asylum school. The development of the educational side of the institution will be especially pushed in the near future.

The public service was postponed till the January holidays in order to allow more time for completion of unfinished buildings and the settlement of unpaid bills.

The past summer has been a very trying one, but thanks to larger buildings and a special gift of \$1,000 (gold) from a young lady in New York city, the institution has pulled through the hot season and all the industries are under full headway once more. Just at present, Mr. Ishii is in Hyuga, whither some thirty of the youngest children have been sent by junk to play and work on the upland farm, strung up in physical health for hard work later in shop and school room.

Mr. Ishii must have hundreds of friends and admirers throughout the country who will be glad to learn that his asylum, not satisfied with its achievements in the past, is pressing on in hope and faith and love to yet larger service for the needy poor of Japan. The institution knows no line of sex or class or nation. Its aim is to befriend the unfortunate and to change thieving beggars into Christian bread winners. Could there be a better time for the general public to express by generous contributions its admiration for the pluck and patience and prayerful devotion with which this man of earnest faith and tireless activity has carried on his work during ten hard years of struggle—and its firm belief that the next ten years will see a yet grander advance in the telling service of his marvellous institution? One strong rally altogether and the greatly needed buildings could be erected and furnished, outstanding bills paid, and the industries placed on a better paying basis. Then what rejoicing there would be next January when friends from far and near are formally called together to review the past and plan for the future. Okayama Orphan Asylum is certainly worth this much attention and assistance at the present crisis in its history. Let us all do something and the deed will be accomplished.

J. H. PETTEE.

Okayama, Sept. 24th, 1897.

A SAD CASE.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—Reliable information has come to me recently of a matter which I decide to share with your readers, not alone in the hope of securing assistance for one unfortunate woman but of stirring up the public conscience to put an end to the vile traffic in flesh and blood of which this is only a representative case.

A woman forced by one of those terrors of Japanese social life, a cruel, covetous, evil-minded mother-in-law, has been sold into the service of shame for a short term of years. She loathes the business and is anxious to be freed from her legal bondage. There is strong reason to believe that if she could be released and removed from her former surroundings, she would become an honour instead of a disgrace to the name of womanhood. It does not seem wise to give further details, though I will add that the woman is not a resident of Okayama and is enslaved at present in one of the three largest cities of the empire. I have no desire to persecute individuals however abominable their trade and despicable their character, or to run the risk of causing further distress to their long suffering victims. Moreover, the details would be quite too shocking for publication, but I am anxious if possible to save this one unfortunate and to brand the infamy of a system and a state of society that permit such things in the name and under the sanction of law and order. Any one who knows ought of the under-side of Japanese society is well aware of the fact that hundreds of women are sold every year against their wishes. They dare not refuse to go where they are bidden, to say what they are told, to sign what they are ordered. If the license system must be tolerated for a while longer, it should be kept under a stricter watch than at present. The protection of the law and the sympathy of its executors should be plainly and positively on the side of the weaker, more defenseless portion of society and not that of its brutal domineering devilish “masters.” It is hard to be temperate in one's language about such matters in these evil days, when the bottom seem to have dropped out of Japanese morality and one gets a glimpse so frequently into the awful sink of corruption that still exists in this fair land.

But the immediate question is, can this one woman be saved and in such a way as not to further encourage similar sales? Unfortunately I am not in a condition at present to handle the case alone financially. If there are those who are willing to help me in the matter so that seventy dollars can be raised, the attempt will be made. The plan would be to discharge the legal claim at the lowest possible figure and set the woman at work supporting herself under new and helpful surroundings, with the clear understanding that all earnings above the bare cost of living—for at least the same number of years as her present engagement—should go toward refunding the payment made on her behalf or for the rescue of similar women.

If for any reason it should prove unwise or impossible to rescue the woman, all contributions received for this purpose will be returned to the donors, unless such givers are kind enough to allow me the option of devoting the money to some other charity—say Mr. Ishii's Orphanage, whose treasury is in great straits just now.

Seventy pieces of silver is not a large amount in these times. Its giving may mean the reclamation of a life on earth and the cause of lasting melody in Heaven. Can there be a better investment?

J. H. PETTEE.

Okayama, Sept. 24, 1897.

[If any of our readers are disposed to contribute to either excellent works mentioned in Mr. Pettee's letters, we shall be glad to receive subscriptions, acknowledge and forward them, should our intervention seem to facilitate matters.—Ed. J. M.]

YOKOHAMA CHORAL SOCIETY.

The annual general meeting of the members of the Yokohama Choral Society, to receive the report of the committee and elect officers for the ensuing season was announced for Thursday evening at 5.30, at the Van Schaick Hall, but as there were not sufficient members present to form a quorum, after waiting till 6 p.m. the President Mr. J. T. Griffin adjourned the meeting till Monday afternoon, the 11th October, at the same hour.

THE LADIES INTERNATIONAL READING ROOM.

The first annual meeting of the subscribers to the Ladies International reading-room, will be held at the Public Hall on Thursday, Oct. 14th, at 3 p.m. It is generally known that the King's Daughters undertook to supply the reading-room with funds for the first year only. From the beginning of 1898, therefore, they have no further connection with it, and it must pay its own way, if it is to exist at all. This meeting will accordingly decide whether the ladies of Yokohama consider that the experiment has been successful, and wish the reading-room to become a permanent institution.

The following is the Directors' Report:—

Your Directors are pleased to report the successful working of the Reading Room, which was started in October, 1896, by the King's Daughters' Circle, with little more foundation than faith and energy.

The following Rules will be considered at the Meeting:—

Rule XI.—Winding Up.—“In the event of the Society being wound up at the end of 1897, all the property shall revert to the Yokohama Order of King's Daughters.”

The following resolution will be proposed:—

“That a Committee be elected to carry on the L.I.R.R., and in addition to a Board of Directors a working Committee of young ladies be elected to arrange for a Monthly Social Afternoon.”

It will further be proposed “that the Directors be empowered to raise a sum of money to pay for 500 books as a nucleus for a Circulating Library.”

Rule III.—Members.—“The Subscription, payable in advance, shall be \$1.00 for the first year.”

The following resolution will be proposed:—

“That the yearly subscription be \$3.00 for one person, or \$5.00 for a family of not more than three.”

It is earnestly hoped that all subscribers will attend the annual meeting, and that the undertaking will not be crippled for lack of funds.

L. B. MORRIS,
President.

TREASURER'S REPORT FOR YEAR ENDING 30TH SEPTEMBER, 1897.

RECEIPTS.	
Subscriptions	\$55.00

MARY WHEELER, Hon. Treas.

The Secretary reports:—The Ladies' International Reading Room was opened on January 4th, 1897, with 216 members, and the number has now increased to 265. Up to September 15th, 1,108 members had visited the Reading Room.

Next follows a list of the Magazines and books. A Librarian was engaged at a salary of \$20 a month, which has since been raised to \$25.

A Circulating Library was started in June in connection with the Reading Room.

During the Summer months, from July 1st to September 15th, the Reading Room was closed except for 2 hours on three days of the week, when it was open for members to take out magazines. The total number of magazines taken out from June 1st to September 15th was: Monthly, 438; Weekly, 236.

G. STEDMAN,
Hon. Secretary.

ORDINANCE NO. 17 OF THE DEPARTMENT OF AGRICULTURE AND COMMERCE.

It is hereby notified that By-laws for the operation of Regulations embodied in Law No. 47 of the 30th year of *Meiji*, with regard to the corporation of dealers in staples of export, have been established as follows:—

September 17 of the 30th year of *Meiji*.

(Signed) Count OKUMA SHIGENOBU,
Minister for Agriculture and Commerce.

BY-LAWS FOR THE OPERATION OF REGULATIONS REGARDING THE CORPORATION OF DEALERS IN STAPLES OF EXPORT.

Art. I.—The name of the corporation shall necessarily consist of terms signifying "Corporation of persons of similar occupation."

Art. II.—The local limits of the corporation shall in all cases exceed those of a City or District (*Shi or gun*).

Art. III.—All initiatory affairs relating to the organisation of a corporation shall be conducted by more than five promoters approved by the Local Governor.

When instructions are issued for the establishment of a corporation in accordance with Art. XIV. of the Regulations regarding the corporation of dealers in staples of export, the organization committee shall be appointed by the local Governor.

When the local Governor has approved of the promoters or appointed the organization committee, notice shall be issued throughout his jurisdiction stating the names and residences of the persons so approved or appointed, the local limits of the corporation, as well as the classification of the business for which it is to be organized.

Art. IV.—The promoters of a corporation are required to hold a general meeting of organisation within six months from the date of the local Governor's sanction, for the purpose of deciding upon the rules of the corporation, the appointment of officials, and the presentation of an application for final sanction, with the following documents enclosed:—

1. A statement of the reasons for the establishment of the corporation.
2. The names of commodities with which the corporation is chiefly to deal; the amount, quality or value of their production, manufacture or sale within the limits of the corporation during the past five years.
3. A paper testifying to the consent of more than four-fifths of the persons of similar occupation in the district.
4. Estimates of expenditure and profits.

Art. V.—In the case of instructions being issued to organise a corporation, the organization committee must at once hold a general meeting in order to discuss the regulations of the corporation, to appoint officers, and to apply for official sanction.

Art. VI.—In the case of a general meeting's being held, the organization committee is required to fix the date of meeting, and notify the fact to dealers of similar occupation throughout the district, and also to present a report thereof to the local governor, at least fourteen days previous to the meeting.

At the general meeting so convened for the organisation of a corporation, more than two-thirds of the members shall form a quorum.

Note.—Votes by proxy are permitted.

Art. VII.—All matters relating to the establishment of a union of corporations shall be dealt with by a committee selected from each corporation.

Art. VIII.—The following points shall necessarily be provided for in the regulations for a corporation or a union of corporations.

1. The name of the corporation and the location of its office.
2. The district, as well as the classification of occupations for the organisation of the corporation, or the names of the corporations for the formation of the union.
3. Object and occupation.
4. Rules for membership and retirement.
5. Rules in regard to the qualifications, privileges, and election of officials.
6. Meeting regulations.
7. Financial rules.
8. Rules for dealing with breaches of contract.
9. Rules for amendment of the laws of the Corporation.
10. Rules for dissolution.
11. Rules to be framed in the case of merchandise being subjected to inspection.

Art. IX.—The application for obtaining sanction to the officials appointed by a corporation or

by a union of corporations must be accompanied by a history of their past career.

The following persons are not allowed to apply for sanction as officials of a corporation:—

1. Any person who has not been engaged for one year in the occupation for which the corporation is to be formed in the district where he resides.

2. Those who have been sentenced to major imprisonment for more than one year, or convicted of obstructing commercial, agricultural, or industrial occupations, or of offences relating to property, corruption of public morals, or impairment of credit, and who have not passed full two years after the expiration of the term of punishment or acquittal for the offences mentioned.

3. Those who have been deprived of, or suspended from, the exercise of civil rights.

4. Bankrupts and insolvents prior to rehabilitation.

Art. X.—The application for obtaining official approval in regard to the estimates of expenditure and the process of collection for a corporation or a union of corporations, except in the case of initiatory institution, shall be presented two months prior to the commencement of each fiscal year, and all reports containing the settled account of expenses, comparative table of loans and credits, and the result of transactions, shall be forwarded within two months after each fiscal year.

Art. XI.—All documents requiring the sanction of the Minister for Agriculture and Commerce shall be presented through the local Governor.

TREATY OF FRIENDSHIP & GENERAL INTERCOURSE BETWEEN JAPAN AND SPAIN.

His Majesty the Emperor of Japan, and His Majesty the King of Spain, and in His Royal Name Her Majesty the Queen Regent of the Realm, being equally desirous of maintaining the relations of good understanding which happily exist between them, by extending and increasing the intercourse between their respective States, and being convinced that this object cannot be better accomplished than by revising the Treaty of Friendship, Commerce and Navigation hitherto existing between the two countries, have resolved to complete such a revision based upon principles of equity and mutual benefit, and for that purpose have named as their Plenipotentiaries, that is to say:

His Majesty the Emperor of Japan, Shinichiro Kurino, Shoshii, Second Class of the Imperial Order of the Rising Sun, &c., &c., His Envoy Extraordinary and Minister Plenipotentiary at the Court of His Majesty the King of Italy.

And His Majesty the King of Spain and in His Royal Name Her Majesty the Queen Regent of the Realm, Don Carlos O'Donnell y Abreu, Duke of Tetuan, Marquis of Altamira, Count of Lucena, Grandee of Spain, Senator of the Realm, Brigadier General, His Most Catholic Majesty's Chamberlain, decorated with the Collar of the Royal and distinguished Order of Charles III., Knight Grand Cross of the Military Order of St. Hermenegild, decorated with the Collar of the Order of the Tower and Sword of Portugal, Knight Grand Cross of the Orders of St. Stephen of Hungary, of S.S. Maurice and Lazarus of Italy, of Leopold of Belgium, of the Osmanieh, &c., &c., His Minister of State,

Who having communicated to each other their Full Powers, found to be in good and due form, have agreed upon and concluded the following Articles:

Art. I.—The subjects of each of the two High Contracting Parties shall have full liberty to enter, travel or reside in any part of the territories of the other Contracting Party, and shall enjoy full and perfect protection for their persons and property.

They shall have free and easy access to the Courts of Justice in pursuit and defence of their rights: they shall be at liberty equally with native subjects to choose and employ lawyers, advocates, and representatives to pursue and defend their rights before such Courts, and in all other matters connected with the administration of justice they shall enjoy all the rights and privileges enjoyed by native subjects.

In whatever relates to rights of residence and travel; to the possession of goods and effects of any kind; to the succession to personal estate, by will or otherwise, and the disposal of property of any sort in any manner whatsoever which they may lawfully acquire, the subjects of each Contracting Party shall enjoy in the territories of the other the same privileges, liberties and rights, and shall be subject to no higher imposts or charges in this respect than the subjects or citizens of the

most favoured nation. The subjects of each of the High Contracting Parties shall enjoy in the territories of the other the right to exercise their worship, subject to the Laws, Ordinances and Regulations of the respective countries, and also the right of burying their respective countymen, under the same condition, according to their religious customs, in such suitable and convenient places as may be established and maintained for that purpose.

They shall not be compelled under any pretext whatsoever to pay any charges or taxes other or higher than those that are or may be paid by native subjects or subjects and citizens of the most favoured nation.

Art. II.—The subjects of either of the Contracting Parties residing in the territories of the other shall be exempted from all compulsory military service whatsoever, whether in the army, navy, National Guard, or militia; from all contributions imposed in lieu of personal service; and from all forced loans or military exactions or contributions.

Art. III.—There shall be reciprocal freedom of commerce and navigation between the territories of the two High Contracting Parties.

The subjects of each of the High Contracting Parties may trade in any part of the territories of the other by wholesale or retail in all kinds of produce, manufactures and merchandise of lawful commerce, either in person or by agents, singly or in partnership with foreigners or native subjects; and they may there own or hire and occupy the houses, manufactories, warehouses, shops and premises, which may be necessary for them, and lease land for residential and commercial purposes, conforming themselves to the Laws, Police and Customs Regulations of the country like native subjects.

They shall have liberty freely to come with their ships and cargoes to all places, ports and rivers in the territories of the other, which are or may be opened to foreign commerce, and shall enjoy respectively, the same treatment in matters of commerce and navigation as native subjects, or subjects or citizens of the most favoured nation, without having to pay taxes, imposts, or duties, of whatever nature or under whatever denomination levied in the name or for the profit of the Government, public functionaries, private individuals, Corporations or establishments of any kind, other or greater than those paid by native subjects, or subjects or citizens of the most favoured nation.

It is, however, understood that the provisions of the present and the two preceding articles in no way annul the Laws, Ordinances, and special Regulations respecting Commerce, Police and Public Security in force in the respective countries applying to foreigners in general.

Art. IV.—The dwellings, manufactories, warehouses and shops of the subjects of each of the High Contracting Parties in the territory of the other and all premises appertaining thereto, destined for purposes of residence or commerce, shall be respected.

It shall not be allowable to proceed to make a search of, or a domiciliary visit to, such dwellings and premises, or to examine or inspect books, papers or accounts, except under the conditions and with the forms prescribed by the Law, Ordinances and Regulations for subjects of the country.

Art. V.—The subjects of each of the High Contracting Parties shall enjoy in the territories of the other exemption from all transit duties, and a perfect equality of treatment with native subjects in all that relates to warehousing, bounties, facilities and drawbacks.

No merchandise of the territories of either of the Contracting Parties imported into the territory of the other, shall be liable to pay higher excise or "octroi" dues, whether national or local, than those imposed upon the similar merchandise of native production.

Import duties on any particular goods or merchandise may be increased in either country in proportion to the burden imposed upon the similar goods or merchandise by the system of internal duties.

Art. VI.—All articles which are or may be legally imported into the ports of the territories of His Majesty the Emperor of Japan in Japanese vessels may likewise be imported into those ports in Spanish vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Japanese vessels; and, reciprocally, all articles which are or may be legally imported into the ports of the territories of His Majesty the King of Spain in Spanish vessels may likewise be imported into those ports in Japanese vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Spanish vessels.

In the same manner, there shall be perfect equality of treatment in regard to exportation, so

that the same export duties shall be paid, and the same bounties and drawbacks allowed, in the territories of either of the High Contracting Parties on the exportation of any article which is or may be legally exported therefrom, whether such exportation shall take place in Japanese or in Spanish vessels, and whatever may be the place of destination, whether a port of either of the Contracting Parties or of any third Power.

Art. VII.—No duties of tonnage, harbour, pilotage, lighthouse, quarantine or other similar or corresponding duties of whatever nature or under whatever denomination levied in the name or for the profit of the Government, public functionaries, private individuals, Corporations, or establishments of any kind, shall be imposed in the ports of the territories of either country upon the vessels of the other country, which shall not equally and under the same conditions be imposed in the like cases on national vessels in general or vessels of the most favoured nation. Such equality of treatment shall apply, reciprocally, to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

Art. VIII.—In all that regards the stationing, loading and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the territories of the two countries, no privilege shall be granted to national vessels, which shall not be equally granted to vessels of the other country; the intention of the High Contracting Parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

Art. IX.—The coasting trade of both the High Contracting Parties is excepted from the provisions of the present Treaty, and shall be regulated according to the Laws, Ordinances and Regulations of Japan and Spain respectively.

It is, however, understood that Japanese subjects in the territories of His Majesty the King of Spain and Spanish subjects in the territories of His Majesty the Emperor of Japan, shall enjoy in this respect the rights which are or may be granted under such Laws, Ordinances and Regulations to the subjects or citizens of any other country.

A Japanese vessel laden in a foreign country with cargo destined for two or more ports in the territories of His Majesty the King of Spain, and a Spanish vessel laden in a foreign country, with cargo destined for two or more ports in the territories of His Majesty the Emperor of Japan, may discharge a portion of her cargo at one port and continue her voyage to the other port or ports of destination where foreign trade is permitted, for the purpose of landing the remainder of her original cargo there, subject always to the Laws and Customs-house regulations of the two countries.

The Japanese Government, however, agrees to allow Spanish vessels, for the period of the duration of the present Treaty, to carry cargo between the existing open ports of the Empire, excepting to or from the ports of Osaka, Niigata and Ebisu-minato.

Art. X.—Any ship of war or merchant vessel of either of the High Contracting Parties which may be compelled by stress of weather, or by reason of any other distress, to take shelter in a port of the other, shall be at liberty to refit therein, to procure all necessary supplies, and to put to sea again, without paying any dues other than such as would be payable by national vessels. In case, however, the master of a merchant vessel should be under the necessity of disposing of his cargo in order to defray the expenses, he shall be bound to conform to the Regulations and Tariffs of the place to which he may have come.

If any ship of war or merchant vessel of one of the Contracting Parties should run aground or be wrecked upon the coasts of the other, the local authorities shall inform the Consul General, Consul, Vice Consul or Consular Agent of the district of the occurrence, or if there be no such Consular officer they shall inform the Consular officer of the nearest district.

All proceedings relative to the salvage of Japanese vessels wrecked or cast on shore in the territorial waters of His Majesty the King of Spain shall take place in accordance with the Laws, Ordinances and Regulations of Spain; and, reciprocally, all measures of salvage relative to Spanish vessels wrecked or cast on shore in the territorial waters of His Majesty the Emperor of Japan shall take place in accordance with the Laws, Ordinances and Regulations of Japan.

Such stranded or shipwrecked vessels, and all parts thereof, and all furniture and appurtenances belonging thereto, and all goods and merchandise saved therefrom, including those which may have been cast into the sea, or the proceeds thereof, if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be

given up to the owners or their agents when claimed by them. If such owners or agents are not on the spot, the same shall be delivered to the respective Consuls-General, Consuls, Vice-Consuls or Consular Agents, upon being claimed by them within the period fixed by the laws of the country, and such Consular officers, owners or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the case of a wreck of a national vessel.

The goods and merchandise saved from the wreck shall be exempt from all the duties of the Customs, unless cleared for consumption, in which case they shall pay the ordinary duties.

When a ship or vessel belonging to the subjects of one of the Contracting Parties is stranded or wrecked in the territories of the other, the respective Consuls-General, Consuls, Vice-Consuls, and Consular Agents shall be authorized, in case the owner or master, or other agent of the owner, is not present, to lend their official assistance in order to afford necessary assistance to the subjects of the respective States. The same rule shall apply in case the owner, master, or other agent is present, but requires such assistance to be given.

Art. XI.—All vessels which, according to Japanese law are to be deemed Japanese vessels, and all vessels which according to Spanish law are to be deemed Spanish vessels, shall for the purposes of this Treaty be deemed Japanese and Spanish vessels respectively.

Art. XII.—The Consuls-General, Consuls, Vice-Consuls and Consular Agents of each of the Contracting Parties, residing in the territories of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from the vessels of their respective countries.

It is understood that this stipulation shall not apply to the subjects of the country where the desertion takes place.

Art. XIII.—The commercial travellers of either of the High Contracting Parties shall enjoy in the territories of the other the same rights and privileges in respect of Patents or Permits as are granted or may hereafter be granted to commercial travellers of the most favoured nation.

If such commercial travellers shall have paid any Customs duties or deposited money on importation of sample goods into either country, they shall be entitled, at the time of re-exportation or re-entry into warehouse, to repayment of such duties paid or money deposited, provided the necessary formalities shall have been complied with in accordance with the Customs Laws, Ordinances and Regulations of the respective countries.

Art. XIV.—The High Contracting Parties agree that, in all that concerns commerce and navigation, any privilege, favour or immunity which either Contracting Party has actually granted, or may hereafter grant, to the Government, ships, subjects or citizens of any other State, shall be extended immediately and unconditionally to the Government, ships or subjects of the other Contracting Party; it being their intention, that the trade and navigation of each country shall be placed, in all respects, by the other on the footing of the most favoured nation.

It is, however, understood that the stipulations of this Article shall not apply to arrangements regarding Customs Tariffs, that are or may hereafter be made respectively with any other countries, nor to the special treatment reserved by Spain to Portugal or to the Spanish-American Republics, provided that such special treatment should only be extended to the said countries.

Art. XV.—Each of the High Contracting Parties may appoint Consuls, Vice-Consuls and Consular Agents in all the ports, cities and places of the other, except in those where it may not be convenient to recognize such officers.

This exception, however shall not be made in regard to one of the Contracting Parties without being made likewise in regard to every other Power.

The Consuls-General, Consuls, Vice Consuls and Consular Agents may exercise all functions, and shall enjoy all privileges, exemptions and immunities which are or may hereafter be, granted to Consular Officers of the most favoured nation.

Art. XVI.—The subjects of each of the High Contracting Parties shall enjoy in the territories of the other the same protection as native subjects in regard to patents, trade marks and designs, upon fulfilment of the formalities prescribed by law.

Art. XVII.—The High Contracting Parties agree to the following arrangement:

The several foreign Settlements in Japan shall be incorporated with the respective Japanese Communes, and shall thenceforth form part of the general municipal system of Japan.

The competent Japanese authorities shall thereupon assume all municipal obligations and duties

in respect thereof, and the common funds and property, if any, belonging to such Settlements, shall at the same time be transferred to the said Japanese authorities.

When such incorporation takes place the existing leases in perpetuity under which property is now held in the said Settlements shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property. It is, however, understood that the Consular authorities mentioned in the same are in all cases to be replaced by the Japanese authority.

All lands which may previously have been granted by the Japanese Government free of rent for the public purposes of the said Settlements shall, subject to the right of eminent domain, be permanently reserved free of all taxes and charges for the public purposes for which they were originally set apart.

Art. XVIII.—The stipulations of the present Treaty shall be applicable, as far as the laws permit, to the Spanish Provinces and possessions beyond the seas.

Art. XIX.—The present Treaty shall, from the date it comes into force, be substituted in place of the Treaty of Friendship, Commerce and Navigation concluded on the 28th day of the 9th month of the 1st year of Meiji, corresponding to the 12th of November 1868, and the additional Article of the same date, and all Arrangements and Agreements subsidiary thereto concluded or existing between the High Contracting Parties; and from the same date such Convention, Treaty, Arrangements and Agreements shall cease to be binding, and, in consequence the jurisdiction then exercised by Spanish Courts in Japan and all the exceptional privileges, exemptions and immunities then enjoyed by Spanish subjects as a part of or appurtenant to such jurisdiction, shall absolutely and without notice cease and determine, and thereafter all such jurisdiction shall be assumed and exercised by Japanese Courts.

Art. XX.—The present Treaty shall not take effect until the 17th day of the 7th month of the 32nd year of Meiji, corresponding to the 17th day of July, 1899. It shall come into force one year after His Imperial Majesty's Government shall have given notice to His Most Catholic Majesty's Government of its wish to have the same brought into operation.

Such notice may be given at any time after the 16th day of the 7th month of the 31st year of Meiji, corresponding to the 16th day of July 1898. This Treaty shall remain in force for the period of twelve years from the date it goes into operation.

Either High Contracting Party shall have the right, at any time after eleven years shall have elapsed from the date this Treaty takes effect, to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice is given this Treaty shall wholly cease and determine.

Art. XXI.—The present Treaty shall be ratified and the ratifications thereof shall be exchanged at Tokio as soon as possible.

In witness whereof the respective Plenipotentiaries have signed the same and have affixed thereto the seal of their arms.

Done at Madrid, in duplicate, this second day of the first month of the 30th year of Meiji, corresponding to the second day of January, one thousand eight hundred and ninety-seventh year of the Christian era.

(L.S.) S. KURINO (L.S.) EL DUQUE DE TETUAN.

PROTOCOL.

The Government of His Majesty the Emperor of Japan and the Government of His Most Catholic Majesty the King of Spain, deeming it advisable in the interests of both countries to regulate certain special matters of mutual concern apart from the Treaty of Friendship and General Inter-course signed this day, have through their respective Plenipotentiaries agreed upon the following stipulations.

1. The High Contracting Parties agree to conclude hereafter a special Commercial Convention based upon the principle of reciprocity for the adjustment of the import duties to be levied upon the goods and merchandise of either of the two Contracting Parties upon importation into the other.

2. It is agreed by the High Contracting Parties that one month after the exchange of the ratifications of the Treaty signed this day, the Import Tariff now in operation in Japan in respect of goods and merchandise imported into Japan by the subjects of His Most Catholic Majesty the King of Spain shall cease to be binding. From the same date the General Statutory Tariff of Japan, for the time being in force, shall, subject to the provisions of Article 23rd of the Treaty of November 12th 1868, at present subsisting between the Contracting Parties, as long as the said Treaty remains in force, be applicable to the goods

and merchandize of the territories of Spain and her Provinces and possessions beyond the seas, upon importation into Japan.

But nothing contained in this Protocol, shall be held to limit or qualify the right of the Japanese Government to restrict or to prohibit the importation of adulterated drugs, medicines, food or beverages; indecent or obscene prints, paintings, books, cards, lithographic or other engravings, photographs, or any other indecent or obscene articles; articles in violation of patent, trade-mark or copyright laws of Japan; or any other article which for sanitary reasons, or in view of public security or morals might offer any danger.

3. The Japanese Government, pending the opening of the country to Spanish subjects, agrees to extend the existing passport system in such a manner as to allow Spanish subjects, on the production of a certificate from the Spanish Representative in Tokio, or from any of His Most Catholic Majesty's Consuls at the open ports in Japan, to obtain upon application passports available for any part of the country, and for any period not exceeding twelve months, from the Imperial Japanese Foreign Office in Tokyo, or from the chief authorities in the Prefecture in which an open port is situated; it being understood that the existing Rules and Regulations governing Spanish subjects who visit the interior of the Empire are to be maintained.

4. The Japanese Government undertakes, before the cessation of Spanish Consular Jurisdiction in Japan, to join the International Conventions for the Protection of Industrial Property and Copyright.

5. It is understood that all cases pending in the Spanish Consular Courts in Japan at the time of the cessation of the latter shall continue to be subject to the same until finally adjudicated.

6. The High Contracting Parties agree to conclude a special Convention for the mutual surrender of fugitive criminals. Until such Convention shall have been concluded each Contracting Party shall extend to the other the same rights and privileges in the matter, as well as in the execution of requisitions concerning civil and criminal cases, as have been granted or may hereafter be granted to the most favoured Nation.

7. The High Contracting Parties agree to notify to each other all cases in which either shall have granted its nationality to a subject of the other in accordance with the laws of the country. All such cases of naturalization shall be considered null and void as regards the country to which such naturalized subjects originally belonged, unless the above mentioned condition of notification shall have been previously complied with. Should such naturalized subjects go back to the country of origin without intention of returning to that of naturalization, they shall "ipso facto" be bound by all the duties and obligations incumbent upon them as the subjects of their native country, and shall be held to have tacitly renounced the acquired nationality.

A residence exceeding one year shall be held as "prima facie" evidence of such renunciation.

8. The undersigned Plenipotentiaries have agreed that this Protocol shall be submitted to the two High Contracting Parties at the same time as the Treaty of Friendship and General Intercourse signed this day, and that when the said Treaty is ratified the agreements contained in the Protocol shall also equally be considered as approved without the necessity of a further formal ratification.

It is also agreed that this Protocol shall terminate at the same time the said Treaty ceases to be binding.

In witness whereof the respective Plenipotentiaries have affixed thereto their seals.

Done at Madrid, in duplicate, this second day of the 1st month of the 30th year of Meiji, corresponding to the second day of January, one thousand eight hundred and ninety-seven of the Christian Era.

(L.S.) S. KURINO. (L.S.) EL DUQUE DE TETUAN.

Royal Palace, January 2nd, 1897.

Your Excellency:—I have the honour to inform Your Excellency that in accordance with Article 2nd of the Protocol signed this day, one month after the exchange of the ratifications of the Treaty of Friendship and General Intercourse to which the said Protocol is attached, and as long as the favourable treatment is granted by Japan to all articles or merchandize, produced or manufactured in Spain and her Provinces and possessions beyond the seas, the second column of the respective Import Tariffs of the Peninsula and the Islands of Cuba and Puerto Rico will be applied to the produce and manufactures of Japan, proceeding directly therefrom, and in the Philippine Islands the General Tariff in force for other Nations.

I avail myself, &c., &c.,

Signed: EL DUQUE DE TETUAN,

To the Japanese Plenipotentiary ad hoc, &c.

CRICKET.

The match played on Tuesday afternoon, between a team of the Y. C. and A. C. and the Fleet, can scarcely be taken as any criterion. The weather in the morning was simply wretched and it was not generally expected that the game would be played, consequently there were practically no spectators on the ground. Of course the game was played on a matting pitch as the turf was completely sodden and unfit to play upon. Yokohama went in first and after scoring 143, to which Duff contributed 50 and Edwards 40, not out—the innings was declared closed with three men to bat. The representatives of the Fleet failed to make any stand after Mr. Dalrymple had been disposed of for 19, and the innings closed for 38. The scores were as follows:—

Y. C. & A. C.

Mr. C. M. Duff, b. Bowden Smith...	50
Mr. A. Kingston, c. Hickley, b. Gillett...	9
Mr. F. E. White, b. Gascayne...	12
Rev. T. S. Tyng, c. McNeill, b. Gillett...	15
Mr. E. B. S. Edwards, not out...	40
Mr. W. Y. Shewler, c. Chetwynd, b. Gascayne...	6
Mr. E. Owen, b. Gillett...	8
Mr. F. H. Bugbird, b. Gillett...	1

SUICIDE OF A MARINE OFFICER.

An Inquest was held at the U.S. Consulate on Thursday afternoon, by J. F. Gwney, Esq., Consul-General, as Coroner, and Messrs. N. F. Smith and L. Brower as Associates, to inquire into the circumstances attending the death of R. A. Crocker, second mate of the American ship *Commodore T. H. Allen*, who was found dead, with his throat cut, on Thursday morning in a dormitory at the Seamen's Mission, No. 82, Settlement.

Mr. G. H. Scidmore, U.S. Deputy Consul-General, deposed that at a little after 9.30 on Thursday morning he went to No. 82 and saw a body which he recognised as that of R. A. Crocker, lying on the floor of an upstairs room surrounded by a pool of blood. Deceased appeared to have been dead an hour or so. Witness examined the room and saw nothing to indicate any violence or struggle. The blood stains were only on the floor. Deceased had come there from Shanghai, where he was discharged from the ship *S. D. Carleton*, and arrived on the 26th inst. He had received \$82.71 from witness, the balance of wages due him from his last employment. He had at the same time signed the articles as second mate of the *Commander T. H. Allen*. He stated himself to be a citizen of New York, aged 49 years.

Dr. Stuart Eldridge deposed that at 9.20 that morning he saw in the upper front room in the Seamen's Mission the body of a man lying in a pool of blood. Upon examination he found an incision on the left side of neck, severing the great vessels, and quite sufficient to cause immediate death. Close by the man's right hand witness found an ordinary jack knife (produced) with which the wound was probably inflicted; there were no other injuries, but on the left leg just above the ankle, which was bandaged and showed signs of a recent sprain. All the indications were of suicide, probably effected from an hour to an hour and half before witness saw the body. The wound in the throat and neck had been made from left to right. Witness had made a more minute examination of the body at the mortuary, but had no reason to alter his original decision.

Captain Meriman, master of the ship *Commodore T. H. Allen*, deposed that he was acquainted with the deceased for about 7 years. He shipped him on Saturday last. Witness saw him on Tuesday night last. He was too drunk to get up the

ladder, and witness advised him to go ashore again.

Rev. W. T. Austin deposed that he first saw the deceased on Tuesday evening the 28th inst. He was then in the reading room at the Mission. He applied to witness to be allowed to sleep at the Mission. He said he was the mate of the *Commodore T. H. Allen*, and that he had no money, but that he had sprained his ankle by falling out of a jinrikisha. Witness had a boy show him into the dormitory, where he had his ankle bandaged. The next time witness saw him was on the evening of the 29th. It appeared that without witness' knowledge he had remained in the dormitory all that day. Witness went up to question him as to why he had not gone on board, as he said he had intended doing. He asked if he might remain there another night as he wished to get properly sobered up. Witness asked him if he had had any food, or needed any. He said no, he did not want any; he had had a glass of water and that was enough. Witness proposed to send him some food, but he said he could not eat any. That morning, a little before 9 witness' son came to him and told him the big man upstairs had committed suicide. Witness went up and examined deceased and found his forehead quite cold and no signs of life. Witness sent for Dr. Eldridge and the police and sent a note to the U. S. Consulate, asking for the marshal to come and make investigations. The last man came down from the room where deceased was at about a quarter to eight. On the night of the 29th deceased appeared quite rational and in full command of his intellect. Two men left the dormitory at a little after 7, and went to Tokyo. Witness did not think the act could have been committed until after the last man left the dormitory.

Ito Mitsuzumi, a boy employed at the Seamen's Mission, gave evidence as to going into the room where deceased was sleeping, at about 9 that morning, and found him dead.

Kojiri, another boy employed at the Mission, deposed that he first saw deceased that morning at 7.05. He was then alive and witness attended to him, covered him up with a blanket and brought him some water. There were no other persons in the room or in the adjoining room at that time, and he did not know whether any one entered the room afterwards. He had seen a knife on the chair where deceased had kept his glass of water, from 9 o'clock on the previous morning; the knife produced resembled the one he had seen. He first saw the body about 9.14 this morning; he went into the room to clean up and change the sheets, and saw deceased lying on the floor near the bed and a pool of blood round him.

Dr. Eldridge, recalled, said when he saw deceased he was lying on his right side, the right hand lying on the body and the knife within six inches. Witness was under the impression that deceased had inflicted the wound in a standing or sitting position, and had then fallen forward. The pool of blood was nearer the feet than the head.

The Court returned a verdict that deceased died at No. 82, Settlement, on the 30th Sept., and that the cause of death was a knife wound in the throat, self-inflicted, with suicidal intent.

LIGHTHOUSE ILLUMINATION IN JAPAN.

The Japanese Government, which pays great attention to the light of its coasts, not long ago commissioned Messrs. Sautter, Harlé & Co., of Paris, to supply the optical apparatus for a new lighthouse erected in the recently acquired Island of Formosa. With characteristic foresight and intelligence, the Japanese lighthouse authorities resolved to adopt the lightning flash (Feux-Éclairs) system, which has proved so successful on the French coasts that it is fast supplanting all the older lights, whether the illuminant be electricity, incandescent gas, or mineral oil.

The new Japanese light is installed in one of those high iron towers, not unlike that of Roches Douvres lighthouse in the Channel. These towers are erected on the Japanese coasts in a remarkable manner—namely, without cranes or lifting machinery of any kind, but simply by bamboo scaffolding and inclined planes. The optical apparatus of the Formosa light is of first order—i.e., 920 millimetres or 36.2 in. in focal length, the illuminant being petroleum, having the specific gravity of 0.8, and its flashing point at 35° Cent. The lamp is a six-wick burner, having a luminous intensity of about 500 standard candles, and consuming about 1.35 kilogrammes (3lb.) of mineral oil per hour, or 5.4 tons per annum of 4,000 lighting hours. In accordance with the fundamental principle of the lightning flash system the duration of the flashes emitted by

the apparatus is only one-tenth of a second—that is, the time strictly necessary for a complete impression on the retina of the observer. The flashes are emitted at the rate of one group of three flashes in each complete revolution of the apparatus, the interval or eclipse between two consecutive flashes being two seconds, and that between two consecutive groups, corresponding to the "dead" angle of 144°, being six seconds. To give this characteristic the apparatus has to perform one complete revolution in the short space of $2+2+6=10$ seconds, whereas first-order apparatus of the older type requires in some cases as much as 1-6 minutes, or ten times more. So great a rotary speed as ten seconds per revolution can, of course, only be obtained by means of the other essential principle of the lightning flash system—namely, by the apparatus rotating, not on the antiquated travelling carriage with conical or spherical rollers, which would cause excessive friction, but by means of a floating drum which carries the table and panels of the apparatus, and is plunged in a mercury bath, the energy absorbed by the friction of the liquid surface being practically nil. A further advantage of this mode of suspension is the ease with which the parts subjected to friction can be inspected; whereas in the case of a shaft revolving in bearings, inspection is necessarily much more troublesome. The system of the apparatus rotating by means of a floating drum in a mercury bath admits further of governing the rotary speed by means of clockwork with counterpoise instead of using more powerful but less suitable motors.

The photometrically tested intensity of the flashes of the Formosa first-order lightning flash oil light is equal to 154,000 standard candles, the luminous range being as much as seventy miles in clear, thirty-two in average, and fourteen miles in hazy weather. The range of seventy miles exceeds, of course, considerably the geographical range or direct visibility of the light, and applies, therefore, only to the glare or "sky illumination" produced by the flashes, and visible beyond the horizon. The luminous range in hazy weather refers to a state of the atmosphere in which, in Japanese waters, the unit test light of one-tenth of a standard candle (1-tenth of a *bec carcel*) is visible at a distance of three nautical miles, which practically corresponds to "hazy weather" in the Bay of Biscay, the atmospheric conditions of the two seas being therefore, similar.

A first-order apparatus of the old type, with slow rotation and long duration flashes, is composed of no less than sixteen panels instead of three or four, and while burning the same amount of petroleum the luminous power of its flashes is only 32,000 candles as against 154,000. The lightning flash system has, therefore, made it possible to reduce the number of panels to one-fifth of that of the old type, and to give, at the same time a five and six fold intensity of beam. Equally conspicuous is the advantage of a first-order lightning flash light like that of Formosa or Hourtin, or even of a third-order light of the same system like that of Porquierolles (Riviera) over hyper-radiant apparatus—e.g., that of Cape d'Antifer (between Iécamp and Havre).

The weight of the Formosa apparatus is as follows:—Revolving parts—viz., panels, table reflector, floating drum and pivot, 2.8 tons; fixed parts—viz., mercury tank, support, clockwork, &c., 3.3 tons; mercury, 0.23 tons—total, 6.33 tons. The total cost of the apparatus, including all accessories and lamps, was 47,000 francs or £1,680.

From the comparisons made above, it is abundantly clear that in giving preference to the lightning flash system the Japanese lighthouse authorities took a step in the right direction. They are, indeed, to be congratulated upon having decided to adopt, for the atmospheric conditions of their coasts, that scientifically beautiful mechanically perfect, and remarkably economical system of which the French coasts already possess so many brilliant and monumental examples in the optical apparatus supplied by Messrs. Sautter, Harlé, and Co. for the most powerful electric lights in existence, emitting short-duration (1-tenth of a second) flashes up to 25,000,000 and even 38,000,000 candle-power.—MR. C. S. Du Riche Prieller, M.A., in *Engineering*.

THE MAKING OF OATHS.

Oaths have played a prominent part in the administration of justice from the earliest times. In "the twilight of English law," when Trial by Ordeal was in vogue, they were even more plentiful in the courts than they are in the present age. A man who accused another of theft swore on the holy relics, "By the Lord I accuse not this man either for hatred, or for envy, or for unlawful lust of gain." This accusation was immediately fol-

lowed by a solemn oath on the part of the prisoner, who exclaimed, "By the Lord I am guiltless, both in deed and in counsel of this charge." If the twelve compurgators, who were summoned to testify to his character, then swore "By the Lord the oath is clean and unperjured which this man hath sworn," the prisoner was set free. If the compurgators, who were forefathers of our jurymen, were unable to express so favourable an opinion of the accused, the Creator was called upon to prove his guilt or innocence, and, if immersion was chosen as the ordeal, he was thrown into the water, to float if he were guilty, to sink if he were not. When "kissing the book" became a part of the ceremony of oath-taking has never been determined, though the final words of the present form of English oath, "So help me God," which are uttered as the witness raises the sacred volume to his lips, are known to have been in use since the days of Henry IV. There is reason for believing, however, that the practice did not prevail in courts of justice before the seventeenth century. Coke, in dealing with the administration of the oath, makes no reference to kissing the book. "It is called a corporal oath," he writes, "because the witness toucheth with his hand some part of the Holy Scriptures." Now, the kiss is regarded as the seal of the oath, and witnesses of the moral calibre of Rogue Riderhood deem themselves unsworn if they contrive to kiss their thumb instead of the book, and hold themselves free to tell anything but "the truth, the whole truth, and nothing but the truth."

"Thousands, careless of the damning sin,
Kiss the book's outside, who ne'er looked within."
How firm is the hold which this part of the ceremony has obtained upon the conscience of the community is shown by the fact that section 5 of the Oaths Act, 1888, remains almost a dead letter in the courts. This is the section by which kissing the book ceased to be an essential part of the ceremony of oath-taking. It runs:—"If any person to whom an oath is administered desires to swear with the uplifted hand, in the form and manner in which an oath is usually administered in Scotland he shall be permitted so to do, and the oath shall be administered to him in such form and manner without further question." It may be that the Scottish formula is too solemn even for the witnesses who hesitate to kiss the book on sanitary grounds. "I swear by Almighty God, and as I shall answer to God at the Great Day of Judgment, that I will tell the truth, the whole truth, and nothing but the truth." This is the oath that is supposed to be binding on the other side of the Tweed.

In the most Continental countries the practice of kissing the book is unknown, the ceremony of oath-taking being more akin to the Scottish than to the English form. A French witness has a very simple ordeal to pass through before unfolding his tale. The judge, seated beneath a crucifix, says, "You swear to tell the truth, the whole truth, and nothing but the truth," and the witness lifting up his right hand, answers, "I swear it." In Austria a Christian witness is sworn before a crucifix between two lighted candles, and, holding up his right hand, says, "I swear by God the Almighty and All Wise that I will speak the pure and full truth, and nothing but the truth in answer to anything I may be asked by the Court." Jewish witnesses, while using the same words, add to their solemnity by placing their hands on the page of a Bible on which is printed the Third Commandment. A Belgian witness swears to be veracious in these words, "I will speak the truth, the whole truth, and nothing but the truth, so help me God and all the saints." In Italy the form is much the same, but the use of the Bible imparts a greater degree of seriousness to it. "I swear to tell the truth, the whole truth, and nothing but the truth," exclaims the Italian witness, resting his hand upon an open Bible. The Spanish oath is more elaborate. The witness, kneeling on his right knee, places his hand on the sacred book, and, being asked by the judge, "Will you swear by God and by these holy Gospels to speak the truth to all you may be asked?" answers, "Yes, I swear." Thereupon the judge says, "Then, if thus you do, God will reward you, and if not, will require it of you." In some parts of the country the ceremony is different. The witness forms a cross by placing the middle of his thumb on the middle of his fore-finger, and kissing his thumb—a practice which would probably be familiar to some English witnesses—exclaims, "By this cross I swear." The most curious European oath is administered in Norway. The witness raises his thumb, his fore-finger, and his middle finger. These signify the Trinity, while the larger of the uplifted fingers is supposed to represent the soul of the witness, and the smaller to indicate his body. Before the oath is taken, a long

exhortation is delivered, the most material parts of which are as follows:—"Whatever person is so ungodly, corrupt, or hostile to himself as to swear a false oath, or not to keep the oath sworn, sins in such a manner as if he were to say, 'If I swear falsely, then may God the Father, God the Son, and God the Holy Ghost punish me, so that God the Father, who created me and all mankind in His image, and His fatherly goodness, grace, and mercy, may not profit me; but that I, as a perverse and obstinate transgressor and sinner, may be punished eternally in hell. . . . If I swear falsely, then may all I have and own in this world be cursed; cursed be my land, field, and meadow, so that I may never enjoy any fruit or yield from them; cursed be my cattle, my beasts, my sheep, so that after this day they may never thrive or benefit me, yea, cursed may I be and everything I possess.'" If the law's delay is among the grievances of the Norwegians, it would not be difficult to trace it to the "good mouthfilling oaths" that precede the real business of their courts.

For real picturesqueness in oath-taking, the courts of less civilised countries must be visited. Like the soldier in Jacques' familiar speech, they are "full of strange oaths." The people who have shown themselves to be most resourceful in the making of oaths are the Chinese. Slicing off a cock's head is one mode of impressing a Chinaman with the importance of telling the truth; breaking a saucer is another; blowing out a lighted candle is a third. The beheading of the cock is supposed to represent the fate of the liar; the cracking of the saucer and the extinguishing of the candle indicate what will happen to the soul of the witness who does not tell the truth. In Mahomedan countries every witness holds the Koran in front of him, and bends down until his forehead touches the sacred volume. The position of the body is of the utmost importance in most countries, but in none has superstition left the supreme conscientiousness that distinguished the Irish witness in the days of the Brehons. He took three separate oaths, the first standing, the second sitting, and the third lying, as these were the positions in which his life was spent. Many Indians are sworn on tigers' skins, in the belief that if they defile their lips with lies their bodies will become food for tigers, while others stand upon a lizard's skin, and ask that their bodies shall be covered with the scales of the lizards if they forswear themselves. The Burmese witness, who requests to be destroyed in no fewer than five different ways if he is guilty of perjury, is not content that the punishment should fall upon himself alone. He includes his relations. "Let us be subject," he prays, "to all the calamities that are within the body, and all that are without the body. May we be seized with madness, dumbness, deafness, leprosy, and hydrophobia. May we be struck with thunderbolts and lightning, and come to sudden death."—*The Globe*.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE AFGHAN FRONTIER.

London, Sept. 23.

Haddah Mullah, at the head of 5,000 men, attacked General Blood's force in camp, and continued the fighting for five hours. The British loss was two killed and nineteen wounded, Brigadier-General Wodehouse severely.

London, Sept. 28.

General Westmacott's brigade has destroyed Jorobe, the head-quarters of Haddah Mullah, whose forces are now disorganised.

It has been proposed in Sydney to despatch to India a detachment, one hundred strong, of the New South Wales Lancers. The scheme is approved by General French (Major-General G. M. French, C.M.G., R.A., Commanding the Military Forces in New South Wales), who also favours sending a body of the New South Wales Mounted Rifles, many of whom are volunteering for India.

THE TREATY OF PEACE.

London, Sept. 23.

The Sultan has ratified the preliminaries of peace.

The Greek Press, on learning the con-

ditions of peace, is furious, and demands the rejection of the scheme.

London, Sept. 24.
The popular excitement against the terms of peace is on the increase in Athens. Count Muravieff, Russian Minister for Foreign Affairs, has declared to the Greek Minister at St. Petersburg that the European concert considers its mission ended, and that any step taken by Greece against peace will be at its own risk.

London, Sept. 27.
The excitement in Greece, caused by the publication of the conditions of the treaty of peace with Turkey, is subsiding.
PRESIDENT KRUGER'S HEALTH.

London, Sept. 23.
The *Chronicle* states that President Kruger is suffering from Bright's disease, and that the malady is so far advanced that his physician opines that he can scarcely live more than eighteen months.

STONING BRITISH TROOPS.
A party of British soldiers have been stoned in the Egyptian village of Qualioub. Twenty-two arrests were made.

THE BANK OF ENGLAND.
London, Sept. 24.
A meeting of the banks belonging to the Clearing-house has discussed the Bank of England's policy, and decided to communicate with the Bank thereanent. It is understood that all the banks objected to the new policy of the Bank of England.

In its money article, the *Standard* regrets the mistaken expectations prevailing in the Bombay silver market owing to the Bank's action.

LOSS OF A GERMAN TORPEDO-BOAT.

A German torpedo-boat has foundered, and its Commander, Duke Frederick of Mecklenburg, with seven men, were drowned.

THE BANK OF ENGLAND.
London, Sept. 25.
A resolution was passed at a meeting of the Clearing-house bankers, and forwarded to the Bank of England, entirely disapproving of the proposed silver reserve.

A ROYAL CRUISE.
The *Times* announces that the Duke of York will hoist the broad pennant on board the first-class cruiser *Terrible* in April next, as Commodore of a squadron of three cruisers, for a cruise that will last twelve months, to visit the principal colonies.

London, Sept. 27.
The announcement by *The Times* that the Duke of York would take the *Terrible* and two other cruisers on a twelve months' cruise visiting the colonies is officially denied.

THE BEHRING SEA CONFERENCE.
It is stated that the British Government has notified the United States that England objects to participate in the Behring Sea Conference if Russia and Japan be represented thereat, on the ground that they have no *locus standi*.

London, Sept. 28.
England's objection to join the Behring Sea Conference if Russia and Japan are represented is confirmed.

ANOTHER DUEL.
A duel has taken place between the Austrian Premier (Count Badeni) and a German Nationalist Deputy. The Premier was wounded.

A DISPUTED TARIFF POINT SETTLED.

Washington, Sept. 24.
It has been decided that duty-free goods imported to the United States by way of Canada need not pay an additional tariff of 10 per cent. on crossing the frontier. Such goods shall be examined and certified at the American Consulate at Vancouver.

THE "FUJI."

Colombo, Sept. 25.
The *Fuji* arrived here to-day. She will leave for Singapore on the 2nd prox.

CHOLERA IN SINGAPORE.

Mr. Fujita, Japanese Consul at Singapore, has sent the following telegram to the Department of Foreign Affairs:—

Singapore, Sept. 25.
A cholera epidemic has broken out at this place, and there are about four new cases every day. The epidemic, however, shows no signs of spreading.

SILK PROSPECTS.

Japanese Consulate, Lyons, Sept. 25.
The silk market has become fairly brisk, and quotations have again advanced. The current prices of No. 1 Japanese filature range from 42½ to 43 francs, and there is a tendency to rise still higher.

BRITISH NAVAL MOVEMENTS.

(FROM OUR OWN CORRESPONDENT.)
Hakodate, Sept. 29, 7 a.m.
H.M.S. *Rattler* left here on the 27th, the *Alacrity* on the 28th, and the flagship *Centurion* and *Immortalité* this morning. The first three go to Port Lazareff; the *Immortalité* proceeds to Garabovitch Bay.

THE BRITISH NORTH BORNEO BRIGAD.

Singapore, Sept. 17, 11.30 a.m.
H.M.S. *Iphigenia* is leaving Singapore for Labuan, British North Borneo.

It is reported that a portion of her crew will join the punitive expedition being organised by the Government of British North Borneo against the Dyak chief Mat Salih, who raided Gaya some time ago and looted the Government treasury.

THE TRIPLE ALLIANCE.

Paris, Sept. 5.
At Hamburg, the Emperor William and King Humbert toasted each other, and spoke of the reality of the Triple Alliance and their earnest desire to maintain peace.

GENERAL LOCKHART.

General Sir W. Lockhart, who has been holidaying in Germany, has been suddenly recalled to India.

ANARCHISM.

Paris, Sept. 7.
The Spanish Council of War has condemned the anarchist Simpan, who fired at and wounded the Chief of Police at Barcelona, to forty years' hard labour. Simpan is only 27 years of age.

EGYPT.

Paris, Sept. 8.
The Arab tribes friendly to England have taken Berber.

SANGUINARY BATTLE IN THE PHILIPPINES.

Paris, Sept. 9.
It is reported from Manila that a sanguinary battle took place on Monday last at Alaga, which the Spanish troops captured. The rebel loss was very heavy. On the Spanish side only 1 officer and 9 men were killed.

THE KING OF SIAM IN FRANCE.

Paris, Sept. 13.
M. Méline has paid a visit to the King of Siam,

who has given him the assurance of friendly feeling towards France. The King visits the Fort of Vincennes to-day. He is an object of public curiosity wherever he appears.

Paris, Sept. 14.
M. Faure entertained the King of Siam to dinner in the Elysée. Cordial toasts were exchanged. M. Faure and the King will be present to-day at the review at St. Quentin which concludes the manoeuvres of the north.

FATAL EXPLOSION.

From Madras it is reported that about forty workmen were killed in an explosion at the mines on the Champion Reef.

BISMARCK'S OPINION ON THE FRANCO-RUSSIAN ALLIANCE.

London, Sept. 6.
Prince Bismarck in an interview says that he does not attach too much importance to the Franco-Russian alliance, but that now the French pot is moved nearer to the fire it will the more easily boil over.

(FROM THE JAPANESE PAPERS.)

LATE U.S. MINISTER TO KOREA.

Soul, Sept. 23.
Mr. Sill, ex-United States Minister to Korea left here to-day for Japan.

RAILWAY TUNNEL FALLS IN.

Shizuoka, Sept. 28.
The heavy rainfall of last night caused the Satta Tunnel to fall in and railway traffic between Okitsu and Kambara is interrupted.
SAILING VESSEL SUNK IN COLLISION.

Mito, Sept. 27.
The sailing vessel *Hanyei Maru*, owned by Mr. Wakae of Nihonbashi, Tokyo, sank in collision with a steamer off the coast of Kashima about 2.30 a.m. on the 23rd inst. The crew, four in all, were saved by a fishing boat.

JUNK RUN DOWN BY A STEAMER.

Hiroshima, Sept. 28.
The night before last the steamer *Hokumon Maru* collided with a junk near Takane island, Toyoda gun, and the junk sank, but all the crew were saved.

THE "YEN" IN KOREA.

Soul, Sept. 28.
A contract has been arranged between the First Bank (Japanese) and the Korean Finance Bureau to the effect that the Japanese one yen silver piece now in circulation in Korea shall be accepted in payment of customs duties upon a stamp being imprinted on its face.

THE "KING-EMPEROR" OF KOREA.

Soul, Sept. 28.
To-morrow the Korean people will offer the title of "Emperor" to the King of Korea, all the people taking a holiday in honour of the event.

Correct solutions received from W.H.S., D.D., and P.E.F.S.

ANSWERS TO CORRESPONDENTS.

G.M. (No. 2).—Thanks, have written.
J.H.T.—White could have won by losing a move and thereby gaining the "opposition."

PROBLEM NO. 340.
By Mrs. W. J. BAIRD.

White to play and mate in three moves.

THE QUEEN OF CHESS.

Mrs. W. J. Baird (Edith Helen Winter-Wood), was born in the year 1850, at Hareston, the family seat of the Woods, in Devonshire. She is, says L. Hoffer in the *Chess Monthly*, the only surviving daughter of T. Winter-Wood, lineal descendant of the Woods who possessed the Manor of Hareston from the reign of Edward III.

In 1880, Miss Winter-Wood married Deputy Inspector-General W. J. Baird M.D., R.N., and has an only daughter, Lilian, who has, from eight years of age, added a charm to many a leading chess column by means of her graceful little problems. Mrs. Baird was nurtured in a chess atmosphere, the whole of the Winter-Wood family being well versed in the mysteries of the royal game. In the year 1888, she was induced to try her hand at problem composing, with the result that a simple two-move composition with some attractive features was published in the *Illustrated Sporting and Dramatic News* of the 28th of January of that year.

Since that date we hardly need tell our readers that she has been a most prolific composer, having published upwards of 400 problems in 2, 3, 4, and 5 moves, in both direct and self-mates; only three of which have been found to contain second solutions. This is a feat which, we believe, has no parallel in the history of Chess problem composition; and is a quality which many a Chess editor will know how to appreciate, and welcome her name when attached to a problem.

Mrs. Baird has not frequently competed in problem tournaments; but when doing so, upwards of

twenty of her compositions have attained prizes or received distinctive notice in the leading competitions of the day. In the early part of her career she also competed in solution tournaments and came off with clean scores.

In the matter of difficulty, Mrs. Baird certainly ranks high; having several times come out as the composer of the most ingenious problem in the periodical list of the *Morning Post*.

Outside the sphere of Chess, Mrs. Baird has many accomplishments. At an early age she displayed great talent for pen and ink drawings, flower-painting, &c., and was no mean performer with the billiard cue. The last hobby she has taken up seems to be Archery, in which graceful pastime she has already made great progress.

In the midst of her achievements, however, she looks upon her volume of illuminations as the greatest. This she accomplished some years ago and it exists as an example of patience, skill and perseverance not, we believe, to be excelled in any boudoir of the United Kingdom.

The above problem has proved to be the most difficult three move that has appeared in the *Morning Post* since the records in the column were commenced in 1887.

Recently at the Scottish Chess Association meeting a game opened as follows:—White 1—P to K 4, P to Q 4; 2—P takes P, Q takes P. At this point White intended to play the usual 3—Q Kt to Q B 3, but inadvertently he played the Q Kt to Q Kt 3. This being an illegal move White was obliged to replace his Kt, and move his King; as his only move was K to K 2, Black mated by 3—Q to K 5!

The expenses of the match by cable between the legislators of the United States and Great Britain were over £450, exclusive of the £100 trophy.

Only three games remain to be decided No. 8 having been won by "Nemo," whose opponent resigned the game on the 19th move. The score stands now as follows:—

PLAYER.	WON.	LOST.
Pakela	2	—
Olymp	1	3½
Shepherd	1	3
Nemo	2	—
Fardel	1½	½

Very slow progress is being made in the two Telegraph Games (Nos. 4 and 10) owing to the continual break-down of the telegraph wires. Below we give the moves to date:—

METALS.

Nothing doing. Transport on most of the railways has been interrupted by damage to the lines from the heavy rains which have prevailed. Stocks are accumulating and dealers will do nothing till the block is removed.

Round and square 1/2 inch, and upward.	4.15 to 4.60
Iron Plates, assorted	4.40 to 4.50
Sheet Iron	6.20 to 6.50
Galvanized Iron sheets	10.00 to 10.50
Wire Nails, assorted	6.00 to 6.50
Fin Plates, per box	5.90 to 6.00
Pig Iron, No. 1	2.10 to 2.20
Hoop Iron (1/2 to 1 1/2 inch)	4.80 to 5.00

IRONWORK.

The tone of the market continues to improve

and a fair number of transactions have taken place at a slight advance in prices.

American	2.00 to 2.15
Russian	2.00 to 2.15
Langkat	—

SUGAR.

The market is quiet and stocks are gradually reducing, arrivals of all sorts of Brown having been only about 1,000 piculs, while sales amount to 14,600 piculs for the week. Prices generally have advanced about 10 cents per picul. In White refined a steady business has been done at former quotations.

Brown Takao	43.90 to 4.10
Brown Manila	4.20 to 4.90
Brown Daitong	3.20 to 3.35
Brown Canton	3.30 to 4.20
White Java and Penang	6.50 to 6.80
White Refined	7.30 to 8.90

EXPORTS.

RAW SILK.

A good daily business has been done during the week, mostly for America, at an increase in prices of from \$10 to \$20 per picul. Quotations for fine-sized Filatures are too high to tempt buyers for Europe. Settlements for the week amount to 2,155 piculs, more than half of which consisted of Filatures. Stock is estimated at 6,800 piculs.

QUOTATIONS.

TEA.

A small but steady business has been done during the past week, mostly in the lower grades. Sales amount to 186,000 catties, and stocks to about 6,000 piculs. It is anticipated by dealers that the total supply will be cleared off by the end of the year. Total settlements for the season to date amount to 198,600 piculs against 193,170 piculs at same time last year. Shipments since

last report have been 174,493 lbs. per China, and 479,440 lbs. per *Kinshiu Maru*, both on the 23rd September. Prices close firm.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomed to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, at 51, Main Street, Settlement, by ARTHUR HULLAY BROWN, of "The Colonies," No. 156, Bluff, Yokohama.—SATURDAY, OCTOBER 2, 1897.

YOKOHAMA: SATURDAY, OCT. 9TH, 1897.

BIRTHS.

On the 30th ult., at 17, Nakayamate-dori, 4-chome, Kobe, the wife of I. A. CHRISTENSEN, of a son.

At Shanghai, on the 20th September, the wife of A. NEUBOURG, of a daughter.

On the 25th Sept., at Shanghai, the wife of ARTHUR R. LEAKE, of a daughter.

At Shanghai, on the 24th Sept., the wife of J. W. H. BURGON, of a son.

On the steamer *Columbia* at sea between Kobe and Moji, Mrs. HUDSON of a daughter.

At Bahar Lodge, The Peak, Hongkong, on the 27th inst., the wife of Hon. W. MEIGH GOODMAN, Attorney-General, of a daughter.

At Kiukiang, on the 29th of September, 1897, the wife of JACOB K. KOFON LIND, of a son.

At Tientsin, on the 30th of September, Mrs. G. BAUR, of a son.

At Canton, on the 19th September, the wife of JAMES HOLLIDAY, of a son.

At the Hotel des Colonies, Shanghai, the wife of A. SEISSON, of a daughter.

At Matsumoto, Shinshu, on the 4th inst., the wife of the Reverend FRANCIS W. KENNEDY, of a son.

MARRIAGES.

On the 22nd September, at Shanghai, HARRY H. LUSTON of San Francisco, U.S.A., to HARRIET ELIZABETH, eldest daughter of the late W. R. FULLER of Chefoo, N.C.

On the 18th of August, at St. Stephen's Church, East Twickenham (England), CHARLES FURSMAN EFFORD (L.D.S.) Eng. (Dental Surgeon) only son of Capt. J. J. Efford, Yokohama, to LILLIAN ROSA, only daughter of the late Clarence M. Edenborough, Esq. (No Cards.) New York papers please copy.

DEATHS.

On the 20th September, Mr. EDMUND SHARP, late Crown Solicitor of Hongkong. (By telegram from England).

On the 20th September, at No. 39, Kerbau Road, Singapore, ANDINIA VIRGINIA, the beloved wife of A. G. DOUGLAS, of Hongkong.

At Canton, on the 30th of September, 1897, suddenly, WILLIAM, eldest son of the late Rev. William DE ST. CROIX, Vicar of Glynde, Sussex, aged 50 years.

SUMMARY OF NEWS.

A NEW Cabinet has been formed at Athens by M. Zaimis.

YELLOW fever is reported to be raging at New Orleans.

THE commencement of work on the new Osaka harbour has been fixed for the 17th inst.

COUNT MATSUKATA, Premier, is confined to his residence at Mita, Shiba, with rheumatism.

THE King of Korea has accepted the title of Emperor and is to be crowned on the 12th inst.

THE revised Treaty between Chili and Japan was signed at Washington on the 25th of September.

THE Spanish Cabinet has resigned and Senor Sagasta has been summoned to form a new Ministry.

By the explosion of a steam pipe on H.B.M. torpedo catcher *Thrasher* near Falmouth, four stokers were killed.

News from the Soudan expedition is to the effect that the whole of the Eastern tribes have renounced Mahdism.

A Fine Arts Exhibition will be opened from the 10th inst. at the exhibition building of the Japan Fine Arts Society at Ueno.

LT. GENERAL YAMAJI, Commander-in-Chief of the Western District, died on the 3rd inst. from the bursting of a blood vessel on the brain.

THE King of Siam has paid a visit to Paris and it is stated that the results, in connection with the relations between France and Siam, are very satisfactory.

A JUNK was sunk in collision with the N.Y.K. steamer *Shiganoura Maru* on the 2nd instant, and it is believed that several of the crew of the junk were drowned.

AN explosion of oxygen gas occurred at a photographer's studio in Yokohama on the 4th inst. by which seven persons, mostly children, were more or less severely injured.

THE Osaka Shosen Kaisha recently established a branch at Mokpo, Korea, and on the 4th inst. the Company's steamer *Chikugoyama Maru* left on her first trip there.

THE members of the Go-Ni Kai (a commercial association) in Tokyo, has under consideration the establishment of a Merchandise Museum in the capital at a cost yen 200,000.

AN accident occurred to a service train near Oyama on the Tokaido Railway on the 3rd instant by which five coolies and railway employes were killed on the spot and fourteen more badly injured.

THE total amount of Japanese silver yen and paper notes imported to Yokohama from the Straits Settlements and Shanghai, etc., to be

exchanged for gold, up to the 4th inst. was yen 2,015,000, of which yen 1,815,000 were silver and yen 200,000 notes.

FOREIGN postage rates from Japan have been doubled, and it is under consideration by the Government to raise domestic postal and telegraph rates 50 per cent., in order to obtain funds for extending telegraphic communications.

THE Captain and eight men of the sealing schooner *Golden Fleete*, owned in Yokohama, were lost from the schooner a few days ago near Commander Islands and were picked up by H.M.S. *Daphne* and taken to Hakodate.

OUT of 430 emigrants raised by the Hiroshima Kaigai Tokyo Kaisha (Hiroshima Emigration Company); 217 left Yokohama for Hawaii by the steamer *Belgie* on the 3rd inst. The remaining 212 will leave for Hawaii at the end of this month, together with another company of 500 emigrants.

THE 1st of October having been the first day for the exchange of silver yen into gold, the Bank of Japan at Tokyo is stated to have exchanged over yen 103,000 during the day, of which sum silver amounted to yen 3,000 only, all the rest being notes. The amount of exchange at the Yokohama Specie Bank on the 1st inst. reached yen 175,350.

THE establishment of the Komu-Sho (Industrial Department) seems to have been decided on, and will shortly be officially sanctioned. The Department when established will consist of the following sectional bureaux:—Civil Engineering Bureau in the Home Department; the Industrial Bureau in the Agricultural and Commercial Department; the Railway Bureau in the Communications Department and the Marine Bureau, etc.

THE Import market generally during the past week can scarcely be described as brisk, but still business is beginning to look up a little after several months of depression. Manchester has only participated in the improvement to a limited extent. Shirts are a drug on the market and fancy cottons and woollens are in little better favour, though a small business has been done. Yarns have looked up considerably, partly, no doubt, owing to the temporary suspension of work by several of the Japanese spinning companies due to the high price of raw material and labour. A good business has been done at slightly reduced quotations, but the market is firmer at the close. In metals there has been a little bit of a boom, consequent, to some extent doubtless, to the firm if not rising tone of the home markets. Bar and galvanized iron have been the principal lines dealt in, and in these some very considerable transactions have occurred. In kerosene the market is firm, in spite of rather heavy arrivals, and a fair business has been done at a slight rise in prices. The sugar market has been fairly brisk, and sales have slightly exceeded arrivals, rates being well maintained. In the Export market a good business has continued in raw silk, and there has been quite a boom in waste. Holders are firm in their demands and are probably justified in their position by the report as to the European crop, and it is generally allowed that for growers and native dealers in Japan this season will be the best on record; not for the amount of the crop, but for the profits made. The sales of tea are gradually decreasing; but so also is the stock, and producers and dealers have nothing to complain of. The principal demand at present is for medium and good medium grades at from \$23 to \$25 per picul. Exchange closes firm at 28.07½ demand.

SPIRIT OF THE VERNACULAR PRESS.

Year by year, as the time for the assembly of the Diet approaches, rumour busies itself with exaggerated statements about the Budget and speculations about the policy that the Cabinet will adopt to make the revenue suffice for the expenditures. In former days, no such questions troubled men's mind. On the contrary, the great problem that presented itself for solution in each session of the Diet was how to spend the surplus revenue lying in the Treasury's vaults, and how to contrive such a reduction of official salaries and administrative outlays as would warrant a substantial decrease of the Land Tax. But the war with China changed all that. The extensive programme of post-bellum measures to which the nation pledged itself effectually dispelled any hope of cutting down the Land Tax, and the question of the day thenceforth became, how to find money. Never before did the public show so much anxiety on the subject as it shows now. Not that the difficulty of establishing equilibrium between the revenue and the expenditure has assumed alarming proportions, but the people begin to doubt whether there is to be any finality in the series of leaps and bounds by which the outlays of the State are growing. The scheme mapped out by the Ito Cabinet and presented to the Diet in its ninth session (1895-6) showed an extraordinary development of expenditure, but was endorsed by the country as an exceptional and finite measure undertaken for a special purpose. People imagined, in short, that they were then in a position to gauge the limits of their post-bellum liabilities and that, the great programme of *Sengo Keiyi* once disposed of, the nation would revert to its wonted condition of financial ease. But that expectation has been rudely disappointed. On the top of the big increases of expenditure shown by the Budgets of the past two years, comes an unlooked-for addition of from 20 to 30 million yen for the fiscal year 1898-9. No one can be surprised that the intelligence has given rise to much discussion. It seems, however, that the impatience of the Government's critics is greatly augmented by the impossibility of discovering what plan the Cabinet contemplates for raising the required revenue. Possibly the Ministers of State are themselves undecided. There is no reason, indeed, for any precipitate decision. But it may be that they are purposely keeping their own counsel so as to avert the hostile and inconvenient discussion that would inevitably follow any declaration of policy. A long article in the *Nichi Nichi Shimbun* is evidently inspired by a sense of exasperation at the Cabinet's "aloofness" and nonchalance. It is true that no distinct charge of that nature is formulated, but our contemporary takes for its text a statement attributed by rumour to Count Matsukata that if the revenue now accruing is not sufficient, the responsibility of providing a larger revenue will devolve on the people, and endeavours to show that a financial Minister guided by such a doctrine is not likely to observe the degree of discretion demanded by the occasion. No wonder that, where a magnificent mood of that kind exists, the sometime loud talk about cutting down administrative expenditures and reforming the Administration has proved to be mere talk. The administrative Reform Commission, after sitting for a year, has effected absolutely nothing, and now its personnel has undergone a radical alteration. People not unreasonably ask why the original members were appointed if they were not fit for the task, and why, if they were not fit, it took a year to discover their unfitness. People further ask what is meant by reconstructing the Commission with materials such as those recently drafted into it—parly politicians without any knowledge of administrative affairs or any experience of the working of officialdom. Is it to outsiders of that kind that recourse must be had for a scheme of administrative reform? If so, the incompetence of those hitherto entrusted with the management of the country's affairs must be indeed hopeless. Another matter of surprise is

the exclusion of Army and Navy representatives from the Commission. Many critics think that the reform of the military and naval sections of the Government ought to precede the reform of all the other sections, and every one concludes that when the Commission was originally organized the inclusion of Army and Navy representatives among its members demonstrated the Cabinet's belief that reforms were needed in these departments. But now, the Cabinet's views seem to have undergone a radical change, for the representatives of the Army and Navy have been excluded. It is an undeniable fact that the Commission has proved a fiasco, and yet the one person primarily responsible for its failure, namely, the President, Count Okuma, retains his old position of President. There is no hope that the Diet will condemn the strange vacillations or properly scrutinize the financial policy of the Cabinet. The majority in the Lower House are mere creatures of the Government—deaf and blind mutes so far as any effective criticism is concerned. Thus, on the whole, the *Nichi Nichi* finds the situation very disquieting.

* * *
A similar feeling of impatience is displayed by the *Fiji Shimpō*, but on broader grounds. That journal declares that the nation is weary of the trimming and temporizing of the Cabinet. In every-day life a man must not cling closely to the same routine. If he wishes to be sound in mind and in body, he must from time to time, seek change of air, of scenery and of pastimes. The effort may involve some sacrifices but its results are amply compensatory. The same rule applies to the career of a Government. It may truly be said of Japanese statesmen that during the past twenty years they have been treading uniformly in the same groove. Whatever changes they have made, find their parallel in the conduct of a householder who, from week to week, makes some slight alteration in the alcove ornaments of his guest chamber or some fresh arrangement of the chairs and tables, but leaves the room itself exactly as it was. When the present Cabinet came into power, the air was full of large promises. There was to be radical administrative reform; there was to be complete freedom of speech; the people at large were to be invited to assist in the management of State affairs. It can not be denied that some portion of the great expectations founded on those promises have been realized. Freedom of speech has been immensely extended by abolishing the Administration's power of arbitrarily suspending a newspaper, and a certain effort has been made to infuse new blood into the veins of officialdom. But there is no sign of any radical administrative reform. Evidently the nation is to be again put off with a mere shifting of the old scenes and re-shuffling of the familiar cards. The *Fiji* writes at considerable length upon this subject, and concludes by calling on the Government not to be hampered by petty considerations but to strike out a bold and thorough programme; to undertake a radical clearing away of the dust and cobwebs that have accumulated during the lapse of time, and to let the new year's sun dawn upon a genuinely purified and properly garnished house.

* * *
The *Nippon* takes virtually the same line. It contends that the object of reform at present should be destructive rather than constructive; that to demolish existing evils is the prime need of the hour, rather than to build up new systems. From whatever direction the doings of the Administration are viewed, the prospect is most unsatisfactory. Even in Tokyo, the capital of the empire and the seat of the Government, abuses abound; yet the administration seems powerless to correct them. The state of the streets is disgraceful; the completion of the water works is unaccountably delayed; the work of harbour construction is not even commenced; the means of communication show no signs of progress; the special system of local administration works most unsatisfactorily; the police are political instruments rather than guardians of public peace; the governor

is always a Choshu man; the chief of Police, a native of Satsuma. If the Cabinet has not the ability or the courage to amend abuses flagrantly apparent in Tokyo, may not still greater incompetence be inferred in provincial localities? The Ito Cabinet mapped out an extensive programme of *post bellum* reforms. It was an excellent programme on paper, and the country readily consented to supply funds for carrying it into practice. What are the actual results? Where are the barracks that should have been built; the docks that should have been constructed; the forts that should have been erected? Instead of material achievement on the desired lines, the nation sees larger sums of money accumulating in the Treasury—the money that should have been devoted to these various enterprises, but has simply been withdrawn from circulation and rendered temporarily useless. The plan is not in fault: the blame rests on the men entrusted with the duty of carrying it out. Again, the Ito Cabinet drew up an administrative scheme for Formosa, establishing a civil government, placing a Governor-General at the head of everything, and appropriating a considerable sum for purposes of improvements such as should develop the island's resources. But in practice the military worked on their own account; the Colonization Department interfered in civil affairs; the Governor-General was reduced to a figure-head; the improvements could not be undertaken on account of the unsettled state of the people, and the appropriations had to be spent, for the most part, in reporting or quelling local disturbances. Further, the Matsukata Cabinet itself went to work as if it contemplated thorough administrative reforms; appointed an imposing Commission for purposes of preliminary investigation. But, after a year's labour, the Commission proved a complete fiasco. It has now been reconstructed, and set to its task once more, but who will venture to predict that, twelve months hence, its labours will not be found as abortive as those of its predecessor? A certain measure of progress has been attained in *post-bellum* undertakings, but have steps been taken to develop the machinery of communication—railways, posts and telegraphs—so that it shall not fall behind the advance made in other directions? The truth is that everything is choked with the weeds of evil habits. Schemes of reform are useless unless the men engaged to carry them out are themselves imbued with the spirit of reform; and appropriations for this or that programme of development can only be wasted or left unapplied so long as the officials that have to use them see in them nothing but new opportunities for practising old abuses. The upshot of it all is that what the country wants most urgently is to have the weeds pulled up rather than new trees planted.

* * *
In the *Mainichi Shimbun* we find an article signed "Iakashi" which embodies a violent attack upon Marquis Ito's followers. The writer says that these men do not concern themselves at all about the interests of the country, but think only of securing the emoluments and honours of office for themselves. When Marquis Ito resigned the premiership, they were constrained to follow him into private life, but they have ever since been scheming to recover the sweets of office. Their present plan is to agitate for a coalition Cabinet. The country has had enough of coalition Cabinets. It does not look back with any marked satisfaction to the Okubo Kido-Itagaki Cabinet of 1872, or to the Ito-Okuma-Goto Cabinet of 1880. It recognises that the so-called *Meiji* statesmen merit the veneration belonging to antiquaries, but that to make any new combination of them would be mere romance. Such a proceeding could have no issue except the restoration of clan power, the establishment of the Sat-Chō clique, a result that the public can scarcely be expected to consider useful or desirable.

* * *
The *Yomiuri Shimbun* devotes two long articles to demonstrating that Japan is entitled to take part in the Washington conference for the preservation of marine animals. It will be

remembered that a recent telegram represents the British Government as having objected to the admission of either Russia and Japan to the conference, on the ground that they have no *locus standi*. The telegram is probably a mistake. When Mr. Foster was despatched by the United States Government to secure the cooperation of Great Britain and Russia, he visited St. Petersburg first, and went on to London after having obtained Russia's promise to take part in the conference. England was, therefore, well acquainted with the fact that an invitation had been extended to Russia and accepted by her, so that the idea of an objection's being raised now on the very eve of the conference is impossible to comprehend. The *Yomiuri*, however, has sufficient faith in the telegram to consider Great Britain's alleged attitude worthy of detailed refutation. We seem to detect, indeed, on perusing the articles, that they are addressed to Japanese objectors as much as to Great Britain's supposed protest, but their avowed text is Reuter's telegram. Considering that fur seals have a breeding ground on three of the Kurile islands—Mushiru, Raikoma and Suretoneba—and considering that the Behring Sea seals visit Japan's coasts, coming as far south as Kinkazan, it appears quite unnecessary to discuss the untenable assertion that she is not directly interested in the question which the Conference has to consider. If pelagic sealing threatens to exterminate the Behring Sea seals it must be equally fatal to the seals frequenting Japan's coasts and having rookeries on her islands. At present, she is powerless to restrain the pelagic sealing carried on by American, British and Russian vessels in the neighbouring seas, but if the Conference comes to an understanding, she will acquire the necessary competence. With regard to the contention that, owing to the fact of only four Powers taking part in the Conference, the results may prove practically abortive, since vessels flying the flags of other Powers will not be bound by any agreement formulated at the Conference, the *Yomiuri* alleges that the only persons engaged in pelagic sealing are Englishmen, Russians and Americans, so that, if their operations can be subjected to control, the desired object will be attained.

FINANCIAL MATTERS.

Japan having become a gold standard country on the 1st October, it becomes necessary, remarks the *Shogyo*, that information should be published regarding the amount of specie reserves held by the Bank of Japan. These consist of gold coins and bullion, deposits of the Indemnity from the Government, and new gold coins obtained by exchange for the silver in its possession. Below is a table showing details:—

1.—Coins and bullion held on 29th September.	
Gold coins	35,311,600
Gold bullion	295,693
Chinese gold bullion	190,000
American gold coins	1,046,200
English gold coins	77,800
Broken old gold coins	205,000
Miscellaneous gold	294,400

Total 37,423,693

It may therefore be perceived that gold coins and bullion actually held by the Bank of Japan amounts to 37,400,000 *yen* approximately. This figure, however, is to be increased by a further exchange of silver for gold and by the settlement of the indemnity accounts.

2.—Gold to be obtained by liquidation of Government deposits:—Fifty millions of *yen* deposited by the Government on account of the indemnity having been reduced on the 18th ult. to 34,133,522 *yen*, while 1,262,929 *yen* was paid to the Government by the 29th, a balance not exceeding 14,594,549 *yen* was left, which amount was included in the specie reserves of the Bank, thus aggregating 52,018,242 *yen*. Gold coins to that amount, therefore, are shortly to be taken into the Bank's vaults.

3.—New gold coins procurable by exchange for silver in the Bank's possession:—Silver coins and bullion actually in the hands of the Bank are:—

	Yen.
Coins	18,993,203
Bullion	26,130,285

Total 45,123,438

Thus the Bank holding 18,993,203 *yen* in silver, has another resource besides gold. The gold reserve of the Bank then will be as follows:—

	Yen.
(1)	37,423,693
(2)	14,594,549
(3)	18,993,203

Total 71,011,445

As the Bank of Japan is entitled to hold silver to the extent of one-third of the gold coins in its possession, the total specie reserve will be:—

	Yen.
Gold	71,011,445
Silver ($\frac{1}{3}$ of gold)	23,670,482

Total 94,682,927

Moreover, the Bank lately applied to the Government that the silver bullion in its vaults, amounting to 26 millions of *yen*, should be received in place of *yen* pieces for conversion into gold. If this request is granted, the Bank's reserve will stand thus:—

	Yen.
(1)	37,423,693
(2)	14,594,549
(3)	26,130,235

Total 78,148,477

Silver ($\frac{1}{3}$ of above) 26,049,492

Grand total 104,197,969

It is said that gold bullion in the Government's possession amounted originally to 55,600,000 *yen* (deposits excepted), of which 48 millions were sent to the Osaka Mint, where 43 millions were appropriated for the manufacture of 20 *yen* and 10 *yen* gold pieces, the remaining 5 million *yen* having still to be coined. The balance on the whole—7,600,000 *yen*—is actually held by the Government in the shape of bullion. If this figure is added to the various amounts mentioned above the account really stands thus:—

	Yen.
Coins actually held by the Bank of Japan	37,423,693
Amount receivable on account of indemnity	14,594,549
New gold coins struck	43,000,000
Gold bullion under coinage	5,000,000
Bullion	7,600,000

Total 107,611,242

The gold reserve is thus more than sufficient.

As shown above, 43 million *yen* out of the 48 millions of bullion forwarded to the Osaka Mint having already been coined, and 10 millions of new coins were lately sent to the central Treasury, while 5 or 6 millions were transported to Yokohama, Kobe, Shimonoseki, Hakodate, and Nagoya. Another 5 millions are at present being coined, and there still remain 7,600,000 *yen* in bullion, which, together with other bullion, is expected to be coined to the amount of 27 million *yen* by March next. The total output therefore at that time will aggregate about 70 millions of *yen*.

According to the *Shogyo*, the issue of convertible notes above the legal limit on the 29th ult. shows a considerable increase over the previous week. The following are the figures:—

	Sept. 29th.	Sept. 25th.
Convertible notes	195,026,435	189,515,113
Excess of issue	20,366,334	13,634,261

Thus the actual issue on the 29th September shows an increase of 5,551,322 *yen* in convertible notes and of 6,733,073 *yen* in excess, as compared with the previous week. That the legal limit was exceeded to such an enormous amount

during the past week might be ascribed to the increased demand for capital. But the direct cause seems to have been the repayment of Government deposits to the amount of 7,500,000 *yen*.

The delivery of shares in September amounted, says the *Mainichi*, to 18,000 in number, valued at 980,000 *yen*. This is the most insignificant amount that changed hands this year. The principal stocks were as follow:—

	Number.	Value.	Per share.
		Yen.	Yen.
Railway shares	9,840	541,850	55.065
Miscellaneous shares..	9,103	438,393	48.19
Totals	18,940	980,243	av. 51.74

The *Tokyo Asahi* publishes a comparative table showing the quantity of mail matter dealt with during the past two years:—

Classification.	29th Year.		28th Year.
	Ordinary.	Regist'd.	
Letters	292,351,532	4,510,854	296,839,485
Post cards	268,803,315	0 448	268,807,761
Newspapers and magazines	86,801,875	1,465	86,803,337
Books	5,617,114	14,521	6,431,735
Samples	727,351	23,200	710,452
Agricultural seeds ..	370,839	1,879	379,728
Containing money ..	408	408	297
Postage free	18,605,357	665,630	20,700,980
Total	498,135,721	5,223,801	503,359,688
N'ber of deliveries ..	481,999,916	5,360,600	487,200,516

GOLD EXCHANGES ON THE 1ST AND 2ND INST.

The quantity of gold paid out by the Bank of Japan on the 2nd inst. to persons presenting silver *yen* or convertible notes was as follows:—

	Yen.
Convertible notes	63,740
Silver <i>yen</i>	4,840

68,580

It must be remembered that the 2nd inst. was Saturday, and that the Bank closed at noon. The payments made on the 1st inst. at the Bank and its various agencies were as follow:—

	YEN.
Tokyo	103,290
Osaka	311,700
Yokohama	175,340
Kobe	340,000
Nagoya	6,965
Baku	2,120
Hokkaido	3,250

Total 942,665

Total on both days.....1,011,245

These figures certainly do not suggest any very formidable demand for gold. It is, of course, too soon to form any definite opinion, but thus far the expected inflow of silver *yen* from China and elsewhere gives no sign of becoming a reality.

DISASTROUS EXPLOSION OF GAS.

On Monday evening, while a son of Mr. Kusakabe, a photographer of Honcho-dori, Yokohama, and an assistant named Tsuruoka Hatsuzo were making some oxygen gas, for a magic lantern show in one of the rooms of the studio, the gas suddenly exploded with terrific violence. A number of young people were in the room at the time, waiting for the lantern display and nearly all of them were more or less seriously injured. The wife of Taro, Mr. Kusakabe's son, was badly wounded in the lower part of the face. A girl of nine, Miss Ogawa Tana, and her brother Yoshio, seven years old, had their arms almost blown off. Nakagome Masashige, an employé of the studio, was injured in the head, Miss Akao Tei, aged 13, and her brother, in the legs. Taro and Tsuruoka, the two young men who were making the gas, escaped without injury, excepting the loss of their hearing, probably temporary. The injured persons were promptly sent to hospital or in some cases to the nearest doctor's. The furniture, ceiling and walls of the room were badly shattered.

THE GOLD CURRENCY.

The proceedings of the Bank of Japan at the present juncture are watched with considerable interest. When the gold system went into operation, the Bank held 18 million *yen* in silver coin and 26 millions in silver bullion. Many people imagined that it would at once take steps to convert the whole into gold, and that by so doing would cause some embarrassment to the Treasury. We do not clearly perceive why such an apprehension should have been entertained; for, in the first place, it seems most unlikely that the Bank would adopt any programme of the kind without the Treasury's endorsement, and, in the second, the Treasury is under no obligation to give gold in exchange for silver bullion. It has pledged itself to change silver *yen* pieces for gold, but of course it need not buy silver ingots unless it pleases. However, the *Fiji Shimpō*, which certainly ought to be trustworthy, alleges that, since the Treasury would have been inconvenienced had the Bank applied for gold to the full extent of its silver reserves, the Bank has adopted a medium course, and has changed into gold coins 10 million silver *yen* pieces and 16 million *yen* worth of bullion only, making 26 million *yen* in all. Our contemporary goes on to say that as the Bank already possessed gold reserves to the amount of 37½ million *yen*, and 14½ millions on the system of mutual deposit, its total stock of gold is now 78 million *yen*. The law allows it to hold silver to the extent of one-fourth of its note-redeeming reserves, but the strong probability is that, like the Bank of England—which, though legally entitled to have one-fifth of its reserves in silver, keeps no silver at all—the Bank of Japan will convert all its silver into gold with the utmost expedition. We do not, for our own part, perceive that much interest attaches to any transactions of the above nature between the Treasury and the Bank. In whatever proportions they divide between them the stock of available gold and silver, the stability of the new currency is not practically affected. If the Bank contemplated the sale of 20 or 30 million *yen* worth of its silver reserve in the open market, the matter would deserve the attention of all persons interested in the gold-price of silver, but for the rest it matters little whether the country's reserves of hard metal are lying at the Treasury or in the Bank's strong room.

The *Fiji Shimpō* thinks it possible, if not probable, that the Government may ask the Diet to change, from five years to three months, the period originally fixed for the withdrawal of silver *yen* and their conversion into gold. The three months would, of course, be reckoned from the day when silver *yen* cease to be legal tender, namely, April 1st, 1898. If that plan were adopted, it would be necessary that all holders of silver *yen* pieces should present them for exchange before July 1st 1898, since, after the latter date, they would possess bullion value only. Arguing on that assumption, the *Fiji* predicts that the Bank of Japan will take steps to convert all its silver bullion into gold before next July. We venture to doubt that any such precipitate action will be taken. It will pay the Bank better to hold its silver on the chance of a rise and with the certainty that, sooner or later, it

can be sold to the Treasury for purposes of subsidiary coinage.

With reference to the question of silver *yen*, we observe that one of our local contemporaries has fallen into an error too serious to be left unnoticed. In connexion with the Imperial Ordinance issued on the 1st instant, the paper in question says:—"In terms of the Coinage Law passed by the Diet last session the *yen* will be exchangeable for gold until April 2nd 1898." The Coinage Law fixes no date of the kind. It merely says that, pending exchange, silver *yen* shall circulate as hitherto; that six months' notice must be given before suspending their circulation, and that, during a period of five years, commencing from the suspension of circulation, the coins shall be exchanged for gold if presented for that purpose. The Imperial Ordinance issued on the 1st instant has given the six months notice required by law: that is all. Hence, the situation now is that up to April 1st, 1898, silver *yen* are legal tender in Japan to an unlimited amount, and that, up to April 1st, 1903, they are exchangeable for gold if presented at the Bank of Japan, its branches, or other agents appointed for the purpose.

FINALLY THE HAKODATE CASE.

All the arguments advanced by our opponents in the Hakodate case have now been effectually disposed of. We do not mean simply that, in our opinion, they have been disposed of. We mean that the bases upon which the most important of them rested have been admitted by our opponents themselves to be either blunders or wrong suppositions. There, then, the matter ends. The invective stage has been reached by the discomfited controversialists, and we leave them in undisturbed possession of it. One point, however, must be made clear "for purposes of future reference" as statisticians say. The *Japan Gazette*, with agreeable ingenuity, sums up the case thus:—"We contended that the Japanese had no jurisdiction over the crew of a British warship ashore; the *Mail* contended that they had." That is not without adroitness, but it will not pass. The *Mail* made no such contention. The *Mail*'s contention is strictly limited to such members of the crew as are not British subjects. The *Mail* says that the Conventional jurisdiction possessed by Great Britain in Japan extends to her own subjects only, and that in order to make it valid as regards the *Centurion*'s Chinese cooks, the latter must be shown to be British subjects. We do not propose to have our position so very flagrantly perverted as the *Japan Gazette* perverts it.

To sum up the matter simply and succinctly:—Great Britain's claim of jurisdiction over the Chinese cooks can be justified in one of three ways only, namely, by the provisions of the Treaty, by the sanction of usage, or by the right of superior civilization. The Treaty fails: it refers to British subjects alone. Usage fails, for Japan has never admitted any such usage. There remains only superior civilization, and, in truth, such claims of jurisdiction have but one logical and intelligible basis, superior civilization. Now we fully agree that where a country like China is concerned, the right of superior civilization should be exercised.

The *Esaki* precedent falls under that principle. We also agree that the right of superior civilization in matters of criminal jurisdiction would have been properly exercised against Japan twenty-five years ago. But we deny that it can be properly exercised any longer. That is our position in the shortest compass.

THE SILVER YEN.

The following Imperial Rescript was issued on the morning of the 1st inst.:—

We hereby authorize the suspension of the circulation of the silver *yen*, and direct that the same be promulgated.

[Imperial Sign Manual.]
&c., &c.

IMPERIAL NOTIFICATION No. 338.

The circulation of the one-*yen* coin hitherto issued shall be suspended from the 1st day of the 4th month of the 31st year of *Meiji* (1st April, 1898).

(Signed) Minister of State for Finance.
&c., &c.

The issue of the above Ordinance does not indicate any change in the programme fixed by the Coinage Law passed in the last session of the Diet. The 16th Article of that Law says:—

The silver one-*yen* coins already issued shall be gradually exchanged for gold coins, according to the convenience of the Government, at the rate of one gold *yen* for one silver *yen*.

Pending the completion of the exchange referred to in the last paragraph, silver one-*yen* coins shall be legal tender to an unlimited extent, at the rate of one silver *yen* for one gold *yen*; and the suspension of their circulation shall be notified six months in advance by Imperial Ordinance. Any of these coins not presented for exchange within a period of five full years reckoned from the day after that on which their circulation is suspended, shall be regarded thenceforth as bullion.

Combining the Ordinance issued yesterday with the clause here quoted, it is seen that silver *yen* remain legal tender until April 1st, 1898, but that they will be exchangeable for gold, *yen* for *yen*, until April 2nd, 1903.

We may here allude to a point which has always seemed very perplexing, though its practical importance may not be great; namely, the singularly careless drafting of the second clause of the 16th article of the Coinage Law, as quoted above. The clause sets out by declaring that the silver *yen* piece shall remain legal tender to an unlimited extent until its exchange for gold is completed, and then goes on to say that the exchange shall not be considered to have been completed until five years after the coin has lost its legal-tender quality. This obvious contradiction appears to have escaped the attention of the drafters of the Law.

In practice, the circulation of silver *yen* is tolerably sure to cease at once. For though the coin is legal tender, there is a distinct risk connected with receiving it, inasmuch as any defacement will justify the Treasury in refusing to exchange it for a gold coin of corresponding denomination. So far as we know, no exact definition of defacement for purposes of exchange has been published. The 13th article of the Coinage Law says:—

If the design upon a coin has become difficult to distinguish, or if it has been privately restamped, or otherwise defaced, it shall be regarded as unfit for circulation.

What constitutes "otherwise defaced"?

We can not tell. Our assumption is that the Bank of Japan will be disposed to take a liberal view of the matter, but people are not likely to rely upon assumptions where a loss of 12 or 15 per cent. is involved in assuming wrongly. It is at all events certain that no one can be safe in receiving any large quantity of silver *yen* without most careful shroffing, and as private individuals and tradesmen in general have no means of shroffing, we anticipate that silver *yen* will find much difficulty in circulating, even during the six months of legal life that remain to them.

MILITARY AND NAVAL.

The *Fiji Shimpō* says that the line-of-battleship ordered by the Japanese Government from the Clyde yard will be completed by November of next year, and that her displacement will be 15,040 tons. The latter fact was, of course, already known, but we were not aware that so much celebrity could be hoped for.

The navigation of these big vessels is undoubtedly a very severe test of Japanese seamanship. We have not seen any comment made on the subject, but, after all, when a man who has never been in charge of anything larger than a 4,000 ton vessel, is suddenly required to command a fifteen-thousand tonner, he must be a remarkably capable officer or disaster is inevitable. In the British Navy the captain of a big iron-clad, the commander, the navigating officers, all the superior officers, in fact, have become thoroughly familiar with the management of these monsters before they are called on to perform responsible duties in connexion with them. But it is not so in the Japanese Navy. Four or five officers in the whole service may have had some practical experience of line-of-battle ships while completing their studies in Europe, but, on the whole, we may say that the Japanese are now obliged to undertake a task of absolutely unprecedented difficulty so far as the handling of big ships is concerned. We wonder how they will acquit themselves. If they succeed, it will be a great feather in their cap.

It used to be asserted, writes the *Hochs Shimbun*, that the General officers of the Army were all of either Choshu or Satsuma extraction. But since the post-bellum programme of military expansion began to be carried out, that state of affairs has gradually undergone alteration. The numbers of Generals—Generals, Lieut.-Generals and Major-Generals—divided according to prefectures, stand as follow:—

Yamaguchi (Choshu)	20
Kagoshima (Satsuma)	11
Shizuoka	5
Ishikawa	4
Wakayama	3
Other Prefectures	17

MR. McCABLE'S LETTER.

Concerning Mr. McCaleb's criticism of our recent remarks, it does not appear to us that any lengthy rejoinder is required. Mr. McCaleb departs from the most elementary rule of fair discussion. It is not permissible that he should separate his original assertion of heavenly citizenship from the context in which it was made, and thus transform it into a mere abstract proposition. We are not so curiously illogical as to pretend that any man claiming to be a

citizen of heaven renounces, by implication, all citizenship upon earth. But we do say that when a man refuses to take part in an essentially national celebration which all his fellow-citizens, the world over, make a patriotic point of observing, and when he assigns, as one reason for his refusal, the fact that his citizenship is in heaven, a reasonable doubt is suggested as to the light in which he regards his earthly citizenship. It is unnecessary, we are persuaded, to do more than remind Mr. McCaleb that unless the texts quoted by him on his post-card were intended to be entirely irrelevant to their context, they can not afterwards be discussed independently of that context. To one other point, a most important point, we are constrained to allude. Mr. McCaleb says that when the United States Minister asked him to furnish "some affirmation or other evidence of citizenship," he "complied with the request and removed every doubt." Unfortunately that statement is irreconcilable with the facts as ascertained by us. The United States Minister prepared for Mr. McCaleb's signature a form of affirmation entirely free from any semblance of oath, since Mr. McCaleb objected to swear. Mr. McCaleb signed the affirmation on the 1st of July, but, on August 2nd, cancelled his signature, declaring in the most emphatic terms that, in the interval, he had become convinced of the impropriety of signing. Had we not, by personal inquiry, assured ourselves of these facts, we should not have ventured to pronounce any opinion on the question. Being assured of them, however, we are at a loss to understand how Mr. McCaleb can now allege that he "complied with the Minister's request and removed every doubt." Such a conflict between facts and statements must be attributed, we presume, to Mr. McCaleb's having completely forgotten the most memorable incident of the whole affair. Appreciating, as we think that we appreciate, the difficulty which presents itself to Mr. McCaleb's mind, and honouring a man that thinks he is consulting his conscience rather than his convenience, we find this discussion very distasteful. Still, we are constrained to ask Mr. McCaleb whether he respects the laws of his country and whether he thinks that the United States Minister is under any obligation to respect them. The law lays down that proof of citizenship is a preliminary essential to claiming the protection of the United States Legation in a foreign country, and that proof of citizenship must take the form of a declaration of allegiance, sworn or affirmed. The United States Minister has absolutely no discretion in the matter: he must be furnished with the prescribed proof or he may not extend the desired protection. But Mr. McCaleb will not furnish the proof and yet claims the protection. Why? Because others have obtained the protection without giving the proof. That, in truth, is not the case. We are assured that other American citizens in Japan have complied with the necessary forms. But even supposing that they had not; even supposing that they had been allowed to evade the law, what then? Does Mr. McCaleb seriously intend to assert that because others have been suffered to violate the law, he is aggrieved by not being suffered to violate it also? We should have supposed that the finger of conscience pointed in a different direction.

LIEUT.-GENERAL VISCOUNT YAMAJI.

On the 3rd instant Lieut.-General Viscount Yamaji died at Mitajiri at the early age of fifty-six. He was one of the most prominent figures in the war of 1894-5, having been second in command under Field-Marshal Marquis Oyama at the taking of Port Arthur and throughout the operations in the Liaotung Peninsula. He enjoyed the reputation of being a man of extraordinary courage even among a people habitually brave. It is related of him that, when a mere lad, living in Tosa, his native province, he fell from a tree, and injured his right eye so severely that it was forced from the socket, and he carried it in his hand to show to his mother. The evidence that he thus gave of indifference to physical suffering was not belied by his subsequent career. Entering the Army, he attained the rank of Major at the age of 35, and served as chief of staff in the Fourth Division during the Satsuma insurrection. A bullet in the thigh momentarily disabled him at the assault of Atotishi, but he struggled to his feet, and pushed on, sword in hand, his straw-sandal soaked with blood. Promoted to be Major-General, he received the command of the Kumamoto Division, and ultimately attaining the rank of Lieut.-General, became commander of the First Division, whose head-quarters are Tokyo. He led the Division to Liaotung, and directed the campaign against Port Arthur, his services on that occasion being rewarded with a peerage, the Grand Cordon of the Rising Sun, and the Command-in-Chief of the Western District. He was engaged inspecting the Fifth Division, and had set out from Mitajiri for Yamaguchi on the 2nd instant, when the bursting of a blood-vessel on the brain compelled his return to the former place, where he expired the following day. It is generally believed that the incidents which occurred at Port Arthur materially lessened the reward bestowed upon Lieut.-General Yamaji by his Sovereign, and deprived him of the honour of leading his Division in the Shantung campaign. He was undoubtedly a commander of great capacity, sound judgment, and inflexible resolution, but his ideas of warfare with enemies so inhuman as the Chinese were not up to the high standard indicated by the general orders of Marshals Yamagata and Oyama, and under the pressure of extreme provocation he judged retaliation in kind to be a justifiable method.

POSTAL AND TELEGRAPH RATES.

The recent increase of postal rates to foreign countries is not surprising. It is in one sense a necessary sequel to the adoption of gold monometallism. The rates fixed ten years ago in silver are now from forty to fifty per cent. less in sterling than they were then, and since the portion taken by the gold-using partner in the transport business has remained always constant, the whole loss resulting from the depreciation of silver fell on Japan. So long as her metallic currency was in silver, she doubtless accepted the risks of fluctuation. The white metal might have appreciated, in which event some part of her losses would have been recouped. But now that she has placed her finances on a gold basis, the exact sterling value of her subsidiary coins is known,

and it seems reasonable that she should amend her rates so as to bring them to something like the original figures. That, however, is a matter quite distinct from an increase of domestic rates for postal matter and telegrams, which is said to be now contemplated. The programme according to rumour, is to raise the rates by 50 per cent., making the one-*sen* post card cost one-*sen* and a half, and the two-*sen* stamp cost three-*sen*. The idea appears to have been mooted some time ago, but being strongly opposed in official circles, it was abandoned. It has again been revived, however, chiefly on the ground that the mechanism of communications must be largely added to, and that funds for the purpose can not be obtained except by recourse to higher rates. It appears that the greatest difficulty is now experienced in dealing with telegraphic business. The number of messages is so great that they can not possibly be forwarded with any degree of expedition, and it is not uncommon for a telegram to be delayed a whole day in transmission. To double the lines is essential, but the outlay required would be fifteen million *yen*. Application in that sense was made in the estimates submitted by the Department of Communications for the fiscal year 1898-9, but the Treasury eliminated the item, on the ground that funds are not at present available, there being already an excess of twenty-three million *yen* on the expenditure side of the 1898-9 Budget. Thus, unless the deplorable state of affairs now existing is to be left without remedy, it becomes necessary either that a loan be floated by the Communications Department or that the charges be increased. A loan is out of the question in the present state of the money market, and so, finally, augmented rates become the sole resource. It is thought that if the increased rates were levied for a term of five years, sufficient money would be obtained, and the original charges might then be reverted to. Such are the statements made by vernacular newspapers, but the arithmetic of the programme requires elucidation. The gross revenue from posts and telegraphs at present is 12½ million *yen* approximately. Hence, if the rates were raised by fifty per cent., the sum collected in five years would be over 30 million *yen*, not 15 millions. That, too, is on the assumption that the earnings of the posts and telegraphs remain stationary. But so far from remaining stationary, they have nearly doubled during the past five years. Thus, whereas the gross revenue in 1893-4 was 6½ million *yen*, it is estimated at 12½ millions for 1897-8. Altogether it seems plain that to increase the rates by 50 per cent. for the purpose of obtaining funds to carry out a work costing only 15 millions would be an extravagant process. The whole affair is strongly suggestive of the embarrassments that Japan is beginning to feel for lack of capital. No wonder, indeed. Just thirteen years have elapsed since the certainty that such embarrassments must overtake her became apparent to her foreign friends, and was predicted in these columns. In truth no one anticipated that she would be able to go on for such a long time, building railways, buying ships, starting manufacturing enterprises and carrying out various public works without recourse to foreign capital. For our own part, we looked to see her in difficulties long ago. But it would seem that only now does she feel the pressure seriously. She can not find means at home

to carry out a work absolutely essential to her industrial and commercial development, yet if the European money market were open to her, she could obtain not 15 but 30 or 40 million *yen* by merely setting aside the natural increment of her revenue from posts and telegraphs as interest and sinking fund. In other words, without increasing the rates or imposing any burden whatever on the Treasury, she could carry out this work and many another scarcely less useful undertaking. From that point of view it must be confessed that her adoption of gold monometallism was a far-seeing measure. Her material development is out of the question without foreign capital, and whatever may be otherwise the effects of demonetizing silver, the step will assuredly open to her the money markets of the West in the end.

THE NEW POLITICAL PARTY.

The *Sekai-no-Nippon* writes in very severe terms of the new political association, the *Kodo-kai*. The gist of its criticism is that the new party owes its origin to two causes; first, resentment because no members belonging to the three sections of which it is formed have been rewarded by official appointment; and secondly, the conviction that these sections will be simply swallowed up by the *Shimpo-to* in the general election next year unless they appeal independently to the constituencies. It will be remembered that two of the sections which have now coalesced to form the *Kodo-kai* consist of seceders from the ranks of the Liberals and the National Unionists; men who left their parties for the purposes of voting with the Government last session, but who nevertheless refrained from enrolling themselves in the party (*Shimpo-to*) which openly supported the Government. These men, according to the *Sekai no Nippon* think that they ought to have been rewarded with some of the plums that have fallen to the *Shimpo-to*, in the shape of Departmental Counsellorships, headships of bureaux and governorships of prefectures. They also think that, if, in their present nondescript character, neither open friends nor avowed enemies of the Cabinet, they appeal to the constituencies next year, the result will not be satisfactory. So they are setting up on their own account. Doubtless that is the least favorable explanation that can be furnished of the *Kodo-kai's* organization. It is the explanation of an enemy.

FATAL RAILWAY ACCIDENT.

An accident occurred on the Tokaido Railway on the 3rd inst., that involved the overturning of an engine and trucks, engaged in the work of repairing the injuries suffered by the line between Yamakita and Oyama, and the loss of many lives. The trucks had discharged their load of stones and earth, carried from Oyama when, owing to some unexplained error, the engine-driver went forward, instead of reversing. The guard, finding the train moving in the wrong direction, applied all available brake-power, but owing to the steepness of the gradient, his efforts to arrest the train proved unavailing. It held on its course with increasing velocity, until a part of the line was reached where the road had been washed away. There the engine and trucks were precipitated into the bed of the river Aigawa, a fall of twenty-five feet. The driver, a guard, a fireman and five workmen were killed instantaneously, and thirteen or fourteen others were badly hurt. It is said that the accident will considerably

impede the work of repairing the line, from which we infer that the rolling stock available in the locality where the rains proved most disastrous is limited in quantity.

With reference to this sad affair we have received the following letter from the traffic office of the Imperial Government Railways.—

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—Will you kindly allow me to correct the account given in your issue of to-day under this heading by giving the actual facts of the occurrence.

In the first place no passenger train or passenger has suffered. The deplorable affair happened to a train engaged in the transport of materials at a point about one mile on the Yamakita side of the Oyama Station where the high embankment had been washed away by the Aigawa breaking its bounds and flowing with great force against it on the night of the recent storm.

The train in question had brought material to a distance of some two chains from the breach. After being unloaded the driver was instructed to back his train towards Oyama, but instead of doing so he moved ahead and the train and the six vehicles following fell over into the opening caused by the wash-out. The Driver, Fireman and Guard who were on the engine together with five coolies who were in the waggons were unfortunately killed and some 13 or 14 other coolies sustained injuries of a more or less serious nature. Why the driver neglected to carry out the instructions he received will, I fear, ever remain a mystery.

I may mention that between the break in the line and where the material train came to a stand, a temporary buffer stop had been erected, upon which a danger (red light signal) was exhibited at the time of the accident.

I remain sir, yours obedient servant,

S. HIRAI.

October 4th, 1897.

A passenger who left Kobe by rail on the evening of the 29th ultimo, at which time, according to the information possessed by the Kobe officials, the line was open right through, found that he could not be carried farther north than Ejiri, the first station on the Tokyo side of Shizuoka. The whole section between Ejiri and Kozu, a distance of 65 miles, was then considered unsafe. Here and there, of course, engines and trucks were able to pass, but the through traffic was entirely suspended. The passenger of whom we have spoken, made his way along the line, chiefly on foot, and was able to form a tolerably clear idea of the amount of damage caused by the rain. Between Ejiri and Kambara, a distance of 10 miles, the buttresses of a bridge had been forced out of position by the floods, and the embankments at the entrance of a tunnel had been precipitated on the bed of the road. Thence to Numazu the line, which has been engineered so as to lie below the level of the surrounding country, was here and there covered with water, not so deeply, however, as to prevent the slow passage of trains. From Numazu to Kozu, that is to say, throughout the mountain section of the railway, very great injury had been done. The cuttings immediately outside several tunnels had fallen, the debris being heaped high on the line, and in two places the scarps forming the bed of the road had been completely washed away, so that the rails and sleepers hung suspended in space.

JAPANESE MERCHANT STEAMERS.

Captain J. J. Efford, Marine Surveyor at this port, has published a volume setting forth the names of all the steamers over 100 tons that belong to the Japanese mercantile marine, with their original names (if any), their tonnage, the nationality of their officers and engineers, the place and time of building, the class, the date of last surveys, the names of owners and the port of registry. So far as we can judge the list is wonderfully complete, and of its utility we need say nothing. The printing and general get up do much credit to the *Japan Gazette* office, where the book was brought out. On the last page is an ominous list showing that 24 steamers and 7 sailing vessels belonging to the Japanese mercantile marine, have been wrecked since 1896.

COUNT OKUMA'S FOREIGN POLICY.

OUR readers doubtless remember the essay recently published in the *Far East* over Count OKUMA's signature, and remember, also, that it contained an expression of very moderate views, and an emphatic disclaimer of any policy of territorial aggression. Commenting on the essay, the *Kobe Chronicle* expressed doubts whether Count OKUMA—who does not himself write English—had been accurately "taken down," inasmuch as both the Count and the party headed by him were understood to be pledged to the very policy which he had now disavowed in the pages of the *Far East*. We, in turn, commented on our Kobe contemporary's comments, and said that we had always interpreted Count OKUMA's foreign policy in the sense indicated by the essay. The matter being one of contemporary history, we are somewhat surprised to find the *Kobe Chronicle* refer to it again in these words:—

Our contemporary has surely forgotten that the proximate cause of Count Okuma's accession to power was the hostility aroused against Marquis Ito and Count Mutsu by the retrocession of Liaotung, the opponents of which may surely be described as advocates of territorial extension. The views as to Treaty Revision which the *Mail* restricts to the "strong-foreign-policy" party, were those common at one time to almost all the Japanese political parties. What differentiated the "strong-foreign-policy" party from others was the advocacy of Japanese control over Korea, the acquisition of Formosa, and, for a brief time, though we do not hear much about this point of the programme at present, the expansion of Japan's armaments until she was strong enough to recover the territory retroceded in deference to the "advice" of the three Powers. There is little doubt that it was because Count Okuma was credited with holding these or similar views that his appointment was received by this party with so much satisfaction. It is surprising in face of utterances by members of this party, both in and out of the Diet, to find the *Japan Mail* crediting it with such extremely moderate opinions as those outlined in the sentences we have quoted. True, those who strenuously advocated "southward extension" at one time—by which we presume was meant the addition of the Philippines to Japan's possessions—have not been so active since the difficulties inseparable from Colonial government were proved by the experience of Formosa, but so far as we have observed, there has been no public hint of any radical conversion to moderate views in these matters.

It appears to us that our contemporary is very egregiously misinformed as to the subjects discussed above. Indeed, we could not have suspected the prevalence of such views had they not been advanced so unequivocally, and as they constitute an interesting page of recent history, we shall discuss them seriatim.

As to the term "strong foreign policy" (*Kyōkōshugi*), it had its origin in 1893, when a movement in favour of "strict treaty enforcement," attained sufficient dimensions to become a topic of public discussion. The movement had its embryo in an anti-mixed-residence agitation, started a year previously, by Mr. OI KENTARO, the *Soshi* leader. No one attached much importance to Mr. OI's doings at the time, but, by-and-by, he modified his platform, so that its principal plank became, not the prevention of mixed residence, but the revocation of all privileges
